## 1879.

CONFORMABLY to our annual custom we now, at the birth of another year, take a brief survey of the more prominent events of the past twelve months.

At the close of the previous year, and in the early part of 1879, the Loochooan question assumed those proportions, and displayed those elements of controversy, which brought the debate between this empire and China to a threatening climax. On the 28th of December, 1878, the representatives of the new Han, who had come to Tokio to petition the central Government to allow the jurisdiction precedent, under which the islands paid equal respect to the two monarchies, to remain in force, were peremptorily ordered to return to their country, a mandate which the necessary measures were taken to enforce. Since that date the various aspects of the subject have been widely discussed in the native and foreign press here and in China. Interest in the matter was not confined to the East. It spread to Europe and America, where public commentators have since been largely exercised in view of the menace, which they thought they foresaw, of an appeal to arms, a state of things which would considerably interfere with foreign trade in the remote Orient. Fortunately the fears expressed have not been borne out by results, but one unforeseen effect has been produced by the discussion. Attention has been attracted to the vast but undeveloped resources of the Middle Kingdom, which now finds itself in the unprecedented position of a factor not only in Asiatic but in European politics. By several of the great western powers China is looked upon as a possible and serviceable ally, or a foe whose enmity has to be avoided. Her successful termination of the Kulja affair, and the retrocession of that province by Russia, have aided her in the unexpected achievement, to which also the suppression of two revolts, one of which was serious, and the final and complete reconquest of Kashgaria, have contributed. The overthrow of the armed rebellion of Hakka peasantry in Hainan, and of Li Yung Choi, ex-Taiping rebel leader, then imperial soldier, and next the chief of a revolted army aiming at the conquest of Tonquin, who was only put down and captured

after a protracted struggle, have vastly consolidated China's power.

Extension was given in January to a scheme for the establishment of Chambers of Commerce in the country, similarly constituted to that of Tokio, by the foundation of such a body in Osaka. The first of a number of distinguished foreign visitors, who have made a pleasant sojourn in Japan during the year, arrived, early in January, in the person of Mr. E. J. Reed, M. P. He was accompanied by his son; and during his stay was the guest of the Government, under whose careful chaperonage he was enabled to visit most of the places of interest within the empire. In the early part of the year intelligence was received that a special treaty had been concluded between Japan and the United States. This document was virtually valueless, except as a sort of mutual testimony of friendliness, owing to its final clause, which determined that no other provisions should be operative until such time as the other treaty powers had entered into similar conventions. The matter of revision will, then, have to be treated as a whole, and subject to the general approval of all the powers in convention with Japan.

In February the Finance Minister published his statement of actual national receipts and expenditures for the financial year ended in June, 1876. His Excellency admitted the necessity of issuing such document, at the same time as he indicated the difficulty which attended the earliest compilations required, and promised to furnish arrears up to most recent dates as soon as was compatible with the work of his department. This month witnessed the initiation of a Government measure to control, in some degree, the improper speculation then rife in paper currency. Exchange dealers were ordered to provide themselves with a license if they should elect to continue their operations: to show that they possessed a certain capital; and to deposit a small percentage thereof with the Finance Department. It was not, however, till towards the close of the year that an effective blow was struck at the most vicious form of stock-exchange gambling, by prohibiting the practice of purchase on time bargains. When this measure was taken speculation in satsu, which were steadily depreciating, had made many victims. A sentence of exceptional severity was passed by the Yokohama Saibansho upon a Japanese, at that time caretaker of the foreign-rented race-course at Negishi, for keeping a room in which opium-smoking was indulged in. He was relegated to imprisonment for a term of ten years. We mention this fact here to show how intense is the determination of the authorities to prevent the introduction of the Chinese vice into the empire. After a hearing, which extended over nearly three months, the case of Messrs. Jardine, Matheson & Co. v. Goto Shojiro, the proprietor of the Takashima mine, involving an extensive claim of money lent and interest thereon was advanced a stage, at which it virtually ceased, the dispute having been subsequently arranged between the parties.

By notification dated the 4th of April, the Prime Minister declared the Loochoo Han abolished and the Okinawa Ken established in its stead. This was virtually the formal and final an-

nexation of the insular dependency to this empire, and its enfranchisement from all present and future claims to tribute or homage on the part of China. Several new National Banks, established in various Ken, received their charters during the twelve months. The members of the British Naval Mission received notice, in the spring, that their engagements, shortly to expire, would not be renewed. In the summer all the instructors, with the exception of one or two of inferior rank, returned to Europe. In April, the ex-monarch of the Loochoo islands arrived in the capital, where a residence, with the style of a Japanese noble of the first rank, was allotted to him, and where he has since remained. A handsome income, derived from Government bonds, has since been assigned to him.

At the end of May epidemic cholera manifested its presence in the Southern provinces, first of all in Kiushiu, where, the story goes, it was first let loose by the disinterment of the bodies of certain of the soldiery, who had died of the disease and been hastily buried, in 1877, during the Satsuma revolt. The malady quickly spread over the whole length and breadth of the empire, reaching Yokohama and Tokio by the end of June, through the landing and subsequent seizure of men of the crew of a steamer plying to and from the already infected ports. Quarantine regulations were issued, and put in force; the English and German Ministers, however, making their administration a consular, and not a parochial, matter. The *Hesperia* difficulty quickly ensued. That steamer, being declared healthy by a German physician, was ordered out of detention after three days pratique. Although this measure was in part brought about through the defectiveness of the quarantine rules first issued, yet it has since been rather severely animadverted upon by a portion of the European press, which holds that the administration of quarantine by a state should overrule all questions of extra-territoriality. As the system to be pursued in like contingencies of epidemics in Japan, is now very thoroughly matured, no such hitch should occur in future. As it was, the *Hesperia* brought no actual danger of infection to this locality; and, indeed, shortly after her arrival, the pestilence had taken such hold, that quarantine was suspended, in favor of a simple system of inspection. At the close of the year official returns showed that out of one hundred and sixty-five thousand individuals attacked throughout these islands, nearly one hundred thousand had met their deaths. This is quite sufficient to establish the serious and fatal nature of the visitation.

Mr. Pope Hennessy, Governor of Hongkong, and Mrs. Hennessy, were among the summer visitors to this beautiful land. They were everywhere enthusiastically received by the authorities, whose guests they were, and the people. Increased cordiality on the part of Japanese of all classes, towards the British nation, has been one of the pleasing results of the trip. Soon after midsummer General Grant also arrived in Yokohama. His stay in this vicinity, and his travels in Japan, were one continuous series of ovation. Never was guest more joyously and heartily received. After a sojourn of two months he finally quitted these shores in the *City of Tokio* on the 3rd of December. Here and in China he enjoyed the confidence of statesmen, having been specially consulted by both sides, and having rendered good counsel to either on the Loochooan question. The subsequent offer of mediation by the United States between the two powers, in the event of arbitration being resorted to, no doubt is traceable to the results of his visit. Other distinguished sojourners during the year were Their Royal Highnesses Prince Henry of Germany and the Duke of Genoa, who have both been welcomed and fêted with the full amount of honour due to their rank.

Unquestionably, the most important political event of the

year was that change in the ministry effected in the autumn, to which we must, if only briefly, refer. Terashima, till then Minister of Foreign Affairs, was removed to the Educational Department, where his post is virtually a sinecure, the work of the bureau falling upon an able and hard-working official, Tanaka, the Vice-Minister. Mr. Terashima, while a man of the most estimable character, hardly possesses the force of mind which should distinguish the incumbent of so important a post as that which he lately held. Liable to yield to pressure in small matters, having but insufficient comprehension of principles, he was subject to accesses of obstinacy when trifling questions were involved, which created a friction the effects whereof ultra-compliance in other respects could hardly efface. To his office Inouye was appointed, on transfer from the Public Works Department. To this latter post he had been assigned on the occasion of the murder of Okuma; and it was fully recognized in high circles, and by the observant public, that he was only temporarily there located, his great ability marking him out for a higher sphere of action. Mr. Inouye has extensive experience in domestic and foreign policy. On the occasion of the Shimonoseki affair, he and Ito were the two Choshu students who went to the Governor of the town, and implored him to comply with the demand of the foreign powers, against whose might Japan could not hope to stand. It is well understood that he has thoroughly comprehended the present relation of his country to western nations. In the matter of the approaching revision of the treaties he has been willing to postpone for some time the assertion of the right of this empire to control completely the customs' tariff, and to undertake negotiations on the same basis as before, securing however the advantage of a moderate revenue. He was second to Kuroda in the Korean embassy; and that the matter in dispute was solved amicably, yet with honour to both sides, is greatly due to his tact and discrimination, a fact of which his countrymen appreciate the full value. The nomination of General Yamada, who is very popular with the army, was a very good political arrangement, though the claims of Yamao, the present vice-minister, to promotion were by no means insignificant. No better selection for the control of the War Office than that of General Saigo, the successful director of the Formosan expedition, could have been made. He is thoroughly popular, and his loyalty has been proved by the most critical tests of experience. The promotion of General Yamagata to the position of Chief of the Staff (an office nearly analogous to that of Adjutant-General) was judicious but void of much significance. We know little of the officer who has replaced Kawaji in charge of the Police Service; but we do know that through the death of the late Prefect the Government has lost a devoted and valuable servant. The records of the Satsuma campaign, prove how much of the imperial success was due to him; and the approximate perfection of organization in the police and prison systems of the country, is in great measure his work. His excursion to Europe, from which he only returned to die, was in part prompted by a desire to glean instruction, and copy models, for still further improvements; but it also had, for a secondary object, the endeavour to discover traces of the machinery through which rumoured forgeries in the south were said to have been perpetrated. That much, at least, of the alleged counterfeiting was grossly exaggerated by rumour, arising out of insufficient information, is evident by recent events. The discharge from custody of Messrs. Fujita and Nakano dissipates one bubble, blown of fancy.

On the whole Japan has to be congratulated warmly upon the experience of the year that has passed; although the incoming of the winter season has been accompanied by two disastrous conflagrations, one in Hakodate, and the other in Tokio. These disasters point to the necessity—incumbent upon the Government—of framing and enforcing regulations

for the building of substantial edifices in all the large towns, in the place of these inflammable and perishable structures which are unworthy to be the habitations of a prosperous, progressive and civilized nation.

#### INTERNATIONAL FRIENDSHIP AND GOOD-WILL.

“THERE shall be eternal peace and friendship between Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Her Heirs and Successors, and His Majesty the Emperor of Japan, and between their respective dominions and subjects.” Such is the text of the first article of the treaty between the insular power “which rules the waves” and the other island state which has recently entered the sisterhood of nations; and similar language inaugurates every treaty entered into by Japan with other powers. If words mean anything, these signify that, on emerging from a seclusion of nearly three centuries duration, this empire was received with professions of friendship, of good will and of kindly regard. Is it too much to ask in this year of our Lord 1880, just being ushered in, that all these professions of friendliness, of gracious, sympathetic good nature and national fellow feeling should convey something higher and worthier of our common humanity than the empty compliments of diplomatic etiquette and official phraseology? In the good old times, in praise of which dreamers and enthusiasts of various sorts and denominations are often heard to speak even now, international law was little known and less heeded; and international courtesy was scarcely practised. Indeed, it is not so very long ago in the history of nations that either the one or the other has found anything like fair recognition. The usages of ancient Greece and Rome, which lacked every principal of law, justice and good faith in intercourse with other nations, were not in later years professed openly with the same ostentatious cynicism and disregard for the rights of the weak, but in practice they were very slightly modified at as late a date as the beginning of the seventeenth century, the very time when Japan began that policy of exclusion which she maintained to within the last few decades. At that period Grotius had not written his great and famous work *De Jure Belli et Pacis*, which may be said to have initiated among nations the practice of those principles which had been proved to be necessary, and were duly enforced and observed, among individuals. It was only then that the infamous old doctrine of regarding every stranger, as such, as an enemy, received its death blow. Only eighty years divide the publication of this monument of progress from the appearance from the press, of Machiavelli’s “Prince;” and the difference of tone in the two works speaks more for the advance made during that time in humanity and Christian qualities, than any other evidence that could be collected. Machiavelli’s name and reputation, as far as his character as a private individual is concerned, have been triumphantly cleared of the obloquy and execration which now only cling to his written work, but the lesson which the latter inculcates is on that account all the more impressive and fraught with instruction. It shows that at that late day, namely, in the year 1532, perfidy, treachery, perjury and almost every other vice were looked upon in the South of Europe, by men whose lives as citizens were pure and spotless, as justifiable means to be used against a neighbouring country. The world may well be grateful that those good old times are over; and if Japanese statesmen study the history of the period which is limited by their country’s isolation, let them pay due heed to that spirit of broad philanthropy which ennobles and glorifies our time more than all material progress; more than all the innumerable inventions and discoveries which multiply the means of health, comfort

and pleasure; more than all the great ideas, and those successful solutions of important problems with which in every field master minds have enriched the world’s stores of knowledge. The claims of justice and humanity—even those of friendship, kindness and good will—founded though they be simply upon abstract moral principles, have not only found fuller and broader recognition in their application between man and man; but have also been acknowledged as binding upon nations in their conduct toward each other, and are now exerting much, if not the very fullness, of their influence upon international policy. If the character of diplomacy and the means which it employs are founded from what they were, it is because its exponents are brought, by education and training, to walk in the new path. Even if impelled by peculiar idiosyncracies to act in another spirit, no diplomatic agent could for any length of time defy the outside pressure which public opinion would bring to bear upon him. Such high minded diplomatists as Lord Elgin and Lord Lytton are as essentially the type of modern public political opinion, as Machiavelli was of that which was current in his time and country.

But the altered sentiments which, as we all know, thus govern the relations of western nations with each other, and find their best exponents in the press, still to a certain extent seem to become inoperative in the dealings of those states with non-Christian countries. Religion, in so far as it may disqualify the individual socially, or invalidate his claims in justice, is a factor which in nearly all civilized countries has lost its former power; but in the relations between “Christian” and “heathen” countries it still seems to retain much of its former efficacy; and none the less because it is occult and exerted indirectly. There may be people who will not agree to this, although it is too evident a proposition to admit of refutation. In a former article in this review it was said that, as the citizen of old Rome carried everywhere with him the rights and immunities conferred by the title of *Civis Romanus*, so the modern Christian emigrant to non-Christian countries claims similar privileges by virtue of his title *Civis Christianus*. Whatever may be the political need of the continuance of extra-territoriality, and whatever may be the absolute justice of the policy which enforces it, its relative injustice cannot be called into question. Protection to life and property is certainly as great in Japan, for instance, as it is in those South American Republics where, as an English writer happily remarks, the revolutions of the earth around the sun are more regular than, but not so frequent as, revolutions in the state. Paraguay, under Dr. Francia, maintained for years a policy of isolation nearly as strict as that which long governed Japan, and strangers were treated there with extreme rigour, and often had to submit to great hardships and injustice. Yet all these countries, and even unique governments, like that of San Domingo or Hayti, receive from the hands of foreign cabinets an amount of consideration which is in strange contrast to that shown to peoples who do not belong to any section of the Christian faith.

It is not, however, with a review of any of the broad principles of extra-territoriality that we wish to deal in this article. Our present object is only to consider one of its minor outgrowths, one whose applications, we believe, is capable of considerable modification and improvement and deserving of more attention than it has yet received. We refer to that extreme sensibility, that straining at often meaningless points and merely conventional forms that lack of anything like a conciliatory spirit which, on the spot, often seems to characterise the actions and speech of those who in any way are charged with representing western power and western opinion. It may often appear to those who do not look beneath the surface of things, that any incautious act or word of the Japanese authorities, any unintentional remissness or

failure to act up to the foreign diplomatic code of etiquette, any accident, in fact, which may offend the western representative, or clash with his notions of personal dignity is, not unfrequently, visited with all such power as the displeased one can command upon the nation at large. The instance of the *Hesperia*, which has recently attracted so much attention in the European press, offers a good illustration. We certainly do not wish to speak of His German Majesty's Envoy otherwise than with that high regard and esteem, in which he is deservedly held by every one who, either officially or privately, has come in contact with him. And, in the case in point, the then minister for foreign affairs committed the error of sending to him and the other representatives, a draft of regulations, not only imperfect, but utterly different from those which the government had decided to enforce, and which were afterwards promulgated. Under the circumstances, His Excellency was placed in a difficult position, and it is to be regretted that he should have been unable to avoid wounding the feelings of every class of the population, and bringing before them, in all its harshness, in all its irritating possibilities the extent of extra-territorial privilege.

We cannot but hold that it ought to be the business of modern diplomacy to smooth over trivial difficulties and not magnify or cause them to swell into national grievances. In all western countries this conciliatory course is pursued; and the anomalous position into which extra-territoriality places eastern nations should not act as a barrier to the exercise of a like spirit of forbearance. Such, unfortunately, is not the case. Relations seem to have come to such a pass that, without looking for a pretext, most foreigners breathe an air of antagonism, of continual latent objection to, and distrust of, everything that is done or proposed by Japanese. How otherwise can we account for the withholding of consent and co-operation, in what everyone acknowledges to be useful and highly necessary measures: the refusal to recognize a badly-needed harbour master; the difficulties thrown in the way of the acquisition by the government of the control of the postal service; the tardy acquiescence, after more than a year's delay, in the regulations for pilots; and many similar instances. A section of the foreign press here has been, to a great extent, an *ex parte* exponent of this state of feeling; and its open criticism of, and constant indiscriminating opposition to, the government and its measures, have not endeared it to the people of this country, nor helped to bring about a better mutual understanding. Mr. Mounsey, in his book on the Satsuma rebellion, has severely censured this review for its strictures on the ministry of this country and its measures, at a critical time, and the rebuke was well deserved, a former but short lived management of this paper, fell into the inconceivable blunder of believing in the ultimate success of Saigo's revolt and of openly sympathizing with insurrection against the constituted authorities of the empire. Mr. Mounsey is certainly neither the first nor the last among our English diplomatists who has shown friendly regard and considerate sympathy for a foreign and a non-Christian land. The private letters and correspondence of Lord Elgin breathe a similar spirit of humanity in almost every page. The debate in the House of Commons, on the occasion of the burning of Kagoshima, which is being reprinted by the *Tokio Times* shows many of the foremost Englishmen on the same side. The speeches of such men as Buxton are as cogent as they are pathetic. But it is not only there, it is here, on the spot, that such feelings ought, not merely to exist, but to manifest themselves by deed and word. If all the accredited representatives of England, all those charged with power in any degree, had acted in the spirit which animated Lord Elgin, and if the foreign press here had duly seconded their efforts, few can doubt that our relations with Japan would stand upon a better footing than they do, and that English influence

would be more powerful than it is in the councils of the empire. It is no satisfaction to us to find that some other countries have pursued a similar course to that generally followed by England's representatives and attended with similar results. The interest of no other power here is as great, either politically or commercially, as that of Great Britain. As a matter of policy Japan ought to be led to see in the great maritime nation of the west what that nation really is, her firm friend and ally. The recognition of this fact may be as valuable to Englishmen here as it is to the country in which they reside.

The Eastern question is, day by day, assuming more important proportions, and a wider area of countries is concerned in it. We are told openly in the St. Petersburg journals that, in case of difficulties arising between Japan and China, the great northern power would give its moral support to the latter nation. "On account of her conservative policy," so it is said, "China inspires Russia with no fears for the future. On the contrary, there are signs that, if changes are introduced, the unwieldy fabric of the Celestial Empire will tumble to pieces, and then Russia will become the natural heir to such lands as lie nearest to her frontier. The valley of the Ili, the source of the Irtish, the upper Yenesei, Lake Dolon-Nor, Sugari,—all these places may some day complete and rectify our Asiatic frontier. All these are of little importance to China, and she may be induced to cede them to us in order to repay the advantages which a neutrality (with moral support) will possess for her. Our position with Japan is different. . . . Japan has a Europeanized army and an ironclad fleet. These are signs of progress which under certain conditions may be disagreeable for Russia." The very causes which render Japan's position different in the case of Russia, are precisely those which make Japan valuable as an ally to England. The contingency in which this might be proved is not by any means an improbable, or perhaps not even a very remote one. But in such an event, co-operation would have to be hearty and sincere—the grateful outcome of previously friendly relations, and not cemented by the necessities or exigencies of the hour. It was through English arms that Napoleon was repulsed from the Iberian peninsula, but even English bravery, courage and soldierly skill, would have failed in effecting their object without the earnest and unqualified support given by all classes of the Spanish population.

Japan is almost the only Asiatic country which possesses that great and powerful engine for moulding public opinion—a public press. Although born within the last decade it has already assumed extraordinary proportions, and may even challenge comparison with that of some European countries. Everything is now brought to the notice of the people, and it will be hard to convince the latter of England's friendship as long as the native papers teem with the records of instances where, often upon trivial occasions, native self love has been wounded, and native patriotism offended; or as long as the public can cite extracts from foreign journals published here wherein a constant display of antagonism to the government and its measures is paraded. Let us hope that a better spirit, a spirit of conciliation, of good will and of natural concession, will prompt all action in regard to the approaching revision of existing treaties, and that the future will witness the growth and development of a permanent cordiality which shall efface all traces of former misunderstandings.

AN article in the *Fuso Shinshi* alludes to the alleged likelihood of an Envoy being despatched by the Government of Japan to treat with the Peking authorities for the solution of the Loochooan question. The author holds that it would be advisable for this country to adopt

the initiative in the matter, so as to derive all the possible advantages which are held to accrue to that one of the two parties in a dispute which takes the first step towards its adjustment. But in no case, our correspondent argues, should Japan make any concession to China in this particular matter, inasmuch as "the ex-King of the islands, in obeying the order of the Tokio authorities to take up his residence in that capital, has recognized the Japanese claim to dominion, which right is further established by the fact that his former provinces are now administered by Japanese officers. Hence, even if war should be the result of persistence, for China is obstinate and holds to the possession of the isles, small though they be, the ministry cannot and must not yield to her pretensions." The idea of mediation, whether by the United States or any other power, is scouted by this writer, who seems to think that the whole dispute might be arranged by the early presence of a skilled Japanese plenipotentiary, charged with its settlement, at the Court of Peking.

THE *China Mail* having recently, in the opinion of the Chief Judge of the Hongkong Supreme Court, by publishing contrary to the expressed wish of the Bench, a report of a criminal trial while proceedings were still pending, His Lordship, though refraining from taking action against the offenders, took occasion to define at some length the duties and liabilities of the press, under circumstances similar to those under which the prohibitions had been issued. In concluding his address to the representatives of the local newspapers, he stated his interpretation of the law thus:—

First; That whenever any judge of the Court has directed that there shall be no report printed of any pending proceedings in Court pending the trial, it is a contempt of Court punishable by fine or imprisonment or by both to disobey such direction, and that it is the duty of the Court to enforce its orders. But the Court has as little power as it has inclination to prevent by order any publication of proceedings after their termination.

Second; If before or pending any trial any statement be printed and published which tends in the judgment of the Court to the prejudice of any party before the Court, any such statement even where there is no order prohibiting publication of proceedings, is such an injury to the party who is "under the protection of the Court," (13 Ves. p. 238) as to call on the Court to punish such act as for a contempt, as was done by Lord Hardwicke in the case I have referred to in 2 Atkins, and thus to save the party injured from resorting to an action for libel (see. 13 Ves. notes). I have now to state that such being the opinion of both of us it will be our duty to take care that in future the law be carried out with all necessary consequences. At the same time we feel assured that the gentlemen who have hitherto reported the proceedings in this Court with great fairness and discretion, with few exceptions only, will take care that no difficulty shall arise from any breach of either of these rules. After the termination of any proceedings in Court, a newspaper, in the words of Lord Chief Baron Kelly, has a right to comment on all descriptions of proceedings in Courts of Justice. Such comments when made as the two newspapers usually make them, well-founded or erroneous, all Judges must be content to submit to, although they sometimes are deficient in that law-learning which gives authority to criticism. No one rejoices more heartily than I do in that liberty of unlicensed printing for which Milton so nobly pleaded and which, perfected by Lord Campbell's Act, is now the palladium of our liberties.

IF credence is to be given to the statements of the Cabul correspondent of one of our Indian contemporaries, the Afghans, rulers and ruled, are far from forming an amiable community; and almost any Government would be better than that of the native princes. We read that "the

evidence is daily accumulating which wraps the ex-Amir Yakub Khan and his ministers in the disgraceful mantle of treachery and deceit, which will prove, one may hope, their shroud. Treacherous, deceitful, bigoted, proud, and debased beyond all other eastern people, the Afghans begin to feel that the hand of providence will reach them for their many crimes. As yet they are led gently, but should they continue in their course, the grip will tighten. The abominations, encounters, and bestialities of the people of Cabul, of which I possess the written proofs, are something too awful to mention. The mind shrinks from that human nature which is capable of such crimes." Certain specific abominations are then adduced against the population of a country which has caused the authorities of British India considerable trouble, whose latest exploit was the murder of a peaceful and civilizing mission, composed of the invited guests of the monarch of the land.

WE note that the Supreme Court of the United States has declared the Act of Congress, known as the "Trade-marks Act," unconstitutional and invalid. The Court held that a trade-mark does not come within the description of an invention or discovery, or of a literary production, as it does not involve the elements of originality or depend upon novelty, but is simply founded on priority of appropriation. The clause in the Constitution under which Congress claimed the power to enact the law in question reads:—"The Congress shall have power to promote the progress of science and useful arts, by securing, for limited times, to authors and inventors, the exclusive right to their respective writings and discoveries." This decision does not, it is understood, in any way limit the right of property in trade-marks, but simply does away with criminal prosecution for infringement, and the constructive notice which registration effected.

EVIDENT advantages offered in the Hawaiian islands to constant labor and frugal living, are attracting considerable numbers of Chinese thither. Indeed, some time ago we read that the Asiatic immigrants were really settling in the kingdom, intermarrying with native women, and rearing families of useful and relatively prosperous colonists. A paper published in Honolulu states that, since the first of January last, two thousand seven hundred and thirty male Chinese had arrived in that port alone, exclusive of those that had landed at Hilo and Kailua, of whom no record has been available. "As mates, or help-meets for this army, there arrived here during the same period, fifty Chinese females. By the last census of the Islands, the proportion of (Chinese) males to females was three to one." Most of the land is exceedingly fertile. In one farming area called the "Commons," there were lately thirty teams at work ploughing, the intention being to put in about two thousand acres in sugar-cane. With the rich soil of that locality—from two to five feet of the alluvial wash of ages from the mountains—a yield may be expected of from four to five tons to the acre, say nine thousand tons, worth on the spot something over \$1,000,000. Great attention is being given on all sides to the cultivation of rice and sugar, the exports in those articles having largely increased during the last twelve months. In fact, other branches of agriculture, and pastoral pursuits, appear to be comparatively neglected in favour of the more recent industries, though an augmentation in the exports of coffee and wool was anticipated. The export of peanuts (by Chinese) has increased by 25,213 pounds; and the total value of domestic exports for the first nine months of the present year was \$2,749,838.27, being an advance over the corresponding period in 1878 of \$91,808.67.

CHINESE immigration into the United States is still, to use an expression there current, a plank in the platform of politicians. Dr. S. Wells Williams, the well known sinologue, in an address delivered at Saratoga, and subsequently published in the *New York Independent*, shows to demonstration that the alleged fear of an Asiatic unarmed invasion of American territory is utterly groundless. He proves, further, the advantages which Chinese labor has conferred upon the States of the Pacific slope, and alleges, on indisputable authority, that several extensive enterprises, now brought to a successful termination, could never have been achieved without it. He demolishes the sophisms of those who argue that Chinese occupy a place in the community that, in their absence, would be filled by a more desirable class of settlers, and reviews the oppression and cruel disabilities under which the yellow race has had to suffer. He proposes—and an increasing class of just-thinking Americans go with him—that the rights of citizenship should be placed within reach of the Chinese who desire to possess them. On the whole, it appears that a reaction in favor of the much abused and maligned immigrants has already commenced in the Great Republic, and that a healthier and more righteous leaning towards them is gradually making its way against that which had its origin with hoodlums and lazy and dissipated white workmen, but which, none the less, made its false and wicked impression in better classes of American society.

AS we predicted, the chapter of “the Times of the Taira,” printed in this number of the *Weekly Mail* is replete with dramatic effect. The story is now evidently approaching its period of historic interest.

#### THE BACHELOR'S SERVANT.

THAT the “house-boy” in the Far East is essentially a grand institution, none, we are persuaded, will ever attempt to deny. In fact, without his kind assistance, it is questionable whether foreigners could even exist in these distant climes. But of all the race, there is perhaps none more deserving of eulogium than the “boy” whose mission it is to supply the wants and relieve the necessities of the young bachelor resident.

By the term “Bachelor's Servant,” be it here understood, we do not by any means allude to one of the numerous domestics on duty in a large house wherein there exists a junior mess. In such establishments there are usually found numerous coolies, upon whose shoulders the “boy,” or upper servant, can generally shift the greater portion of the burden that should rightly be borne by himself. No; the subject of our present remarks is the bachelor's servant, pure and simple, the sole domestic of some gay young spark who messes by himself, and whose household consists of but one tried and trusty retainer, at once *major domo* and *factotum*. And when you light upon a really good specimen of the class, such a servant is indeed invaluable.

To assert that the “Bachelor's Servant” is a veritable jack-of-all-trades would convey but a faint idea of the multifarious duties he is expected to perform. Indeed, the greater puzzle would be to ascertain what he does *not* perform. Nothing, absolutely nothing, is deemed too much or too little for this unfortunate and long-suffering being. He is, as a matter of course, expected to be equally *au fait* at filling cartridges or sewing buttons, to have the same ingenuity for cooking a beef-steak or adjusting a patch on his *danna's* nether garments. He is likewise required to be handy at cleaning guns or spurs, careful and diligent in the rearing of pointer pups, and able to scent a dun from afar, and forthwith take the most effective measures to get him off the premises. Being also in charge of his employer's wardrobe, he must be so far learned in the mysteries of the foreign toilette as to be capable of distinguishing a dress coat from a suit of jockey “togs,” and a fire-brigade uniform from the costume donned in the foot-ball field or on the running path. Of

all these, the fire uniform is perhaps the one that most takes his fancy, and his master is certain to find it neatly laid out alongside his pillow every night, so as to be handy in case of need. Upon the very first clang of the fire-bell, in rushes the “boy,” and urges you to don the said uniform with speed. If you be mild in mood and of quiet temperament, the probability is that he drags you from beneath the sheets by sheer force, shrieking the while “Fire! Fire!” in stentorian tones. Should you, on the contrary, be prone to sudden wrath, he finds it the more effective plan to bustle about your room, dropping on the floor at measured intervals the brass-bound fire-helmet. The man who can sleep in spite of all this, must be possessed of a conscience truly void of offence. Compared with this duty of caring for your uniform, the safeguard of your other clothing is of merely secondary importance: you need only say you are going out to dinner in order to ensure the production of the proper habiliments. As for races, &c., the “boy” knows quite as well as you do the date on which you are to perform, and as a rule the very first object on which your wakening eyes alight on the eventful morn is the colors you are to carry. We may here mention that the bachelor's servant invariably backs his master's mount or crew, nor is it difficult to perceive how he stands at the finish of the day. Should he win, you won't see him again for at least forty-eight hours; should he lose, he'll forthwith apply to you for an advance of wages to enable him to meet his liabilities.

But it is when you are about to go up country, that the truly marvellous powers of the “boy” come forth in their strongest and fullest value. You need only state for how long your trip will last, and all is said. Out comes the valise or portmanteau, and in goes your baggage. It is amusing to sit by, pipe in mouth, and watch him at his work. A couple of flannel suits are crammed in first: then follow as many flasks of whiskey, next a pair of heavy shooting boots; and a tin of tobacco and cigars *ad lib.* complete the whole. By furious blows on the summit of this pile he at length induces the lid to close. That done he dances on the top till he can induce the lock to catch, and there you are ready equipped and provided for the journey. He loves, too, to accompany you on your shooting excursions, looks despondent whenever you miss a shot, and howls with delight over every bird that you bring down. But on your arrival at your tea-house, he at once returns to his old habits, looks after you with care, provides the best of “chow-chow” within reach for your refectation, and only retires to rest after seeing that his master is carefully tucked up for the night.

His good temper and his forbearance are unfailing. Liable though he be to be called up at any hour of the night or morning, he nevertheless will respond with alacrity to your summons. He has been known to provide supper for a convivial crowd at 4 a.m., or breakfast for a hungry set after a fire parade, with equal efficiency and celerity. He takes his rest when and where he can, and generally has a quiet nap after the departure of his employer to office work. He also extends his patronage and kind care to the latter's friends;—for he can distinguish almost by intuition between a casual visitor and an acknowledged friend of the house. To the former he is ever polite but undemonstrative; the latter he will receive with a hearty welcome even in his master's absence, entreating him to sit down and rest himself awhile. On such occasions he invariably produces the cigar-box, and will, if permitted, demonstrate his skill in the manufacture of a cocktail or other appetising refreshment. He has never been known to drive away your bosom chum fasting, nor, again, to offer a drink to the bill-collector.

That our hero has his faults it is useless to deny; for, indeed, he is but mortal after all. He is occasionally overcome by grief and *saké* after parting with a company of friends, and he sometimes goes in for a small game with a crowd of other “boys,” coolies and *bettoes* who make night hideous by their yells of delight or howls of despair beneath your bed-room windows. He has even been known to take a half-holiday without previously obtaining permission. But, after all, one must not be too severe on him for these little peccadilloes; you cannot discharge a servant of half a dozen years' tried fidelity for a single fault, neither can you give him his *congé* for having once overstepped the boundary line between sobriety and excess. He is

useful to you, and he knows it. You cannot get on well without him, and he is perfectly aware of that fact. You may, in a moment of passion, dismiss him, but you are heartily sorry for it the moment after; and it is a matter of secret rejoicing to you when he turns up again the following morning and goes about his work as usual, without making the slightest allusion to the unfortunate misunderstanding of yesternight.

What the bachelor would be without such a "boy" we dare not say. The bare thought of a young and inexperienced man being exposed, without the assistance of a trusty servant, to the evils and hardships that beset us in an Eastern community, is too terrible even for contemplation. And ill would it become us to say aught but what is favorable to the character of our well-known, true and trusty adherent—the "Bachelor's Servant."

## OSAKA.

December 30th, 1879.

There is very little to report from here, although it might naturally be expected that something would be stirring at this festive season. Such, however, is not the case, matters in fact are "flat, stale and" (at least the merchants say) "unprofitable." The Japanese are making their usual preparations for the new year's celebration, and to judge from appearances, great festivities will be the rule next week.

The examinations in the Semmon Gakko (Special Science School) went off very successfully the other day, and reflected great credit both upon the students and the teachers. The natives evidently appreciate the benefits to be derived from the course of study pursued in this institution, and the number of pupils is rapidly increasing as they are drafted from the Tokio and other schools throughout the empire to the Semmon Gakko, and instructed there in special branches, such as chemistry and medical science. The system has been found to work admirably; a new class—anatomy and physiology—has lately been established and placed under the care of Dr. Cunningham of the University of Edinburgh. The principal (or president as he is called) of the school is Mr. Hattori, who held a similar position in the Daizaku Yobimon in Tokio. Mr. Hattori is a sensible and energetic man, devoted to his work, and thoroughly acquainted with the foreign methods of instruction.

The soldiers forming the garrison here are being drilled vigorously; earth works of different kinds, with trenches, &c., have been thrown up in the neighbourhood of the castle to exercise the engineers, and the infantry are continually being put through field evolutions. As far as I am able to judge the men do extremely well on parade, but it is to be hoped that the time is far distant when all this preparation will be found useful in actual warfare.

A "Bankers" club has been established on the model of similar institutions in foreign countries. Above one hundred members have already joined, and meet regularly to read the papers, &c.

The news of the fires at Hakodate and Tokio has caused considerable uneasiness here, and I have reason to believe that the authorities have adopted precautionary measures which will enable them to promptly grapple with any similar catastrophe should the necessity unhappily arise.

## REUTER'S TELEGRAMS.

LONDON, January 2nd, 1880.

Reports from Cabul are of a more quieting nature.

A passenger train has fallen over the bridge across the river Tay, and ninety people were drowned.

Paris.—A new ministry has been formed under the presidency of Freycinet.

LONDON, December 30th, 1879.

Secocoeni's stronghold has been taken.

PARIS.—The Ministry have resigned.

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but, as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 3RD, 1880.

JAPANESE ERA 2510, MEIJI 13TH YEAR, 1ST MONTH, 3RD DAY, DO-YO-NI.

### NOTES OF THE WEEK.

On Thursday last the O. & O. steamer *Gaelic* arrived from San Francisco, with American dates to December 6th. The P. M. S. S. *City of Peking* came into port from Hongkong on the 30th ultimo, and left for San Francisco this afternoon, at four o'clock. The M. M. steamer *Volga* left for Hongkong with a European mail on the morning of December 29th.

The P. & O. steamer *Malacca*, with the English Mail, left Hongkong for Yokohama on the 31st ultimo. The *China Mail* of the 18th instant says that a telegram has been received in Hongkong announcing that, after the 1st of February next, all mails to and from the East will be sent *via* Paris and Modena.

The steamer *Breconshire*, from London, left Singapore for Hongkong on the 19th of December last.

The Ocean Steam-ship Co.'s steamer *Menelaus* left Singapore for Hongkong on the 23rd ultimo.

The N. C. *Daily News* has received a communication from Captain R. H. Napier, commander of H. M.'s surveying vessel *Maggie*, dated 1st December, from the Tungsha Banks, Yang-tzekiang, in which he asks publicity for the following information:—From the recent examination by the boats of H. M.'s surveying vessel *Maggie*, of the small cluster of rocks, marked Ariadne Rock, on the British Admiralty Chart, No. 1602 (Sheet 1 Yang-tze-kiang; the entrance), the highest pinnacle was found to be awash at low water (ordinary) spring tides.

As in Hongkong, so in the Straits settlements, the new Japanese Minister to London was received with distinction. He left the former port in the *Djemnah* on the 7th ultimo for Europe. During the stay of the mail steamer in Singapore His Excellency was the guest of the Honorable Ho Ah Kay Whampoa, an opulent Chinese merchant, who holds the office of Japanese Consul.

The transfer of the work of the late British to the Japanese Post Office, was made on the last day of the year. We presume that Mr. Machado will shortly proceed to Shanghai, to assume control of the English Postal service in that port.

Local Japanese rumour has it that a number of the leading native merchants of this port, with a view to reduce the discount of the paper yen, are about to place on the market all the specie which they at present hold.

We observe in translations from the southern Japanese journals that anxiety is manifested by Chinese residents of Hiogo and Osaka, on the subject of the diplomatic difference between this empire and the authorities of their flowery land. It is even added that they meditate a general exodus. We can hardly credit the existence of any such feeling. Certainly nothing like it has had any expression among the numerous celestial population of this locality.

Allusion was made in our last issue to the resignation of Sir Arthur Kenedy from his Queensland government, and the possible appointment of Mr. J. Pope Hennessy to the post. The latter gentleman's name is also vaguely mentioned in connection with a change in the administration of our Malayan Indian dependencies. The Straits Times writes:—

Guesses are rife of course as to who our new Governor will be. Many suppose that Sir Henry Bulwer, who was at one

time Governor of Labuan and has recently administered, in the capacity of Lieutenant Governor, the colony to which Sir William Robinson has been appointed Governor, and which will be raised doubtless to the rank of a first class colony, will be offered the post. Sir Henry, it must be remembered, has a mind of his own, and has sometimes given the Colonial Office trouble. Other rumours hint that, probably, General Anson, who has often been passed over, will now get the appointment, especially since the revenue of the settlement has so materially increased since he assumed the reins of administration, owing of course to fortuitous circumstances mostly. A wild few mention Mr. Pope Hennessy as our future Governor, while a unit or two hint that Mr. Douglas, now Colonial Secretary of Ceylon, will be raised to the gubernatorial chair. All these are the vaguest surmises, and it is just probable, now that the general election is approaching, when it is a mere uncertainty whether the present government will again be returned to office, that the Ministry, keeping religiously in view the claims of firm supporters in Parliament in the past will give the post to some zealous underling in Parliament, whose chances of re-election are vague. Colonies, it must be remembered, are some of the prizes in a Government's lottery and form an enticing bait for party support.

The long talked of naval manœuvres will, it is said, now be executed on the 10th instant, in the waters of the bay. Their Majesties the Empress and Empress Dowager propose to be spectators of the evolutions.

His Majesty the Emperor was present at the closing, last week, of the Daijo Kuwan, for the winter vacation.

One of those foreign residents who suffered by the fire in Tsukiji was not only, as our first report of the disaster stated, one of the earliest to provide relief for destitute Japanese: he had previously organized a system for its distribution. Between ten o'clock on Friday night and daylight on Saturday morning four thousand simple meals were distributed at the cost, and through the foresight, of an individual who is himself far from being the smallest pecuniary loser by the recent conflagration.

Chambers of Commerce are in course of being established in provincial centres of industry or trade. Such a body has recently been organized in Kumamoto, and the first subject discussed at the meetings was treaty revision.

We read in the *Straits Times* telegraphic news that an attempt has been made to repeat the Mayo tragedy. On the 14th of December a drunken Eurasian tried to shoot Lord Lytton in Calcutta.

The *Echo du Japon* says that, the official revision of the penal portion of the New Code having been completed, that of the civil half will shortly be proceeded with. It is also stated that the whole perfected Code will be issued sometime next March.

Not very much has been heard for some time past of Itagak and his schemes of reform. It is currently rumoured now, in Tokio, that he proposes to devote considerable time and energy during the current year to endeavours to bring about the establishment of a National Assembly. Meetings are also said to have been held in some of the provinces for the furtherance of the same object, and petitions that it may receive the countenance of the Government have been prepared.

A Reuter's telegram, dated London, 26th of December, announced the foundering, in the Atlantic, of the steamer *Borusia* with a loss of two hundred lives. The vessel in question was British, and sailed on the 21st of November from Liverpool for New Orleans, with sixty-five farmers and their families bound to Texas. These passengers were mostly from Lancashire, Yorkshire and Durham, with a few from Scotland and Ireland.

On the 31st ultimo the Duke of Genoa entertained the officers of the French Military Mission at dinner, on board the *Vettor Pisani*.

A holiday row among the native boatmen employed at the British Consulate is said to have resulted in fatal injury to one of the combatants.

A recent well known resident of Yokohama, Mr. Wong Awan, late of the P. & O. Company's service, has passed, on his way to Europe, through Hongkong, where the fact that he is

about to study in London for the bar has procured him the honour of a notice in the local journals.

Mr. Symes, late of the Hiogo branch of the Imperial Japanese postal service, has been transferred to the Yokohama bureau, his former duties being now discharged by a trained Japanese official.

Our readers will be glad to learn, from the Reuter's telegram we publish to-day, that there was apparently little ground for the unpleasant feeling produced by a former telegram relative to the supposed danger threatening the British army acting in Afghanistan. It appears to us more than probable that the true cause of the uneasiness reported to be felt on the subject, may be sought and found in the fact that, after telegraphic communication had been established with Cabul, the wires were cut by some of the predatory hordes who infest that barbarous country.

Referring to the miscarriage last week of a number of "The Times of the Taisho," a correspondent now indicates new irregularities. He states that "a very large number" of Christmas and New Year's cards, which were sent through the Post Office, have not yet reached their respective destinations, a loss or detention which in several instances is specially annoying. Some of the missives contained water-colour sketches by a well-known local artist, and their non-delivery is a source of much regret to his friends.

From the native papers and private sources we have learned the following additional particulars respecting the appalling catastrophe which has happened in Tokio, a calamity, as we now understand, accompanied by great loss of life. The conflagration commenced in a house in Hakuya cho where a wood fire was burning in consequence of the cold weather; and as a strong gale was blowing it spread, as already stated, extremely rapidly. In the crush and hurry to escape from the flames, many women and some children were knocked down and trampled to death, in addition to the loss of a number of men, women, and children, whose charred remains have been discovered among the smouldering ruins. Although the damage done in Tsukiji is very great yet we are glad to report that the majority of the important buildings are safe. The Governor of the Fu, Mr. Matsuda, took immediate steps when the severity of the calamity was disclosed, to provide food for all and shelter for a considerable number of the sufferers. Unfortunately, however, the extent of the misfortune was so great that roofs could not be found for several who most needed them, and who expired from the sheer effects of cold and exposure. On Friday night even, thousands probably were still unhoused. Lieut.-General Oyama, the Chief Superintendent of Police, was rendered conspicuous by his exertions, directing and encouraging the firemen and police in their endeavours to check the spread of the fire. An opportunity is now afforded the authorities of insisting upon wide streets being laid off in a considerable portion of the capital; and we trust that they will see the propriety of carrying so essential an improvement into operation. The same course has had to be adopted eventually in other cities, at vast expense and inconvenience, but with the most salutary result; and there is no reason why Tokio, with wider streets and a better and more substantial class of buildings should, not at once lose its undesirable notoriety for frequent and disastrous fires.

Liberal relief has been provided for the sufferers by the fire, the most distinguished personages in the kingdom contributing promptly and handsomely. The most extensive donations have come from the imperial family and relations. Subscription lists were rapidly filled. The proprietor of the Shintomiza Theatre threw open his building. School-houses were also utilized as refuges. Orders have been issued, from the Ministry of Public Works, that all the timber held in reserve, for government use, in the yards at Saracho, as well as supplies now on the way from Owari, shall be sold at cost price to those whose houses were burned. The work of rebuilding is going on rapidly; but, alas, the structures, as before, are made of wood and paper, as if to invite a repetition of the calamity.

A subscription list, opened at the *Gazette* office, has resulted in a very liberal response on the part of the foreign residents of

Yokohama: and a considerable sum has been forwarded to Tokio for distribution among the destitute.

It is now accurately known that 263 lives have been lost. Numerous bodies are so burned that it is impossible to distinguish the sex to which they belong.

The number of houses destroyed is apparently not positively ascertained. Every native paper gives different figures.

House building in the old flimsy style is going on rapidly, and all trace of the fire will be effaced in an incredibly short time. We are sorry that no attempt has been made to improve the streets, but there can be no doubt that, ere long, another opportunity will be presented for carrying out the course which must ultimately be adopted.

During the past week we were glad to see full houses assemble to hear the ventriloquial feats of Mr. Vose and the very excellent playing of Mr. Brown. But one opinion was, and indeed could be expressed, viz.—that Mr. Vose is really wonderful. The conversation between the different figures is better than anything of the kind we have ever witnessed before, and the decapitation of *Mr. Trotter*, his remonstrances, requests for restoration, and sigh of relief when reunited, must be heard to be properly appreciated. Mr. Vose conclusively dispelled any lurking suspicion that he had a confederate—*Jones on the roof* might have been a friend in the flies, but *Anderson in the cellar* was unmistakably Mr. Vose, as the voice travelled from apparently below the ground to the performer. Mr. Brown's banjo playing is such a marvel on that unpromising instrument, that the audience were positively charmed. *Home Sweet Home* was a wonderful exhibition of what patience, long training and a thorough love of art will accomplish. There was a matinee on Wednesday afternoon when the programme was entirely changed. This afforded parents an opportunity of allowing their children to witness the eccentricities of *Mrs. Brown*, *Mr. Trotter* and the rest of the "merry odd folks" that they largely availed themselves of, much to the delight of their little ones. Last evening, the performance was particularly good, Mr. Brown fairly surpassed himself, and the *terre and esprit* with which he rendered one of those quaint negro camp meeting hymns, procured him a treble encore. We regret that these artists left us so soon. It is very seldom that such a really enjoyable night's entertainment can be obtained in Yokohama; and the constantly increasing attendance showed unmistakably that the community appreciated a good performance, when they had an opportunity of witnessing it.

Favored by the most beautiful of all possible weather, up to last night, when the sky began to lower, and pay instalments of overdue rain, Japanese holiday makers have had exceptional opportunities for enjoyment this season. On the whole they have not been slow to avail themselves of their good fortune. Private parties to scenes of interest in the neighbourhood have been numerous; and temples conspicuously thronged. Honmura is a bower; and the streets between the Town Hall and the Railway Station are also abundantly decorated.

Owing to the general holiday, no Japanese newspapers have been published for the last few days. On Monday the exponents of national opinion will re-appear before the public; and foreign journalists will have, as usual, their happy choice of translations.

The much talked of arrest of Fujita Denzaburo and Nakano Goichi, was brought to a close on Friday, the 26th ultimo, by the release of both parties from custody, after a careful and thorough investigation, which resulted in their complete exoneration from every shadow of suspicion. We are enabled to state, on very good authority, that no specific accusation was preferred against Messrs. Fujita and Nakano, and that the lengthened examination they underwent was due, in great measure, to the various rumours which have been flying about the country, and for the purpose of ascertaining if any valid ground existed for bringing a definite charge against them, on which they might be arraigned before the tribunals of their country. As no such charge could be preferred they have, as already stated, been honourably discharged. We also hear that the chief of police who ordered their arrest was yesterday summarily dismissed from his position in the force. The previous career of both Nakano and Fujita fully warrants the public in coming to the conclusion that the result arrived at is a just one, and the previous action of the police wholly indefensible. Nakano was one of the most

trusted councillors of Tokugawa Keiki (Hitotsu-bashi) at Tauruga, and subsequently governor of Chosiu (Yamaguchi no Kenrei), where he earned golden opinions amongst his countrymen for the able and conscientious manner in which he discharged the duties of his office. Fujita, again, has long been in the front rank among the merchants of Osaka, and has had very extensive dealings with foreigners, every one of whom speaks in the very highest terms of his honourable and upright conduct in all his business transactions.

We are informed that some time ago a calendar was published by the Naimusho under the title of Inyo-taisho-reki. This was compiled merely for calculating back the dates of both the solar and lunar calendars, and was not intended as a comparison between those of Japan and Europe. To facilitate a comparison between the calendars of Europe, China and the Mahometan Countries, Mr. Tsukamoto was instructed by the Naimusho to compile a table under the name of San-Ski-tsuran; this work is in two parts, the first of which is already completed, and about to be published.

His Majesty the Emperor granted an audience to the foreign professors of the naval college, on the occasion of distributing the certificates to the successful students on the 25th instant.

His Royal Highness the Duke of Genoa has returned from Yokosuka, and visited the Italian Minister on the 24th instant.

His Majesty the Emperor has expressed his intention of witnessing the naval review which is to take place shortly.

Mr. Shimadzu has been received by the Emperor, whom he thanked for his attendance at the recent exhibition of *Inu-omono*. His Majesty made Mr. Shimadzu a handsome present.

From a Notification issued by the local authorities, we learn that a competitive exhibition will be held in Sendai next year. The exhibition will open on the 10th of August, and last for about twelve weeks.

As soon as the snow has disappeared, the survey will be resumed of the new road in the Hakone Mountains. When completed this road will prove a great boon to tourists and the public generally.

The fifth annual report of the Tokio Female Normal school, and the eighth annual report of the Imperial Japanese Post Office, have been published.

His Majesty the Emperor's gift of seventy thousand yen to the city of Tokio, was divided amongst the fifteen *Ku* of the capital, on the 26th instant.

A present of three hundred yen has been made by the authorities to Mr. Choyo Senzai, the president of the Board of Health, as an acknowledgment of the zealous and efficient manner in which he discharged the important duties of his office, during the recent epidemic of cholera.

His Majesty the Emperor has given one thousand yen to the Minister for Colonization, to be applied to the relief of the sufferers by the fire at Hakodate.

The *Mainichi Shimbun* mentions a rumour that China has raised an internal loan of eighty million taels to defray the cost of military and naval preparations. The loan was subscribed immediately.

It is stated in the *Chingai Bukka Shimpō*, that the export of rice for the current year has reached nearly nine million kin.

There is a little game that Japanese were playing very much of late. It is an incomprehensible game to foreigners, being bagatelle without a cue, played on a board without a cloth. It has enjoyed a popularity now all but vanished; for Japanese pleasures are

Like poppies spread;  
They snatch the flower, the bloom is dead;  
Or like the snow flake on the river,  
A moment white, then gone forever;  
Or like the Borealis race,

or like any other notion or fancy which comes on an inconstant popular mind and disappears as rapidly as it comes. A Japanese mania is like a Japanese fire: very impressive for the mo-

ment, but producing an impression on a wonderfully elastic surface.

The following were the exports from New York to Yokohama from the 8th to the 21st of November last. Barque *Harrard*, 35,000 cases kerosene; ship *Charles Dennis*, 32 packages h'ware, 42 cs. blacking, 112 pkgs. drugs, 981 cas. s. slates, 9 do. soap, 44 pkgs. glassware, 14 do. lamp goods, 50 bbls. alcohol, 50 bxs. ext. of logwood, 269 kegs. ptg ink, 250 bxs. perfy, 150 kegs. nails, 52,700 cs. kerosene, 6 cs. furniture, 2 iron safes, 1 organ, 1 bbl. crickery, 15 cs. effects, 75 tons coal, 50 bbls. rosin, 5 pkgs. packing, 25 bbls. plaster, 1 pkge. pumps, 31 cs. tobacco, 393 bxs. clocks, 500 gals. spts. turp, 45 cs. brassware; ship *Manuel Llagudo*, 62,629 cases kerosene.

STUART ELDRIDGE, M.D.,  
Surgeon-in-Charge.

#### PARIS LETTER.

The anticipated *Krack* has arrived and nearly gone. The little South Sea Bubbles, that have been rippling over the French Financial World have come to a head with Philippart's inability to meet settling day owing to a balance against him of six million of francs. Is Philippart a Law! He would seem to be so, and a "prophet" into the bargain. As the gains he promised to re-confiding admirers after bankruptcy number one, have not been realized, he has proved a bad prophet of course, but a book is a book although there be nothing in it. He founded a European Bank in this city a few months ago; the crowd brought him more millions than he demanded; he bought up the Grand Hotel, plunged into stock speculations, and finished by ruining thousands. There is nothing but wailing and gnashing of teeth in the four corners of Paris. The Bank he founded attempts to set up the plea that it is not responsible for Philippart's private liabilities, but the law, like public opinion, will not accept that convenient defence. Aware of the romance and fascination that the crowd surrounded Philippart's name with, some speculators farmed the popular credulity; bought in the bank shares, sold them at a high premium, and have thus left the present holders of scrip in the position of the clients with the oyster-shells. A score of leading brokers, yesterday princes, are beggars to day. One of them came before the liquidation committee, confessed he was ruined, placed two hundred thousand francs on the table—all he had—removed the ribbon of the Legion of Honor from his buttonhole, placed it in his pocket and retired weeping. He next bid his family good bye, and has disappeared.

The truth about the Labor Congress just closed at Marseilles, is leaking out; the speakers who indulged in all the wild freshness of communism, and exploded socialism generally, have been repudiated by the working men of France, and protests from the latter fill the columns of the journals. The monarchists have thus gained nothing by that form of crusade against the republic. The *ouvrier* is not socialist now although he was so in 1848. The congress voted the emancipation of woman, and the holding of property collectively instead of individually. M. Reyband once stated, that fifty years ago he devoted a whole winter in endeavouring to discover a "free woman," to draw up a code of equal rights for the sexes, but failed. Mlle. Dohm, a German lady, puts her French sisters into the shade. She goes in for the superiority of her sex, the "masculinisation of woman." Per contra this means, the sons of Adam must be *feminised*; indeed she does not despair to see the day when man's chief duties shall be confined to "the needle and the frying pan." She will then defend the "widower and the orphan." This lady's pamphlet would make a fine operetta.

Prince Metchersky lately traced the Nihilism of his country, not to moral, but to physical causes—the absence of iron in the blood—which, producing anemia, developed irritability in the brain and deranged the liver. The first part of the diagnosis applies to the out-and-out orators of Marseilles, and the usual remedy for it in asylums is not phosphorous or political economy, but iced douches.

Opinion is agreed that Parliament will be convoked in three weeks, and thus allay the uneasiness about the plenary amnesty and the Ferry educational scheme. As to Ministers, their departure or remaining in office is but a secondary matter; the chief point is that the present constitution shall exist, leaving the game of ins and outs to be played by the moderates and the advanced. M. Grévy has disposed of the claim of the amnestied communists, to be re-registered in that Livre d'Or of France, the Legion of Honor. It may be said, he rejects the claim, and the feeling of the army is with him. But he has been less happily inspired in the exercise of his prerogative of mercy. He has pardoned, it seems, two notorious young murderers, that would have been more in their place, "anywhere, anywhere, out of the world."

The real racing season is over, save the leather flapping business, which never ends. Neither the breed of horses, nor the morality of their admirers, is on the road to improvement. Racing is next to uncontrolled in this country, and the noble animal is rapidly becoming a sort of ambulatory roulette table, where owners, jocks and the fraternity form, with a few exceptions, a questionable ring. There is too much professional gambling connected therewith, and too little rest for the animal. For backers, 1879 will be as well remembered as it will be by vinegrowers. Stag hunting is on the increase, thanks chiefly to the duo d'Aumale and his family. They duly opened the fête of St. Hubert, which ought to continue for a week, by dinner parties and big drinks. The hounds were brought into the parish Church porch at Chantilly: a mass was celebrated, at which the guests and general public assisted; then followed the distribution of cakes. The leader of the pack is named *Ragabab*, a compliment to Emile Olivier of "light heart" fame. All the dogs are English; and the public is allowed to join in the hunt to witness the ceremony of the *chute*, and relish the horn concerts. The guests are invited by receiving a "button;" a mandarin fashion; if they accept, they are expected to wear the Orleanist colors, blue and silver. Among other notabilities present were Dumas and Sardou generally ranked politically as Bonapartists, but here in the capacity of co-academicians. Ladies who take part in the hunt must also display the party colors in their costumes.

M. Jules Claretie has won a success in his historical drama of *Mirabeau*. The Mirabeau family were a bad lot; the father was a philanthropist with loose morals; the mother was something between a lunatic and a virago; one son was called *tonneau*, (hoghead) on account of his Falstaff stomach; not produced by "care or holloeing of anthems," but by drink. The other son, the pook-marked Comte, the famous orator, full of genius and venality, forms the subject of the drama. We have his life as a literary hack and a scapegrace, then his appearance as the demolisher of the monarchy. There are his two mistresses; one, Julie, discarded, and the other, Henriette a Dutch girl, who falls in love with Mirabeau, and secretly pays his debts. Marshal Saxe took money from the actress Adrienne Lecouvreur as he would from Mephistophiles. Mirabeau rewards Henriette by making her his mistress, but she is drowned by her rival. The struggle between the two women, the reconciliation of Mirabeau with his father, the famous Procope café, and the oath of the *Jeu de l'homme* made up from David's picture, are the great scenes. Of Mirabeau's brilliant oratory, perhaps all that is retained as current coin is the, "Go tell your master, &c." reply to the King's messenger, the Marquis de Dreux-Brézé; just as all we have of Guizot's repartees, "You can never mount to the height of my contempt," when deputies climbed up to pull him out of the tribune. Probably the day will come when Gambetta will be only remembered by his recommending MacMahon to *soumettre ou démettre*.

Mlle. Heilbron has not succeeded in her début as Marguerite at the Grand Opera: her voice wants tenderness and greater compass: it is thin, wiry even, and incapable of soaring. She must work a good deal yet before making her mark as a *prima donna*; she has, however, in her favor, good looks and the determination to succeed.

The author of the play of *Mirabeau*, M. Claretie, is 37 years of age and no *littérateur* works more diligently. Like Dumas père, he keeps clerks, and has documents and elegant extracts as carefully pigeon-holed, as Emile de Girardin; he is also a family man and rarely goes into society, save the *salon* of Mme. Richtemberger. He writes his newspaper articles on white paper, and his novels on blue; he is becoming a rich man, and will in time have his own house and estate like modern Bohemians. I have alluded to Mme. Richtemberger; she is one of those republican ladies, who, like Mesdames Adams, Arnaud, and Rouvier, have "at homes" to keep

the republican party together: she is not great friends with Mme. Arnaud, whom she accuses of spiriting away Gambetta. Both ladies are widows and very rich. Gambetta might well say, "How happy could I be with either," &c. Perhaps the most intellectual of all these leading ladies is Mme. Rouvier, better known as Claude Vignon, who is an accomplished sculptress, an industrious journalist, and an exemplary house-keeper.

A new play is for Parisians more important than a change in the cabinet, the election of deputies or communist town councillors, or even a Russian ministry at Constantinople, and the world that likes to be amused participates in this feeling. Well, Sardou's piece *Straphane* is being rehearsed; it is Anglo-American, and represents a love struggle between a philosophical atheist and a protestant young lady, who succeeds in snatching the brand from the burning. There is a tabby that embodies a forty-pawson power in the distribution of tracts, a veritable major-domo in the salvation army. The scene is laid in Geneva, and it is whispered that the chateau of Crètes, Gambetta's Swiss wigwag, will figure in the tableaux. The protestant clergy may safely adopt the drama, after *H. M. N. l'Anglais* has arrived at positively its last night.

The volunteers of a year—as those young men are called who must remain at least twelve months under the flag, have left for the depots. By paying down one thousand five hundred francs, and passing an easy examination, they are exonerated from four years service—the full period being five. Every Frenchman on arriving at legal age, must serve this one year's apprenticeship in common with the lowliest, sharing too their life. Advanced republicans demand that the period under the flag be three years—the experiment is being tried, and every young man is compelled to serve alike. For a bread-winner, families and friends pinch themselves to scrape together the one thousand five hundred francs to have him back at the end of one year instead of four, and parents of social standing accompany their boys to the barrack gates, as if they were connected with a funeral cortège. After a few days the lads are cured of their squeamishness and become true "sons of a gun." One general swears that he receives letters from fathers and friends, "to take care of Donk," which were he to attend to, would entail half the regiment mounting guard in his drawing room.

The Princess Clotilde is returning to Paris to live with her husband Prince Jerome Napoleon. It is rumored that the Princess, vowing she would never consent, has consented. There was a Hagar in the way who has now been sent into the wilderness, but with more than bread and a bottle of water. Evidently Napoleon V. is taking his succession seriously; he does not want for cash, and the party is chopping round him. Even Paul de Cassagnac is listening to reason, remembering that with heaven even there are arrangements. This Bonapartist editor is chiefly devoting his talents to abusing Sari for exhibiting live Zulus in Paris and cracking up the electors of Charente for electing Marshal Canrobert a senator.

The season of Advent lecturing has opened. Père Loyson attacks the Vatican, and Father Didon, of the order of the Jesuits, treats of matrimony, which can only be happy where love exists; interest divides it and passion kills it. Père Naquet, as he is familiarly called, deals with matrimony where there is no love; he objects to its being indissoluble and demands, instead of granting judicial separations, to allow ex-lovers to divorce and try wedlock again. Pope says, "No pious Christian ought to marry twice."

The Dutch cook a turbot thus:—put it in a flat wooden dish; place a morsel of wood under the head and tail to keep it from touching the bottom; pour over it boiling water well salted; cover the whole with a cloth; in an hour the fish will be done to a turn.

Mirabeau—"Tonneau," was a notorious drunkard; his valet had the same infirmity and was dismissed for being intoxicated on the days when his master indulged. "But, Monsieur le Vicomte," replied the valet, "you are drunk every day, and so your action is unfair." The valet was retained.

A lecturer a few days ago in Paris, begged the mixed audience to "excuse him for five minutes while he smoked a pipe."

The Minister of Justice complains, his subordinates are decorated with the Legion of Honor without his being consulted; one official returned the decoration, stating he had already received it.

"R. F." The French say these initials do not mean "Republique Française," but "Republic Forever."

By placing a plaster Phrygian cap on the bust of the ex-empress, it makes a capital figure of the Republic, and gets off old stocks.

Littre complains, the papers do not allude to him when alive, but devote a column once a week to his death.

There is a palm tree in South America, *papaya carica*, which possesses very remarkable properties. Its sap is a very powerful digestive agent. Digestion is a complex act. Meat is digested in the stomach, feculae, already modified by the saliva; while fatty matters are only digested in the intestine. Hence the explanation,

why some persons can digest meat and eggs without difficulty, while their stomachs rebel against seculent and fatty substances. Individuals, on the other hand, who cannot eat veal, can partake of fatty preparations and pastry without inconvenience. Thus each organ has its rôle, and on their state of health depends the integrity of digestion. Inhabitants of cities suffer most from dyspepsia, that is, from an alteration of the digestive ferment. It is for this latter class of sufferers, that Messrs. Wurtz and Bouchut have investigated the action of the *papaya*. The latter gentleman has experimented with the preparation for two years with success, in the hospital for sick children. The papaya is more generally known in America as the "melon tree;" the fruit is rose-colored, sweet, and is eaten like an ordinary melon. The trunk and the veins of the leaves, contain a bitter, milky sap or juice, which, after a short exposure to the air, emits an odor resembling decomposed cabbage. The sap exudes when incision is made in the trunk, it immediately coagulates, and separates into two parts a more or less soluble pulp, and a limpid, colorless serum. Now if this juice, in its natural state, be placed in contact with raw meat, fibrine, the white of eggs, or gluten, it will soften these substances in a few minutes, and in some hours dissolve them if at a temperature of 40° Centigrade. Milk is rapidly coagulated by the juice, and its caseine precipitated and dissolved. False membranes from croup and intestinal parasites, as the tape-worm, &c., are similarly disposed of in a few hours. If a beefsteak be cut up in morsels and placed in a saucer containing some papaya juice, it will be seen to gradually disappear, the pieces melt away as if they were lumps of sugar. Clearly the papaya contains a ferment resembling that peculiar to carnivorous plants, as the drosera, nepenthes, &c. Vegetable pepsine is not exactly a novelty, but that in the sap of the papaya is stronger than what is secreted by the stomach, and possesses this superiority, that it can dissolve nitrogenous matters not only in the presence of a small quantity of acid, but even in a neutral medium, or one slightly alkaline. While weak digestions have reason to rejoice, it is not less important to bear in mind the efficacy of the preparation, in the treatment of croup and tape worm.

M. Gaston Bonnier has written a most interesting essay on the nectaries of plants. His aim is to invalidate the conclusions of the Darwin school. If he has failed in this, he has not the less produced many remarkable facts. The Darwinists may have erred in being too absolute, but it does not follow that the laws of the school are false, because exceptions to these laws can be adduced. The general ideas respecting nectaries and the matters they secrete are that their object is to furnish to insects a saccharine matter which attracts them, and thus compel them, unconsciously, to directly fecundate or cross the flowers. The latter would be destined to gather and protect the nectar, to attract by their colors and their perfume, the insects, and afford them a passage in such a manner, that in penetrating into the corolla, they will deposit on the stigma the pollen with which they are charged. This view has numerous exceptions, as some plants—the *cicis*—are visited by insects for their nectar before even being in flower. A flower deficient in color can still entice insects by its odor. Nageli, for example, attracted bees to artificial flowers coated with odoriferous honey; when the latter had been consumed the bees disappeared. M. Bonnier took four square pieces of different colored stuffs, covered them with honey and spread them on the grass; the bees came and sucked all the same, regardless of the colors, and flew away when the honey had been consumed. But insects not the less know that such and such a flower has colors indicative of a nectariferous corolla. M. Sachs says; an insect visits always a certain flower in the same manner. Bees, if a flower be closed, will tear or perforate it in order to arrive—ever in the same direction—at the nectary. Some flowers, the geranium, digitalis, &c., are visited for their nectar after the fall of the corolla. Insects too large to penetrate into certain flowers, perforate them to reach the nectar. Such insects are not agents of fecundation, but all insects are not adapted for this latter function to all plants. The secretion of nectar varies with the weather, and following the hours of the day. If the weather be fine, the volume secreted diminishes from the morning, is least at noon, augmenting towards the night. Certain species of plants may have nectar in one country, as in Norway, and none in another, as in France. The humidity of the air and soil increase the emission of saccharine juice, and the latter is most productive at the moment of pollinisation, and in proportion as the sugar diminishes the glucose augments. The latter feeds the ovary, which changes and swells into fruit. This alteration in the saccharine matters is due to a ferment, which acts in the same manner as the leaven of beer. M. Bonnier agrees with Bravais that plants can re-absorb their secreted nectar.

Professor Saccardo of Padua, continues his interesting experiments of artificially coloring the corolla of flowers. There is no

thing new in the idea, but the methods employed are original. He simply causes the plants to drink certain colored solutions—aniline chiefly, which penetrating the tissues, modify color—in fact dye the nervelets and veins of the corolla. Gardeners are aware that by mixing iron filings with the soil around hortensius, the latter receive a blue tint. The roots of pansies and stocks dipped in a solution of green aniline become colored in their flowers in fifteen minutes, but the plant dies in the course of a week. Watering the soil with a colored solution does no good—as the earth absorbs the coloring material.

Messrs. Rambert and Robert are bringing out a magnificent serial publication of what I might call, the "Natural History of Familiar Birds;" of those birds that we love, which interest all ages, even infancy. About sixty species are noticed, and what is certainly new, the drawings are all from nature. The authors are very severe on the inhabitants of Southern Spain, of Corsica and Italy, for their massacres of feathered friends. They slaughter with the coldest cruelty, some of the most charming species, seeing in them nothing but game. The havoc is more terrible as it is over these regions the migrations pass. The Italian markets are encumbered with robin redbreasts, larks, red wings, finches and thrushes; the nightingale is a good take also, and even young swallows. The chapter on the tom-tit is peculiarly interesting. This bird is a veritable acrobat, and executes gymnastic feats on the extremity of a leaf with a marvellous dexterity—a combination of a monkey and the squirrel. But its play is hunting all the while the eggs of caterpillars, bugs and spiders, and it is terribly cruel if caged with a weaker bird—will kill it in order to suck its brains. As a parent, it cracks hard seed and grains affectionately for its young. The hawk is the only bird of which the tom-tits have a mortal dread.

Messrs. Cerbel and Dumont publish a volume of six hundred pages of a work treating on the industries of France, and deploring, that there is no intelligence on the part of the French artisan and manufacturer, that they are being cut out of their own market by the foreigner. The French are not sufficiently speculative—and are afraid to change the old plans for new. In the matter of coal, France ranks only fourth in the production of that combustible—on a par with Belgium, though she is not deficient in coal mines. England produces as much coal as all the nations of the world together. Excepting in iron, France has to depend on the foreigner for her supply of the other metals although she is comparatively rich in them herself. In fact, an English Company works the chief iron mine at Bone, in Algeria.

The preservation of the sight is engaging much serious attention. Professor Javal is not far from considering that defective eyesight is due to the bad lighting of school-rooms, hence the importance of the subject, for France intends erecting thousands of new primary schools. As general rules, the light should never strike the pupil's eyes directly; it ought to enter the class-room bi-laterally, and by windows built on a north-west and north-east axis, inclining if possible rather to the latter. The healthy eye requires no protecting glasses, save when travelling across glaciers or in countries full of too brilliant sunshine. The eye has a wonderful power of adaptation; thus the light of the sun is about one million times more intense than that of the full moon, and yet the eye can distinguish objects by the light of either orb. The variations in the diameter of the pupil contribute something to this power of adaptability, it is in the retina that the sensibility of the eye resides and which produces the faculty of contraction and expansion, following light and obscurity. Reading a book under the direct influence of the sun's rays, will invariably end by producing blindness, and for a time prevent seeing in demi-obscurity. The houses in Madrid are so protected from sunlight by shutters half closed and blinds entirely drawn down, that persons entering such apartments directly from the street, can perceive nothing for eight or ten minutes, while the occupants can see quite well. Insufficient lighting is more injurious to children than adults; the pupils of the latter are less dilatable, thus compelling immediate abstention from work when darkness sets in. Grown up persons also generally patronize glasses, and if not short-sighted in youth, they rarely contract the infirmity in advancing years. It is an error to suppose that the number of windows in a school ought to be proportionate to the number of scholars. Artificial light is a cause of fatigue to many persons, as it entails a greater dilation of the pupil. The difference in intensity between natural and artificial light can be seen in the burning of a lamp during full day. A lustre with one million of candles, would still be very inferior in illuminating a room to the direct light of the sun. A well-known *littérateur* cannot work by day, unless the shutters be closed and the lamps lighted; this is owing to the action of the chemical rays, which yellow glasses ought to remedy. After every eclipse of the sun, oculists have an increased number of patients, who have injured their eyes by looking through im-

perfectly smoked glass. In one of the railway termini of Paris, when the electric light was first employed, there was a general outcry against its effulgency; when it was replaced by gas, the complaints were equally loud by the employés that they were plunged in Egyptian darkness. The fatigue resulting from working by artificial light, is not due to the dazzle of the flame, but to the inadequacy of the light it emits.

Surgery can justly boast of a new conquest; when an eye is severely wounded, the healthy one is in danger of being impaired by "sympathy." To preserve a good eye, it was hitherto the practice to remove the injured one. Dr. Boucheron has discovered, that by cutting the ciliary nerves, the "sympathy" is stopped, and he thus dispenses with the necessity of removing the injured organ. Forty surgeons have thus operated successfully.

Jupiter at present shines with astonishing brilliancy; yet its light is not peculiar to itself, it is reflected. That colossal planet is 309 times heavier than our earth, and 1,230 times its superior in volume. Were it surrounded by a vast ocean, a steam-ship sailing at the rate of fourteen knots an hour night and day, while able to make the tour of our globe in three months, would take nearly three years to circumnavigate Jupiter. And yet the leaf of a tree can obscure him from our vision; a fly alighting on the glass of a telescope, seems to swallow him. After Venus, Jupiter is the most brilliant of all the planets; his diameter is eleven times greater than the earth's, and his surface equal to one hundred and fourteen of our globe's. And yet the diameter of Jupiter is ten times less than that of the sun. The materials of which Jupiter is composed are lighter than those of our earth, but attraction being greater there, they weigh more heavily. It takes Jupiter nearly eleven years and eleven months to revolve round the sun, yet its diurnal rotation is effected in ten hours—five hours day and five night. There are no seasons in Jupiter, all is an eternal spring, and four moons marry their light to illuminate him. If inhabited, it must be by extra-terrestrial beings.

#### ARRIVAL OF THE AMERICAN MAIL.

New York, December 6th.—A cable dispatch to the *Herald* dated Dublin, the 5th, says: Great excitement was caused among the members of and sympathizers with the National Land League by the arrest of Thomas Brennan, which took place quietly, soon after 7 o'clock in the morning, at his lodgings, No. 7 Russell street. The arrest was for a speech made at Balla on the 22d ult. It was effected by Superintendent Mallon, a detective of police, a sub-inspector of the constabulary of Mayo, and two or three detectives. They allowed the prisoner to make every necessary preparation for the journey, and then conveyed him to the Midland and Great Western Railway, where another body of police was waiting. Davitt, who heard of the arrest soon after the starting of the train, immediately telegraphed to the agents of the Land League at all towns along the line to give the prisoner a reception; consequently large crowds assembled about the stations of Mullingar, Athlone and Ballinacree, who rent the air with cheers. The prisoner will be confined in the jail at Castlebar. He is about 26 years of age. For a long time he was clerk of the City Mills. He is Secretary of the Land League and has always taken a prominent part in the Fenian and other demonstrations. He walked behind the hearse at MacCarthy's funeral. It has been his ambition for some time to get arrested. He was much elated when the arrest occurred. His Balla speech bears a wonderful resemblance to one delivered by Meagher in 1848. On Thursday night Davitt and Brennan attended the Theatre Royal, where Geneviève Ward is playing. When they parted after the performance, Davitt said, prophetically, "Good by; when I see you again, you will be in jail." Brennan arrived at Castlebar at 3½ o'clock this afternoon in custody of superintendent Mallon and his assistants. The prisoner was at once conveyed to the Court-house. The general public was excluded, but Brennan's friends and the representatives of the press were admitted. Mayor Wyer presided over the magisterial investigation. Myles Jordan, the Crown Solicitor, prosecuted; Charles O'Malley, instructed by Malachai Kelley, defended. After consultation the Clerk read the information of sub-Inspector Carter of Claremorris, as follows:

"I was at Toonamore, near Balla, on Saturday, the 22d ult., and then and there saw a large assemblage of persons, numbering some thousands. I saw then and there a person named Thomas Brennan of Dublin. The said Bren-

nan made a speech to the aforesaid assemblage, at the same time and place aforesaid; and I say that in the course of said speech said Brennan, willfully, maliciously and seditiously contriving and intending to disturb the peace of the Queen, to raise discontent and disaffection among the Queen's subjects, to promote a feeling of illwill and hostility between the different classes of such subjects, to excite such subjects to break the law, and attempt to procure otherwise than by lawful means an alteration of the laws of the realm, to resist by force and violence the enforcement by legal process of the rights by law established, and excite disaffection among, and seduce from their duty and allegiance certain members of the Royal Irish Constabulary, did speak and publish to said assembly wicked, seditious and inflammatory words."

The witnesses examined were Superintendent Mallon, Detective Pepper and Sub-Inspector Barter. Ultimately Brennan was remanded till Monday. Bail was refused. The Government intends to exert all its strength for the suppression of the seditious utterances of members of the National League and showed by its action to-day that it does not believe that it has made a mistake in effecting the original arrests. Every honest means of obtaining the conviction of the arrested men will be used. The first step was taken in the Queen's Bench to-day toward removing the trials to Dublin, this new move of the Government will cause a postponement of the trials till January. Arrangements have been making all the week for a monster meeting at Castlereagh. The market-place is capable of holding 60,000 persons. All the great leaders will be there. Messrs. Parnell, Dillon, Daly, Davitt, Ferguson of Glasgow and Brennan are expected to attend, and have openly declared that they intend to make seditious speeches. It is believed by the Land League that Brennan's arrest was intended by the Government to dampen the ardor of the participants in the Castlereagh demonstration. Do not be deceived by reports of intense excitement in Dublin and elsewhere. Save in the west, excitement prevails only in the limited circles of agitators. The general public has merely taken an ordinary interest in events. It is generally agreed by those who are most friendly to the Government that the agitation would have died a natural death before now but for the arrests.

Dublin, December 5th.—The Court of Queen's Bench to-day granted the application of the Crown, that if the Grand Jury of Sligo found true bills against Davitt, Daly and Killen, accused of sedition, the indictments should be removed for trial to Dublin.

Thomas Brennan was arrested to-day and conveyed to Castlebar. He will be charged with using seditious language at Balla, and with endeavoring to seduce the police from their allegiance. Brennan is an employé of the Dublin City Bakery Company, Secretary of the National Land League and prominent in the Amnesty Association and other political organizations. He was received enthusiastically by a large crowd on his arrival at Castlebar under the escort of police. Brennan was taken to the Court-house and examined. The indictment was read over to him, after which he was remanded to Monday, to allow time to secure the attendance of the shorthand writer who took down his remarks, as a witness. Bail was refused. The prisoner was defended by Charles O'Malley. The expressions which caused the arrest of Brennan were to the effect that he adopted the words of Davitt, and that the time for resolve and action had arrived. Brennan had been informed of the issue of a warrant, but made no effort to avoid arrest.

New York, December 5th.—A meeting was held to-night under the auspices of the Socialist party, to express sympathy for the Irish people in their present struggle against the landlords. The audience was mainly composed of Germans, but few Irishmen being present. Charles Southeran presided. John Swiston made a long and eloquent address, in which he eulogized Parnell and the movement with which he is identified in Ireland.

London, December 5th.—The number of Her Majesty's ships on the west coast of Africa will shortly be increased in consequence of war prevailing there.

Manchester, December 5th.—The decline in the price of silver causes fresh uneasiness among Eastern shippers of cotton.

London, December 5th.—The Anchor Line steamer *Anglia*, from New York November 22nd, for Glasgow, is stranded

near Plodda, a low rocky island off Scotland, in the Frith of Clyde. It is expected that she will be got off. The crew and passengers have been taken off the vessel.

London, December 5th.—Thomas Bayley Potter, M. P., who recently returned from America speaks enthusiastically of the progress of the United States and of the solidity of the republican institutions of the country.

London, December 5th.—The *Times*, in its financial article, says: The Industry Cotton Spinning Company, the owners of large mills at Oldham, have gone into liquidation in consequence of the depression of trade.

The report of the Cleveland Iron Masters' Association for November shows that the revival in the iron trade in that district is well maintained.

The *Post* announces that Rev. Arthur Wagener of St. Paul's Church, Brighton, has joined the Catholic Church on account of the acceptance by a majority of the English clergy of the Erastian rulings of Lord Penzance's Court, and it is rumored that several members of his congregation and one of the Sisterhood at Brighton will follow his example.

George J. Joseph & Co., export merchants, have failed. They are reported to have business connections in Canada.

Madrid, December 5th.—The Government has decided to dispatch several small war vessels to Cuba.

The Cabinet Council has approved the report of the Senate Committee on the bill for the abolition of slavery in Cuba.

Premier Campos has promised the Cuban Deputies that he will soon present to the Cortes a bill relative to economical reforms, and reforms in the laws relative to the coasting trade of Cuba.

The report on the bill for the abolition of slavery in Cuba was read in the Senate to-day.

Vienna, December 5th.—The Lower House of the Reichstag has rejected the motion for a reduction of the standing army, and adopted the first clause of the Government's bill fixing the strength of the army on a war footing at 800,000.

The clause prolonging the operations of the bill for ten years failed to obtain the necessary two-thirds majority 174 members voting for and 155 against it. An amendment prolonging it for three years was also rejected.

St. Petersburg, December 5th.—The Czar visited the theatre last night and was most enthusiastically received. The performance was suspended while the Russian national anthem was sung.

It is reported that two persons have been arrested on suspicion of complicity in the recent attempted assassination of the Czar.

An excited crowd on Tuesday broke in the windows of the house near Moscow whence they supposed the mine had been fired. They had commenced to wreck the house, but were stopped by the police.

New York, December 5th.—A dispatch to the *World* from Alexandria, the 4th, says: The machinery, constructed upon my designs by Roshling, for lowering and moving the obelisk, has now been thoroughly tested, and I am glad to say that it works admirably. The obelisk has been successfully cradled, as you will see by the photograph mailed you. An attempt was made to-day to lower it before all the gearing was ready, in my temporary absence. One heel of the monolith caught on one of the supporting crabs. The darkness stopped work for the day but the obelisk is solidly and safely moored and suspended, against the renewal of operations. All other preparations are going on favorably.

H. H. GORRISO.

London, December 5th.—The *Daily News* understands that about six months ago the Russian Embassy here received information that an attempt would be made on the Czar's life by blowing up the imperial train. The Russian Government was immediately informed of this, and it is believed that the projected attempt had been more than once frustrated.

Paris, December 4th.—After the debate on the Floquet-Brisson interpellation, and explanations by Waddington and Ferry, the Chamber of Deputies this evening passed, by a vote of 243 to 107, an order of the day favorable to the Government to the effect that the Chamber having heard the explanations and trusting to the vigor with which the Government will remove all reactionary officials, pass the order of the day. Almost all the members of the extreme Left

abstained from voting. The minority consisted of Deputies belonging to nearly all the groups of the Right.

In the debate in the Chamber of Deputies, Wednesday night, Paul de Cassagnac was formally censured by the House for refusing to retract an insult he had offered to Jules Ferry, Minister of Public Instruction.

London, December 5th.—A Paris correspondent says: It is understood that Leroyer, Minister of Justice, has announced his intention to resign from the Cabinet, as he does not consider that the recent vote has consolidated the Ministry.

London, December 5th.—Accounts from Egypt state that the Government is actively completing preparations for a war with Abyssinia. The War Office at Cairo and the harbor of Suez, where the troops are to embark, are very animated. If hostilities are resumed the Egyptian forces will be divided into two armies. The former is to be composed of 8,000 men and the latter of 12,000. The offensive army will be projected on the harbor of Arkiko, near Adua, the capital of Abyssinia, and the defensive army will take up two intrenched positions—one at Gasun, near the Babal River, and the other at Bahin, on Render River, thus commanding the two main roads of Abyssinia leading from the north to the Soudan. Gordon Pasha will command the defensive army.

A dispatch from Alexandria contradicts the report that the British and French Consuls at Massowah have summoned King John of Abyssinia to allow Gordon Pasha to return to Egypt without hindrance. The dispatch says that there is no British Consul at Massowah. No news has been received of Gordon Pasha since his return to Debratabor at King John's request, and it is not yet time for letters to arrive from him. The report of strained relations between Egypt and Abyssinia is greatly exaggerated. No troops have left Cairo and none are preparing to leave, except one battalion which Gordon Pasha requested in his last communication.

A Cairo dispatch says: A special meeting of the Council of Ministers was held yesterday, the Khedive presiding, in consequence of a dispatch having been received stating that two chiefs, acting under the Khedive's orders, had traced Gordon Pasha to Soiani, where they found him in good health, but were prevented from bringing back any letters from him.

King John, with a powerful army; has gone to Gondar. The Egyptian officer commanding at Soulat reports that the Abyssinian General, Ras Allout means to attack that post.

Berlin, December 5th.—During the visit of the King and Queen of Denmark to this city not a word was mentioned about the Duke of Cumberland or the Hanoverian sequestered moneys.

Edinburgh, December 5th.—A correspondent of the *Scotman*, at London, states that he has seen private letters from an influential person in Bulgaria, giving warning that not much credit should be attached to the alarmist report telegraphed thence about the political situation there, and saying the country was never quieter than now.

Vienna, December 5th.—It is untrue that there will be a conference of Russian Ambassadors at St. Petersburg. Neither Count Schouvaloff nor Prince Lobanoff will proceed to Russia for the present. General Ignatieff is again pressed to accept the Ambassadorship at Rome. Norvikoff, Russian Ambassador at this Court, who has been to Moscow, will return here this week.

Vienna, December 5th.—The subject of submitting the Greek question to an International tribunal is under consideration.

Peath, December 5th.—There has been a heavy snow-fall throughout Hungary.

Brussels, December 5th.—The Archbishop of Malines will publish a declaration stating that no difference exists between the Holy See and the Belgian Episcopacy, relative to the education law.

Rome, December 5th.—It is announced that Count Corti, the present Italian Ambassador at Constantinople, will go to London, and Count Menabrea, at present Ambassador at London, will replace General Cialdini as Ambassador at Paris.

Madrid, December 5th.—The water of the Guadiana river has risen considerably, and fresh inundations are apprehended.

London, December 5th.—A land meeting was held yesterday at Menah, county Tipperary, at which 3000 persons were present. Edward Dwyer Gray and Patrick James Smith, Home Rule Members of Parliament, were among the speakers. Resolutions were passed calling for abatement of rents and for a peasant proprietary.

London, December 4th.—A letter is issued by Charles S. Parnell, stating that the Sligo prisoners would be tried at Carrick-on-Shannon on the 11th instant. He also appeals to the public for subscriptions to defray the expenses of the defence.

Parnell and Finigan expect to start for New York on the 17th instant. Parnell will be present at the trial of the prisoners at Carrick-on-Shannon, which it is expected will terminate by December 15th.

Montreal, December 4th.—St. Patrick's Society has asked the clergy for permission to collect funds for the relief of the distressed in Ireland. A mass meeting will be held on Monday night.

London, December 4th.—A Buenos Ayres dispatch of December 3rd says: Intelligence has been received that the allied Peruvians and Bolivians have been completely defeated at Tarapaca, Peru, by the Chileans, who have taken possession of the town. A Chilean squadron is blockading the port of Arica. A dispatch from Valparaiso says Tarapaca has been captured by the Chileans. Losses heavy on both sides.

A Valparaiso telegram reports a disaster to the Chilean forces near Loa, at the mouth of the river of the same name, on the boundary between Peru and Bolivia. After a stubborn fight, 1,500 Chileans surrendered to the allies, with all their cannon and ammunition. The Chilean commander was killed. The Bolivian commander afterwards occupied Concha Blancas.

St. Louis, December 4th.—Carlotta Patti entered suit this afternoon against the *Post Dispatch*, asking \$25,000 damages, for publishing an alleged libellous article from the Leavenworth *Times* of last Sunday, in which she is stated to have been drunk on the occasion of her concert there on the night previous.

Berlin, December 4th.—The famine in upper Silesia has become so serious that in many villages over one-third of the population are starving. Famine distress is appearing in Saxony among the peasants and the weavers.

Philippopolis, December 4th.—Twenty villages in the Kirdschuli district of the Rhodope Mountains have risen in arms, and 500 insurgents have seized the local fund and made prisoners of the gendarmes.

Paris, December 4th.—The French Government has directed the Governor of Senegal, Western Africa, to send an expedition to explore the region lying between the Upper Senegal and the Niger Rivers, and report on the feasibility of constructing a railway between the two rivers.

London, December 4th.—The *Times*, in its financial article says: United States Government bonds are hardly to be got here now, and their prices are a mere reflex of those of New York.

London, December 4th.—The conflict which has broken out in New Calabar, West Africa, is between King Amachree of New Calabar and his followers on the one hand, and a powerful chief called Wildbraid and his adherents on the other. Some time since the king of New Calabar died and the accession to the throne of Amachree has not given general satisfaction. During the conflict mentioned in a previous dispatch, no quarter was shown to the wounded or the prisoners, who were immediately killed in many cases and eaten by the lowest classes of natives. It was thought the British naval commander would not interfere unless the English factories were threatened or destroyed, or British subjects molested.

Bonney is suffering almost equally with New Calabar, and the trade of the district is almost at a standstill. King Juja is also reported to be collecting forces and war material to join in the struggle. In such an event the inhabitants of Three Rivers would be drawn into the conflict. Her Majesty's ship *Dido* was outside the bar at Bonney, ready to enter or send in a boat in case of necessity.

Berlin, December 3rd.—The Government bill for the purchase of the Berlin and Stettin, the Magdeburg and Halberstadt, the Hanover and Altenbreken and the Cologne and Minden railways, having been submitted to the Railway Committee of the Prussian Landtag for examination, that

body has appointed a sub-committee to prepare and settle the conditions of furnishing guarantees against any abuse of the powers which the Government would decree under the new measure. The sub-committee now recommend the concurrence of the railway committee in the measure, dependent upon the Government's introduction of a bill during the present session, or at latest during the next, guaranteeing separate financial administration for railways, so that the revenues therefrom shall be applied solely to meeting the charges on railway debts, management and extensions. The sub-committee also recommend that the railway administration shall be assisted by a general railway council, to co-operate with the central railway administration, vested in the ministry of public works, and by district railway councils to operate with the managers of the various railways. These recommendations have been accepted, with slight modifications, by the railway committee, and will doubtless be adopted by the Landtag.

## LAW REPORTS.

## IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esquire, *Consul*.Messrs. F. GROSSER, & A. SCHULTZE, *Assessors*.

Tuesday, December 30th, 1879.

FRANTZ BARON STILLFRIED

versus

STILLFRIED and ANDERSEN.

Plaintiff asked that defendants be ordered to pay him \$143 for services rendered and expenses had on their behalf in exhibiting their photographs at the Philadelphia Exhibition, 1876. He also asked costs.

Defendants demanded that the claim be dismissed and plaintiff be ordered to pay costs.

Plaintiff appeared personally; Mr. Kirkwood appeared together with Mr. H. Andersen, the present holder of the defendant firm.

Plaintiff urged his claims. Mr. Kirkwood said that the defendant firm had never authorized plaintiff to represent them at the Philadelphia Exhibition; if he had been so authorized by Baron Raymond Stillfried, it had been solely in the private interest of the latter. He produced 4 bills to prove that the photographs of the firm, exhibited in Philadelphia, were exhibited by the Photographic Company in Vienna which had been paid in full by the defendant firm. The exhibition took place 3 years ago, but it was only 6 weeks ago, that the defendant firm for the first time heard of this claim. Then it was only \$40, a fortnight latter it grew to \$100, and now it had swollen to \$143.

Plaintiff stated that he in Philadelphia in 1876 received a letter from his brother, engaging his services at the exhibition on behalf of the firm of Stillfried & Andersen. He is not now in possession of that letter, but he invokes the testimony of his brother. At the same time as he received that letter, the firm of Wilson & Co., photographers in Philadelphia, received a letter from Stillfried & Andersen, requesting them to deliver the photographs of the latter firm to plaintiff, who would refund their outlay. Witness saw that letter in the hands of Wilson and Co. and he assumes that the copy of it must be in the press-copy-book of the firm of Stillfried and Andersen, and he demands that defendants be ordered to produce their press-copy-book, or called upon on oath to deny, that such a letter was ever written. He is not aware of what the firm exhibited in Philadelphia through the Vienna company. He denies that he has ever demanded from defendants first \$40 and then \$100. He is not a merchant and keeps no books, and is therefore unable to prove his outlay on behalf of Stillfried and Andersen but he has written to Wilson & Co to send him a copy of their bill. As to the photographs, they are at defendants' disposal: they are now partly at the permanent photographic exhibition at Philadelphia, partly in witnesses' possession.

To Mr. Kirkwood:—"The photographs were exhibited in the name of Stillfried and Andersen.

To Mr. H. Andersen:—"The letter to me from my brother, authorizing me to act on behalf of the firm of Stillfried and Andersen, was signed "Raymond."

The Court decided that proof must be procured by the plaintiff, that Baron Raymond Stillfried in 1876 authorized him to represent the firm Stillfried and Andersen at the Philadelphia Exhibition, and:

That plaintiff in the course of 1876 had rendered account to Baron Raymond Stillfried of the manner in which he had discharged his trust, and that account of expenses had been admitted as correct by the firm of Stillfried and Andersen, further:

That the defendant firm be ordered to produce the press-copy-book, in which the alleged letter to Wilson & Co. is entered, or that the present holder of the firm, Mr. H. Andersen, deny on oath that such a letter was ever written.

Baron Raymond Stillfried was sworn to speak the truth, and said: I have so far no interest in the present lawsuit that, if the plaintiff loses it, I must pay his claim. My former partner, Mr. H. Andersen, and I agreed to send photographs to the Philadelphia Exhibition in 1876. The photographs were sent by us to the firm of Löwe in Vienna, thence to be forwarded by the Photographic Company at Vienna to Philadelphia, at that company's expense. Fearing, however, that these photographs might arrive too late in Philadelphia, I and Mr. Andersen agreed to send another lot direct to Philadelphia, addressed to Wilson & Co. The correspondence with Wilson & Co. was written by Andersen. Afterwards it struck me that my brother, who was in Philadelphia would probably be more zealous in the interest of our firm than a mere stranger, and with the consent of Mr. Andersen, I wrote private letter to my brother, explaining the matter to him and asking him to take delivery of our photographs from Wilson & Co., and to refund them their expenses, and to represent our firm at the exhibition. Mr. Andersen wrote in the name of our firm to Wilson & Co. Later on my brother wrote to me that the affair had not turned out well and mentioned the amount of expenses he had had on behalf of Stillfried and Andersen. I do not now remember the exact figure, but it was very nearly the same as plaintiff now claims, only my brother did not then charge for his personal trouble. Andersen was in our office when that letter arrived, and he had it in his hands and read it. When I in the year 1877, was in Philadelphia, my brother mentioned the affair and presented me his account against Stillfried and Andersen, but I asked him to wait until my return to Yokohama, and then it slipped from my memory. The account my brother presented to me in Philadelphia was at that time admitted by me on behalf of Stillfried and Andersen as correct.

Mr. H. Andersen produced his press-copy-book, which on page 415 was found to contain the following letter:

"Yokohama, 11th February, 1876.

"Wilson, Esq.,

Philadelphia.

"Dear Sir.—I have read in the *Photographische Mittheilungen*, that you will be kind enough to secure place for pictures, intended for the Exhibition, if they are addressed to your care.

"Being so far away from home we were informed to send in our photographs to a date which could not be kept by us, which was in fact impossible to keep, the time being too short, but notwithstanding we sent off two collections to Vienna, one via America and the other via Brindisi, in case one should be delayed.

"We have protested against the short notice given to us, and do not know if our pictures will be sent off to Philadelphia or not, and we therefore take the liberty to address to you as per receipt enclosed.

"Should our pictures not have arrived from Vienna, kindly exhibit those we send you now. Any expenses will be paid by Baron F. Stillfried, North, 7th street, Philadelphia, upon application.

"We should like to become members of the National Photographic Association and wish to subscribe to the Philadelphia Photographer, and trust you will do the needful in this respect.

"Should the Photos have arrived from Vienna we leave it to your judgment to add some which are not duplicates from those sent to-day. The remainder please deliver to the above address. We shall afterwards be happy to present your association with the pictures exhibited.

"We beg to hand you list of photographs sent and ask you to accept our best thanks for your kind intervention in our behalf.

"We remain, dear Sir,

"Yours obedient servants,

"(Signed) STILLFRIED & ANDERSEN.

"P.S.—We beg to add that our pictures will be exhibited by *Photographische Gesellschaft* in Vienna, if they arrive in time, as our Mr. R. Stillfried is a member of the association."

He denied ever to have seen the letter from plaintiff,

which the last witness had mentioned as containing the account of outlay on behalf of Stillfried and Anderson. He was ready to swear that no other letter had been written to Wilson and Co. in the name of Stillfried and Anderson than the one of which he had just produced copy in copy-book.

Plaintiff asserted that the letter now produced in copy is the very letter to which he had made allusion as ordering Wilson and Co. to deliver the photographs to him.

Mr. Anderson contended that the exhibition of photographs at Philadelphia was not at all in the name of the firm of Stillfried and Anderson, but in the sole name of Baron Stillfried, to whom personally also the diploma has been issued.

Judgment to be delivered on Tuesday, the 6th January next.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXX.

#### THE INMATES OF THE RUINED COTTAGE.

If Saburo's orders to the landlord had seemed to savour somewhat of temerity, the same accusation could not certainly have been preferred against the Taira soldiers' manner of receiving their enemies' summons. In fact had there been any possibility of such a proceeding, it might have been supposed that the inmates of the hostel, either forgetting their superior numbers or perhaps purposely misinformed by their host, had preferred a quiet retreat to the chances of an unequal combat. But the one path leading from the back of the inn across a wide valley of green rice fields and sweet scented bean plants, was entirely visible from the main road, so that the watchers without gave another interpretation to the long silence succeeding the delivery of their challenge by the landlord. They knew that men, let them be ever so brave or ever so hardy, are prone to hesitate before making a rush in which their leaders cannot fail to be struck down, and they did not therefore find it wonderful that those they awaited should be in no hurry to cross a threshold guarded by four such swords as theirs. They therefore watched patiently enough, Benkei and Yoshitsune standing on either side of the porch, while Saburo and Shomon took post between them, a disposition which had been effected by a sort of tacit understanding, but which was not apparently designed so as to derive the fullest benefit from the position, for none of the men had placed himself within certain striking distance of the point where their foes might be expected to issue. Benkei had found, lying under the verandah, a sort of huge lever, shod with iron and girdled with heavy metal rings. Of this he had taken possession, and anyone who had seen him swinging the ponderous bar as easily as though it had been a priest's crozier, could have guessed what a murderous weapon it was likely to prove in his hands.

Presently a murmur of subdued voices and a clatter of armour within the hostel warned the watchers that the moment of onset was at hand. Benkei raising his lever, rested it on his shoulder, while his three companions unsheathed their swords and drew a step nearer the porch. For the rest, they betrayed no symptom of agitation, and what was still stranger, by neither glance nor gesture did they seek to encourage each other or to adjust the parts they were about to act in this deadly drama. In truth, to minds occupied by reflections such as the past suggested in their case, peril becomes a pleasant solace, and its issue so inconsiderable that one may not pause to consider the means of assuring or averting it.

The sounds, which seemed to preclude the Taira men's exit, were not however succeeded by that event. Some new cause of delay must have suggested itself to those within, for their voices were presently hushed again, and the same silence as before replaced this momentary promise of action.

The watchers on this side now began to draw disquieting conclusions from so much caution. If what the landlord had said were reliable, the Heike soldiers ought to have desired nothing less than to avoid an encounter, yet even though they did not seek to escape themselves, they were

strangely careless about preventing their enemies from doing so. Half these wasted moments would have sufficed to carry Yoshitsune's party beyond the reach of immediate pursuit; and that the Taira men knowing this, gave themselves so little concern about it, seemed to indicate either an assurance of its impossibility or the development of some crafty stratagem.

Benkei was the first to yield to his impatience. Moving to the porch, he shouted to the landlord in a voice that made the rafters ring, bidding him bring forth his skulking tenants or prepare to have his inn burned about his ears.

The din of this hasty summons had scarcely ceased to echo within, when the landlord crept from beneath the verandah almost at Benkei's feet, his scared face begrimed with dust and bedewed with perspiration.

"They are coming out by the same road," he whispered, grasping his throat with both hands as if the very sight of Benkei made breathing difficult. "I left them working their way through the old lumber that blocks the other exit, and if you make good speed you shall find them with their feet entangled among the timbers."

Benkei had, as we have seen, contemptuously rejected the landlord's previous offer of guidance, and though its acceptance had promised to place the Heike men at a greater disadvantage, but he was no longer equally forbearing. Should their enemies succeed in this present attempt, the complexion of affairs would undergo a change which even these bold men might not contemplate with indifference, for not only would their superiority of position be wrested from them, but also, before the combat could be brought to an issue, communication might be opened with the reinforcements Hiromori had no doubt posted in the neighbourhood. At once therefore they adopted the landlord's counsel, scarcely waiting to hear his suggestions of secrecy and somewhat prolix directions as to how it might best be attained, for the worthy man, having enjoyed an opportunity of observing either party's demeanour, had formed his own conclusion about the probable issue of the struggle.

When the four men, running round the corner of the hostel, reached the point to which they had been directed, they found that two of their enemies had already emerged, while a third had crept from beneath the verandah just sufficiently far to expose his head and shoulders. Upon the two former, almost before they had time to draw their swords, Benkei sprang without a word of challenge, wielding his enormous club with such terrible force that two blows sufficed to break down a frail barrier of uplifted arms and hurl his opponents crashing to the ground. The third man was of course from his position completely at his assailant's mercy, but Yoshitsune who reached him first, shewed no inclination to strike, so that Saburo, springing forward, dragged him from beneath the verandah and bound him securely hand and foot.

Warned by these sounds of combat the rest of the Heike soldiers understood that their ruse was defeated. Turning as best they might, they made their way back to the guest chamber, from whence, rising the mats, they had endeavoured to effect an exit. But their retreat was anticipated, so that, emerging one by one, they were utterly incapable of successful resistance. Never indeed were men taken at a more grievous disadvantage; and to do them justice it must be recorded that they fought with unflinching courage, neither seeking quarter nor accepting it when offered.

Even under less favourable circumstances, however, the issue could never have been doubtful, for both Benkei's prowess and Yoshitsune's address seemed to be combined in Saburo's arm that day. Indeed, of the five opponents remaining after the first encounter, four fell to his sword, and though his comrades, deeming this rough play the best possible solace for his disquiet, did sometimes withhold their hands in his favour, one who could win so large a share of success in such company must needs have wielded a wondrously keen weapon.

Standing among the bodies of their fallen enemies, it might have been expected that some sentiment of exultation would have animated the victors, but the reverse was the fact. If the heat of the fray had brought them momentary oblivion of the events preceding it, the inaction of success did but leave them leisure to recall their trouble, so that it seemed a much easier thing to risk their lives a thousand times than to approve the possible confirmation of the dread they had conceived.

Saburo and Benkei carried in their prisoner, and, loosing his bonds, waited till Yoshitsune should question him. He was a stout-looking soldier, from whom neither the sight of his dead comrades nor the persuasion that his own fate was only deferred for the nonce, elicited the smallest evidence of trepidation. Yoshitsune, understanding that with such an one intimidation would be worse than useless, adopted a somewhat strange method of attaining his end.

"Now that the swords of the Gen and Hei are once more crossed," he said, "it were idle to speak to each other of quarter or compromise. We are in a position to enforce our commands, nevertheless we would first ask on what condition you are prepared to obey them."

The man looked steadfastly into his interrogator's face, but reading there neither hesitation nor mockery, replied, stoutly enough indeed but yet with a show of deference that proved his appreciation of Yoshitsune's rank:—

"As for your commands, master, I may not obey them under any conditions that violate my allegiance. Saving that, there is however one thing I would do much to obtain. It has been your fortune to overcome me before I could strike a blow, and I doubt not that my comrades here were no better entreated."

"That conjecture is false," Yoshitsune interrupted haughtily. "Your chief indeed had small scruple to set a gin for us into which had we fallen, our swords could have served us little, but those dead men met with no such treachery. They were neither foully struck nor overwhelmed by numbers; and could any of them now repeat the story of their discomfiture, you would know that they were suffered to come forth unmolested, and that from first to last each had do to with but one and the same blade."

Yoshitsune spoke truly. However little patience the memory of their wrongs suggested, it had not been once necessary for him to restrain his followers from taking advantage of their enemies' mischance. Thus beyond its moral effect, their evil plight had cost the Heike soldiers nothing but the humiliation of observing their adversaries magnanimity.

The captured man was plainly not incapable of appreciating such chivalry. When he spoke again his tone showed more respect and less defiance.

"If that be so, master," he said, "I have good hope that you will not find my entreaty extravagant. It is that you will cause my sword to be restored, making your own conditions as to whether I shall turn it against you or myself."

"Your request is granted," replied Yoshitsune without a moment's reflection. "Not only shall your sword be restored, but you shall also be at liberty to turn it against any one of us you may select, with the assurance of safety if victorious."

"And what must I do to escape too large a debt of gratitude?" asked the man, doubtful whether his good fortune were yet assured.

"Nothing unworthy of a loyal soldier," was the answer. "We seek our comrades with whom we parted yesterday morning. They have either fallen into Hiromori's hands or been done to death by his devices. You need but to tell us where we may find them dead or alive, and your obligation is completely acquitted."

Whether restrained by the sore anxiety he read in the faces around him, or deterred by a dread that the information he had to impart might imperil the concession just obtained, the man betrayed the greatest reluctance to reply. If Yoshitsune's judgment suggested the true cause of this hesitation, his hope had still strength to misinterpret it.

"We can command no force beyond what you see," he explained frankly "so that your information is little likely to give us any dangerous advantage. At the worst it will only bring us somewhat sooner within striking distance of Hiromori, and you will scarcely deem him desirous of postponing that event."

"Nay, master," returned the man, "if I faltered it was rather on your own account than on my chief's. I am ready to guide you to where I last saw anything of those you seek, but I pray you to believe that if I cannot answer you more explicitly it is because I had no share whatever in the events to which your question refers."

An interval of painful silence succeeded this statement. Not one of the four men dared pursue the inquiry any further. Saburo at last spoke in the hollow monotonous tones of one who retains his self-command by a very frail

tenure:—"Of those we seek, my wife was one. Ere we place ourselves under your guidance, may we not know whether our hope of saving her must be exchanged for a determination to avenge her?"

The prisoner fixed his eyes for a moment on the face of his new questioner, but averted them almost instantaneously, for stranger and enemy though he was, he could not but sympathize with the pain he saw depicted there. "I might almost forget my own mischance," he said, "did it enable me to serve you in this matter, but my knowledge is too scanty to be useful. My comrades and I followed our master an hour after he had left the city in your pursuit. When we overtook him, we saw that the number of his retainers was reduced by five soldiers, whose bodies lay on the road yonder beside two of those they had sought to capture. For this much only can I vouch, but how it fared with her you speak of, I know not. Nevertheless, since those your friends' swords had spared were still some two score men, it were against reason to hope that she has escaped."

"Comrades," cried Benkei, starting up and throwing his huge club over his shoulder, "we gain nothing but new doubt by all these questions and surmises. This man offers to guide us to the place where the cursed varlets did their craven chiefs' bidding. It will go hard if we find not there some better evidence than the stories of our foes."

No counsel could have been more acceptable, and the whole party prepared to follow it forthwith. Before they set out, however, Yoshitsune desired his followers to range themselves before their prisoner, that the terms of their compact might be fulfilled. "For," said he "we may not again have leisure to bestow on this matter, and it were scarcely fair to abridge it overmuch." Then turning to the Heike soldier, he added:—"Make your choice with what speed you may. The adversary you select shall not fail you, so soon as we can afford to dispense with your services."

However bravely the captured man had hitherto borne himself, he quailed perceptibly at these words. That they were spoken in simple faith and with no desire to intimidate, the fashion of their utterance left little doubt, yet they told him that wherever his choice fell, there could be but one issue for himself. Nevertheless his confidence, though somewhat rudely shaken, was probably restored by an examination of Yoshitsune's slight figure and youthful aspect. "If you can consent to cross swords with one so far beneath you, master," he said, "I pray you grant me that grace. If so be that my arm prove stouter, I shall win double praise, and if otherwise, less blame."

"Ho! ho!" laughed Benkei, "you are not the first that has fallen into that trap; nor shall you be by any means the last. Trust my experience, you owe your judgment scant gratitude for this guidance."

"So be it," returned the man doggedly. "I have made my choice, and I will abide by it. At the worst I shall not lack company on my way to the River of the Shades."

The mists of the early summer morning still lingered by the margins of the bamboo groves and among the green rice-fields, as the five men set out from the inn. Benkei had persuaded his comrades to avail themselves of the landlord's hospitable offers, for though neither fasting nor travel had as yet produced any conscious effect on their iron muscles, it was necessary to make provision lest the limits of endurance should be reached at some moment least opportune. For this delay they now sought to atone by increased speed so that a very few minutes sufficed to reach the place their guide had indicated. Many hours had, as they knew, elapsed since the encounter whose deadly results the Heike soldier had witnessed, and they therefore scarcely looked to discover any immediate clue to Iné's fate, but their hope was that Hiromori, delayed by the desire of effecting their own capture might still be within reach of the assault no disparity of force could now dissuade them from delivering.

The road, though dignified by the title of highway, was at best a sorry route, only distinguished from the very rice plains on either side by a narrow ridge of ill laid stones, sometimes so uneven that a man might scarcely traverse them without tottering. Here and there, attaining a little firmness at the cost of large deviation, it followed the windings of a tiny stream, until at one spot an old pine tree, bending down so that its branches almost mingled with those of the stunted alders on the river's margin, served at

once to turn the main road westward and to mark its junction with a barely discernible footpath that led towards a humble farmstead in the heart of the valley.

Reddening the knarled roots of the old pine tree and splashed on the stones they held embedded, were certain stains too conspicuous to have escaped observation even had they not been pointed out by the Heike man-at-arms. Here he had seen, he said, seven dead bodies lying as they had fallen in the fray, that is to say, five on the main road and two in the narrow path that joined it. He had moreover met on their way back to the city, three of his comrades wounded, but of the causes and consequences of all this he knew nothing, having been immediately sent on to take post at the hostel where his own capture had been effected.

While the man spoke, Benkei, passing the pine, proceeded to scrutinize the path beyond. Returning almost immediately, he laid his hand on Saburo's shoulder and said:—"Comrade, you have already guessed whose were the bodies yonder spearman saw in the cross-track. Shall I tell you their history before you look on their faces for the last time?"

Saburo with set teeth and features rigid save for a convulsive throo that now and then distorted them, stood like one who had lost the power of speech or motion, and Benkei himself was so disturbed by his companion's aspect that his words were husky and indistinct when he resumed.

"They had a choice to make and they chose wisely. Narrow as this road is, three men might scarcely hold it long against two score, but on yonder path a pair of swords starkly wielded could bar the passage of half a hundred. This then was how they acted. Matsuda and Koukichi stood in the shadow of the pine there and did such stout battle with the Taira men that a barrier of five corpses soon helped them to keep back their enemies. Behind this barrier Iné and Arake fled along the cross-track towards the hovel at the head of the valley."

"In the name of the Gods, Benkei," cried Yoshitsune, "by whatever tokens you read this history, pause not in your recital. Does your sight reach the sequel or is all this mere conjecture?"

"Nay, in truth, of the end I cannot speak," Benkei resumed, for at this point either uncertainty or reluctance had interrupted his narrative, "but I have learned by what means the Heike rabble made themselves a passage which their swords had failed to open. If I have stayed you to tell what you had already perhaps guessed, it was that Saburo might know how little cause there is to lament those whose death was preceded by such deeds and so much devotion."

"I thank you, Benkei," said Saburo simply. "I know the men and did not look to find them otherwise."

"No, by my faith," Benkei muttered as he led his comrade towards the pine tree, "they were worthy of their master, for stouter soldiers never met a fouller death."

In a little recess, half encircled by the protruding roots of the old tree, lay something which, though completely covered with coarse straw matting, and presenting no outward marks to distinguish it from the bundles of piled up sheaves so frequent on paths among rice fields, did not fail at first sight to awaken that instinct of horror invariably experienced in the presence of death. Certainly on this occasion one might have felt disposed to doubt the justice of such a sentiment, for the rugged outlines of the bundle were scarcely reconcilable with any form of humanity however mangled. But Benkei had no sooner raised a corner of the straw shroud, than the mystery of its shape was immediately apparent, for the matting rested, not on the two corpses beneath, but on the shafts of the innumerable arrows by which they were pierced.

It was even as Benkei's quick perception had divined. After their first onset the Heike soldiers had evidently drawn back from the two solitary defenders of the path and shot them down ruthlessly where they stood. Yet even in the terrible interval between the tending and the twanging of their murderers' bows, these stout swordsmen had not quailed at the certain coming of death. Of all the shafts with which their bodies bristled, not one had reached them from behind, and their fingers still grasped the weapons, no odds, however overwhelming, had sufficed to make them lower.

"The Gods grant them an easy journey to the shades,"

said Yoshitsune sadly, as he helped Benkei to replace the straw covering. "We may none of us hope to die a braver death. But what think you, comrades? I fear no this arrow-flight must have previously shortened the time they strove to gain for their mistress' escape. Shall we not be more likely to avoid a bootless quest by turning our faces at once to Kiyoto than by following this little-trodden by-path?"

"Master," answered Saburo, "whether they had more or less leisure to fly, I know of a surety that neither Iné nor Arake has fallen alive into our enemies' power. If they have escaped, it is by this path we must seek to rejoin them; if they were overtaken, as I may not doubt, there is still an office they claim at my hands."

A moment of silence succeeded to this speech. Not one of the four men, and least of all Saburo, had hitherto permitted himself to express any serious apprehension as to Iné's fate. If this one or that had conceived the idea, it had still proved too painful to endure, but these words, though spoken with almost unnatural calm, were at once so steadfastly hopeless in tone and so little looked for, that they forced a terrible conviction on the minds of their hearers.

Yoshitsune, turning to the Taira soldier who had hitherto acted as their guide, said:—"It is time that you should claim your guerdon, for your services end here. We may not permit you either to follow us or to leave us, else in truth your life were not of much value in our eyes."

"I have had more favour than I sought at your hands, master," replied the man, unsheathing the sword Benkei gave him. "Though my life end here, I shall at any rate have been less unfortunate than my comrades."

So saying he placed himself beyond the shadow of the pine tree in such a position that his back was turned to the rising sun as well as to Yoshitsune's three followers, thus shewing that he doubted neither the possibility of victory nor the good faith of the promise he had received.

Yoshitsune, to whom all feats of arms were so pleasing that he was apt to dally with an adversary before putting forth any portion of his own irresistible skill, exhibited on this occasion a spirit very different from his wont. Impatient himself and sympathizing with his companions' impatience to continue their search, his sword had only flashed twice in the sunbeams before it was red with the blood of the Heike soldier. Severed from shoulder to rib, the man staggered backwards two or three paces, and must have fallen over the corpses at the foot of the pine, had not Benkei, seizing him by the girdle, cast his almost lifeless body over the bank of the rivulet by the roadside.

"Thanks, Benkei," said Saburo, as he readjusted the dead man's straw shroud. "They did not deserve to be disturbed by such fellowship."

Following the path they no longer doubted that Iné had taken, the four companions now hastened forward towards a cottage whose gable was just visible behind the shoulder of a reed-covered knoll. Short as the distance seemed it was interminably prolonged by the endless windings of the stream along whose bank the track ran, neither was it possible to choose a speedier route, for the narrow and often interrupted ridges of the marshy rice fields might not easily be essayed by feet untrained to their treacherous passage. When at last Yoshitsune, who was in advance of his fellows, emerged from the reeds at the base of the knoll, he saw something that caused him to pause in sudden consternation and astonishment.

Half the cottage was destroyed by fire, and, though the flames had been arrested in their progress by some inexplicable cause, an ominous smoke still crept upward from the charred timbers, and clung to the smouldering thatch of the roof. Before the door lay a broken sword; that portion of the blade which remained being covered with blood, while round the hilt were clasped the fingers of a man's hand severed from the arm just above the wrist.

Over this terrible token Saburo bent his head for a moment, and then rising painfully, staggered towards the cottage porch. Benkei would fain have stretched out an arm to support him, but the unhappy man, mistaking the purpose of this action, thrust his comrade aside and passed alone into the house.

When the others followed they found him kneeling on the ground with Iné's body in his arms. She was quite dead, but neither her fair face nor comely form had suffered

any mutilation, and her hands were clasped over the hilt of a dagger buried in her left side as though the faithful steel had lent her some welcome aid in her moment of agony. A ray of sunshine stealing through the open door, gave back the glow of life for a moment to her cheek, and wrung from Yoshitsune's lips a groan of uncontrollable anguish, as he recalled the never-to-be-forgotten evening when her kind eyes had first met his own in the moonlight among the mountains of Shimotsuke.

She was not the only inmate of the cottage. Araki lay just within the threshold, still breathing but so covered with wounds that it was a marvel he yet survived. After Benkei and Shomon had bathed his face and poured some water into his mouth, he opened his eyes and, recognizing his master, struggled hard to speak, but for a time without success. Yoshitsune indeed sought to make him remain silent, for it was evident that the few moments he had still to live were gravely shortened by this effort, but he, fighting stoutly with his faintness, at last summoned strength to make himself intelligible.

"She told me," he whispered, "as we fled along the path my comrades had remained to guard, that if she fell into Hiromori's hands, her husband would be dishonored, and I swore to give her warning when I saw that all hope of escape was gone. We reached the cottage but a few seconds before our pursuers came round the knoll. I knew, by the shortness of this respite, that Matsuda and Kenkichi must have found themselves confronted by terrible odds. Yet thinking to do no less than they, I set myself to guard the door, while she stood inside, holding the dagger you see now buried in her bosom. I had scant space to strike, and these Taira men love not close quarters, but still I think my steel had bitten twice or thrice before I heard them crashing in through yonder window. Then I knew, master, that I might never stand beside you again in the battle. I turned to tell her that the time was come. She was waiting with sad eyes but with such a smile upon her lips as you shall see there when you meet her beyond the Happy Mountains, and such, methinks, as must needs brighten her face still, for it never faded or changed as the keen point pierced its way to her faithful heart. I know not whether it was well done, but I think the gods have kept me alive that I may carry her some message of farewell from you."

Until this moment Saburo had remained like one in a trance, clasping Iné convulsively in his arms, but for the rest, suffering no expression of emotion to escape him, for there is a grief so far beyond the possibility of alleviation, that it may not in anything adapt itself to those outward symbols by which weaker woes are at once measured and allayed. Drawing the dagger from his dead wife's bosom, he now knelt at Araki's side and held the bloodstained weapon before his old comrade's fast darkening eyes.

"I have no farewell to send her," he said, "since I may not live without her, but tell her I pray you, that I must needs wait to see her face until this dagger shall have reached the heart of him the gods will surely give into my hands."

"Your message is delivered, Saburo," said Yoshitsune a moment afterwards, as he laid down the dead man's head, "and if by any chance your own arm should fail in this undertaking, I promise you to count everything imperfect until it is achieved."

(To be continued.)

#### DOUBLE ACROSTIC.

My first's a spring, but I can't tell  
What water from it flows;  
My second's hardly heeded well,  
As o'er our head it goes:  
My whole's a season ladies' prize.  
Though fearful to our sterner eyes!

1.

Husbaby, baby! thou dear little thing;  
Mother bends o'er thee, and softly does sing.

2.

Next, here's a game that you've heard of before;  
"Jack's" a good card, when you've got nothing more.

3.

Space may be nothing—I'll grant you that's right;  
Still, it's a fact that a space is this light.

4.

Many an edifice grand you may see,  
Propped and supported and aided by me.

1—K. takes Kt.

2—P. to Kt. 4, ch.

2—B. to K. 2.

3—B. to Q. 3, etc.

Any other move.

#### LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, DECEMBER 26TH, 1879.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind

.....percentage of humidity

Max. velocity of wind 47 miles per hour on Friday, 4 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer for the week was 30.216 inches on Saturday, at 7 a.m., and the lowest was 29.210 inches on Tuesday, at 7 a.m., the range for the week being almost exactly one inch. The lowest temperature thus far recorded during this season, was 23° 3 on Sunday. The extraordinary average velocity of 26 miles per hour for the wind on Friday cannot fail to attract attention. This culminated in a maximum velocity of 47 miles per hour at 4 p.m. of that day, and contributed largely to the devastating effects of the destructive fire which was raging in Tokio at that time.

## SHIPPING INTELLIGENCE.

## INWARDS.

Dec. 28, Japanese steamer *Akitashima Maru*, Frahm, 1,751, from Kobe, Mails and General, to M. B. Co.  
 Dec. 29, American ship *Golden State*, R. Y. Delane, 944, from New York, Kerosene, &c., to Mourilyan, Heimaun & Co.  
 Dec. 30, American steamer *City of Peking*, Berry, 5,079, from Hongkong, Mails and General, to P. M. Co.  
 Dec. 31, Japanese barque *Sumanoura Maru*, Speigenthal, 925, from Nagasaki, General, to M. B. Co.  
 Dec. 31, Japanese steamer *Genkai Maru*, Conner, 1,917, from Shanghai and ports, Mails and General, to M. B. Co.  
 Dec. 31, British steamer *Gaelic*, Kidley, 2,652, from San Francisco, Mail and General, to O. & O. Co.  
 Dec. 31, U. S. sloop of war *Alert*, Commander Huntington, 1,050, 4 guns, from Kobe.  
 Jan. 1, Japanese steamer *Kobonoye Maru*, Dithlofsen, 1,133 from Kobe, General, to M. B. Co.  
 Jan. 1, Japanese steamer *Tsuruga Maru*, Steadman, 850, from Kobe General, to M. B. Co.  
 Jan. 1, American ship *Richard Robinson*, S. Smith, 1,632, from New York, Oil, &c., to C. & J. Trading Company.

Jan. 2, Japanese steamer *Sumida Maru*, Johanes, 896, from Hakodate, General, to M. B. Co.  
 Jan. 3, French steamer *Tanaia*, De la Marcelle, 1,735, from Hongkong, December 26th, Mails and General, to M. M. Co.

## PASSENGERS.

Per Japanese steamer *Akitashima Maru* from Kobe:—120 Japanese in steerage.

Per American steamer *City of Peking* from Hongkong:—For Yokohama, Mrs. M. Turner and 3 Japanese. For San Francisco, Dr. D. Kindberger, U.S.N., 5 Europeans and 179 Chinese.

Per Japanese steamer *Genkai Maru* from Shanghai:—Mrs. G. M. Dare, Dr. Fitzsimmon, U. S. N. Paymaster, J. Addicks, U. S. N. Messrs. J. W. Clark, E. H. Gill, D. Reynolds, Cunningham, Bisset, Shinamoto, Ballagh, G. W. Knowx, A. Reimer, B. Roth and Okunohi, in cabin; 4 European, 115 Japanese and 4 Chinese. For America Mr. and Mrs. Seaman, Mrs. Yates, and Mr. A. G. Baxter in cabin.

Per Japanese barque *Suminoye Maru*, from Nagasaki:—Mr. Whittle in cabin.

Per American ship *Richard Robinson* from New York:—Mr. Ingham.

Per French steamer *Tanaia* from Hongkong:—From Naples, Messrs. Yoshikawa and Nakano. From Marseilles, Messrs. Elgars, Norigachi, Utiyama and Nakamaira.

## OUTWARDS.

Dec. 27, Japanese steamer *Higo Maru*, Moore, 896, for Hakodate, General, despatched by M. B. Co.

Dec. 28, Japanese steamer *Takachiho Maru*, Nye, 1,407, for Samusawa, General, despatched by M. B. Co.

Dec. 29, French steamer *Volga*, Guirand, 1,502, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 31, Japanese steamer *Nagoya Maru*, Wynn, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Jan. 1, Japanese steamer *Shayio Maru*, Thompson, 800, for Kobe, General, despatched by M. B. Co.

Jan. 3, German brig *Maid Marian*, Brinckmeyer, 260, for Hakodate, General, despatched by Mitsui Bussan Co.

Jan. 3, British steamer *Gaelic*, Kidley, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.

Jan. 3, American steamer *City of Peking*, Berry, 5,079, for San Francisco Mails and General, despatched by P. M. S. S. Co.

## PASSENGERS.

Per French steamer *Volga*, for Hongkong, &c.:—Mr. and Mrs. Thomas, Messrs. R. M. Farlane, Ch. Braun, Volhardt, Seyve and Saitow.

Per British steamer *Gaelic* from San Francisco:—Miss A. Campbell, Messrs. Arthur Peterson, John Gould, John Jamieson, Herbert Osborn, N. Kanda, and K. Suzuki. 1 European and 737 Chinese for Hongkong.

Per Japanese steamer *Nagoya Maru* for Shanghai and ports:—Messrs. Fujita Katono, Fujita Denzaburo, H. C. Litchfield, Nakano, E. C. Kirby, Nakashima, Kojima, Kuna, Nakata, Nakashima, and J. W. McCarthy.

Per American steamer *City of Peking* for San Francisco:—Mrs. C. E. Wheeler, Miss McNeil, Mrs. Yates, Mr. and Mrs. C. R. Simpson and 4 children, Mr. and Mrs. J. F. Seaman, Mr. and Mrs. Wm. Wheeler, Lieutenants H. A. Warren, F. E. Walker, and A. C. Woods, R.N., Dr. D. S. Kindberger, U.S.N., Captain A. B. Cook, Lieutenant S. E. Butler, Messrs. J. W. Clark, J. S. Clerk, K. Schmitz, J. K. Cunningham, A. G. Baxter, G. A. Morganroth, Ira Brown and Val Vose; 10 Europeans and 180 Chinese in steerage.

## CARGOES.

Per American steamer *City of Peking* for San Francisco.

## REPORTS.

The Japanese steamer *Akitsuishima Maru* reports: Left Kobe at 9.15 26th inst. Experienced moderate N.E. winds with fine weather throughout. Arrived at 1 p.m. 28th inst. Passage 39 hours. On the 27th inst. at 1 p.m. passed Company's steamer *Kokonoye Maru* off Cape Sima bound south.

The American ship *Globen State* reports: Left New York 29th July, crossed the equator September 1st, passed the Meridian Cape of Good Hope. Sept. 26th. Had fine weather generally throughout the Indian Ocean; arrived at Anger, November 3rd. Sept. 6th passed through the Java sea and straits Macassar into the Pacific Ocean. In Lat. 32.37 N. 187.24 Long. took the crew off a sinking and disabled junk; next day Lat. 33.45 N. Long. 137.47 took the crew off another disabled junk. Arrived at Yokohama, midnight of 29th December.

The American steamer *City of Peking* reports: Left Hongkong on the 24th December at 3 p.m. To Turnabout had fresh monsoon, thence to Lincholen Islands light easterly winds, thence to port resh westerly gales. Arrived at Yokohama on the 30th December at 2.30 p.m. Passage, 5 days 22 hours.

The Japanese barque *Suminoye Maru*: Left Nagasaki 9 a.m., 25th, arrived at Yokohama 7 a.m., 31st instant, 2 days 22 hours. This is the fastest passage that has been made from port to port. During first six hours experienced strong S. E. winds; remainder of passage strong gales from W. and N. W. heavy sea. Passed a three-masted steamer hove-to off Ku Channel.

The British steamer *Gaelic* reports: Left San Francisco on the 6th of December, and experienced moderate variable winds and fine weather to the Meridian; thence strong N.W. gales, during which heavy seas broke on board, stove in some of the boats, and washed one from the skids, also doing sundry damage to deck gear. Arrived in port on the 31st of December, at 3.30 p.m.

The French steamer *Tanis* reports: Left Hongkong at 5 p.m. on the 26th ultimo. Experienced strong monsoon with high sea to Lincholen Islands: thence to arrival moderate variable winds with fine weather. Arrived at 8 a.m.

## MISCELLANEOUS.

**W. & A. GILBEY'S  
WINES AND SPIRITS.**

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing quality and  
measure, and the strength also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bouny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

## MISCELLANEOUS.

**NOTICE TO MARINERS.***No. 4 of the 12th Year of Meiji, (1879.)***SIRIYASAKI LIGHTHOUSE.****STEAM FOG SIREN.**

THE GOVERNMENT OF JAPAN hereby gives notice, that a Steam Fog Siren has been erected at Si iyasaki lighthouse.

Siri yasaki, at the entrance to the Tsugaru Straits, is the extreme north-eastern point of the Province of Mutsu, in the Island of Nippon.

The Siren will be sounded during fogs, snow storms or other causes that may render the outline of the land indistinct during the day, or the light by night.

The blast from the Siren will be of six seconds' duration with intervals of one minute. During such time as may be necessary for getting up steam for the Siren, or if from any accident the Siren cannot be sounded, the Fog Bell, hung from the balcony of the Lighthouse and rung by machinery, will be sounded at the rate of fifteen strokes per minute as before notified.

YAMADA AKIYOSHI,  
*Minister of Public Works.**Tokei, 20th December, 1879.*

## THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK.

CAMOMILE PILLS are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengtheners of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

### CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

## MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.  
Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.  
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G——, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,  
Export Chemist and Druggist.

## MISCELLANEOUS.

## THE GREATEST

**WONDER OF MODERN TIMES!**  
**HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!**  
**HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1878. 11.

"HIGHEST AWARD & PRIZE MEDAL PHILADELPHIA  
EXHIBITION, 1876."

**OAKEYS**  
**WELLINGTON KNIFE POLISH**

PREPARED EXPRESSLY FOR THE PATENT KNIFE-CLEANING MACHINES, INDIA RUBBER and BUFF LEATHER KNIFE BOARDS. KNIVES CONSTANTLY CLEANED WITH IT HAVE A BRILLIANT POLISH EQUAL TO NEW CUTLERY. PACKETS 3D. EACH; AND TINS, 6D., 1/-, 2/6 and 4/- EACH.

**OAKEYS**  
**INDIA RUBBER KNIFE BOARDS**

PREVENT FRICTION IN CLEANING AND INJURY TO THE KNIFE. OAKLEY'S WELLINGTON KNIFE POLISH SHOULD BE USED WITH RUB BOARDS.

**OAKEYS**  
**SILVERSMITHS SOAP**

[NON-MERCURIAL],  
FOR CLEANING AND POLISHING SILVER, ELECTRO-PLATE, PLATE GLASS, &c. TABLETS 6D. EACH.

**OAKEYS**  
**WELLINGTON BLACK LEAD**

IN SOLID BLOCKS—10, 20, & 40. EACH, & 15. BOXES.

## THE "RIGHT" OF THE COAST TRADE.

WHILE making concessions in the way of composing a moderate customs' tariff, Japan, in the approaching revision of the treaties, is likely to take a staunch stand for the control of her own coasting trade. And she will be perfectly right in so doing; for justice demands that every nation shall possess and exercise control over municipal matters within its territory; and a recognized portion of the domestic jurisdiction which belongs to each country is properly extended over a certain area of the water which washes its shores. It is England's past, rather than her present, example that Japan should follow in this matter. Communities, as well as persons, act mainly from self interest, and a Government, whether it adopts free trade or protection, whether it throws its ports open to the ships of all nations for the conveyance of its coastwise as well as its foreign traffic, or rigidly excludes interference by the stranger in what it considers a strictly private enterprise, does so with the first object of benefiting its own people and contributing to the general wealth and aggrandizement, not of other races, but of its own inhabitants. If this were not so, national rivalry would be injured in its best and most beneficent action, the impulse which it gives to competition and trade, promoting that energy which makes nations great, and so advances the interest, comfort, and happiness of the whole human race. Looking back on English commercial history we find that, as far back as the reign of Richard the second, or in the last quarter of the fourteenth century, the policy of enforcing laws for the encouragement of British navigation, and, further, of rigidly excluding the natives of other lands from participation, in any form, in the insular coastal trade, was adopted. In the time of Elizabeth, when English commerce, and that system of marine adventure and exploration which have so vastly helped to

make it what it now is, were being consolidated, such regulations were in stringent operation. In the reign of Henry the seventh, McCulloch says, two of the leading principles of protectionist navigation were distinctly recognized in the prohibition of the import of certain commodities except in ships belonging to English owners and manned by English seamen. In the very early years of the maiden monarch's prosperous reign, foreign ships were excluded from England's fisheries and coast service. The Act of 1650, emanating from the republican parliament, prohibited all bottoms, of all foreign nations whatever, from carrying on any commerce with the American colonies, unless they had obtained a license from the English Government. Still more stringent measures were to come. Hitherto legislation had been directed principally to the regulation of trade between the empire and its dependencies rather than to the conduct of relations with aliens. In 1651 the Long Parliament passed the famous Act of Navigation, which is described as having a two-fold object,—this being not only to promote our own interest on the seas, but to strike a decisive blow at Dutch power, which was then supreme on the ocean, the vessels of that nation engrossing the far greater proportion of the carrying trade of the world. It is not out of place to mention the principal provisions of an enactment which was in force for more than two hundred years. It declared that "no goods or commodities whatever, of the growth, production or manufacture of Asia, Africa, or America, should be imported either into England or Ireland or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English." Having gained for its own shipping the remoter trade, the Government went on to secure, as far as possible, the European trade. It provided that no goods from any country in Europe should be imported into Great Britain except in British ships or in such vessels as were the actual property of the people of the country or place in which the goods were produced, or from the usual place of export. This proviso was, of course, levelled at the Hollanders, who, while having little domestic produce to export, employed their numerous mercantile fleets in conveying the produce of other countries, to its foreign market. How successful it was in its result the records and events of more than two centuries, and the present unrivalled supremacy of England on the waters of the world, both navally and commercially, can best testify. A silent witness can also be found in the steady decay of the Dutch shipping interests. If we allude at some length to the famous *Charta Maritima*, which has acted a part in England's annals hardly if at all inferior to that played by the Great Charter itself, we do not desire to be understood to propound that, at present, Japan could wisely or safely follow the example there set her. As a matter of abstract right she would no doubt be entitled to do so if she chose, but she gives no hint of any such immediate intention, limiting her existing demands to the control of her coasting trade, a property

which England, from early days, has stoutly asserted and maintained belongs to any nation as fully as do its coasts themselves. As a mere development of this principle came that other sweeping measure which secured to the country that was already colonizing and conquering in every direction where its sons could reach, the shipping trade of the world, adding to her wealth and prosperity, and helping more than anything else in the extension and permanence of its majestic and benevolent rule.

We will not follow up all the additions which were made to the act, each one more stringent than its precursors, until the perfected policy had placed, so far as Britain and her dependencies were concerned, Holland and the rest of the Netherlands with Germany virtually without the pale of the commercial world. In pursuance of our object, however, we will add that, in the words of McCulloch, "the policy, if not the motives, which suggested these statutes have met with very general eulogy." Among most judicious but unequivocal encomiasts of the Navigation Act, we find the name of Adam Smith, who says that its regulations are "as wise . . . as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended—the diminution of the naval power of Holland, the only naval power which could endanger the security of England. The Act of Navigation is *not* favourable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the Act of Navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the Act of Navigation is, perhaps, the wisest of all the commercial regulations of England."

It was not till 1854 that the Navigation laws being no longer needed to protect an industry which they had fostered and developed, were repealed. British shipping then controlled the carrying trade of all parts of the world, and in the hope of greater advantage being secured to the mercantile class all restrictions were withdrawn, and even the coasting trade was thrown open to foreign bottoms. But the fact remains that for two centuries a stringent protective policy was adopted for the home industry: that under it the marine was nourished and increased, and the hardiest and best race of sailors that ever added to the fame, and enlarged the power, of any country were produced and trained. If it had not completed its work that policy would not have been abandoned; and it is well to recollect that it was not actually discarded until several years had elapsed since Great Britain had in other matters of commerce committed herself to a free trade programme. With such precedent before us we fail to see the logic of an argument to the effect that, because England now fancies she sees advantage in admitting foreign competition into the trade of her seaboard, therefore Japan should do likewise. The latter country would probably be wiser in pursuing the course suggested by the earlier examples set in the same quarter. Then, when she has a commerce and fleets like those of the western isles, she can consider the advisability or otherwise of doing as England did when she deemed the time was opportune. But apart from all question of the expediency or reverse of the proposed measure, this empire has probably decided upon adopting it. It is a

mere matter of municipal right; and right after all has to be considered in the revision of the treaties between Japan and friendly European powers.

#### THE NATIONAL EDUCATION.

AT this time last year we had occasion, under this same heading, to review the fourth annual report of the Minister for Education. The period then treated of was 1876, when the national educational system, only a few years old, was effecting its development in all parts of the land. We have now before us the fifth annual report of the department, being for the tenth year of Meiji (1877). Presumably there are good reasons for not issuing these yearly statements within an earlier period of their lapse. We see that this, the latest document, was published in Tokio, in 1879. Mr. Tanaka's reference, at the end of the pamphlet, to the desirability of convening a national educational convention is dated in December, 1878, or more than twelve months ago. As far as we know the congress suggested has not yet assembled. Its utility might be great in accomplishing that conjunction, that unity of spirit less than of form, which should be a powerful engine in moulding, on a stable and truly national model, the men of the future Japan. This country has a grand destiny, which the slow course of the current events that will be history is quietly but surely shaping, and no possible advantage to be gained in improving the instruction of the young should be lost sight of. The Vice Minister, commenting upon the benefits of union, says:—"Convention is not useful only in political affairs but is equally essential to secure unity of action, upon which so much of success depends, among educators. Whatever may be the intelligence and learning possessed by those engaged in the management of educational affairs, it must necessarily fall short of that demanded for the complete solution of the many problems with which they must deal. It cannot be doubted that more can be accomplished by united than by individual effort; and for this reason the organization of an educational convention or association seems to be an important if not an indispensable element of success." He remarks that attention has been directed to the importance of this subject on many previous occasions by his department; but, as the conditions did not appear to be entirely favourable, the matter has been postponed. An examination of local educational affairs throughout the country shows that in many of the *fu* or *ken*, and in some instances in several of the *fu* and *ken* conjointly, educational conventions have been organized, thus indicating a widespread interest in the subject. Hence he argues that the time has arrived for the establishment of a national educational convention, and he therefore strongly recommends that such an assembly be organised and opened at a convenient place; that its regulations and time of meeting be fixed; and that all persons interested in the cause be invited to attend its sessions; in order that discussions may take place, and a general interchange of opinions upon all subjects pertaining to knowledge be made. "In this way," he says, "the cause of public education cannot fail to be promoted and much benefit derived." The idea is an excellent one, and should have direct and happy results. The assembly would probably agree to that difference in the style and scope of instruction which the exigencies of various districts seem to demand, at least as far as elementary education is concerned.

We read that in the primary schools the courses of study, the length of school terms, and other regulations

for elementary schools which were first established by the fu and ken authorities, were almost identical with those of the Government normal schools, and were, as far as possible, uniform throughout. It was soon discovered that in the practical working of these regulations they were sometimes quite suitable for one school district and quite unsuitable for another. To correct these errors, "serious thought and prolonged effort were necessary on the part of the most enlightened and far-sighted men of the time. An inspection of the reports of the educational conditions of the fu and ken during the 10th year of Meiji (1877), will show, however, that most of these difficulties have now been surmounted. A simple schedule of studies has been proposed and adopted for the village schools; and in some instances the length of the school year has been reduced, so as not to interfere with the industrial pursuits of the people in the country districts. In short, the practical operations of the various educational measures have been directed in accordance with experience, and carefully adjusted to the conveniences of different localities, to the end that the benefits of education may, as far as possible, be extended to the general mass of the people; and it is evident that these modifications have already produced beneficial effect on the local conditions." This is highly gratifying, as is also the fact that, notwithstanding the political troubles of 1877, not only has the work of the educational system not been arrested, but has made a steady and uninterrupted advance. The following statistical information on the subject of elementary instruction is taken from the report. The number of elementary schools in all of the seven grand school districts was 25,459, of which 24,281 were public and 1,178 were private schools. Compared with the previous year this shows an increase of 794 public schools and a decrease of 282 private schools, being a total increase of 512. The number of teachers was 59,825. Of these 56,658 were males and 1,275 females, employed in public schools; 1,609 males and 283 females employed in private schools. Compared with the preceding year this shows an increase of 7,364 male teachers and 292 female teachers in the public schools, and a decrease of 111 male teachers with an increase of 18 female teachers in private schools, the total increase being 7,563. The number of scholars was 2,162,962; and of these 1,552,410 were males and 549,768 females in public schools, and 42,832 males and 24,452 females in private schools, which, compared with the corresponding numbers of the previous year, show an increase of 58,827 males and 41,881 females in public schools, the rate of increase in the number of males being 3.93 per cent., and in the number of females 8.34 per cent. The number of males in private schools had decreased by 4,926 and of females by 621, so that the total number in both public and private schools had increased by 95,161.

A small decrease in the attendance in the elementary schools is recorded, the cause of which is not clearly known, but is partly ascribed to the fact that in such ken as Kumamoto, Kagoshima or Oita in the fifth grand school district, the establishments suffered more or less from the evils of military commotion; or in some localities the attendance of scholars was for a time suspended on account of the prevalence of cholera in that part of the country at that time, and in others the scholars failed to attend schools on account of their being obliged to render assistance to their families in their industrial pursuits. We find, further, that the number of the population in the whole seven grand school districts was 34,245,823, while the school population numbered 5,251,807. Of these 2,094,298 received instruction during the year, and

8,158,870 received none, the number receiving and not receiving instruction being respectively 39.9 and 60.1 per cent of the whole. If the number of children of school age who received instruction be compared with the total population of the seven grand school districts, it will be found that there were 6.11 scholars to every hundred of the population. As regards the proportion of the number of scholars to the population, the fu of Osaka and Tokio stand first; and the ken of Nagano, Gamba and Ishikawa follow in the order named. The smallest proportion is shown in the ken of Kagoshima, Wakayama and Aomori. The augmentation in the number of children who were taught as compared with those so instructed in the previous year, is more than one per cent of the population. In these institutions there was, also, a marked advance in the attendance of female scholars in the middle schools. A notable increment in the number of instructors and male students particularly in the private middle schools, is owing to the fact that many students had completed the course in the elementary schools, and, as they desired to continue their studies, the public middle schools were insufficient for their accommodation, and the private ones consequently received large accessions.

His Excellency speaks of the amalgamations in April, 1877, which resulted in the organization of the Tokio University, and the transfer to the control of the new institution of the Botanical Gardens at Koisikawa. In reporting on the condition of the normal schools, he notices in the number of male students a decrease of 1,180 and an increase of 264 female. The great diminution in the number of the former was due to the fact that during February the normal schools of Aichi, Hiroshima and Miyagi were abolished, and the institution in the ken of Kagoshima which had been burned during the rebellion was not rebuilt. The subsequent abolition and incorporation of some of the ken were accompanied by necessary changes in regard to normal schools which could not fail to temporarily check their growth. As the higher education of woman is one of the first needs of Japan, and largely depends upon the qualification of female teachers, we refer at some length to the portion of the document which relates to the numbers in the normal schools, noting first, that, from the reports of local authorities it appears that while the foundation of the educational system may be considered as well established, yet there is a necessity for increasing the school accommodations to meet new requirements; and the scarcity of competent teachers appears to be continually felt. The author remarks: "When the normal schools were first established simple courses of study were adopted for the purpose of training teachers to supply the immediate and urgent demand; but for the future welfare of the schools it is necessary that more complete courses should replace those easier ones, that thorough and competent teachers may be trained, to supply what is now a growing want and one to which the normal schools must now give their attention." The increase, above mentioned, in the number of female students is due to the establishment of two additional normal schools for females, one in the ken of Ishikawa and another in Yehime, and also to the fact that five normal schools previously closed to girls were opened to them. A comparison of the number of male and female students in all the elementary normal schools shows that the females still furnish but a small part of the attendance their number being only 10.06 per cent. of that of the males.

Foreign language schools have been reduced in number; and teachers and scholars of both sexes have largely diminished, for the reason that in "various localities the system of middle schools has gradually been established and com-

plete courses of study adopted, so that those who have hitherto studied in the foreign language schools have advantageously removed to the new institutions. Another cause which has led to the decrease above mentioned is that the people have learned that foreign languages are not very useful or serviceable outside of the large cities or ports opened for commerce, and that they cannot be profitably studied by the mass of the people."

Probably the best evidence of the general favour shown to the dissemination of education consists in the relatively enormous contributions made from private sources. Voluntary donations made by the people of all fu or ken during the year amounted to 809,745 yen in money; land contributions to the extent of 115,506.618 taubo; 810 buildings; 10,576 sets of school apparatus; 26,507 complete sets of books, and miscellaneous contributions of the value of 6,075 yen, 26 sen and 6 rin. The total number of givers was 499,767. We are compelled to observe that, in proportion to the value of the instruction imparted, and the interest evinced by the people, the salary of school teachers is abnormally small, however simple their duties. Even seventy-six yen per annum, the Kioto and highest average, will not allow the favored recipient much pocket money after providing for himself and his family. Living in Kagoshima must be very cheap if thirteen yen and eighty-four sen suffice to maintain a tutor for twelve months.

In notices of the Japanese section at the Paris Exposition of 1878, frequent allusions were made to the educational exhibits. The collection of all kinds of material in this branch was made through the Department of Education, all colleges and schools under the control of the department, the educational museum, the fu and ken authorities, and various societies and private individuals, and carefully selected and classified as follows; 1st. Educational laws and regulations; educational reports; photographs and models of schools, school apparatus. 2nd. Text books; dictionaries; reference books for teachers; educational bulletins and newspapers. 3rd. Educational toys; kindergarten gifts; globes, charts and maps, object lessons; philosophical apparatus; specimens of natural history; medical instruments. 4th. Examination papers and pupils' work in drawing, etc. All of the above articles were exhibited in the educational section of the exhibition, through the Japanese Commission. Mr. Kuki-Rinichi, senior secretary of the Department of Education, was delegated to the exhibition for the purpose of making various investigations upon educational matters of which a report will be presented by him in the future, and referred to in detail in the sixth annual report of the Minister. The fifth report, our review of which we now conclude, contains matter of interest in addition to what we have had space to mention. The brochure will well repay study on the part of all those who are interested in the cause of instruction.

GREATER attention than is accorded to the subject ought to be paid by both Japanese officials and capitalists to the development of the Yesso fisheries. In an article in this review on the 26th of last July we emphatically drew attention to the sources of wealth and national strength which were virtually left unheeded in the northern waters of this empire. It seems that Americans can afford to send fleets of vessels to the neighborhood of the Kurile Islands to catch fish which are subsequently cured in California and thence exported to China. Here is a practical lesson which Japan should not neglect. We read in a San Francisco paper some account of an enterprise which might have more Japanese imitators than exist:—"The codfishing fleet for 1879 on the Pacific coast consisted of thirteen vessels, all of

which were fitted out at San Francisco. This fleet visits the fishing grounds at Choumigan Islands, on the coast of Alaska, and in the Ochotsk Sea, near the Kurile Islands, north of Japan. The Choumigan Islands fleet consists of eight schooners. Most of these vessels make two trips each season. The fish caught earliest in the season average small in size, and are packed in bundles and made into boneless fish, while those taken later in summer are large and are known as case fish, and are sold at higher prices. The Ochotsk Sea fleet consists of 5 vessels, viz., 1 bark, 2 barkentines, 1 brig and 1 schooner. These vessels range from 150 to 400 tons burthen, and make only one trip per season. The codfish on arrival at port are in the condition known as green fish, and have to be dried before being offered for sale. The total catch of 1878 was about 1,600 tons dried fish. The catch of 1879 is estimated at about 2,000 tons. There is as yet a very limited demand for export, but it is expected that if properly introduced considerable sale for fish will be found in Australia and China, to both of which places small lots have been sent and sold at fair prices."

WHAT ravage phylloxera and oidium work in European vineyards, the gamma moth seems able to equal in its attacks upon the beetroot fields of Germany. The *Times* says that the destruction caused in many parts of that country last summer by the caterpillars of the insect has recently been the subject of frequent discussion in the agricultural societies. In the provinces of Saxony and Hanover the crops suffered considerably. The extent of the losses was illustrated at the last meeting of the Society for the Promotion of the Beet Sugar Industry at Halle. Before the appearance of the moth and caterpillar the sugar beet crops in Saxony were in excellent condition, and would, in ordinary circumstances, have yielded a harvest of from nine to ten tons per *morgen*. The actual yield, where the caterpillars had been, was only three tons. Nor was this all the loss; for, owing to the destruction of the leaves, the roots were never properly developed, and the percentage of sugar obtained was considerably below the average. Among the best means for exterminating the pest, the caterpillar machine was greatly approved. It was further recommended that fire should be lighted in the clover fields, of which this moth is very fond, and that, by drawing a rope or string over the clover, the insects should be roused, when they would almost all fly into the fire and perish; but to this recommendation it was objected that in such cases it is almost without exception the males only which are destroyed, the egg-laden female moths refusing to fly up. It was pointed out that the spots which have suffered during one year are pretty safe from the visitation the year following. Among the greatest natural enemies of the insect, the starling and sparrow were especially mentioned. In Japan, at certain seasons and in different localities, a similar plague of moths occasionally manifests its unwelcome presence in great force; and ingenious and laborious methods are adopted to mitigate or eradicate it. Some months ago the agricultural population of an entire district devoted all its time and energy to the capture of its voracious foes, the local government, we believe, offering pecuniary rewards for large takes of the insect.

MR. Flowers, H. M.'s Consul at Hiogo, will shortly return to England on a prolonged leave of absence; and it is probable that he will not again return to his official duties in this country. Mr. Flowers' name has been a conspicuous one for many years to the foreign residents in Japan, as Assistant in the Consulate in this port, as Consul in Nagasaki, and finally as Senior British Consul in Japan. His urbanity and kindness, as well as the assistance which he has at all times cheerfully tendered to his own countrymen,

have procured for him the regard and esteem of those with whom he has been brought in contact. He arrived in this country at a time and under a system which have disappeared. In those early days Dutch was the diplomatic language of Japan, and he was amongst the first chosen for interpretorial duties. Since then his promotion has been tolerably rapid, and now, after nearly twenty years service in the Far East, he is returning to Europe with the consciousness that he and his colleagues in the Consular Service have in no slight degree assisted in making known to Great Britain the advances which this country has achieved. Mr. Enslic's name has been mentioned as the *probable* successor to Mr. Flowers, at Hiogo. We have italicised the word "*probable*," because it is difficult to see what other consular officer could receive the post. Mr. Enslic, although we believe a much younger man than Mr. Flowers, is nevertheless his senior in the service; indeed he seems, from the official list published by the London Foreign office, to be senior to Mr. Martin Dolmen, the present much respected occupant of the British Consular Chair at this port. There should hardly, therefore, be any doubt about Mr. Enslic's appointment, more especially as he has already served several years in Kobe, with much credit to himself and satisfaction to his countrymen, as has been evinced by the addresses and other souvenirs which he has received from the British residents of Hiogo and Osaka. When we add that he not only possesses an excellent knowledge of Japanese, but is also a barrister-at-law, it will be seen that Kobe may properly be congratulated on its new English Consul.

**E**XPERIMENTS are being made in Yesso to cultivate beet-root with a view to the establishment of a sugar growing industry in that island. The result will probably be announced in the next report of the Agricultural College professors. Even if the extreme northern provinces of Japan should prove to be not too well adapted to the new enterprise, the culture might still, we are convinced, be remuneratively followed in other parts of the empire, which could thus be rendered as independent of the cane of China, as France and Germany are at this day of the produce of the West Indies, whence formerly they derived nearly the whole of their supplies of sugar.

**I**T is of course impossible to say whether or not there is any truth in the rumours so persistently reported in the English and Continental press that Great Britain and Russia have come to an amicable understanding for the settlement of their differences in Central Asia, by which Russia would secure Merv, and England, Herat; but the *Bombay Gazette* states positively "that it is the Viceroy's determination to send an expedition to Herat in the spring unless orders to the contrary are issued by the Home Government." This will account for the heavy reinforcements being sent to India, and the large accumulation of stores in Candahar and Cabul.

**R**EPRINTING it from *Blackwood's Magazine* for October, we publish to-day a short tale of life in Paris, from the fluent and graceful pen of Mr. Rudolph Lindau, whose contributions to the highest class of European periodicals keep his memory pleasantly green in the breasts of his friends in the Far East.

**O**LD traditions, derived from slave-holding days, have made the production of sugar from cane, in its West Indian sources so wasteful as to be hardly remunerative. The English consul in the Spanish colony of Puerto Rico quotes, in his annual report, an extract from the letter of a practical cultivator, who says that no one, not familiar with the indus-

try, can conceive, or believe at all possible, the "enormous waste, the frightful loss, in producing cane sugar. The plant itself is almost in its wild state, for little or nothing has been done towards improving its natural condition—in augmenting the saccharine richness of its juice. Attention seems scarcely to have been at all bestowed upon this most important part of the subject. In the manufacture of sugar the incredible waste is beyond all precedent and beyond all parallel in any other kind of business—where the open pans are still used and muscovadoes are produced—when a tenth part of the shipped value of the produce which it has cost so much time, trouble, and expense to obtain is pumped overboard into the sea. The process is opposed to the most elemental principles of science, to the plainest deductions of common sense." It is hardly possible to refer at all to any aspect of the cane-sugar industry without finding an additional proof of the advisability that every country, with the available resources, should endeavour to produce from an easily cultivated root its own supply of the most simply produced and cheapest of all familiar luxuries.

#### THE LATE MR. DELANE.

**T**HE death of so prominent a character as Mr. Delane, the late editor of the *Times*, is an event of more than usual importance in journalism, and has attracted much notice in all parts of the world. The best obituary notice of the deceased which we have seen occurs in the *Bombay Gazette*, and we produce it below.

The death of Mr. Delane brings to a close a career which would have been impossible for anyone but an Englishman, and which is hardly to be paralleled even in England. As editor of the *Times* when that paper was at the zenith of its reputation, and when the Press at home had not yet been subjected even by the most daring critics to that remorseless scrutiny which in these days all institutions seem to be fated to undergo, and which too often shocks us by revealing the feet of clay of the golden idol we had worshipped, Mr. Delane was unquestionably the most powerful of non-official Englishmen during what may be called the middle period of the Victorian era. In the early years of the Queen's reign, while Lord Melbourne, Sir Robert Peel, and Lord John Russell held successively the reins of government, the *Times*, though already the most influential of English journals, had by no means secured that unquestioned ascendancy which it enjoyed from about 1852 till the death of Lord Palmerston in 1865. During this latter term, and, indeed, in a lesser degree up to the outbreak of the Franco-German war in 1870, when the *Times* gave much offence by espousing the German cause too warmly, Mr. Delane wielded an authority far more wide-reaching and absolute than that of an ordinary Prime Minister of England. In France or America a man who had attained this singular eminence would assuredly have grasped at high office and tried to become himself a prominent figure in the political arena, instead of remaining an almost mythical personage whose identity was concealed by the anonymous character which journalism affects in England. But Mr. Delane was content to sink his own personality in that of the *Times*, and to amuse himself with watching from behind the scenes the antics of the political puppets whom he could set up or knock down at his pleasure. The resolute way in which he shunned notoriety often exasperated Mr. Cobden and Mr. Bright—men trained to open controversy and fond of hard hitting. They were annoyed beyond measure at being persistently attacked and ridiculed by one whom they could not reach and against whom their favourite weapon of retaliation could have no effect. It was like fighting with an adversary who, himself unseen, could select at his leisure all the weak points in their armour and plant his thrusts where they would sting most keenly. Mr. Cobden once, growing desperate at what he chose to regard as the unfairness of this style of warfare, made a vigorous attempt to unearth Mr. Delane and hold him personally responsible for the articles published in the *Times*; but Mr. Delane foiled him by printing his letters and declining the challenge. We are far from asserting that the anonymous journalism, of which Mr. Delane was the greatest representative, may not have its disadvantages, or that an editor occupying such a position may not often be tempted to abuse his power; but, on the whole, the *Times* was conducted by him with a forbearance and even a magnanimity that did him the highest honour. Studiously moderate in his own views, he was uniformly tolerant of differences of opinion; and, indeed, one secret of his success as a journalist was that he never

refused admission into the *Times* of letters written by political opponents, if only these were worth reading. A thorough man of the world, he cherished no small antipathies; and in only two instances that we can call to mind did he crush men who differed from him—once when he summarily extinguished the late Colonel Richards, who had written the famous letters signed "Englishman" in the *Times* and presumed to think the paper was indebted to him for increasing its popularity, and again when he punished poor Admiral Sir Charles Napier, who had complained that the *Times* did not publish his letters correctly, by printing the Admiral's complaint *verbatim et literatim*, with all its faults of bad spelling and contempt of punctuation. The only offence he seemed never to forgive was a want of respect for the authority of the *Times*. He set the example of sacrificing his personal ambition to the paper, and within the office, as well as upon all outside contributors, he enforced the strictest discipline, seeing to everything down to the revision of a small paragraph himself, and letting neither leading article writers nor special correspondents traverse in any way the lines of policy he had chosen to lay down. Admirably consistent, he no sooner found that he could not be master of the paper than he resigned the editorship to other hands, and retired contentedly into private life—a rare example of a man who had everything that ordinary mortals desire for years within his reach, and yet sought neither place nor titles nor decorations. To the excellence of his work we could have no stronger testimony than the fact that the *Times*, shaken as its influence has been by recent vacillation and mismanagement, still remains unapproached and unapproachable. Other daily papers in London create a sensation from time to time by exceptional feats of enterprise or by the brilliancy of their leading articles or correspondence; but there is no real comparison to be made between the *Times* and any one of them in point of political influence.

What were the qualities that won for Mr. Delane this remarkable success? To ordinary observation he was merely a hale, shrewd Englishman of the country gentleman type; for he despised "your author who's all author, fellows in foolscap livery turn'd up with ink," and was fond of cultivating the good society in which his pleasant manner, scholarship, and ready wit fitted him to shine. He really excelled, not in literary merit, but in knowledge of men, the one gift which secures to its possessor the power of governing mankind. Kinglake, in his somewhat painfully elaborated satire on the printing Company which took into its own hands the task of ascertaining and directing the public opinion of England, altogether misrepresented the state of things that prevailed at the *Times*' office during the editorship of Mr. Delane, when he described the proprietors of the paper as directing its policy and sending out "a shrewd, idle clergyman who made it his duty to loiter about in places of common resort, and find out what people thought upon the principal subjects of the time. He was not to listen very much to extreme foolishness, and still less was he to harken to clever people. His duty was to wait and wait until he observed that some common thought was repeated in many places, and by numbers of men who had probably never seen one another. That one common thought was the prize he sought for, and he carried it home to his employers." Mr. Kinglake must have had in his memory, when he wrote this passage, the account Carlyle gives of the way in which John Sterling's father, Mr. Edward Sterling, the original "Thunderer" of the *Times*, used to go about to clubs and taverns to pick up public opinion. But it is nonsense to suppose that any body of men ever deliberately sent out an agent to manufacture leading articles from materials collected in this fashion. The idea was Sterling's own, and a very sensible idea it is, for, as the French proverb has it, "there is somebody cleverer even than Voltaire"—in Anglicizing the proverb we should say "cleverer even than Mr. Kinglake"—"and that is, *tout le monde*." So far, however, as Mr. Delane was concerned, it is certainly incorrect to suppose that he merely gave effect to the principles of a policy dictated to him by a miscellaneous body of proprietors of the paper. He was himself the dictator. He had, too, with all his moderation of language, a very distinct policy of his own. He formed, after the downfall of Lord John Russell's Ministry in 1852, a close alliance with Lord Palmerston, whose fortunes he followed with unflinching fidelity through the remaining portion of that statesman's career. Lord Palmerston, it will be remembered, was, in Lord Aberdeen's Cabinet, "the Minister who went his own way" and forced on a war with Russia; and in this policy he had the invaluable support of the *Times*. It was the *Times*' correspondent, again, who in 1854-55 exposed the mismanagement of our army in the Crimea and the incapacity of the Aberdeen Ministry; and the celebrated leading article commencing "Head! Head! Head!" which the *Times* founded on Mr. Russell's letters prepared the way for the accession to power of Lord Palmerston's Administration. Mr. Delane, then, represented in the Press, as Lord Palmerston did in Parliament, that powerful political party which was tolerably well contented with the constitution that existed before the passing of Mr. Disraeli's democratic Reform Bill, and which in foreign affairs maintained the traditions of the school of

Canning. We need hardly say that this party is essentially antagonistic to the school of commercial Liberalism led by Cobden, Bright, and Gladstone. For ten years, from 1855 to 1865, with one brief interval, Lord Palmerston, supported by the *Times*, governed the country as he liked, and even the Court—reluctantly enough as the "Memoirs of the Prince Consort" show—was forced to submit to the domination of the all-powerful Minister and the *Times*. Never before in the world's history had a newspaper possessed such power, and the changed condition of English journalism makes it unlikely that any other editor will hereafter be able to do what Mr. Delane did.

In some respects, it must be owned, the example set by Mr. Delane has had a demoralizing effect on English journalists. The envied position he held at Cambridge House, when Lady Palmerston was the queen of English society and Mr. Delane was always treated by her as her most favoured guest, has raised up in London a host of imitators who too often allow themselves and their newspapers to be made use of by persons of high social rank. Editors of London daily papers now compete with one another most eagerly for the honour, not so much of directing public opinion, as of seeing their names published in the *Morning Post* at the tail end of the lists of people present at fashionable parties. The difference between most of them and Mr. Delane is that he was a welcome and honoured guest in the houses of the great, while they are contemptuously tolerated and patronized because the art of "nobbling the Press"—that is to say, of converting independent journalists into social parasites, is now cultivated by English politicians as an essential part of the science of statesmanship. Mr. Delane could hold his own, and meet the rulers of Europe on equal terms, because he was himself a man of strong character and an agreeable and polished companion. But the English journalists who now aspire to become the pets of good society are too frequently men who have no personal qualifications to recommend them, but are simply rich adventurers who make use of a newspaper, as other speculators make use of the Stock Exchange, to advance their own fortunes. It is not surprising that they are often outwitted by their noble patrons, and find when it is too late that they have sacrificed their own independence and the character of their papers to no purpose.

#### REVIEW.\*

THIS little work we can heartily recommend to the perusal of all ladies of our community as being specially worthy the notice of those of us who are free from the imperious demands of fashion and imitation that home society imposes. The authoress by no means urges disregard of the general forms indicated by those whose province it is to study the art of dress, and to guide its ever changing modes. "Fashion," she says, "is no phantasy of idle minds, no random despot, but a tendency worth study, and eminently instructive, rightly understood, being, with all its blunders, as direct an outcome of the love of beauty as schools of sculpture and painting. It is the last expression of the underlying impulse, the dancing changing waves which vibrate alternately between the desire to reveal and the necessity to conceal human beauty; and the fashion of dress was certainly recognised as the legitimate province of the artist in the days when art was most precious and most vigorous."

All art however deteriorates and runs riot when those for whom it is supplied are wanting in taste and discrimination, and this is especially the case when the demand is for quick succession of novelties rather than for the good and lasting. The modern increase of education in all branches of the Fine Arts is a public acknowledgement of the fact that it is essential to their progress that a more widely prevailing good taste should pervade society. This is not necessarily in order that the number of practitioners in the arts should increase, but that the body of patrons who create the demand should possess a more cultivated discrimination rendering impossible the success of bad productions, and thus leading to higher aims among artists. In a similar way the aim of Mrs. Haweis is rather to assist the judgment of society as to what is good and bad in dress. "We must give intelligent attention to the chief points which go to make up our clothing. And who is so fit to consider these points as ourselves? It is no part of a milliner's business to think for us. It is not her province to consider what amount, form or fabric best accords with our tone of mind, habits and appearance; that is the wearer's province. Since we have all got to dress it is meet and right to do our best with that

\* The Art of Dress by Mrs. H. R. Haweis, Chatto and Windus, Piccadilly, 1879.

amount of time we must devote to the matter." Taking it then for granted that there is a responsibility devolving upon whomever enters society at all, that of not becoming a nuisance to the rest, in looks as well as in deed and act, we come to consider the chief points which should govern our clothing.

One of these is that all dress should have a *raison d'être* and a logical outcome from the wants dictated by climate and customs. We all know the discomfort in this climate in the observance of some of the forms which society expects: the misery, for example, of the black dress suit in the hot evenings, to say nothing of the white starched fronts which our ideas of politeness compel us to exhibit. A compromise was at one time effected in the shape of a white suit and mess-jacket which we believe is still in vogue in some of the China settlements; but this has been given up here and we have returned cheerfully to our bondage again. Our lady friends could, no doubt, cite instances of equal or surpassing torment which they endure in the adoption of the stereotyped forms that the mails bring from Europe, and which, even if we give them the credit of fitness to western requirements, are based upon the demands of an entirely different climate. It is a fact that in some Eastern settlements, as for example those in Java, European modes of dress are more or less violated, but in such a way as to put aside all idea of art or decorum and to produce slovenliness. Without wishing to be considered to advise the sacrifice of artistic appearances to individual comfort, we cannot help thinking, that, with some little study, fashions might be instituted which would excel in, rather than fall short of, the charming, inasmuch as they are based upon what is healthy and sufferable in the country. A certain uniformity in general style of dress is essential. A Babel of costumes would be as distressing as a Babel of tongues; but general uniformity is not inconsistent with endless variety of detail. Art works better within circumscribed limits, and is far more apt to err when perfectly free as to subject and motive, than when bound by certain restrictions. The excellence attained by the early Italian painters, abounding in variety of conception and detail, was produced by them whilst working upon limited subjects and according to the orthodox interpretation of subjects selected for special veneration by the Roman Church.

So with the minor matter of dress, we find among those nations, mostly Asiatic, which have evolved a useful and beautiful costume suitable to their habits and climate, the retention of the given forms unaltered has in no way prevented variety and fertility of ideas. A good example of this may be noted in the costume of Japan, one, which, until the recent changes in favour of European imitation, seems to have remained unaltered for centuries. Mrs. Haweis declaims against the introduction of modern European dress into such countries as Japan, despite the unsuitness of many of the new habits for the old climatic conditions. Irrational as many of these imitations are, it is nevertheless inevitable that in some points the costume should change with the customs. Take merely the simple fact of sitting upon raised seats, and we see how this modifies the utility and the comfort of clothing designed to adapt and display itself in a squatting posture. So that, although we may regret for the world the predicted loss of another artistic coloured costume, in that of old Japan, it cannot be denied that it is in many ways unsuitable to modern ways and manners. Many hints and ideas, however, have from time to time been borrowed by the West from the dress of the ladies of Japan, and it will not be uninteresting to note some of its attractions and merits.

A wide difference exists between the court costume and the popular costume. As a matter of art, the popular costume would undoubtedly bear away the palm. It is moreover, the dress of the middle classes, which may be taken to represent more truly the native taste and character and to accord most with the physique. The court costume founded upon ancient traditions borrowed from China, abounds in excessive display and richness of material, shrouding and distorting rather than adorning nature. The parts of the people's dress, simple in themselves, are capable of endless little varieties and combinations of colours. The principal garment, being a plain square robe with large sleeves and ornamental neck-bordering, is secured by a handsome silken belt, tied into an elegant bow, the form of which varies with the age and position of the wearer. The robe thus kept in place falls in pretty natural folds, and is arranged with a number of little devices to ensure effect. We are apt to undervalue the beauty of natural folds, by

which is meant the effects of lines and shadows in changeable combination, made by loose hanging drapery. Modern costumes rely much for their elegance of form upon their tightness and smooth betrayal of the shapes they cover, and the addition for embellishment of unmeaning gathers and flounces. Artists who study drapery have to go back to ancient costume. Perhaps the Greek dress is artistically the best, shewing all the richness of loose natural folds, and revealing in parts the shape of the figure also; but this is hardly a mode of attire in accordance with our present ideas of decorum. The winter dress of Japan, though to our notions insufficient for the severity of the cold, is a mere repetition of well-lined robe over robe according to what Mrs. Haweis calls the "scientific principle that several vestures are warmer than one, though that one be thicker and weigh heavier than the several together." Each robe drawn a little back reveals a dainty *souçon* of the one beneath it. The writer upon the art of dress says:—"Every ceremony of social life claims its appropriate robes; because lines, colours and textures bear a certain affinity to human moods—they have neither speech nor language, yet their voices are heard among them—sombre lines for autumn days, light bright sparkles for smiling spring; rest for the old, for the young a rainbow;" and we find in Japan all these pretty distinctions most clearly defined.

In perusing books upon the subject of ladies' dress in this country, of which several exist of a most amusing and instructive character, we are struck particularly with the naïve and open manner in which the little arts and devices of adornment—not unknown in Europe, but practised there more secretly, are described and explained. Mrs. Haweis in her little book says:—"I hope the day will soon come when it shall be a recognised duty to conceal what is offensive,—when slight deformities of limb and skin shall be artfully disguised by art, and great and startling deformities shall cease to disgrace our public streets, and, alas! to repeat themselves through the nervous sleep to delicate persons." A Japanese author says:—"Japan surpasses other countries in the beauty of women and in their discretion and skill. Especially is this the case in the capital (Kioto) where their speech is soft and gentle, their movements graceful, and where their faces resemble in tint the beautiful hue of the peach-blossom. The lady of the city often requires no facial adornment, but even if powder and rouge be employed, the effect is pleasing and natural. The provincial women are not different in birth from those of the city; but though born with the same capacity for beauty, they are not so clever at their toilet, cannot dress tastily, and though spending much money upon self-beautification are still ugly. The difference is owing to skill and education in the arts of adorning. For, if the countrywoman live many years in the capital, her whole appearance changes, and she obtains a rich and superior husband." In Japan then every lady should aspire to approach the standard of beauty, and in any particular in which nature does not favour her she is expected to seek the assistance of art.

The abhorrence of shame is a wholesome enough feeling, which in late years has taken a firm hold upon society, partly no doubt attributable to the eloquent writings of such men as Ruskin and Carlyle. In the matter of toilet, however, as in many other kindred matters, it is difficult to define where legitimate adornment ends, and falsity and disguise commences. It is well known that the confessed limits, and the actual practical limits, are two entirely different things. False hair, cosmetic and paint, tight waists and secret padding are none the less actualities, because it is rude to mention them, or because they are not openly avowed as necessary resources of art to adorn nature. In this country there is no hesitation in the matter, and the various methods and devices are, in the Japanese volume before us, analysed and put into a practical and useful shape. It may be interesting to note a few of these.

A face naturally too long is to be made to appear attractive by keeping the hair low, and giving breadth to the face, by the judicious use of powder, and by lengthening the appearance of the chin and nose. The English authoress on dress gives similar suggestions when she says:—"If the forehead is narrow while your cheeks are rather wide, roll the hair over pads at the temples or fuff it out; if your forehead is too large for your face any form of fringe may be cultivated. If you lack height, dress the hair high brushed off the brow, and wear a flower or jewel as high as possible. I have no prejudice, none need have, against false hair used in moderation and when necessary; any more than any one need have

against cosmetics and paint used in moderation and when necessary."

Again, our Japanese author explains various methods for improving the look of badly proportioned people. If the body is too short the apparent breadth must be diminished by narrowing the *obi* and curtailing all projections tending to add width to the body; also by adopting patterns for the dress the lines of which run vertically. In a contrary manner when ungainly length is to be rendered less noticeable, a proportional increase in width and lateral extension of the robe and belt is to be given, and all patterns are to run cross wise. Statures good as to height but badly proportioned, may be doctored by raising or lowering the position of the waist and the *obi*. All of these instructions shew a very true appreciation of the laws of decorative art applied to dress, no less than is seen in the other industrial products of the country.

Another point upon which something may be learnt from the dresses around us is that of colour. Happily, although the male sex in Europe have long given up almost entirely the use of colour in their costume, it is still retained as a desideratum in the adornment of the fairer sex. Nothing is more misleading than the rules often quoted as to colours which will and which will not go well together. It is supposed to be a law that blue and green, or blue and a mixture of blue and red are insufferable together; and yet we find these very combinations in some of the best specimens of Eastern art. The mistake is in supposing that when a colour is used it is best to have the crudest brightest tint of that colour. Colours have been used, by those nations skilled highly in the decorative arts, in a more impure state than modern science enables us to manufacture them; and whether this be the result of intention or ignorance, it has had the effect of providing tones which will harmonise well in almost any combination. The deterioration of the painting on Japanese porcelain and hanging pictures is greatly owing to the adoption of crude colours from the West. Mrs. Hawis says:—"The moral is, every colour is bad when it is too bright; but every colour may be made beautiful by selection of tint and by clever combination with other hues. When you see a colour which is moderately dull in tone, and so far indescribable that you question whether it is blue or green or brown, red or yellow, it is an artistic colour and will mix with almost any other artistic colour. No artistic colours are unduly bright; they are all more or less toned down. At the same time though artistic colours are dull, all dull colours are not artistic. And I must not be understood to taboo collectively all primary or pure bright colours always. One morsel of brilliant colour may have a capital effect well placed in a mass of negative tint. No colour harmony, says Ruskin, is of a high order unless it involve indescribable tints."

It is this habit of using colours more or less subdued in tone, for the general masses, with the brighter colours introduced only in very small degrees, that has a great deal to do with the charm of the Japanese and other eastern dresses. We rarely in our walks through the streets see colour combinations that we can call ugly; robe, belt and cloak invariably accord in some pleasing harmony. It is a matter of surprise that our lady friends do not adopt more readily some of these charmingly artistic colours, which are so near at hand for study.

#### NOTES OF THE WEEK.

##### DEATH.

On the 12th November, at 50, Holland-road, Kensington, FANNY HANNAH, the beloved wife of Sir HARRY S. PARKES, K.C.B., H.B.M. Minister, Japan, aged forty-seven.

The P. & O. steamer *Sunda*, with homeward bound mails, left for Hongkong on Monday morning last, at daylight. The steamer *Malacca*, owned by the same company, came into port on the 7th instant, with European dates to November 24th.

Englishman cannot exist, apparently, without their club. We learn from the Indian papers, that one of these institutions is to be established in the Sherpur Cantonments at Cabul, for the convenience of officers and "visitors." The latter will, however, be pretty few for some considerable time to come unless a very remarkable change comes over the country in which the new club is situated. The name of this, the first club in Afghanistan is, we understand, much debated, "Cabul Club," if alliterative is only local; the "Hindu Kush Wanderers" is suggestive enough, but the *Bombay Gazette* proposes either "The Central Asian Reform" or "Savage" as neat and appropriate titles for the new institution.

However honest and straightforward Mr. Moseby, United States Consul at Hongkong, may be, tact, that quality which is indispensable to a public man who hopes for any measure of success, does not seem to enter largely into his composition. Some time ago, he managed to appear in rather a ridiculous light before the American public on a simple question of the dress he should or should not wear when participating in festivities at Government House. More recently he appears to have quarrelled with Governor Hennessey, because the latter expressed a desire to be informed of the contents of some of his dispatches, the information being asked for with the idea that if given, it would aid His Excellency in the prosecution of some of his schemes of reform. At least this is what New York papers say. The *New York World* remarks:—

"We think that Col. Moseby, the American Consul at Hong Kong, has been acting a very silly part. The British Governor Hennessey, wishing to break up the opium traffic at that port, applied to Col. Moseby for his consular records. This request was refused, on the ground that the records were strictly private. To which Gov. Hennessey replied that his desire was to get at the names of shippers and consignees of opium, and intimated that if Americans were afraid to have their consular records examined it was likely that they had something to conceal. Col. Moseby of course replied with heat, denying the

intimation, and hinting that Gov. Hennessy was a writer of fiction. Here the matter stands at present. To our thinking Col. Moseby should have aided Gov. Hennessy in his efforts to break up the infamous traffic in opium which is the curse of the whole seaboard of China. The representatives of this country abroad should not place themselves in a position where their conduct can have even the appearance of their being a shield for an illegal traffic. The conduct of Col. Moseby may win him cheap applause from unthinking, rowdyish Americans, who regard sauciness, petulance and impudence as an exhibition of independent American spirit, but he will surely receive the censure of all who have a proper regard for the good name of the country. The good name and fame of the country are not advanced by protecting a traffic as infamous as that in opium."

The American journal is adrift somewhere, for the opium trade is not illegal in the colony. However, it appears that there is some disagreement.

Writing to Colonel Moseby on the occasion when the subject of that gentleman's habiliments had been made a public one, Governor Hennessy was very consolatory. He said:—"I have read with astonishment a paragraph from an American newspaper about your costume at Government House &c., and hasten to assure you, that, as far as I know, the paragraph is without the slightest foundation. You have often done me the honour of being a guest at my table; and I need hardly say that there is no one in the colony whose social qualities and high character I more fully appreciate."

A correspondent of the *Times*, writing under date the 18th of November, relates the following pleasing little incident showing what may happen to a gentleman taking a quiet afternoon drive with his wife in the neighbourhood of the "City of the Seven Hills":—"Two brigands in the Romagna intercepted Count Porsi and his wife as they were driving home, made the lady alight and walk home, and detained the Count and his carriage. No trace of the captives has yet been discovered." This speaks volumes for the state of Italy, and is pretty much as if a person driving out on the new road were to be captured by thieves and spirited away. If such thing was to happen here, in a country supposed to be incapable of managing its own affairs without interference, what an outcry would be made! How many morals it would point and tales adorn! But in Italy—well the people there are used to that kind of thing, and would miss it if it were to be made to cease.

The *Times* correspondent with General Robert's force in Afghanistan, supplies a graphic description of the terrible Jagdalak Pass, where Elphinstone's army was annihilated in the first Afghan War, in 1842. The correspondent says:—

"The country through which the route lies is extremely barren and uninteresting and apparently uninhabited, not a single homestead or village being seen from the line of march until our arrival at Jagdalak, which is a small village of about twenty houses in a grove of fine mulberry trees, the first we have seen since crossing the Surkhab. The Jagdalak Pass fully realized our expectations. It is a terrible defile, nearly three miles long, and having a mean width of forty feet. It has three gates where the passage narrows to from ten feet to six feet. The rocks on each side rise nearly perpendicularly, the strata being quite vertical and hanging very loosely together, as if a heavy mass could be precipitated by a push of the hand. In places single alabs stand erect on end, rising to a height of one hundred and fifty feet. The road is simply the water channels. The troops marched up to their ankles in water. After surmounting the crest of the kotal, the road again descends, and four or five yards passes through a very narrow cutting in loose sandstone, then issues into less hilly country, descending gradually to the Surkhab river, which was reached after a march of ten miles. The bridge over it, said to have been built by Ali Mardad, still stands; but landships have carried away a considerable part of the parapet and the roadway on the Cabul side, leaving only a narrow passage of about ten feet, the safety of which is doubtful. The river just before reaching the bridge rushes through a deep, narrow gorge, with rocky, precipitous sides, forming one of the prettiest bits of scenery in this desolate-looking country. Although the stream is not deep, the current is very rapid, its waters sounding at night as if it were a mighty river. The camp was pitched on ground reclaimed from the stream; hills frowned down on each side, particularly on the northern, where the cliffs rose sheer up to a height of fully one thousand feet. Pickets were placed on the southern and western hills. The road immediately after leaving Surkhab passes a small affluent of that river, then ascends in a steep, rocky, narrow pathway alongside the hill forming the western face of the amphitheatre. This is the most difficult bit of road in the whole way."

London papers announce that, in a letter to M. Sabiriakoff, Professor Nordenskjöld expresses his intention of undertaking another voyage to the northern coast of Asia as soon as circumstances permit. "After my return," he says, "I think of spending a year in preparing an account of the voyage of the *Vega*, and it is my desire then to continue the exploration of the Icy Ocean along the coast of Siberia, making the river Lena the point of departure and the Siberian Isles the basis of operations. For the object I have proposed to myself—the rendering of the northern part of Asia completely accessible to commercial shipping—the prosecution of these researches is of paramount importance."

The naval review and manoeuvres which were to have been held in the presence of the Emperor and Empress this week has been postponed indefinitely. The *Mainichi Shimbun* states that the events will not take place until April.

Our local skating club has enjoyed a few hours good sport on its recently constructed rink on the Rifle Range, a better and more accessible situation after all than was selected at the gravel pits near the kerosene oil godowns.

It appears to us that imprisonment with hard labor for a term of seventy days is very inadequate punishment for an offence of such gravity as that committed by Mr. Kimura Shinjiro. This man, who is said to have furnished the principal false and defamatory evidence which resulted in the arrest of Nakano and Fujita, whom he has thus been mainly instrumental in injuring, socially and pecuniarily in their reputations, and in a number of other ways to an extent which it is impossible to realize. The heartless and sordid ruffian convicted of such infamy, received yesterday, at the hands of the Tokio Saibanabo, the sentence above stated, a term hardly, if at all, longer than the time during which his victims were kept in suspense and duress.

We observe that the next P. & O. steamer is announced to leave on Saturday, the 17th, at noon, instead of Monday, at daylight. This will, no doubt, avoid a Sunday mail, but at the same time it means that a period of eleven days will elapse from the departure of the *Malacca* from Yokohama, and the connecting steamer from Hongkong.

An Afghan gentleman at Dera, who is shortly about to return to Cabul, has informed the correspondent of the *Delhi Gazette*, that Sir Louis Cavagnari's head (after he was decapitated) was sent to Herat in a bag to convince the soldiers there of the Envoy's massacre! The hunt for Cavagnari's head will in time become an historical event, like that for the lost head of Cromwell's body.

The *World* says: the *Lancet* startled us the other day by the story that ladies at the Westend were in the habit of scientifically intoxicating themselves by the subcutaneous injection of morphia. I do not believe a word of it. Hypodermic applications of the kind may be used as a relief to acute neuralgia; but I decline to accept such an insult to the distillers as to admit that any woman could prick herself into inebriety while a bottle of *fine champagne* could be had behind the arras at the confectioner's. But there is an ingenious novelty in the means of satisfying the craving for drink which I can vouch for. It is—this in all confidence—it is in the form of an opera glass, with the central cylinder enlarged and hollowed for the reception of choice old cognac. To this is attached a nozzle, which can be unscrewed, and a suction-pipe inserted, so that the jewelled occupant of a box *en évidence* can imbibe the liquor for heroes unobserved, while affecting attentively to watch the final pirouette of *La Sylphide* on the stage. This alcoholic lorgnette is as neat in its way as the device of Judge Boyd, of the Irish King's Bench. Daniel O'Connell used to tell that this legal luminary was so fond of brandy that he kept a supply of it constantly in court upon the desk before him in an inkstand of peculiar make. His lordship used to lean his arm upon the desk, bob down his head, and steal a hurried sip from time to time through a quill that lay among the pens, which manoeuvre, he flattered himself, escaped observation.

We have to acknowledge the receipt of the *Japan Gazette Hong List and Directory* for the current year. The present

volume fully maintains the high reputation of the former issues of this valuable work, and from the mass of useful information it contains, and the evident care bestowed in compilation, we feel convinced that this directory will be found a positive necessity in every business establishment, and of use for almost daily reference in private houses.

Agreeably with usual custom, the Iron, Tea and Silk Guilds, have been celebrating the opening of business for the year with processions, &c. The native Fire Brigade also perambulated the town one forenoon, carrying their apparatus and dragging the engines and hose reels.

The *Mainichi Shimbun* contains some interesting particulars respecting the Chinese labourers who went to the silver mines in Mexico (?) under contract. It appears that 6,265 labourers left China last year to fulfil engagements varying from seven to thirteen years, while 7,322 returned after completing their contracts. The personal appearance and dress of the returned labourers, contrasted very favourably with the condition of those who were leaving, and they all seemed to have accumulated money in Mexico and brought home presents to their friends and relatives. Our contemporary pathetically remarks, that the money these people had saved during their arduous toil, "was likely to become smoke from opium pipes and fly away towards India."

The following paragraph from *Vanity Fair*, shows the kind of shooting fashionable in England at present. It does not appear to us there can be much true sport in such wholesale destruction:—"Lord Grey de Wilton and Mr. Arthur Pryor have enjoyed excellent sport at Cockley Cley Hall. They killed one thousand one hundred pheasants with six guns in two days last week, and have had very good average bags throughout the fortnight. Only one or two woodcocks have yet been seen."

"Atlas" in the *World* is informed that Yosie Wooyeno, the Japanese Minister at the Court of St. James's, and now in Japan on leave of absence, will not return in that capacity. It is said that his services are required in Japan, where the new treaty arrangements between that country and the Powers in Europe and America are being actively negotiated, and of which subject he has great knowledge. His successor as Minister Plenipotentiary in London is to be His Excellency Mori, who was formerly accredited to the United States. Besides having a good knowledge of English, he has a reputation for great ability. The writer adds:—"This news will cause regret to many who remember the interesting position which Madame Wooyeno occupied in London society during the last three seasons. I am therefore more pleased at being able to state that his Excellency Mori is also possessed of a most amiable and charming Japanese wife, who, if my information is correct, will arrive with her husband in England in time to be presented to her Majesty at the early Diplomatic Court next season. I am told, however, that she has also adopted European modes in place of the picturesque costume of her country, which is a pity."

The same contributor says:—"I regret to have to announce the death of Lady Parkes, wife of the British Minister in Japan, which took place last Tuesday. Sir Harry Parkes, now on his way to this country, is expected to arrive this week. His return was decided on, partly on account of the precarious state of Lady Parkes's health, and partly to discuss, with the Foreign Office authorities, various *désagrémens* which have arisen between Great Britain and Japan." [Sir Harry Parkes arrived in London on the 15th November, E. J. W. M.]

The *Hochi Shimbun* states that the Japanese authorities received a telegram on the 30th ultimo, stating that an unsuccessful attempt had been made to assassinate the King of Spain.

The Shintomiza Theatre will be re-opened on the 15th instant, and the Hisamatsuza Theatre, to-day.

The Chinese residents in Yokohama are about to establish a hospital. The funds for the maintenance of the institution will be supplied by private subscription.

## PARIS LETTER.

Paris, November 22nd, 1879.

We have a Zulu difficulty, which has not yet risen to the dignity of a cabinet question, and that the transitory passage across Paris, en route for Madrid, of the poor ex-Empress, has not been able to appease. The Bonapartists will not tolerate a representation of Zulu habits and customs by friendly natives, and the republicans insist that this being a land of liberty, the tawny warriors must be allowed to indulge in their Pyrrhic dances. The Empress Eugenie, the few who saw her through her tears and weeds, declare to be a wreck,—a bent, and broken looking old woman. The French are not cruel; despite all the ruin she was the instrument of creating, by forcing her worn-out husband to make an iniquitous war against Germany, those who recognised her as she passed, respectfully took off their hats. However, it is customary to salute the dead. She was kept in view by a squad of detective officers, just as if her load of sorrows was contraband, or that politics had now for her the ghost of an attraction. She was only accorded the privilege that any political exile could claim, of being allowed, on the score of humanity, or the dire necessity of private affairs, a free pass for a fixed period, a truce as it were against the sentence of the code, for reasons of state.

If a proof were needed as to the stability of the present form of Government, the quasi-private banquet just held by the royalists of Vendée, is conclusive: tolerated by the authorities, protected by a republican police, some 800 individuals met to denounce the Republic, exalt the Comte de Chambord, summon up the reminiscences of civil war, and display every kind of factious banner. The tricolor alone was absent. These culinary protestations are harmless; having no longer the command of the avenues to power and place, the grip which royalists had on the populations of a few districts, is getting relaxed; the peasantry show evidence that the scales are dropping from their eyes; the liberal journals arrive in the wake of the lay teachers, new railroads, deepened water-ways, and ameliorated roads. There is a great "levelling up" in operation.

The first snow has arrived, wicked and dry, not unpleasant, save for the aged who have to go abroad, and the poor who have no firesides; charity is quietly doing its work, and, I learn from several sources, more effectually than heretofore, because its distribution has been handed over to local committees of laymen. The mayor's office is the proper place to confide donations, and responsible unpaid agents make at present house to house collections for the suffering. This is independent of the sums raised by sticking a tax of some ten per cent. on the receipts of places of amusement. There is no pauperism in France, for parents, when they arrive at the age of 65, can legally compel their children to contribute to their support, at the rate of five or six sous per day. The result is, that children combine and obtain for a fixed yearly payment, a comfortable home in a well kept hospice for their parents, and *amour propre* is thus at the same time upheld. These hospices are conducted cheaply, as the nuns manage them, a guarantee that nothing shall be found wanting under the heads of order and cleanliness.

The municipal councillors agitate a proposition, that they be paid for their services, which if important, are not so onerous but could afford to be discharged gratuitously; the members have already decreed themselves a medal, insignia of office, and this has its effect on their house-maids and shop-boys. In China a peacock's feather would mark the dignity. Less opposition is expressed at the intention to make convents and monasteries pay rent for their establishments, like Dick, Tom, or Harry; at present they are not subject to taxation, and where the city is the landlord, they are exempted from quarter days. This intention executed, the budget of the city, already so proverbially pléthoric, would be augmented by nearly a quarter of a million of francs, which sum would be devoted to establishing and maintaining lay schools.

What's the use of a French employer holding out against a strike? Is it for form's sake or to save appearances? Strikes here arrive with the regularity of new moons; each trade has its turn regulated in advance; the workman "haugs up de shovel and de hoe," at an hour fixed, and waits till the mountain, in the shape of the employer, comes to him, which is generally so; the master then methodically adds on to bills, the extra price necessary to cover his increased outlay, so that the public

in the end pays, and like the cels, becoming used to skinning, cease to complain. I think all political economy, with due respect to Adam Smith, Mill, Faucett and Say, is comprised in the maxim of Hudibras,—“The value of a thing, is just as much as it will bring.” The bakers have run along the whole line, their “staff of life is strong—fr. 45 a week,” bread and wine included, for they have to work semi-naked, and thirst is consequently excusable. Parisians were in sympathy with the bakers, for nowhere in the world is bread better made than in this city: bakers appear to be artists; look at the forms; the golden and white colors they give to rolls and loaves; you feel an appetite on entering a French bakery, with its marble counter, floor, and shelves; its shining brass racks and comfortable look—for few bakers ever figure in the list of bankruptcies. The bread is toothsome and digestible, not the horrible lumps of warmed dough to be met with in the rural districts, to which Norwegian cakes are superior although these be flat, strung on a cord like Chinese coin, and suspended from a blackened roof and a few months trapeze acquaintance with flies, similar to Dutch hung beef. It is remarked, that it is three thousand years after the appearance of the *Iliad*, that we have only known how to make bread. To accomplish the latter well, Voltaire, I think it is, remarks, is the sign of intellectual and moral superiority of a people. Formerly the lady of the house made it a point to make bread proof of her authority. Abraham so far interfered in household affairs, as to dictate to Sarah the quantity of meal to employ, and he had plenty of servants, not forgetting that maid of all work—*pour tout faire*, Hagar. The Greeks were bakers with the Romans; they had more talent and their manipulation was more skilful.

The passing through the city of the new queen of Spain (what a contrast with that other august visitor the ex-Empress) has created a weak sensation; she is apparently a lady of a masculine turn of mind and means business in her love; she plays into the hands of her mother-in-law; they are as agreeable to each other as such relationship is before spending a honeymoon. Worth, according to a stage whisper, was entrusted to execute the bridal trousseau, and has done his work well: the *robe de mariée* consists of a jupe of white satin, very long, with a square train, trimmed all round with beautiful Alençon: in front, draped and embroidered with silver, and covered with similar lace. Another robe is in rose-coloured damask, trimmed with black, and the mantle is in dark-blue velvet, garnished with lace, and slight golden embroidery.

Out-door sporting life is on the increase; M. Grévy is perhaps the crack gunner in France; he beats Gambetta hollow in bringing down those elegant barn door fowls, known as pheasants, or knocking over a poor puss. As for stag hunting, this *salon* amusement is on the increase, but for an excitement, in the absence of the usual find and finish, commend me to a wild boar hunt, or running down a wolf. Manly sports cannot be too much encouraged for French boys, who snivel their youth away round a store sucking chocolate, or studying how to storn the pantry; *eh bien*, paper hunts are on the increase, and when the hares lead well over a cross country, the result is satisfactory. A great many drawing rooms are still in brown Holland and plate chests continue hermetically sealed, but the opening of the Chambers, on the 27th, will set fiddles scraping and legs whirling. By then, too, all the anniversaries of the Saints will have passed with the usual honors: Saint Cecile shall have received her share of music, and Saint Catherine shall have been honored by old and young virgins, for she was a famous girl of her period; she was beheaded on account of her piety, but the angels had their revenge, as they carried her away and buried her on Mount Sinai, where Renan says he sought in vain for her tomb-stone, just as if he expected it to be of Pyramids pattern, common to her royal countrymen. In the event of school girls not being brought on that day to the theatre, they have the privilege to transform the school-room into a stage and perform Racine's *Esther*; lemonade follows, and then a few waltzes. The Bible alludes to the ugly rush of seven women to take hold of one man, that they could be called after him and so take away their reproach as spinsters. At present ladies of an uncertain age burn tapers, and try the virtue of doing up the hair of a bride, or sticking a pin in her bonnet; anything rather than to be a vestal virgin to St. Catherine.

Mme. Thiers has resolved to keep the study of her husband in the same state as he left it: nothing is changed: it has the

appearance as if the owner had left for a few moments; the last book he read, Plato's dialogues, lies open, having a pencil with which he annotated the text, for when an author—in this case cousin—presented him with a copy of his writings, it was specially printed to leave meadows of margin: all Hugo demands is, that presentation copies be richly bound. An addition has been made to the study, it serves as a store house for all the “crowns” that could not find a place on his tomb: in a press is the plaster model of his features taken after death. No shelf in the library, was higher than he could reach from the floor. He loved his “workshop,” entered it every morning at five o'clock. He never had an almanac card, so that he was puzzled frequently for the date, and when uncertain, never dated his letter. One day a young man called on him to be recommended to a minister: “What day of the month is it?” he demanded of the visitor, who confessed he did not know: “Don't know, Monsieur; and how can I write a recommendation without a date? Take my advice, Sir, never be without a pocket almanac.”

The assizes of Versailles has condemned a plagiarist, in one respect, of Noro, to ten years hard labor. Last August, commenced a series of incendiaries, one a week, during six weeks, and that involved a total loss of property of fr. 32,000. A very handsome dress-maker, aged 17, but looking twenty, was too well guarded by her parents: her mother in the morning accompanied her to her work, and her father brought her home in the evening; she had a lover, aged 19, and was prohibited from meeting him; she set fire to a cottage or a farm-building; the neighbours ran at the sound of the tocsin to aid its extinction: the lover arrived also, but passed his time with the girl while all was confusion. In a late boarding house row, two clients disputed; a duel was arranged; one of the antagonists avowed he had no money to travel to Belgium to fight, the other promised to pay his expenses, for which kindness, his head and nose were smashed with a chair. In the department of the Aisne, a national teacher inspired a warm passion in the bosom of Lucie, a young needlewoman; he rejected the advances, and sent an anonymous letter, accusing her of being ugly and illegitimate: she met him on the public road, attacked him with a knife and scissors, and wounded him several times; he sought refuge in the chapel, still pursued and bleeding; she begged the officiating clergyman not to interfere for a moment, as since he could not marry the fellow, he could at all events bury him. He recovered, and the jury acquitted Lucie.

The New York correspondent of the *Liberty* complains, that on the American stage an actor instead of kissing once, as the exigencies of the play require, indulges in a score. It is hard when a man has the chance with a pretty girl, to leave off when he has commenced.

The European Bank is expected to make a good dividend: some of its scrip was stolen, and not only was it mysteriously returned, but scrip of another company into the bargain.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### COURT, POLITICAL AND OFFICIAL.

The Local Governors' Assembly is to be held at the Nobles' Club, at Takarada-cho, Tokio, which is now undergoing preparation for that purpose.

The *Choya Shimbun* states that the Governor of Sakai Ken suddenly sent in his resignation at the end of last year, but our contemporary says it will not answer for the truth of the report.

Mr. Yoshikawa, the Chief Superintendent of the Telegraph Department, has returned to Japan after attending the International Telegraph Conference held in London last year.

General Kuroda, the Chief of the Colonization Department, is about to visit Hakodate for the purpose of inspecting the scene of the late fire. It is not the General's intention to go on to Sapporo.

The following notification has been issued by Iwakura U-daijin, to the *Kwan, Sho, Ia, Shi, Fu, and Ken*:—

“It is hereby notified that, during the absence of Sanjo

The officials of the Home and Finance Departments, who are entrusted by the Government with the preparation of the

measure for the compulsory insurance against fire of buildings throughout the Empire, visited the scene of the recent conflagration in Tokio, on Wednesday last, in company with Dr. Mayet, of the Finance Department, who has already taken much interest in the proposed scheme.

Mr. Tanaka, of the Agricultural Bureau, accompanied by several officers of the Department, has left the capital for Osaka, in order to arrange for the opening of the forthcoming exhibition, to be held there next month.

#### MISCELLANEOUS.

The *Mainichi Shinbun* contains a rumour that a special meeting of the local assembly will be held in Tokio shortly, to consider the advisability of adopting a building act, with a view of preventing the disastrous fires so frequent in the capital.

A fire took place at Shigetara, in the province of Kazusa, about 10 o'clock a.m. on the 10th ultimo. It soon spread in various directions, and was not extinguished until about 2 o'clock p.m., after having destroyed four hundred and nine houses.

The family of the late General Kawaji, the Chief of Police, were presented with the sum of five thousand yen by the Government at the end of last year.

Their Excellencies Sanjo and Iwakura have each presented the sum of one hundred and fifty yen to the sufferers by the late fire in Hakodate.

On Tuesday evening, Mr. Wooyeno, Vice-Assistant Minister of the Foreign Department, entertained His Royal Highness the Duke of Genoa at a banquet.

A fire occurred in the boarding establishment connected with the Tokio Normal School on the 5th instant, and was not extinguished until three buildings had been totally destroyed.

From the *Hochi Shinbun* we learn that Mr. Under-Secretary Obana, who is stationed at Ogasawara-jima, in the Bonin Islands, has sent in a report, in which he recommends the cattle now on the Chi-chi-shima (father island) shall be removed to the Haha-shima (mother island) a course which he thinks would prove very beneficial to agriculture. Mr. Obana also recommends that a harbour should be formed at Haha-shima for the convenience of shipping at the islands. The report states that five foreigners resident on the islands, have taken out licenses during the past year, for hunting and felling timber. A Spaniard who went out fishing has not since been heard of, and is supposed to be drowned.

An association has been formed by the political agitators of the three provinces of Bizen, Bitchin, and Minasaka. They propose to memorialize the government, urging the advisability of at once establishing a national assembly, and two members have been appointed to proceed to Tokio and present the memorial. Messrs. Nishi and Takenchi of Okayama, will accompany the deputation in the capacity of advisers.

Assistant Police Inspector Sawa, who went to Europe together with the late General Kawaji, is shortly expected to return to Japan.

It is said by the *Nichi Nichi Shinbun*, that His Royal Highness the Duke of Genoa presented one thousand five hundred yen to the officers appointed to receive foreign visitors, for their attention during his stay at the Enriokwan. The Duke has also forwarded three hundred yen to the Tokio Fucho, to be added to the relief fund for the sufferers from the late great fire in Tokio.

A fire occurred at Funasaki Mura, in the province of Settsu about 2 a.m. on the 7th instant. Sixty-seven houses were destroyed and three persons lost their lives, before it was extinguished.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, 28th December, 1879.

#### ARRIVAL OF THE ENGLISH MAIL.

London, December 8th.—Obituary: The Duke of Portland.

St. Petersburg, December 8th.—Prince Gortschakoff has resumed the direction of Foreign Affairs.

London, December 8th.—The Board of Trade returns of exports for the past month amount to £17,062,500, showing an increase of £1,093,750 as compared with last year.

Mr. Gladstone has arrived at Hawarden, after being everywhere most enthusiastically received on his tour.

The steamer "Eldorado," onward bound to Colombo and Calcutta, has put into Plymouth for repairs, having encountered a heavy gale in the Bay of Biscay.

Lahore, December 8th.—Yakub Khan arrived at Peshawar to-day and is quartered in barracks guarded by one officer and 90 men. The Safedsung camp is removed to Gundamuck, as the medical authorities condemned it as too cold.

Sofia, December 8th.—A new Bulgarian Ministry has been formed.

London, December 9th.—Thomas Breunann, the land agitator lately arrested at Dublin, has been committed for trial. Bail was accepted.

Madrid, December 9th.—The Spanish Ministry has resigned owing to a determination to abolish slavery and introduce other reforms in Cuba. A new Ministry has been formed by Senor Canovas del Castillo.

London, December 10th.—Lord Salisbury, in a speech at Watford yesterday, praised the manner in which the Afghan War had been conducted, and especially referred to General Roberts as "our great hero."

The Queen has received at Windsor the recipients of the Order of the Bath, and has decorated the officers and men who also distinguished themselves in the Afghan and Zulu wars.

London, December 10th.—A Company has been formed to work the Wynnad gold mines, with a capital of £100,000

The *Times*, in a leading article, announced that a reduction of 4,000 in the British army is intended.

St. Petersburg, December 10th.—The Nihilists have owned to being the perpetrators of the attempt to assassinate the Czar.

In a speech by the Czar at St. Petersburg, his Majesty hoped that Russia would develop her resources in paths of peace.

London, December 11th.—An authoritative denial is given from Berlin to the report published by the *Morning Post* that the German Government intended resuming the sales of silver.

Alexandria, December 11th.—A letter from King John of Abyssinia to the Khedive expresses his readiness for peace with Egypt, if the Great Powers will recognise the conditions thereof. An Egyptian battalion has been ordered to proceed to Massowah.

Kuttra, December 11th.—The fine upon Kabul city will be probably fifty lacs, £500,000. Kashim Khan, the son of Dehra, who is a prisoner, has been appointed Governor of Turkistan; Gholam Hyder, the nominal Governor, having ignored our overtures.

London, December 12th.—The officers distinguished for their services in the Zulu campaign dined with the Queen yesterday. The *Daily News* publishes a telegram stating that the Tekke Turcomans have made raid close in to Tchikislan. The *Times* publishes a telegram from Kabul giving the opinions at army head-quarters respecting the Afghan settlement and urges adherence to the Treaty of Gundamuck and the evacuation of territory while safe and honourable. England, it adds, demands the rest which is urgently necessary.

London, December 13th.—The *Daily News* publishes a telegram stating that a deal of serious fighting has taken place at Kabul.

#### THE JAPANESE PRESS.

##### A FORECAST OF THE YEAR.

(Translated from the *Choya Shimben*.)

IN the discharge of our duty as journalists, we cannot confine ourselves to simply congratulating our readers on the opening of another new year. We think it incumbent upon us to give a brief summary of the most important events or questions which may reasonably be expected to attract most attention during this thirteenth year of Meiji, which has just commenced. It is of course at present impossible to say if these different matters will prove advantageous to Japan, or the contrary, but one thing is quite certain, that they will be either one or the other.

Looking back to the past history of the country, we find that the question of the rights of the people first began to be agitated in the sixth year of Meiji (1873), when the Cabinet became divided in opinion on the subject. Ever since then this question has been assuming greater prominence year by year and been growing in popular estimation, like water running in a stream, or weeds blown by the wind. The opinions first enunciated on this subject were impracticable and void of all reason or sense, so that the holders of those opinions were unable to exercise their legitimate influence. Of late, however, a great alteration has taken place, societies in furtherance of this object have been formed all through the country, and efforts have been made to force the matter upon the favourable consideration of the Cabinet. Amongst other similar meetings we may mention that of the Aikokusha (Patriotic Society), which held a meeting in Osaka last year, and discussed at great length the most advisable steps necessary to be adopted in order to secure the establishment of a National Assembly. This important political association finally determined to present a petition to His Majesty the Emperor next March, urging upon him to grant their request. Nor have the "Aikokusha" been singular in their action in this matter, other political societies have joined with them in furtherance of their object, while other societies again, preferring to act independently, are about to present separate petitions praying for the same boon to be granted. This question of a National Assembly we consider one of the most important which will occupy the public mind during this year.

Treaty Revision, the negotiations for which were resumed last year, is also a grave matter, but the result is as yet unknown. The Ministers are charged with the labour of carrying on the negotiations, but many patriotic men in the empire have assisted in demonstrating the disadvantage of the existing treaties, and the various newspapers and different Chambers of Commerce have, by their articles and memorials, shown that the unanimous voice of the nation calls for their revision. We cannot say if our efforts to be rid of these trammels will succeed this year but, at any rate, the question is one of great importance.

The dispute between Japan and China has not yet, apparently, been settled. Conferences have taken place; General Grant has offered his advice, and lately we learnt that an alliance had been formed by China and Russia on this Loochoo dispute. It appears certain that the matter will come to a head this year, and it certainly is worthy of mention from its gravity and importance. There are other interesting questions which we cannot deal with; numerous trifling matters which our space will not permit us to refer to in detail.

As we have already stated there are many important subjects for consideration this year, which will, we think, be a momentous one for Japan. Such great questions as the establishment of a National Assembly, Treaty Revision, and the settlement of the dispute with China, cannot be successfully arranged without extreme difficulty; and it will be indeed a source of great happiness to our people, if the close of the present year witnesses a satisfactory settlement of these matters. If, on the contrary, we are unable to achieve our desires, how great will be the miseries entailed upon us? Ah! If we could only induce the public to interest themselves in these great national questions, then it would be no idle phrase our lauding this as the "happy new year" according to the custom of Japan and, indeed, of the whole world also.

#### THE RELEASE OF FUJITA AND NAKANO.

(From the *Fuso Shinshi*.)

HOW erroneous was our opinion regarding the suspicious case of Fujita and others! When the said matter first came to light in Osaka, the public at once supposed that the charge brought against them was one of counterfeiting and like offences. The rumours current produced, for a time, an uneasy effect in the money market, but very fortunately Mr. Godai Tomotatsu, in the Osaka Chamber of Commerce, having decidedly stigmatized all such reports as false, public opinion changed, and it was openly asserted on all sides that the imputation was baseless. Indeed, of late, rumour was busy every day affirming that the accused would shortly be acquitted. However, from the first to the last, we never gave credence to these statements. It must be borne in mind that it is a matter of great delicacy to arrest a man. Now, not only did the public officers who are bound to respect the rights of other people, arrest Fujita and Nakano, who had already obtained a certain popularity among the community, but they had taken such measures to accomplish their object in a speedy and effectual manner, that their work was done with the rapidity of a thunder-clap. Hence we thought that those people must be more or less guilty, no matter in what degree. We formed that opinion because we have always trusted our police officers so thoroughly that we would not listen to any popular censure of their proceedings. However, according to what we have now learned, those implicated in the Fujita affair have been absolved, and were set at liberty on the 26th ultimo, furnished with the daily fees for attendance in Court, and their travelling expenses; we repeat how mistaken was our opinion regarding this case! Still the matter truly wore a suspicious aspect, and its details have been kept so uncommonly secret that it is impossible to form a correct estimate of any report which we hear on the subject. When the first rumours became current, we wanted to believe in the police officers: to be convinced that they had not been careless; but we have sometimes had to hear contrary statements, and we have therefore had cause to regret that if the investigations, as was sometimes said, were to result in a decision of "not guilty," the consequence would be the creation of a popular sentiment that our Government does not respect the rights of the people, but

acts as if it were not worth while to protect the lives and property of its subjects. Again when we further considered the matter, we saw that if the accused were released, the Government should admit the real consequences of its careless proceeding and publicly apologise. Fujita and Nakano having lost their personal freedom for several months, finding their honour defamed and themselves damaged in their vocations and property, should demand from the Government that means should be adopted sufficiently to dispel the unjust suspicion cast upon them in the eyes of the public. The real state of affairs should be clearly made known on all sides. Indeed, we have expected up to this moment that the deliberations and conclusions of justice in the case would be published; but having only heard rumours of the release of the accused, we feel still as if we were wandering in a dense fog. What does the public think about it?

## LAW REPORTS.

## IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Friday, January 9th, 1880.

H. ANDERSEN *vs.* RAYMOND, BARON STILLFRIED.

Mr. Kirkwood appeared for plaintiff; defendant appeared personally.

Mr. Kirkwood stated that by judgment rendered in this Court on the 26th of July, 1879, defendant was forbidden for a term of ten years from the 30th of June, 1878, to trade either in Japan or from Japan in photographs, taken by himself, but that defendant had acted in flagrant contravention of that judgment inasmuch as he by a bill of sale executed on the 6th of December, 1879, and on the same day registered in the U.S. Consulate General, had sold to his brother Baron Francis Stillfried for \$6,000 "all those photographic instruments, lenses and camera, stock, materials, negatives and pictures now in and upon the said house and premises known as No. 80, Yokohama," knowing that his brother intended offering the pictures thus bought for sale in Yokohama; and the said Baron Francis Stillfried had actually since then offered for sale and sold from these pictures. He was ready to prove these allegations by the register of the United States Consulate General, by the original bill of sale in the possession either of Baron Francis or of Baron Raymond Stillfried, and by the evidence of Mr. David Welsh, who had been engaged by defendant to sell pictures for him. He asked that the judgment rendered by this Court on the 26th of July, 1879, be enforced and that defendant be made to pay costs.

Defendant utterly denied to have sold to his brother any Japanese negatives or photographs whatsoever, he has not sold to his brother any photographs whatsoever, and the negatives he has sold him were all either East-Indian or Chinese, which in his opinion do not come within the terms of the judgment of 26th of July last. He produced the bill of sale, that had been registered in the United States Consulate, and also an inventory of the objects sold, and he explained that the reason why this inventory had not been annexed to the bill of sale was, that on the day when the bill of sale was executed, those objects were not all unpacked and could therefore not be specified, and the solicitor, Mr. Litchfield, who drew up the bill of sale, declared it unnecessary that the inventory should be affixed to the bill of sale. He asked that the plaintiff's demand be rejected and plaintiff made to pay costs.

Mr. Kirkwood admitted that the bill of sale now produced was the one to which he had referred. He urged that this bill of sale expressly mentions *all* the negatives and pictures now on the premises No. 80, and he was ready to prove, that there were on the 6th of December, many Japanese pictures, both negatives and photographs, on those premises. He would prove that by the evidence of Mr. David Welsh, to whom Baron Francis Stillfried had handed such photographs for sale.

Defendant did not at all deny that Japanese negatives and photographs were on that day on the premises No. 80, which is the joint residence of himself and his brother; but he denies having sold them. More than a month before the bill of sale was executed, he had in Tokio made his

brother a present of all his Japanese negatives, and they were therefore on the date of the bill of sale already the property of his brother. Japanese photographs he has neither given nor sold to his brother; all the Japanese photographs, that on the 6th of December were in No. 80, had been taken by his brother personally. He added that unless a negative be *retouched* it is unfit for use, and the present he made his brother of old negatives was therefore absolutely valueless, until his brother had himself taken the trouble to *retouch* them and thus again make them fit for use. On this point he wished that the Court would take the evidence of an expert. He also asked, that his brother be called as a witness and examined with regard to the whole transaction, especially as to the declaration of Mr. Litchfield. He wished to observe to the Court that the plaintiff is persecuting him with an implacable rancour.

Mr. Kirkwood insisted on the term *all* in the bill of sale, and protested against the tenor of a written document being in any way affected by defendant's present explanations.

The Court declined to call any expert as demanded by defendant, and also to hear the evidence of defendant's brother.

Defendant then asked that the servants of the house be called to prove his allegation about negatives and photographs. He declared that he always had strictly complied with the judgment of this Court rendered in July last, and he mentioned the names of several persons, to whom he, since that judgment was rendered, had refused to sell photographs; but he could surely not be prohibited from making his brother a present of negatives, which to himself were entirely worthless.

Judgment was reserved, and will be rendered on Friday, the 16th instant, at 9 a.m.

## IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esquire, Consul.

Messrs. F. GROSSER, AND A. SCHULTZE, Assessors.

Tuesday, January 6th, 1880.

FRANTZ BARON STILLFRIED *vs.* STILLFRIED AND ANDERSEN.

(Adjourned from the 30th ultimo.)

THE COURT TO-DAY DELIVERED THE FOLLOWING JUDGMENT.

*The facts of the case.*

The plaintiff at the hearing of this case asked, that the defendant firm be condemned to pay him \$147.50 and costs, and he alleged in support of this demand that he in April 1876, was by his brother Raymond, Baron Stillfried, commissioned to represent the interest of the said firm as their exhibitor at the Philadelphia Exhibition 1876, and to take delivery from the firm of Wilson & Co., in Philadelphia, of an invoice of photographs belonging to the firm of Stillfried and Andersen. He asserts that he has fulfilled that commission, and therefore, as well as for the outlay therewith connected he now demands \$147.50, and says, that he, in the course of the year 1876, rendered account to his brother Raymond, but then stated that he would see himself refunded later by sending the firm of Stillfried and Andersen an order for Japanese curios. His brother on behalf of the firm, admitted his account as correct, but the settling of the account had been neglected.

The defendant firm has in the first place demanded security for the eventual payment of costs, and then contended that it never commissioned the plaintiff to represent it, and that, if plaintiff has received such a commission from Baron Raymond Stillfried, such commission must have been to represent the private interests of the latter, and not the interests of the defendant firm. The defendant firm has further demanded that plaintiff produce vouchers in proof of his alleged outlay on behalf of defendants.

Plaintiff has denied defendants' assertions, and asked that Baron Raymond be heard as witness, and also that the press-copy be produced of a letter written by Mr. Anderson, on behalf of the firm of Stillfried & Andersen, to Wilson & Co. in Philadelphia, in which the latter firm, among other things, was requested to deliver the pictures to the plaintiff, —or that Mr. Andersen take his oath that he never wrote such a letter. The evidence of the witness was received during hearing on the 30th December, when also the letter in question was produced.

*The law of the case.*

To prove his claim, it is incumbent upon plaintiff to prove that he in the year, 1876, was commissioned by the firm of Stillfried and Andersen, or one of the then partners of that firm, to represent certain interests of the said firm, as more fully mentioned in the petition, at the Philadelphia Exhibition, and that he is justified in therefore claiming \$147.50. The witness Raymond von Stillfried is not only a relative of the plaintiff, but has also an interest of his own in the issue of this law suit, and his sole evidence would therefore not be sufficient to prove the truth of the assertion that the commission in question had actually been given; but this deficiency in the proof is fully supplied by the letter which Mr. Andersen on behalf of the firm of Stillfried and Andersen, wrote to Wilson & Co. in Philadelphia. This letter orders, in clear and unequivocal terms to deliver to plaintiff those pictures which Stillfried and Andersen had sent to Wilson & Co. for use at the exhibition, and refers to plaintiff as ready to refund any outlay hitherto made by Wilson & Co. Mr. Andersen's assertion, that he was not aware that his former partner Raymond Stillfried had already authorized the plaintiff, sounds improbable, considering his own communication to Wilson & Co. It is not to be assumed that a man of business requests another man of business to deliver property entrusted to his care to a third person and to apply to the latter for payment of his claim for expenses, without this third party having been made aware of the service that is required from him, and without his consent having been secured. When, therefore, Mr. Andersen did not notify plaintiff of the delivery to him by Wilson & Co., of the pictures, then it may be presumed that he omitted it because he knew that plaintiff either had received, or would receive, the necessary instructions from his partner. It being thus considered proven that the commission was given, it remains to examine whether plaintiff is now justified in suing the defendants firm for payment of his claim, and whether the amount of his claim is satisfactorily established.

As to the first question the answer must be in favour of plaintiff, considering the terms of Art. 114 in the *Handels-Gesetz-Buch*:

"Each of the partners, who represent a firm, has power to transact any kind of business on behalf of the firm."

"The transactions made on behalf of the firm by one of its active partners carry rights and obligations for the firm; it makes no difference whether the transaction was made expressly in the name of the firm, or whether it appears from the circumstances that it was the will of the contracting parties that the transaction should be on behalf of the firm."

It is according to the article evident, that in deciding the question whether the partner of a firm is responsible for debts contracted by his co-partner, it is irrelevant whether the co-partner, *vis-à-vis* his partner, was empowered to contract such a debt, but the sole point is whether the debts were made by the co-partner in his own name or in the name of the firm, and the Art. 114 says plainly, that in this respect makes no difference whatever, whether the transaction or the contract was made expressly in the name of the firm, or whether it only appears from the circumstances that it was the will of the contracting parties that the contract should be on behalf of the firm. From this point of view it also becomes irrelevant, that the letter written by Raymond von Stillfried to plaintiff, which contained the commission in question, was signed, not with the name of the firm, but only "Raymond," a signature that is easily explained by the relationship between the correspondents and the nature of the business, of which the letter treated. Defendant is at present the sole owner of the former mercantile firm of Stillfried & Andersen; he has taken over the business, and under these circumstances he is responsible for the fulfilment of the earlier business liabilities; it has never been averred by Mr. Andersen that he has not assumed the liabilities of the former firm.

The court has therefore no choice but to declare the firm of Stillfried and Andersen liable for all the expenses arising from the commission in question.

On the other hand the defendant is undoubtedly entitled to demand that the plaintiff produce a regular account current, with proper vouchers. The bill that is annexed to the petition is insufficient, and in the same is at once to be cancelled the item of \$25, which the plaintiff charges

for his trouble, because he had told Raymond von Stillfried, while the latter was still a partner in the firm, that he renounced that remuneration, and this remuneration must now be carried to the credit of the defendant firm.

The allegation, that Raymond von Stillfried had formerly admitted the accounts as correct is not proven, because the single testimony of Raymond von Stillfried is not sufficient to constitute such proof.

For these reasons the court decides:—

The firm of Stillfried & Andersen is held bound to refund the plaintiff Baron Francis Stillfried the outlay which the latter has made on behalf of the defendant at the exhibition in Philadelphia in the year 1876, in consequence of a commission entrusted to him by the defendants firm; but it is also now declared that the plaintiff is not entitled to claim the \$25 for this trouble. For the rest, the plaintiff is ordered to prove his bill and bring satisfactory evidence that he has expended \$122.50 on behalf of the defendants firm.

As to costs, the judicial costs are divided equally between both parties; the extra-judicial costs are thrown out.

## INVESTIGATION.

Into the circumstances connected with the stranding of the Mitsui Bishi Co.'s steam-ship *Kiushiu Maru*, at Samusawa, on the 30th of September, 1879.

The following is the decision of the Court:—

From the evidence adduced it appears that the steam-ship *Kiushiu Maru*, of 1,216 tons gross and 112 horse power, William Sherett Davison, master, on the 28th day of September last, came to a single anchor off the village of Samusawa, the port bower being used and 9 fathoms of chain veered on it; the weight of this anchor was 22 cwt., and the size of the chain, 1½ inch.

About 5 o'clock p.m. on the 29th, her stern touched on the eastern bank whilst swinging to the ebb tide, the anchor having come home; the cable was hove on but the anchor continued to come home; a hawser was then made fast to the opposite shore and by it at about 6.20 p.m. the vessel was hove off, and then anchored in mid channel. At this time the barometer was falling and a southerly swell setting into the harbour. At about 8.30 p.m. the vessel swung to the flood, that is to say, with her head to the southward, and, as the weather was getting worse and the swell increasing, the master deemed it prudent to remove to the outer anchorage, which he accordingly did, and there anchored her by the port bower in 3½ fathoms of water, veering to 30 fathoms of chain. At midnight on the 29th it was blowing a fresh gale from the south, with a heavy swell setting into the harbour. At 7.30 a.m. on the 30th, it was blowing a strong gale from the southward, and the vessel being swung to the ebb tide was sheering about very much and started her anchor, in consequence of which the starboard one was also let go (the weight of this anchor was 16 cwt., and the size of the chain 1½ inch,) and 15 fathoms of chain veered on its cable, and at the same time the port one was slackened away to 45 fathoms.

The Master stated that at this time he would have weighed and proceeded to Okinohama for shelter, but the vessel being very light, and heading the wrong way, he did not consider it prudent to start his anchor in such a strong tide. At 10 a.m., it being slack water, the master decided on making for Okinohama, and with this intention commenced heaving on both cables; at 10.30 the starboard anchor was sighted and held by claws attached to the chain, and the cable hung off the windlass. The port cable was then hove on, and when about one fathom of it was in when the vessel took a broad sheer to port and the cable parted. The engines were put on full speed ahead, and the order given to get the starboard anchor ready for letting go, and the main try-sail set; but before the anchor could be let go, or the vessel gather steerage way, she struck heavily ast, on the eastern bank, and her head fell off before the wind; at this time she was drawing from 12ft. 6in. to 13ft. 6in. aft and 8ft. forward. The engines were then turned full speed astern, but the vessel kept forging ahead and striking heavily; the master then finding the vessel would not come off, and knowing there was a sandy beach ahead opposite the village of Samusawa, ordered the engines full speed ahead and ran the vessel hard and fast on this sandy bottom.

From this position a stream anchor was run out, and a hawser made fast to the opposite shore. The following morning the weather moderated, when the cargo was discharged, and on the 1st of October she was got off, and ultimately towed to Okinohama.

The damage sustained whilst the vessel was striking was very considerable, a large portion of her bottom having to be renewed in consequence.

From the parting of the port cable till the striking of the vessel a space of about 4 minutes elapsed, during which time she must have drifted a distance of at least one cable. Had the starboard anchor been let go immediately the port cable parted, it is probable it would have prevented her going on shore, but the delay appears to have been due to the old and awkward anchor gear with which this vessel is fitted, and not to any fault on the part of the master or mates.

The stranding of this vessel was due to the parting of the cable, and we do not attach any blame to the Master, William Sherrett Davison, but we think he did all that he could under the circumstances he expected of him, and therefore recommended his certificate of competency should be returned to him.

We would take this opportunity of calling the attention of owners, and others interested in shipping, to the importance of having their vessels supplied with ground tackle of sufficient weight, and of good quality, and, to ensure the latter, would recommend that no anchors or chains should be used that have not been tested at a Licensed Public Testing Machine, as is required by Lloyd's and the other principal registries of shipping. Anchors and chains not so tested are as a rule of very inferior workmanship and material, and should be regarded with suspicion. A certificate from a Licensed Public Testing House should accompany every anchor, and each 14 fathoms of chain.

The Master stated that the chart of Samusawa, No. 81, ("Sketch Survey") is very incorrect, and as this is a Harbour of some importance we recommend steps should be taken to have a careful survey made of the same.

(Signed) A. R. BROWN,  
F. KNIPPING,  
JAS. ELLERTON.

Tokio, January 7th, 1880.

I hereby approve of this decision, and direct that the Master's certificate of competency be returned to him forthwith.

(Signed) H. MAYESHIMA,  
Vice-Minister, Home Department.

## A DEADLY FEUD: A TALE FROM FRANCE.

BY RUDOLPH LINDAU.

At sixty-five M. Isidore Tisson, professor of History at the University of Montpellier, had still one great passion and one dear friend. He was a collector of rare books, and loved to be called a *bibliophile*. His friend's name was Colonel Casimir Coste.

M. Tisson had been a widower thirty years. His two daughters—who, after their mother's death, had been educated by an old aunt of a very religious turn of mind—were both married. One of them was settled at Nîmes; the other at Lunel. They were highly proper and highly respected ladies, who punctually performed all their duties without a murmur and without any pleasure. They paid their father frequent but short and formal visits, and never stopped a night in Montpellier, so that they in no way interfered with the quiet routine of the Professor's life.

Colonel Coste was a bachelor. Isidore Tisson and Casimir Coste, whose parents had been next-door neighbours, had begun to play together when they were only five years old. They had been to the same school, and had parted for the first time when they were seventeen. Tisson then went to the University of Toulouse, while Coste was sent to the military college of St. Cyr. They did not meet again for forty years, and by that time they had completely forgotten each other. During this long interval M. Tisson had published several learned works, and had obtained the chair of Professor of History in his native town. Coste had fought the Bedouins in Algeria and the Russians at Sebastopol, and had been obliged to retire from active service in consequence of a severe wound received at the storming of Fort Malakoff. He was a lieutenant-colonel, and an officer of the Legion of Honour. On leaving the hospital, the lonely, weary man returned to his native town, which he had not visited since the days of his youth. But he had often felt a strange longing to spend there in quiet the evening of his restless life, and now he hoped to do so.

He found Montpellier but little altered during the long years of his absence, and soon recognised in one of its narrow streets the very house in which his parents had lived and where he was born. It so chanced that a small apartment was to be let there. He hired it, furnished it simply, and established himself there at once.

Behind the house was a large garden; and the Colonel, as a favoured tenant, obtained permission of the landlord to walk in it when he chose.

One evening in September, as Coste was passing up and down the gravel-walk in this garden, smoking his short pipe and thinking of Africa, the Crimea, and friends that were dead or lost, he heard himself called in a fashion that startled him—

"Casimir!"

For nearly forty years no one had called him by that name. His superiors and his soldiers during that time had addressed him successively as lieutenant, captain, major, and colonel; his brother officers as Coste. He had lost his father and mother many years ago, and had never had any brothers or sisters. He might well have forgotten that he had a Christian name, and now some one was calling him by it!

"Casimir! Casimir!"

He turned round and saw at a window of the first floor of the house next to his own a middle-aged gentleman, who was smiling and nodding to him in the most friendly manner. For a moment the Colonel remained motionless. Then with an oath, which it was his habit to utter whenever he wanted to express joy, anger, astonishment, or, in short, any sudden emotion, he called out in return—

"Isidore! Is it possible?"

A few minutes later the Professor was in the garden with his friend. He told him that he had returned that very morning from a trip which he had taken during the vacation, and had only just learned that a Colonel Coste, a native of Montpellier, had come to live next door.

"I at once thought it must be you, and would have called upon you to ascertain if my conjecture was correct, but I saw you in the garden and recognised you at once. You are not a bit altered."

The Colonel upon this laughed so loudly that the sparrows in the trees flew away in affright. "Well," he said, "I think that's just a little exaggeration. When I accompanied you to the diligence that took you to Toulouse you were a handsome, slender lad, with a soft down on your upper lip and a profusion of dark curly locks. Now you can boast of a very respectable circumference, and your dark hair has turned grey.—I was then a mere boy, with bright eyes, sound teeth, active legs, and a magnificent head of hair which I used to part sometimes on the right, sometimes on the left side, not being sure which way was most becoming. Now I require spectacles to read, I munch like a rabbit because I have lost my back teeth, I walk lame because the Russians sent a bullet into my right leg, and I have so little hair left that the natural parting of it reaches nearly from one ear to another. Frankly, I cannot think I am very like the Casimir you knew."

"Still I recognised you at once. I would have known you among thousands, and would have said: 'That's my old friend and school-fellow, Casimir Coste.'"

"Well! and did I, I should like to know, hesitate as to your name?"

Then the two old gentlemen shook hands for the twentieth time, and laughed, while their eyes grew moist. Both talked at the same time, so that neither understood what the other was saying, until at last they came to regular questioning.

"Are you married?"

"No; and you?"

"I have been a widower many years."

"Children?"

"Two married daughters."

"Here, in Montpellier?"

"No; one at Lunel and one at Nîmes.—Are you going to live in Montpellier?"

"Of course; and you?"

"I am Professor at the University. But come; it is getting cold. Pascal, my old housekeeper, shall give us some supper. We will drink a bottle of rare wine and have a good chat together."

The Colonel made no objection, and the two friends sat together till a late hour in the Professor's snug drawing-room, telling each other the simple stories of their lives. They met again the next day, and the Colonel dined at the Professor's. On taking leave he invited his old friend to be his guest the next day at the *table d'hôte* where he was in the regular habit of taking his meals.

"I have never kept house," the Colonel said, "and I am too old to begin now. Wherever I have been stationed, the *table d'hôte* has been my table. I hope you will dine with me there to-morrow."

But M. Tisson objected. "We dine together," he said, "because we like one another's company, not because we want to do a polite thing. I have no fancy for restaurants and hotels. There are always strangers there, and one cannot talk comfortably and freely. Besides, to tell you the truth, Pascal has spoiled me. I am accustomed to her cooking, and hotel fare does not agree with me. Please withdraw your invitation. We do not stand on ceremony. Dine here again to-morrow and the day after—every day; you cannot do me a greater favour."

The Colonel consented to dine with his friend the next day.

Two weeks went by. The friends spent several hours together every day, and the bachelor had dined, maybe, a dozen times at the widower's house, when one day after dinner—old Pascal having left the room after serving coffee—Coste lit his pipe, cleared his throat, and made the following speech, for which he had been preparing himself for the last week—

"This is all very fine, Isidore, but things cannot go on in this way."

"What do you mean?"

"I have never lived better in my life than I do now with you, yet I do not like my board."

"Why not?"

"When I was a lieutenant I used to pay sixty francs a-month for my dinner: when I became captain, it cost me eighty francs; since I have been a major, I have always reserved a hundred and fifty francs for that purpose. I must stick to these old habits to be com-

fortable: and if you cannot think of some way in which I can spend my money and have your company. I must give up dining with you."

"Excuse me, Coste, but really you are not speaking like a sensible man."

"But I have been thinking that I would be very sorry not to see your familiar face opposite me at dinner; and, somehow, I fancy you too would miss me."

"You may take your oath of that."

"And therefore I make a rational proposal to you."

"There was a long pause. The Colonel cleared his throat again."

"Well, go on," said the Professor, gently, "I see what you are driving at in that clever way; but let me tell you, I consider your proposal childish. Yes—be angry if you like—positively childish."

"Childish or not, I stick to it. And if you care as much for me as I do for you, if you are not afraid of having too much of me you will accept it."

The Professor resisted for some time. He tried hard to persuade the Colonel to continue to be his guest; but the old soldier would not yield, so the Professor had to give up.

"You were ever obstinate and self-willed," he said, "whereas I was always the good-natured and sensible one of us two. Let it be as you wish: henceforward you shall pay for your board."

But this did not settle the question. Coste proposed to pay too much—Tison asked for too little. At last they agreed that Pascal, who for thirty years had been the Professor's housekeeper, should act as arbitrator. She was what is called in France a *waitresse-femme*, and had a clear, sensible answer ready for any question that might be put to her; so after a short conference with her, it was settled that M. Tison would not be a loser if the Colonel contributed 120 francs a month. Thus this long discussion came at last to an end.

From that day a new and brighter life began for the two lonely old men, which made them forget their age, and which continued without interruption for many years. The Professor had little to do; the Colonel nothing at all. They spent many hours together every day, they walked arm in arm up and down the "Perou" and the "Esplanade"—the two principal promenades of Montpellier; they sat together in the Professor's library; or they went out together on the "Links," being passionately interested in an interminable game of "golf"—a pastime which is almost as much in honour at Montpellier, and at Montpellier alone of all French towns, as at St Andrews in Scotland. Their evenings were spent at the Club, where they found their regular whist-party. They became daily more and more dependent on each other, as happens with old people from whom the rest of the world is gradually withdrawing, who love few people, and are loved by few, and whose interest centres in a narrow circle. Very soon they became indispensable to each other. Tison became uneasy if Coste was five minutes late for dinner, and the Colonel had every morning a confidential talk with Pascaline to inquire if the "maister" had passed a good night, if his cough had been troublesome, and if he had enjoyed his breakfast. He was a regular attendant at the Professor's lectures. His venerable head, his attentive, earnest, mild countenance, soon became known to the whole University. The young students took a liking to the quiet old gentleman, and made room for him respectfully when he entered the lecture-room. And he greeted them kindly: "Good morning, gentlemen." When the lecture was over, the Colonel liked to have a talk with the Professor—often asking for explanation of some obscure point. The Professor would offer it with a pleasant smile, and with an air of innocent, gentle pride. Now and then the Colonel would quote some Latin sentence, in order to show that he, too, was not deficient in classical knowledge: "Alca jacta est," "Dulce est pro patria mori," "In vino veritas," and other sayings of that sort. On such occasions the learned Professor was wont to look a little embarrassed, though he smiled approvingly, and he would change the conversation. But when the old soldier spoke of his campaigns, the Professor, in his turn, would listen for hours, and put encouraging questions so as to induce the narrator to continue his story.

The friendship of these two old gentlemen had become proverbial. The Professor's daughters were perhaps the only beings who did not look upon it favourably. They complained of the fearful profanity of the Colonel's and of his poisoning the whole house with that horrible short pipe of his, which he smoked indiscriminately in every room of the house. "But papa approves of everything the Colonel does," they said. "Let us hope that he will have no cause to repent some day."

The remark was not quite correct, however. Their father was far from approving entirely the views and the mode of life of his friend. The Professor was an earnest Catholic, and, like most members of the upper classes in the South, a staunch Legitimist. Coste, on the other hand, possessed an inexhaustible stock of rather scandalous stories, in which priests, monks, and nuns were not always mentioned with the respect that Tison thought due to them. In politics he was a Liberal, inclining towards Republicanism. Tison would sometimes call Coste "Charraa," and the Colonel would retort by "Polignac." Their discussions, which were long and frequent, were generally brought to a close by one of them reminding the other that the time for a rubber or a game of golf was come. Then the excited countenance of his opponent would at once assume a calm expression; both would take their hats and sticks, and walk to the Club or to the "Links," chatting cheerfully by the way, as if nothing had ever disturbed the perfect harmony of their intercourse.

The terrible year—*l'année terrible*—of 1870-1871 put an end to these discussions between the two friends. Both were true patriots, and in their grief for France they forgot all differences of opinion. Both blamed the Emperor and the Empress, the Ministers and the generals, with the same severity. They believed with the same implicit confidence all the stories which were told of the heroism of the French soldiers and the barbarity of the Germans. They felt

the same indignation towards Russia, which did not hide its sympathy for the enemy; the same disdain for the English, "that nation of shopkeepers," who had forgotten Sebastopol; the same contempt for those "ungrateful" Italians, who abandoned their old ally in her distress; and they shed tears together when the news of Sedan reached Montpellier.

About this time a peculiar kind of feverish, nervous excitement had taken possession of the whole French nation. Our two friends did not escape the contagion. The cheerful equanimity of former years was gone. They never touched a card, and dust gathered on their golf clubs and balls, lying unheeded in the hall. They read the papers with passionate eagerness; they made strategical plans, and discussed them as earnestly as if armies had been at their command; they hoped against hope; they believed that the fortune of war would take another turn; they never despaired, for it seemed to them simply impossible that France, their proud, mighty, beautiful country, could succumb in a war with any other nation—and they felt almost crushed when the dreadful truth at last dawned upon them, when they knew that the power of France was broken, and they saw her, humbled to the dust, at the mercy of the conqueror.

Coste and Tison spent day after day together, silent and mournful, feeling that their common sorrow had drawn them even more closely together than the peaceful happiness of former years. But as, in spite of their advanced age, they had preserved a good deal of that liveliness and elasticity of mind which characterises the inhabitants of southern France, they shook off after a time that dull oppressive sense of gloom. Nervous irritability and great bitterness of feeling remained, however, and showed themselves in frequent and violent explosions of anger against the supposed authors of the great national misfortune.

Then the papers brought the news that a Revolution had broken out in Paris, and that the Communists had seized the reins of government. At first the two friends heard these reports almost with indifference. The wounds inflicted by the foreign foe were still so fresh that they were unable, so to speak, to feel any new pain. But soon the civil war compelled their attention. It became the principal theme of conversation. The interest in the struggle for the possession of Paris, where Frenchmen fought against Frenchmen, soon absorbed every other feeling.

It was on the 3rd of June, 1871. The day had been hot and sultry. Dark thunderclouds had gathered, and threatened a storm at every moment. The air was heavy.

The Professor was peeing up and down the dining-room in an agitated manner, waiting for the Colonel, to sit down to dinner. At last Coste arrived half an hour after the usual time. He held some half-opened crumpled newspapers in his hand, and, on entering, threw them on the table. He looked pale and disturbed.

"I have waited for the papers from Paris," he said; "read—it is horrible, incredible!"

Tison took up the papers and looked at their contents. Pascal had served the soup; the steaming plates stood before the two old men, but neither thought of touching them.

The papers reported the horrors committed by the Communists: the destruction of the Tuileries, the Hotel de Ville, the Ministry of Finance, the Cour des Comptes, &c. . . . They related the massacre of the hostages the furious fighting in the streets, and lastly, the slaughter among the "enemies of society" by the avenging Versailles troops.

Tison looked up and said, with a long-drawn breath of relief, "God be praised! The good cause has triumphed!"

"It might well have triumphed with more humanity," retorted Coste, sullenly.

"I hope you are not going to defend the Commune?" continued Tison, in an almost threatening tone.

"No," replied Coste, turning pale and speaking in a tremulous voice, "I am not going to do that. But I do think that the troops might have shown less bloodthirsty cruelty. Fifty thousand! . . . Think, Tison, what that means. . . . Fifty thousand human lives have been sacrificed! . . . Fifty thousand! It is dreadful! . . . They have shown no mercy to women and children; they have been killing as if they were destroying wild beasts!"

"They have done right!" cried Tison. "Brave men who have fought against wild beasts—a murderous crew, the scum of humanity, robbers, murderers, incendiaries!"

"Tison, Tison, think of what you are saying! You are speaking of Frenchmen, of our countrymen, our brothers!"

"Your brothers, if you please—not mine, thank God! I have nothing in common with thieves and murderers."

"Nor have I."

"You have—since you dare to defend them."

"Dare? . . . You must be out of your senses, Tison, to speak to me in this way."

"No, I am perfectly in my senses, and I tell you calmly and deliberately that it is a shame—a burning shame—that you should dare to say a word in defence of the Commune,—yes, you ought to be ashamed of yourself!"

"Recall that word, Tison! recall it, or by . . .!"

"You ought to be ashamed, I say. Shame! shame!"

The Colonel rose, pale as death, with flaming eyes. He struck the table with his clenched fist, so that the plates and glasses rattled, and he swore with a fearful oath that he would never sit down at that table or put his foot in that house again until Tison begged his pardon and retracted what he had said.

"And I declare," replied the Professor, who of a sudden had become strangely calm, but was as pale and trembling as his wretched old friend—"I declare, without the use of any blasphemous language, that the words you require me to say shall never pass my lips."

Then the Colonel went to the door, took his hat and in a moment, without another word or look, was gone. Tison heard his heavy,

halting step upon the stair. The house-door was opened and shut again; then all was still—the stillness of death.

For three whole days the Colonel and the Professor lived on their passionate wrath. Then their anger cooled, and both began to understand what they had lost. The isolation consequent on their estrangement became unbearable. Coste dared not leave his rooms for fear of meeting his old friend; the Professor crept stealthily out of his house when obliged to go to his lecture,—and the two old hearts longed for reconciliation. Yet it could not be. They thought over again and again that parting scene, and remembered every word and every look.

"He should not have insulted me at his own table in his own house," said the Colonel; and he felt he could not, in honour, break the oath he had sworn.

"He was entirely in the wrong," thought the Professor. "How could he defend the greatest rascals and criminals the world has ever seen?" And he remembered with a shudder that he had solemnly vowed never to pronounce the words which alone could induce the Colonel to return to the house as a friend.

One morning old Pascal came to the Colonel. "What have you done to my master, sir?" she asked, with tears in her eyes. "He does not eat, he does not sleep. He sits all day long in his study without opening a book or writing a line. He will see nobody, he speaks to nobody—he will die. What have you done to him, sir? Do help my poor master!"

The Colonel had always treated the faithful old servant with kind familiarity, and he was quite ready to discuss the matter with her. "You see, Pascal," he said, in conclusion, "I have sworn upon my honour never to re-enter his house until he house until he has acknowledged himself in the wrong—and I cannot break my word."

"It is a wicked thing to take an oath when in anger," said the old woman. "Ask our vicar, sir; ask the bishop himself. They will release you from your vow."

"I have given my word. No human being can help that. I must keep it." Tears stood in the dim eyes of the old soldier. He looked miserably sad, but he spoke with so much determination that Pascal felt she must give up all hope of reconciling the two friends.

Soon after this the Professor's daughters came to pay their customary visit to their father. Pascal told them what had happened. They disliked the Colonel, whose manners they considered coarse; and they merely observed that no doubt their father would soon find out that the loss he deplored now, was, in fact, a gain. They were about to say as much to their father, but he stopped them angrily, telling them with flashing eyes to keep silent on that subject or to leave the house.

For a whole month there was no change in the relations between Tisson and Coste. Their quarrel had become the subject of talk in all Montpellier, but no one felt inclined to play the part of peacemaker between the two old men.

At the end of that time the Professor went away on his usual holiday trip. For the last ten years Coste had been his companion on these occasions. They had visited together Paris, the Pyrenees, Auvergne, and Switzerland. They had enjoyed themselves everywhere. But now the Professor started alone. He thought of going first to Paris—and then? He had not settled where. He wanted to leave Montpellier. He could not bear to remain there any longer.

The Colonel stood at his window, hidden by the curtain, when the cab stopped at his neighbour's door. He felt a heavy load on his chest, and his eyes burned in their sockets when he saw the Professor leave the house with a heavy step and enter the carriage. When it had driven off, Coste hid his face in his bony hands and wept bitterly; but he experienced a sort of relief in the thought that Tisson was no longer in his immediate neighbourhood. He walked up and down his garden sadly and thoughtfully, feeling himself free and unobserved. A kind of peace stole over him; and one day, when he got up in the morning, he wrote the following letter:—

"DEAR TISSON,—I have made up my mind to leave Montpellier and to return to Algiers, where my old regiment is stationed, and where I have still a few comrades who will be company for me. They cannot make up for what I have lost; but, at any rate, I shall not feel as utterly lonely as I do here. Before I leave, never to return, I would like to meet you once more as in the good old times. I therefore beg you will write to me, on receipt of this, to appoint a place of meeting in Paris. We will, as in bygone days, have a stroll through the big town, we will dine together in the evening, and then bid each other 'good night,' as we have done for the last ten years. On the morrow I will leave Paris. You will then be able to think of me as of an absent friend from whom you have parted in peace and goodwill. My anger lasted but a few days. Since I have become cool and collected I feel the same old friendship for you which I shall ever feel, even if you reject my proposal.—Believe me, dear Tisson, your faithful friend.

"CASIMIR COSTE."

Old Pascal gave him her master's address. The Professor was staying at a small hotel in the Rue du Helder. The landlord was from Montpellier, and Coste and Tisson had lodged there on several occasions.

The second day after the despatch of this letter the Colonel received one from Paris. He at once recognised the writing of his friend, and tore open the envelope with a trembling hand. The letter consisted of a few hurried and almost illegible lines:—

"I have sworn never to pronounce the words which you require before re-entering my house; but I may tell you how hard it has been for me to keep my vow. Forgive me the pain my anger has caused you. I, too, have suffered much, and I remain, till we are parted by death, your faithful and attached friend,

"ISIDORE TISSON."

The letter fell from the Colonel's hands, and all seemed dark for a moment. When he had recovered a little he went to Pascal. She had received no tidings of her master. Coste then telegraphed to the landlord in Paris begging to be informed of the health of the Professor. In a few hours the answer came back,—Professor Tisson had died suddenly. He had been found dead in his bed on the morning of the preceding day. The funeral was to take place on the morrow. The daughters of the Professor had been communicated with.

Coste started that same evening for Paris, and arrived there a few hours after the funeral. He saw the daughters and sons-in-law of his friend at the hotel. They were in deep mourning, but appeared to bear their loss with great equanimity. They seemed surprised at the Colonel's troubled countenance when he entered their room unannounced in his dusty travelling dress, and they answered his inquiries briefly and precisely. Their father had had a stroke. He had gone to bed in his usual health at ten o'clock, and had been found dead the next morning. The doctor thought he must have died about eleven. At any rate, he had been dead some hours when found; and he had died, they hoped, without pain.

Coste went the next morning to visit the grave. On his return to the hotel he was informed that "the family from the south" had left Paris after ordering a "pretty" tombstone to be placed on the Professor's grave.

The landlord M. Doucet, a great talker, who had known Coste for many years, and was particularly fond of having a chat with him under ordinary circumstances, became unusually silent and reserved when the Colonel asked him for the particulars of his friend's death. He was evidently concealing the truth, and Coste determined to find it out. He bribed the waiter, who at first held back; but when the Colonel promised faithfully not to betray him, the man related in a nervous, frightened manner all the knew.

M. Tisson had arrived five days ago. He went out little, dined alone in his own room, and spoke to no one in the house. On Friday morning he wrote several letters, which he posted himself. About ten o'clock he ordered some tea, and told the waiter that he was going to bed, adding that he did not wish to be disturbed before the next morning.

"When I knocked at his door on Saturday morning at nine; to give him a letter that had arrived from Montpellier, I received no answer, and finding the door was locked on the inside I became alarmed. I called M. Doucet, who sent at once for the police, and in presence of the 'Commissaire' the door was opened. M. Doucet, the 'Commissaire,' and a doctor who had come with him, were the only people who went into the room. My master told me to stand at the door and not to let any one go in. I had to wait a long while. When those three came out of the room, M. Doucet was as pale as a ghost. He took me aside and said: 'I trust that you, an old servant of the house, will not talk. It would damage the reputation of the hotel.' I promised to be silent, and up to this moment I have not opened my lips about it to a single soul, nor will I do so again. But you were an old friend of M. Tisson's, and ought to know the truth. A little later the doctor returned with an assistant. They locked themselves into the room where the dead body was lying, and remained there about an hour. Late at night, so as not to alarm the other visitors, the coffin was brought quietly into the house. The next morning M. Tisson's relations arrived. They asked to see the body, and I followed them into the little drawing-room where it was laid out. The features of the dead man were not distorted, they were yellow as wax. Round the neck was placed a broad white cravat, which reached up almost to the ears. I felt a cold shudder when I saw it. I told M. Doucet in a whisper that it looked very horrible. He made me a sign to be silent, and seemed very agitated. It's my opinion, sir, that M. Tisson laid violent hands upon himself and—"

Coste turned deadly pale, staggered back, and sank into a chair. The waiter sprinkled some cold water on his face and gave him something to drink. When he had recovered from the shock, the man entreated him once more not to betray him, and then quietly left the room.

A few days later Colonel Coste returned to Montpellier, but only to superintend the removal of his simple furniture and belongings to Paris, where he settled in a remote part of the town at no great distance from the cemetery where Tisson was buried. He lived there for a year in sadness and solitude. Then his health began to fail, and at the end of a few weeks he was confined to his bed. The doctor advised him to take a Sister of Charity as a sick-nurse, as he had no relation or friend to take care of him. Coste assented to everything. The nurse came, and performed her duties carefully. She was a strong young woman, with a smooth calm face, fair, with rosy cheeks—a face that looked as if it belonged to one pure in body and mind. She nursed the lonely helpless old man carefully, unwearyingly, without anxiety and without hope, as she had nursed for years many other sick and dying people.

"He is getting weaker and weaker," she said one day to the doctor. "He does not know me now."

The Colonel lay on his bed, with half-closed eyes, breathing feebly. The doctor felt the pulse, forehead, and heart of his patient, and said, while slowly drawing on his gloves—

"I do not think he will hold out through the day. I will look in again to-night; in the meantime you may go on with the medicine I prescribed yesterday."

The sister nodded, and when the doctor was gone, took up some needlework, with which she busied herself whenever the patient did not require her attendance.

The day passed quietly, without any perceptible change in the state of the dying man. When it grew dark the sister left the room noiselessly to fetch a lighted lamp. The door had remained ajar. From the next room she thought she heard the patient speak, and hurried back to his bedside. He had raised himself from his pillows, and his face, which she could not well distinguish in the dim twilight, seemed to her to have grown younger. His eyes, which

during the whole day had remained half closed, were now wide open, and looked kindly and peacefully around. That indescribably sweet smile with which so many weary ones greet the approach of peace-bringing death lighted up his countenance.

"It is getting dark," he whispered. "Wait for me, Isidore; we will go home together."

He fell back on the pillow. His breathing became slower—slower and fainter—then ceased.

The sister remained for a few moments perfectly still. She then left the room, and soon returned with the lighted lamp. She raised it above the head of the dead man, so that the bright light fell upon his pale, emaciated, and calm features. She looked at him attentively, without tenderness, without sorrow, or indeed any visible sign of emotion, turned quietly away, and after placing the lamp on the table, returned to the bed to close the eyes of the departed. In the same methodical way she smoothed the pillow and placed the quiet head carefully and gently upon it, drew the sheet up to the chin of the dead man, and placed a crucifix in the cold hands, after having folded them above the counterpane. Then she lighted two candles, and placed one at the head and the other at the foot of the bed. Lastly, she took a small bottle and poured the holy water which it contained into a saucer, already prepared for the purpose, which stood by the bedside. When she had attended to all this without hurry, or without hesitation, she looked around as if to see if anything else remained to be done. Her calm searching glance surveyed with the same serious composure the corpse, the tapers, the crucifix, the saucer with the holy water; and when she had satisfied herself that nothing had been omitted, and that everything was in perfect order, she drew from her pocket a little, well-worn, black book, opened it with unerring hand at an accustomed place, knelt down, made the sign of the cross, and her silent, moving lips recited the prayers for the dead.—*Blackwood's Magazine*.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXI.

#### THE LORD SENESCHAL'S TOURNAY.

It has been recorded with what reluctance Yoshitsune's retreat to Oshin was undertaken in obedience to his uncle's desire and his comrades' counsels, so that we are not surprised to find him discovering in Iné's fate a more than sufficient motive for abandoning that project. The girl's brave and always sagacious action had been so intimately associated with the progress of all his plans, and her sympathy had unconsciously become such a solace in misfortune and such an addition to success, that the purpose of his life was for a time completely obscured by the shadow of her loss. There are indeed among the rarer gems of humanity, some whose lustre sheds upon life a light too fair to be fully appreciated until men have been made wise by a sense of the grievous darkness that succeeds their extinction, and such a jewel most assuredly was Iné. When the four men had kindled incense and set up vases of cypress and lily before her tomb on the seventh day, to no one of them did anything of solace seem to remain save the hope of avenging her. They did not tell one another of this common sentiment; it was too evident to require expression; neither did they immediately seek to devise any scheme of achieving their purpose, perhaps because they felt that they might not yet command the patience necessary to success, but while they lingered at Kiyoto, performing all the ceremonies of sepulture with scrupulous exactness, every one of them knew that this sedulity was inspired not more by the memory of the dead, than by a secret desire that Hiromori's search might at some time bring him within reach of their swords, by whatever strength he should be environed at the moment of encounter.

But strange to say the very temerity of their action proved their safety. Hiromori, though he traced each step of their return to the neighbourhood of the city by the dead bodies of his followers, never for a moment supposed that they would venture to remain at Kiyoto, and thus while they, strewing fresh flowers day after day upon Iné's tomb, or praying for the peace of her soul at all the chief fairs of the city, looked hourly to find themselves face to face with a hundred foes, their arch enemy followed the baffling guidance of false reports hither and thither on the northward routes, until at last, weary of a search which Iné's death had robbed of its prime object, he returned to Kiyoto on the very day they chose for their final departure.

A most unlooked for obstacle had turned Yoshitsune from his renewed determination of joining the Lord Seneschal and seeking his aid in the development of some scheme

of revenge. That obstacle was Saburo's dissent. His was not one of those lighter griefs that find expression in blind wrath or loud complaint, but a silent sorrow that appropriated every faculty of his nature, changing the blithe, light-hearted soldier, into the stern, unswerving follower of an inexorable purpose. If he had once been somewhat apt to overestimate the perils that menaced his friends, he had ever been more than proportionately ready to despise those lying in his own path, and certainly no outcome of his bereavement seemed less probable than an access of caution almost amounting to timidity. Yet such was unquestionably the quality that characterized his conduct after Iné's death. Side by side with an utter apathy to all the common chances of life, he did not scruple to show an unwearied care for its preservation, so that Yoshitsune's rash desire to remain in Kiyoto found in him an unexpected and most determined opponent.

The marvel of this utter change invested its cause with additional solemnity in his comrades' eyes, for though little congenial with their own natures, they were not so lacking in sympathy as to misinterpret it. They understood that if Saburo, having deferred his reunion with Iné until the punishment of her murderer, was yet heedful to avoid any profitless risk, it was not because his suffering had unmanned him, but because the very intensity of his purpose made him circumspect in his method of attaining it.

To such a motive they could not refuse their approval, neither was it to be controverted that though to follow the Lord Seneschal's guidon might bring them the solace of hard blows and little leisure, it would at the same time postpone and perhaps altogether preclude the opportunity they so earnestly sought. Thus then the four men, setting out on the seventh day from the cemetery where they had laid the bodies of Saburo's young wife and his faithful vassals, might almost have heard the tramp of Hiromori's lancers as they rode citywards, weary and empty-handed, on their return from a quest in which their black-hearted chief had looked to win a double prize. It was a strange chance, and one in which the superstitious interpreters of Yoshitsune's career have not failed to discover divine interference.

We shall leave the chief actors in our history to pursue their route northwards and turn our attention for a moment to the events which immediately succeeded their departure, for from this time the comparatively narrow interests which have hitherto centered about our hero and his comrades, are destined to widen until they identify themselves with those, not of a mere clan, but of an entire people.

The conference at which Prince Mochihito had been persuaded to grant the House of Gen his Imperial Commission, was not the first occasion Yorimasa had contrived with that object. He had already laid before the Prince a list of goodly dimensions, wherein were inscribed the names of the chief knights and nobles of the Minamoto, whose active aid might be surely expected in the day of revolt. It was a bulky muster roll, and the old Seneschal remembered as he penned it, that but a few years before the men it included could have summoned all the flower of Japanese chivalry to follow them to the battle, though now in truth little remained to them, but the fast fading fame of their ancient greatness. Yet there they were, some three score Earls and Barons, many of tried prowess, all of hereditary renown; and to the gentle-hearted Prince, who at thirty-two years of age had only the scantiest traditional knowledge of the world from which his inconvenient birthright had excluded him, such a confederation seemed an invincible puissance. Yorimasa himself did not perhaps hold the forces his record comprised in less esteem, but the experienced veteran knew well how many days would be needed to equip and unite the scattered elements of his clan's power, and he could not forget that if, in the interim, any intelligence of this design reached the Taira chiefs, his own and his sons' lives would prove but a feeble bulwark to their royal ally.

Before everything then it was essential that the Imperial Commission should be transmitted with all possible despatch to the various provinces, and that the messenger to whom it was entrusted should set a much smaller price on his own safety than on the success of his errand. The Lord Seneschal's choice did not waver in this matter. Living at the cloisters of Kumano, where he had lain concealed ever since the fatal fight of Rokuhara, was the Earl

of Harima's younger brother, Yoshinori; a man whose unflinching courage and stern patience needed not the adjunct of an implacable hatred for the House of Hei to suggest him as a peculiarly apt agent at this crisis. To him, by Yorimasa's advice, the Prince entrusted the precious document, investing him at the same time with the rank of Chamberlain, and changing his name to Yukiye.

History has not preserved any record of Yukiye's adventures, beyond the fact that he passed safely from province to province, disguised in the garb of a travelling Bonze, and that he left with each of the noblemen whose names were borne on his roll, a copy of the Imperial summons. To Yoritomo in his island of exile he carried a special commission, rescinding his sentence of banishment, and authorizing him to assume whatever authority the occasion required, and we find that Yoritomo immediately sent a circular to the men of his clan in the north and east provinces, calling on them to prepare forthwith for action, and desiring them to assemble at points which seem to indicate, that the first plan of campaign was a direct descent upon the capital.

But of Yoritomo and his doings we shall have to speak more fully anon. For the present, the thread of our narrative holds us at Kiyoto, where Yorimasa awaited the issue of Yukiye's errand, scarcely entrusting his projects to his own sons, lest some whisper should forewarn the Taira chief and rouse him to the easy effort of crushing an immature design. At such times indeed the zeal of partisans is often more dangerous than their apathy, and the event amply justified the astute veteran's precautions.

In the cloisters where Yukiye had found an asylum the contrast of his family's misfortunes and their rival's limitless magnificence had aroused more than transient sympathy. Not a few of the friars, stout men and trained warriors, who wielded the glaive better than the crozier and carried a hauberk more blithely than a cassock, had placed their services at the refugee's disposal, and by him their names had been added to the roll of the Minamoto vassals, side by side with the descendants of that prince of liege-men, Watanabe, the 'demon-slayer.' From these, his hosts and allies, Yukiye might not conceal the purpose of his sudden departure. He told them—with what exultation we may well imagine—that the time for action was at last come, and bade them prepare to take part in the great struggle so soon as the achievement of his mission should leave him free to lead them.

These were the days of soft squalline on the verge of summer, when men's passions are stronger than their prudence. Whether they went a Maying or to mass, the soldier cenobites could not forget the lusty sport in which they were presently to take a part, and which, as was natural, their impatience prompted them to anticipate by fencing bouts and glaive practice. They would fain be ready when the summons to arm came, and cared little whether those of their fellows who were opposed to their design, discovered it afterwards, or afforded them an occasion to strike the first blow in its behalf immediately.

For the House of Taira too had its allies among the friars of Kumano, and chief of these was the Prior, Oye. Ample guerdon for himself and large endowment for his shrine had this priests' ministrations won from the piety of Shigemori and the justly troubled conscience of Kiyomori, and never for a moment doubting the strength of the cause he espoused, he saw in the warlike demonstrations around him a new opportunity for winning praise and profit. Assembling four thousand friars, on whose support he could reckon, he marched to attack Yukiye's partisans, confident in his superior numbers and in the surprise of his unlooked for assault.

In the fight that ensued, the war cries of the Gen and Hei were heard again for the first time since the Earl of Harima's disastrous defeat twenty years before. The assailants' force was more than double that of their enemies, but they had at once less stomach for hard blows and less to lose by discomfiture. After a melee that lasted little more than an hour, they fled pell-mell to the shelter of their cloister, leaving some four hundred of their fellows dead on the field and their leader to fare as he might.

Oye, however, who had fought rather for gain than for glory, made no attempt to rally his army of monks, but retreated hastily to the mountains, sending a trusty messenger to carry the news of all these things to the Taira chief

and accusing Prince Mochihito of complicity in the rebellion.

Kiyomori was at his summer palace of Fukuoka on the sea side when the tidings reached him. Failing health, his son Shigemori's death, and a succession of evil omens and troubled visions had ill prepared him for any exhibition of patience. He burst into such a paroxysm of passion as men remembered to have seen overtake him when he caused the Lord Deputy to be tortured in his presence, or when he trampled on the face of the prelate Saiko in the Council chamber. "If this fit hold," said his captains, as they rode after the old autocrat's carriage on the following day, "there will be shrewd work for sword and arrow ere many suns have set."

Arrived at Rokuhara, Kiyomori summoned an extraordinary conclave of his feudatories and vassals. The cause of their chief's visit to the capital had of course become immediately known to the Taira nobles, but it gave them little concern, for the main part found themselves disposed to offer congratulation rather than condolence on so favorable an opportunity of removing for ever the somewhat troublesome claims of Prince Mochihito and leaving Kiyomori's grandson undisputed heir to the throne.

Kiyomori himself, however, looked beyond this present gain, though not by any means despising it. He bitterly lamented the moment of weakness in which he had listened to his step-mother's instances on Yoritomo's behalf, and forgetting altogether the true motive of that clemency, warned his clansmen that unless they found speedy means to rectify the error then committed, it would assuredly one day bring them sharp cause for repentance. As for the rebellious Prince, his punishment should show that the Taira power was not yet on the wane. The two Lord Deputies, and one of the Lord Chamberlains, were ordered to take measures for his immediate arrest, while faithful to his policy of employing the Minamoto nobles upon all duties most likely to be distasteful to them, and ignorant as yet of Yorimasa's complicity, Kiyomori desired the Lord Seneschal's son Kanetsuna, to proceed to the palace in the capacity of Judicial Delegate.

Kanetsuna undertook this mission without remonstrance, but lost not a moment in warning his father of the impending danger, so that almost before the Taira nobles had determined on the best method of carrying out their chief's orders, a letter from the Lord Seneschal was placed in the Prince's hands, conjuring him to fly with all speed to the cloisters of Miidera, where Yorimasa promised presently to join him with all the force he could muster.

The sequel of these things certainly contains nothing more calculated to stir our sympathies than the story of this unhappy Prince's fate. A life of utter seclusion and inactivity had so little prepared his gentle nature for the stern realities he was now called on to face, that when, on the perusal of Yorimasa's letter, he cried aloud with plaintive helplessness; "What am I to do? Who will aid me to escape from this peril?" his oldest servants shrunk from the responsibility they saw thrust upon them. Fortunately, however, a certain knight, Nobutsuna, who had married one of the ladies-in-waiting, happened at that moment to be in the palace. He was a man of immense physical strength and indomitable courage, as had been proved on two noteworthy occasions: once when he carried two refractory nobles from the audience chamber, one under each arm; and again, when single-handed he pursued a party of robbers who had pillaged the palace, and killing four of their number, took a fifth prisoner, so that the whole band were subsequently traced and annihilated. To him those the Prince had taken into his confidence appealed in their perplexity, and not without result, for he immediately devised and put into execution the only feasible plan of effecting his master's escape. Hastening to his wife's apartments he procured a woman's hat and robe, with which he disguised the Prince, and conducting him through the palace garden, struck a by-road that led in the direction of Miidera.

They had proceeded in this fashion some two or three furlongs when the Prince recovered his presence of mind sufficiently to remember that a number of his most prized heirlooms had been left scattered about in the palace, and amongst them the celebrated 'Cicala' flute\* which he had

\* A flute which had been made from a joint of bamboo, exactly resembling a cicala in shape. It was originally a gift from the Emperor of China in return for some timber sent from Japan at his re-

received from the Emperor Toba. So distressed was he by this loss, that in that moment of supreme peril he actually delayed his flight until Nobutsura had returned to the palace and brought away the precious piece of bamboo! If this incident illustrates the helpless childishness of imperial princes in the days of which we write, Nobutsura's subsequent conduct is a no less truthful type of the devoted courage so often displayed by their subjects. So soon as he had conducted Mochihito and his one attendant nobleman beyond the limits of the city he declared his intention of returning to the palace, lest the Taira envoys, finding no responsible officer to answer their summons, should deem that the Genji men had not dared to abide their coming. The Prince would fain have kept the stout warrior by his side to the last, but Nobutsura was not to be dissuaded from his purpose. Alone he made his way back, and had scarcely taken up his post in the palace when the clatter of hoofs in the outer court announced the arrival of his enemies. Then followed one of those scenes which can only occur in an age when men, limiting life's purposes to the attainment of perfection in warlike exercises, sometimes become capable of almost incredible achievements. Kiyomori's messengers, riding into the palace without the slightest ceremony, ordered their followers to seek out the Prince and take him prisoner. Fifty men-at-arms sprang forward to obey this mandate, and to these Nobutsura opposed himself single handed. His sword, a trusty blade that had often served him well before, had laid fourteen of his enemies low before it shivered at the hilt on the cuirass of the fifteenth, and finding himself unarmed, he thought to make use of an arrow which had pierced his leg, but when he attempted to draw it out, the shaft only came away leaving the barb buried in his flesh. Yet in such a strait he never thought of seeking quarter. One of his assailants he knew to be almost as stout a soldier as himself, and seeing this man shorten his glove to deal a final blow, he spread out his brawny arms and leaped on him like one that welcomes death. Probably, however, the novelty of finding himself assailed by an empty-handed adversary disconcerted the Heike soldier, for his misdirected thrust only reached the other's thigh, and the next moment the two were grappling on the ground. Nobutsura was of course taken prisoner, and we would gladly follow him to Rokuhara, where his defiant bearing when confronted with the Taira chief well nigh cost him his head forthwith; but we may not depart so far from the course of our history. Suffice it to say that his life was spared at the instance of the Heike men themselves, and that Yoritomo, who never forgot a benefit or forgave an injury, recognized and amply recompensed his services in after years.

Meanwhile the prince toiled on towards Miidera, his feeble feet finding almost insurmountable difficulties in the arduous by-paths it was necessary to follow. The distance was little more than ten miles, but the road climbed over steep passes or crept through rocky ravines, so that it was nearly midnight when the fugitives reached the cloisters beyond the peak at Nioi. Their coming was quite unexpected, nevertheless, the cenobites received them readily, lodging Mochihito in their principal cloister and choosing the stoutest of their number to guard him.

But this hospitality, however opportune, had little power to reassure the Prince in the absence of his ally and adviser, Yoritomo. Utterly unversed in all life's ruder phases, he had looked to be received at Miidera not only by the Lord Seneschal but also by an ample army of Genji knights from the provinces to which his commission could scarcely yet have been carried, and finding instead a synod of tonsured monks with cassock and stole in place of cuirass and sword, he was only persuaded to remain by his inability to devise any other refuge.

It was not indeed till the fifth day after the flight from the palace, that Yoritomo arrived at Miidera. He had with him but a scanty following, some three hundred knights in all, but they were every one men of repute, and among them were the Seneschal's three sons, who could draw as strong a bow and strike as stark a blow, as ever their father did in the times when his fame was greenest.

quest for the purpose of building a temple, and its fashioning had been solemnized by seven days of litanies and prayers. Once when irreverently played by the Deputy Seneschal, it snapped in his fingers, and consequently received the title of the "broken cicala."

Two names, however, were absent from the muster roll, and they were those of warriors who could ill be spared at such a juncture. Takeguchi and his son, Kiso, were reckoned by men the manliest, and by women the comeliest, knights in the capital. They were staunch liegemen of the Seneschal's and would have been the first to bare their blades at his bidding, but unfortunately they lived within half a bowshot of Kiyomori's castle at Rokuhara, and Yoritomo dared not send them word of his intentions lest their movements should furnish the Heike men with a clue to his own.

And his discretion was well advised. So soon as the Lord Seneschal's retreat to Miidera was told to the Taira chief, he despatched a messenger to see whether Takeguchi was still at home, "for surely," he said, "if Yoritomo has taken the field his stoutest knight will not be sleeping in the alcove."

Of the Seneschal's intentions, however, there was soon unmistakable evidence for the flames of his castle—which he fired as he marched out—were visible from the watch tower at Rokuhara, but as for Takeguchi, it was equally certain that neither he nor his vassals as yet evinced any intention of sharing their liege-lord's enterprise. Their mail was not lowered from the rack nor were their horses led from the stable when Munemori's\* messenger looked in at the vestibule, and the Heike chief drew a not unnatural and very welcome conclusion from this tardiness. Summoning Takeguchi he questioned him as to his relations with Yoritomo, and finding that the knight was, or pretended to be, not a little piqued at the neglect with which he had been treated, he asked him to fight in future under the red flag and promised to do more for him than ever his old lord could have hoped in his most sanguine dreams. To the surprise of all, Takeguchi consented without a moment's hesitation, and Munemori, who well knew the value of such an ally in the dangers that were beginning to lower, held high vassal that night at his castle, presenting Takeguchi with two suits of richly enchaîned armour and two of his own favorite horses, reputed to be the fastest among the fifty score that stood in the stables at Rokuhara.

The next morning, as the Heike men were discussing these things or preparing somewhat lazily to execute the new fortifications their chief had ordered, a band of seven knights rode up to the gate of the castle. They were in complete armour and their iron masks made it impossible to recognize them, but the two foremost wore suits of mail not easily forgotten when once seen, and bestrode horses—a chestnut and a black—of which half the bystanders could have told the names without hesitation. "Tell your master," the foremost knight shouted in a stentorian voice, drawing rein for a moment beyond the bridge, "that we thank him for his gifts, since the harness is light and the steeds swift, and we would fain make good speed to Miidera where Yoritomo awaits us. A tough suit of mail and stout nag are none the worse for being fresh, but the old master is the best, whatever the new may bring."

It was in this fashion that Takeguchi and his son reached Miidera a day later than the Lord Seneschal. Munemori would gladly have sacrificed a thousand men to bar their passage, but he knew that the horses they rode could carry them beyond the reach of all pursuit before his soldiers were even in the saddle. He swore a solemn oath however, that so surely as they fell into his hands they should be sawn asunder on the public execution ground in the city, and he issued immediate orders that twenty thousand of his stoutest liegemen should hold themselves in readiness at a moment's notice.

Not unsuspicious of the wrath they had aroused, though apparently quite indifferent to its results, Takeguchi and his little band of followers rode leisurely towards the peaks of Nioi, expecting every moment to hear the shouts of a pursuing troop, and perhaps not altogether disposed to rejoice at their enemies' forbearance. They were received with acclamations by the Genji knights, for despite his confident assertions, even Yoritomo himself must have felt some misgivings as to the disposition his seeming neglect might beget in these haughty warriors. Men did not easily

\* Kiyomori's son, and chief apparent of the Taira clan since the death of his elder brother, Shigemori. He is said to have been a supposititious child and certainly no share of Kiyomori's iron will, or Shigemori's chivalrous nature, seems to have descended to him.

pardon anything savouring of a slight in those times, and if a liegeman's loyalty was governed by a very rigid creed, his lord's obligations were none the less punctiliously discharged. Takeguchi indeed had just cause for umbrage, but the shadow was dispelled in a moment when he found himself face to face with the Seneschal, and saw the proud joy of the old man's look as it met his own.

And with what a burst of uproarious hilarity did his comrades receive the news of the knights' reception at Rokuhara and of the exquisite cozenage practised upon Munemori. To have laughed in the very teeth of the arrogant tyrant and made him a helpless spectator of his own discomfiture—why the thing was such a triumph as these doughty soldiers might not aspire to secure in a month's battles! Keen as their delight might be too, they knew that it was but a small measure of the passionate exasperation to which Munemori must now be a prey; an exasperation that might even move him to some rash retaliation, offering his foes an occasion to win fresh successes. One act only was wanting to crown the insult, and this the Seneschal's sons set themselves immediately to perform.

They took the chestnut horse—Munemori's gift to the knight he had hoped to seduce—and cutting off its tail and mane, branded on its forehead in large characters, "Taira no Munemori." This done, they led it to the top of the pass at nightfall, and sent it speeding cityward with a shout that stifled the echoes of its flying feet.

When their lord's favorite, disfigured so as to be scarcely recognizable, galloped into the castle court-yard, there was not one of the Heike men that dared report the event. Not indeed that they were generally disposed to count the cost of wreaking revenge, but their respect for the Lord Seneschal's strategic skill made them somewhat distrustful of their chief's impetuosity. Munemori, however, only laughed gibingly when he heard what had happened. "Were this done to my father," he said, "the ashes of the Miidera cloisters would be blown about the peaks of Nioi before daybreak, but fire and sword will not suffice for my revenge. The man that brings me the heads of Takeguchi and his son need look for little guerdon at my hands, but it shall go hard if he that leads them to me alive and unscathed have any reason to complain of my ingratitude."

(To be continued.)

### TRIPLE ACROSTIC.

A motley crowd :—it's really hard to say  
Where one could find a scene more bright and gay.

1.

The little flow'r thus spoken of in song  
Was dear unto the singer, or I'm wrong.

2.

A continent of some extent we see :  
Land of the fair, the minstrel, and the free.

3.

What turn and twist, and sometimes, too, a blunder !  
Well may the stolid Asiatic wonder !

4.

The use of this is not much to our mind,  
And yet it's cruel, only to be kind.

5.

Remark that's sometimes used in mild persuasion:  
I hope you'll think of it on this occasion.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, JANUARY 2ND, 1879.  
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
..... represents velocity of wind  
..... percentage of humidity  
Max. velocity of wind 18 miles per hour on Monday, 3 p.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest barometer reading for the week was 30.105 inches on Wednesday, at 10 p.m., and the lowest was 29.563 inches on Saturday, at 2 p.m.; with the exception of the first two days there has been a rising barometer during the week. This has been accompanied by records for both maximum and minimum thermometers; also by clear weather and comparatively dry air.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—Market has opened after the holidays with a strong demand for Yarn and a large business has been done at slightly higher rates. At the close, holders are not willing to go on at current prices, Manchester quotations being much advanced. *Grey Shirtings* are still dull although prices are nominally higher in sympathy with home advices. *Fancy and Dyed Cottons* also are in some request, *Woolens* show a little more life.

**COTTON YARNS:—**

Nos. 16 to 24 Common to Medium ... per pieul	\$27.00 to 33.00
" " Good to Best ... "	\$34.00 to 35.00
Bombay, No. 20 Do. ... "	\$29.50 to 31.50
Nos. 28 to 32 Common to Medium ... "	\$35.00 to 36.00
" " Good to Best ... "	\$37.00 to 38.00
" 38 to 42 ... "	\$39.00 to 40.00

**COTTON PIECE GOODS:—**

Blankets, green 6 to 8 lbs ... per lb.	0.35 to 0.41

**SUGAR.**—There has been a fair business in this commodity, sales of about 13,000 bags having been reported. Stocks are estimated as low as 2,000 bags.

Sugar:—Takao in bag ... per pieul...	\$5.60 to \$5.20
" " in basket ... "	\$5.20 to \$5.00
Taiwanfu in bag... "	\$5.20
do. in basket... "	\$5.00
Ching-pak and Ke-pak ... "	\$8.00 to \$9.00

China No. 4-5 Kongfun & Kook-fah per pieul...	\$6.25 to \$8.00
Daitong ... "	\$4.00 to \$4.40
Japan Rice ... "	\$2.60 to \$3.00
Kerosene Oil ... "	\$1.70 to \$1.75
Newchwang Peas ... "	\$2.20 to \$2.25

**KEROSENE.**—A still further decline may be noticed in the oil market, 27,000 cases having changed hands at from \$1.80 to \$1.70. Deliveries of cargo, under former contracts "to arrive," are still going on. Stocks are about 282,000 cases.

**EXPORTS.**

**SILK.**—A very fair business has been done during the week and prices have advanced. Filatures have again attracted the chief attention. During the last two days offers have been made by foreign buyers for large quantities of Hanks, very little actual business has however as yet resulted, on account of the high pretensions of holders, whilst several hundred bales have changed hands among Japanese dealers.

Small parcels of Kakedas and Oshins have been settled at quotations, and a sale of some 25 bales of Sadai at \$620 has been reported.

Settlements:—220 bales of Hanks, and 290 bales of Filatures, total 510 bales. Arrivals 300 bales; Stocks 3,700 bales. Total export, 13,309 bales against 12,843 bales last season.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing quality and  
measure, and the strength also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Boney Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

**NOTICE TO MARINERS.**

No. 4 of the 12th Year of Meiji, (1879.)

**SIRIYASAKI LIGHTHOUSE.****STEAM FOG SIREN.**

THE GOVERNMENT OF JAPAN hereby gives notice, that a Steam Fog Siren has been erected at Si iyasaki lighthouse.

Siri yasaki, at the entrance to the Tsugaru Straits, is the extreme north-eastern point of the Province of Mutsu, in the Island of Nippon.

The Siren will be sounded during fogs, snow storms or other causes that may render the outline of the land indistinct during the day, or the light by night.

The blast from the Siren will be of six seconds' duration with intervals of one minute. During such time as may be necessary for getting up steam for the Siren, or if from any accident the Siren cannot be sounded, the Fog Bell, hung from the balcony of the Lighthouse and rung by machinery, will be sounded at the rate of fifteen strokes per minute as before notified.

YAMADA AKIYOSHI,  
*Minister of Public Works.*

Tokai, 20th December, 1879.

## THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK.

**CANOMILE PILLS** are confidently recommended as a simple Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial, that it is with justice called the "Natural Strengthener of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 45 years. Sold in Bottles at 1s. 1½d., 2s. 9d., and 11s. each, by all Medicine Vendors throughout the World.

### CAUTION.

Be sure and ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

**MEDICAL TESTIMONY.**

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. DRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

**KEATING'S WORM TABLETS,**

## MISCELLANEOUS.

THE GREATEST

**WONDER OF MODERN TIMES!**

**HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!**

**HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873. tf.

## SILK.

THE first and most important *semestre* of the season being completed, we may perhaps be permitted to review the course of trade in this article, compare a few statistics, and take a glance at future prospects; not failing to "point the moral" as occasion may arise.

On the whole the present position of the trade may be considered fairly satisfactory: indeed some of the general prosperity of the world would seem to have reached as far as the benighted Silk-exporter; and while the Import merchant gazes with complacency on the result of his ventures in Yarn, or the Teaman contemplates with satisfaction the returns given by his shipments of "spring-leaf", even the poor long-suffering Silk-man may feel that at last his labour has not been in vain. Without doubt Japan silk has participated in the much-talked-of "revival of trade": whether the demand is principally speculative, or based on a real improvement in the manufacturing branch of the industry we will not stay to inquire, but merely observe that, at least in America, there seems to be a legitimate and increasing demand on the part of consumers for the raw-silk of this country.

Turning to statistics we find the export for the past six months compared with recent years to be as under:—

	1879.	1878.	1877.
England .....	4,780	8,512	8,234
France .....	4,892	6,517	6,654
America .....	2,847	1,536	611
Other countries .....	67	849	1,193
	12,586	11,908	16,692

In these figures there are two salient points which claim our attention. First, the extraordinary falling-off in the shipments to "Other countries" (presumably Italy and Switzerland); and secondly the still more remarkable increase in the quantity destined for the United States. It may be that the first change is accounted for by the fact

that large quantities of Japan silk now find their way from Marseille—which is becoming more or less an emporium of raw material for the manufacturing districts of France, Italy or Switzerland—and that the reduction is therefore more apparent than real. On the other hand the increase to America seems really sound; and, as we hope to shew further on, is brought about by the intrinsic excellence of Japan raw silk as now produced here.

There is no doubt that from 1874 to 1876 the produce of this country reached the very lowest depth of inferiority; and turning to our files for the year 1875, we find the columns filled at short intervals with leaders, denunciations, and warnings, inspired by the indefatigable labours, researches, and travels, of these honored patriarchs of the trade,—JACQUET and PRIQUET. Careless reeling, and bad quality of cocoons caused by the suicidal export of "seed," each in turn received its share of blame; while the powerful influence of H. B. M. Consul for Kanagawa was apparently invoked, for we find his Trade Reports for the years 1874 and 1875 teeming with remarks on the prevailing evil. And it is certain that Japanese silk at this time did really fail to command its intrinsic value in the markets of the world; this melancholy position being doubtless brought about by the great inferiority of the staple, as well as from the fact that the large export of silkworm-eggs enabled European throwsters to supply themselves with Japan raw silk grown in Europe, to the great detriment of the legitimate grower of the article here.

On the 16th of October, 1875, we published a letter from a well-known silk-inspector; in which, after reviewing the comparative merits of China and Japan silk, and strongly advising the Japanese to improve the culture and reeling of their produce before their great neighbour should awake from the conservative torpor in which she seems so fast bound, the writer concluded with this remarkable passage:—

"Now the Japanese have hitherto shewn some inclination to adopt Western ideas and civilization—at any rate on the surface of things—and there is no doubt that, if they will give themselves up liberally to the idea of growing their silk in accordance with European usage, they may for many years to come ensure a ready and even eager market for their produce at good and remunerative prices. On the other hand, if they do not take warning in time, the present dislike among consumers to Japan silk will increase, until it becomes what is so forcibly expressed by the words a 'drug in the market.'"

For some time it seemed as though this good counsel had fallen upon stony ground, and very little improvement was perceptible. Then, in 1876, came the whirlwind of frantic speculation; during which men cared not for quality, so that they could secure something with the name

\* The complement to these almost prophetic words may be found in the quotations we made a few weeks ago from Mr. Wyckoff's recent work published under the auspices of the Silk Association of America, and some of which (in spite of the seeming plagiarism) we shall venture to quote again later on, so important do we feel the lessons taught therein.

of silk, and plenty of it. After this typhoon (leaving sad scars in its track) had passed away, a season of calm prevailed, in which our native friends began in earnest the work of improving the reeling and preparation of their produce. It is true that for some years previously the Government had fostered a "filature" under its own imperial wing, and that in some other districts the Ken authorities had followed the august example; but now the idea was taken up with avidity by the general producers of Shinshiu, Joshu, and Koshu, with the result that factories for the re-reeling of hanks or reeling of silk à l'Européenne have rapidly increased until at the present writing there are reported to be over seven hundred such establishments in operation. The re-reeled Maibash hanks find appreciative buyers in the United States, while the better kind of filatures proper compete successfully with European-grown silk in the markets of Lombardy, Piedmont, and the South of France.

We say "European-grown" silk advisedly, for it is beyond controversy that the great bulk of so-called European silk is now nothing but *Japan silk grown in Europe*. It is also incontrovertible that (other things being equal) worms reared in their native land will produce better thread than those transported in embryo several thousand miles, and there reared in a strange climate with alien food. This postulate is much strengthened by the failure to "reproduce" in the magnaneries of Europe the Japan worm from the imported seed. We believe that the result of gradual acclimatization might be different; but as the matter stands at present, the abrupt transition from so great a distance would appear to seriously affect the constitution of the worm, making it incapable of reproduction the second year, thus causing growers to clamour each season for "fresh seed." From these premises we draw the inference that if our native friends still follow the path of improvement they will eventually succeed in placing their home-grown produce above the European-grown; even should they continue the insane policy of supplying their European rivals with the sinews of war in the shape of those *cartons*, which are so cheerfully given away for a mere song, but which would prove mines of wealth to all concerned were they retained for growth in this country.

The rapid increase in the production of these improved kinds may be gathered from the following statistics taken from the records of the local dealers—the figures representing native boxes of about fifty-five catties nett.

	1879.	1878.	1877.	1876.
Filatures .....	4,800	2,900	1,600	1,100
Re-reels .....	4,100	1,800	150	none

The bulk of the filatures proper go to Europe, and there sell at the same prices as ordinary Brutia or Italian raws; indeed it is a matter of notoriety that the recent large settlements in these kinds have been mostly shipped to the Lyons market. At present the best Japan raws cannot displace the high class silks of Novi and the Cevennes; but there is no reason why in course of time they should not even excel them, if producers here will retain the best seed for their own use and devote still greater attention to the careful sizing of the silk when reeled. The great complaints of manufacturers refer to the uneven size; this can only be remedied by very careful sorting of cocoons before the reeling is commenced, and by special care being taken, at the *bassine*, that no thread shall be allowed to run a strand short even for the smallest distance.

The figures last quoted are well worthy our attention, shewing as they do that within the last three years a new kind of raw silk has sprung up here; the demand for which has been entirely created by the desire of manufacturers in the United States to obtain a *labour-saving* material. We allude to the kind tabled above as Re-reeled and known

by the Japanese as "Chankuri" (presumably a compound of *chanto*, correctly, perfectly, completely, and *turn*—to reel). They are not strictly speaking "filature" silks in the proper sense of the term, but consist of Joshu and other hanks bought up by native dealers, and by them given out to various factories (mostly of small size) for sorting, cleaning, and winding anew. These, when made up into skeins with *bouts noués* and properly assorted, are calculated to save the throwster from fifty to seventy-five per cent of time and waste at the winding-engine; and as, in America, labour is very dear, it pays the consumer there to get such cleaning, sorting, etc., done in the country of production. For years past there has been a great export of Hainin and Tsatlee re-reels from Shanghai to the States; but these seem now in a fair way of being entirely supplanted by the Chankuri of Japan.†

Let us once more hear what Mr. Wyckoff says on this subject:—"The re-reeling" (in China) "is however not always well done. Aside from carelessness, which alone would deteriorate the value very largely, there is considerable imposition practised in adulterating Chinese raw silk. Sugar, salt, rice, and acetate of lead are mentioned as among the substances used for adulteration. At intervals there have been brief periods when there was more care and less fraud in Chinese re-reeling; at present there is a season of backsliding, and the raws are about as bad as they have ever been."

"The Japanese have taken a different course. Within four or five years they have established a number of filatures where excellent work is performed. The government has encouraged the work and owns one of the filatures, where skilled operatives from Europe were employed at first, and native labour has since been educated. The result has been that, while the Chinese have improved a very little, the Japanese have advanced with singular rapidity, and their silk has taken rank with the best in our market."

This singularly corroborates what we have said above as to the relative values of the best Japans with Europeans in the markets of the world; and is a strong encouragement to reellers here, never to slacken their endeavours until they stand on the topmost pinnacle of perfection. In connection with this subject we may also notice that, while the total import of raw silk into America has increased but slowly during the last few years, the excess in Japans has grown rapidly; thereby seeming to displace other kinds, presumably Chinese and European. We give the total imports into the United States, compared with exports from Yokohama, for corresponding years:—

	1872	1875	1878
Imports in lbs. av. ....	1,244,193	1,890,482	1,690,663
Export hence in bales ...	158	58	2,386

These facts and figures would seem to bear out abundantly the assertion that there is a vast outlet in the United States for this product of Japan; and it may be confidently predicted that the market will be capable of almost infinite extension in future years, as the broad continent between the two oceans becomes peopled with the vast millions of the next generation. We cannot refrain from congratulating our Japanese silk-men on the promptitude with which they have risen to the occasion. We cordially urge them to go on and prosper, to take for their motto the watchword "Excelsior," and never to rest satisfied so long as the least imperfection remains in their

† It is curious to note that the immense increase in the export to America from this country has entirely arisen since these Chankuri were first made: thus,—

Export, season 1876 to 1877.....	150 bales, (no re-reels made.)
" " 1877 to 1878.....	1,411 "
" " 1878 to 1879.....	3,200 "
" half season 1879 to 1880.....	2,847 "

work. We are sorry to say that there is some foundation for a warning on this point. We transcribe a portion of the last report of the Silk Association of America bearing date Wednesday, 14th of May 1879.

"There has been a large increase in the receipt of raw silk from Japan. The quality has not, however, been quite satisfactory in all instances, owing to a want of care in preparing this silk for the market. This defect has been specially noticed in respect to the Kakedas. The silk from the best filatures is not open to this criticism. The deservedly good repute of Japanese silk was only won a year or two ago by diligent effort; it can be lost even more rapidly by carelessness."

This extract especially hits the mark with regard to Kakedas, as the large and well-nigh unsalable stock here amply proves. The evil has indeed grown during the present season; and, although it is true that the Japanese have not adulterated their silk with chemicals, yet they have done so to an alarming extent by reeling inferior Oshiu cocoons into the style and form of "Kakeda." Now it is well known, to all silk-buyers, that the district from which true Kakeda silk comes is of small extent and quite incapable of producing more than a fractional part of the silk which is put on the market under its name. The quality of true Kakeda silk, being of exceptional excellence, has made for this class a name of renown; and it is no secret that reelers have attempted to profit from this by making nearly all Oshiu silks into so-called Kakeda, and thus bringing disrepute upon the original good stock. To such an extent has this been practised of late, that, until quite recently all Oshiu sorts (Sendai, Harimichi and even Hamatsuki) were reeled in this fashion: and not until buyers made a determined stand against the imposition did the original forms of Oshiu reappear. This is an abuse which must be eradicated at all cost, if Japan wishes to hold her own among the silk-producing countries of the world. Commercial probity and mercantile honesty cannot be trifled with in the slightest degree by any people aspiring to the front rank in the great Commonwealth of Trade; the least suspicion of chicanery or disingenuousness will surely be discovered, and the recoil will be felt with tenfold severity by the people practising it. On the other hand the straight and onward path will invariably lead to the highest renown and success. Especially then does it behove our native friends, in a case like the present where a good foothold has been fairly gained, to take the greatest care, so that nothing within their control shall check their forward march even for a day. We should like to print in letters of gold the pregnant sentence quoted above:—"THE DESERVEDLY GOOD REPUTE OF JAPANESE SILK WAS ONLY WON A YEAR OR TWO AGO BY DILIGENT EFFORT; IT CAN BE LOST EVEN MORE RAPIDLY BY CARELESSNESS."

#### THE IMPERIAL MINT.\*

THE Commissioner's report scarcely loses in value because it is published six months after the date at which the year of which it treats expires, any more than the circumstance that its author spells the era in which he lives "Meiji," while the Educational Department adopts the literation "Meidi," detracts from the value of his compilation. Neither section of the public service has yet adopted any of the most specially approved etymologies of the capital, which is still allowed to remain recognizable, in its former literation, on the title page of each of the two productions.

\* Report of the Commissioner of the Imperial Mint for the year ending the 30th of the sixth month of the 12th year of Meiji (30th June 1879). Tokio: printed at the Kappann of Inseten Kioku.

The present is the ninth report of the working of one of the most important departments of the public service, and one which has had and will continue to have the satisfaction of making a fair annual return to the Government resources. The pamphlet includes the official statement of Mr. Ishimal, the Commissioner, and the reports, to that gentleman, of the foreign Technical Adviser to the establishment, Mr. W. Gowland, F. C. S., Associate of the Royal School of Mines, and Mr. Robert MacLagan, M. I. M. E., Engineer, these being at this time the only foreigners employed in the service of the Imperial Mint at Osaka. Regarding the general aspect of the receipt of bullion during the year, the Commissioner remarks that "compared with the last year, there has been an increase in the number of importers, as well as in the amount imported, of gold; whilst the importation of silver has suffered a decrease, owing to the fact that the greater part of the old silver coins had already been gradually recoined. There has also been a large decrease in the importation of new or tile copper on account of the recoinage of old copper cash, which has just been commenced." The amount of gold bullion imported into the Mint was 23,504 ounces Troy, that of gold of standard fineness accepted for coinage 25,349 ounces: silver bullion imported into the Mint 1,638,082 ounces: silver of standard fineness accepted for coinage 1,797,177 ounces. Of the value of precious metals thus received a very small percentage was in worn coins of the country. English gold money to the weight of rather more than thirty-eight ounces was among the quantity received into the Mint. Of copper bullion 817,701 pounds avoirdupois was imported, whereof 290,197 pounds was native copper, and the rest, Tempo, Bunkiyo, and Nirin zen.

Gold coined during the twelve months was exclusively in five *yen* pieces, to the number of 92,079: value 460,865 *yen*. Of the rather more than two million dollars worth of silver minted, the great majority was in *yen* tokens, the balance being 20,150 ten *sen*, and 144,733 five *sen* pieces. Upwards of eighty-three million copper coins, of two, one, and one-half *sen*, were struck, attaining a total value of 897,286 *yen*. Since the first establishment of the Mint eighty-six million dollars worth of coins has been minted. During the year, eighty-nine ingots of refined gold have been supplied to the Imperial Government; and the whole number of ingots supplied of precious metal since the tenth month of the eighth year, is three hundred and ninety refined gold and ten refined silver, aggregating in value upwards of 4,049,715 *yen*. The manufacture of refined copper ingots, for the purpose of exportation for foreign markets, having been recommended and approved of during the second month of the year, a considerable number of such ingots has been already produced and awaits further instructions as to exportation. In addition to the usual work of the department, a number of medals were manufactured: two bullion balances were constructed for the printing bureau in Tokio; and Mr. Y. Ohno Shiogishi, a superintendent, having received an order from the Imperial Household Department to manufacture a clock for use in the palace, applied his time for five months to its fabrication; and having at length successfully completed the work, he himself took it to the capital, and was presented with some amount of money as a reward for his labour.

Six hundred and five officers and men constitute the staff of the establishment. The percentage of sick admitted to the hospital attached to the mint was comparatively small. Sixteen thousand persons visited the works during the year, the far greater part on Tuesdays, on which day the place is open for inspection by the general public. It is interesting to note that no counterfeit coin have been found; but transfigured and silver-plated copper coins have

been detected to the number of twenty-eight only in all the divisions of the empire.

With regard to the operations in the refinery the Commissioner states that of pure Troy ounces, 58,078 gold, and 1,118,282 silver, were dealt with. The important decrease in the amount of bullion refined during the year is mainly to be attributed to the fact that the refining or parting of the previously accumulated stock of old coins, both gold and silver, held by the Imperial Government, had all been completed.

An average of between fourteen and fifteen thousand *kin* of sulphate of copper was sold by the Mint during the period reviewed; and the Sulphuric Acid works have been fully occupied as before. The extraction, in China, of a small percentage of gold contained in her old "sycee," for which purpose concentrated sulphuric acid is mostly consumed in that country, still continues to be successfully carried on. Of the 2,890,428lbs manufactured in the works 594,891lbs were taken up for home consumption: the balance 1,855,557lbs were exported, 1,595,678lbs of which were sold in the neighbouring empire through the China and Japan Trading Company. The Commissioner says that it is very encouraging to record, for the first time, that a large amount, 146,201lbs of brown sulphuric acid had been disposed of for Japanese use only. This acid is of late becoming more generally used for local consumption by several newly established manufacturing firms of indigo, paper, bleaching-powder and the like, who are gradually increasing in number and importance year after year, a gratifying tribute to the augmentation of native industry and enterprise. A total of about twenty thousand pounds weight of muriatic, and eight thousand of nitric acid was also sold from the Mint retorts. Buildings are in course of erection, on property acquired by the Mint, for the manufacture of carbonate of soda, in conjunction with that of sulphuric acid.

There is little to add to this brief review of Mr. Ishimal's report, except that the memorandum of Mr. Gowland, the Chemist and Assayer, proves that the establishment is kept in a high state of efficiency. The pyx trials made in London and America coincide with the local analyses. It only remains for us to repeat what we have before asserted—that the Japanese coinage is of great beauty and full intrinsic value, and in every respect qualified to become, as it should be, the medium of exchange in all the ports of the Far East.

#### A SITE FOR THE ROWING CLUB?

AS each new year commences we have to chronicle the meetings of the members of the various institutions that are growing up among us;—the affairs of Church and State of these settlements. It is a pleasant task to note the tone of prosperity that rules through the reports of these associations so far as concerns the doings of the past year. But it is to the Amateur Rowing Club that we wish especially to allude at present. This popular club, numbering more than one hundred and twenty members, and having an ample revenue, is in evil plight;—is threatened in fact with dissolution; not from internal disorder, not from apathy of its members, not from any symptoms of decay which presage a gradual falling into disuse; for never before were the members so unanimous, never was there so earnest a feeling, not only among the members but we may safely say among the whole community, that the Rowing Club is an Association so necessary to the comfort if not to the health of a majority of the settlement, that it must not be allowed to fail. The danger that threatens it is the want of a suitable site.

When it was known that the Mitsu Bishi S. S. Co. would require the land lately occupied by the boat-house, we then suggested that the French Hatoba afforded a convenient site for the new premises, and we did not anticipate that any objection could be raised to our suggestion being given effect to. Centrally situated, and being as suitable a spot for the purposes of the Club as can be found in this bay, we considered it the best place for the new location. Disused as a landing place for cargo, the greater part of the space has become a promenade for pariah dogs; so when we were informed that the Committee of the Rowing Club had applied to the Governor of the Ken for permission to rent a part of the Hatoba, and had at the same time declared their wish to convert the desert into a smiling straud, we were astonished to find that any objection had been raised to the accomplishment of what appeared to all reasonable minds a public benefit. That there would be some delay, that there would be much struggling in the meshes of red tape that hedge about official rank, we anticipated. "International friendship and good will," interpreted by diplomatic action, has its disadvantages as well as advantages. Among the former is the rule that prevents the amiable Governor of this Ken from receiving a direct proposal for the lease of ground that is confessedly useless and profitless to him, while at the same time earnestly desired for the enjoyment of others. Had the Governor full power to entertain the proposal and decide upon the grant, we have no doubt that the matter would have been settled at once. We hear that a sentimental objection has been raised to the proposed location; but we can confidently state that the objection is far from well founded. The Club have offered to do as much as possible to secure the amenities of the public, and to see that the Hatoba, or that part of it which might be confided to their care, should be kept free from even the appearance of what the most susceptible could construe into a nuisance. Further, they are willing to conform to all municipal regulations, so that the local authorities should not object to their occupancy. When we look along the sea-line bordering the settlement, we are forced to decide that the French Hatoba is the sole available site for the purpose. The local Japanese authorities will probably come to the same conclusion; and, if they do so, we hope and believe that they will reconsider the decision at which they are believed to have arrived.

REFERRING to what we have, on several recent occasions, written on the subject of copyright, it is interesting to observe, in the columns of the *New York Nation* that in America, where the introduction of an international arrangement has so long been opposed, favour is beginning to be shown to the plan. It is said to be generally understood that a vigorous push is to be made this winter at Washington to secure some provision for international copyright. "This attempt will be made under circumstances of a peculiar and novel character. Hitherto the agitation has been mainly promoted by authors. Now, however, for the first time in its history, a strong and united pressure will be brought to bear by the large publishing-houses," which have been the main opponents of the proposal when previously brought forward. In all discussions on the subject in America "the argument in favor of some international recognition of authors' rights has been mainly rested upon abstract considerations of justice and fair dealing, and it has been taken for granted that the present condition of the law was for the pecuniary advantage of the United States. In this instance, however, important business interests prove to be at stake. Hitherto, again, it has been generally assumed that international copyright,

though not yet given a place in the statute or treaty law of the United States, was still making a steady advance in public opinion, which would sooner or later produce its effect in legislation. The system of royalties paid to foreign authors by leading publishers—a growth of the last thirty years—has been often pointed to as a cheering proof of this tendency. It now appears, however, that the growth of public opinion is being sapped, and the system of royalties itself threatened in its weakest part, by a new and serious danger, which, if not checked, must in the long run reduce foreign authors' rights to the pitiful condition in which they stood thirty years ago, give a general license to piracy throughout the United States, and remit the enactment of an international copyright law to a period too remote to be a matter of interest to any of those who are now on the stage." The *Nation's* article is too long, however interesting, to be republished in this journal. The point that it most insists on is that the system, pursued by the highest class of American publishers, namely, that of securing the right to publish foreign authors' works through the 'courtesy of the trade' has broken down. This system has been a very simple one. "The house that desired to reprint a foreign book for the American market gave a sort of informal notice of its intention, and thenceforth was recognized by courtesy as having the right to republish that author's work without interference from other publishers. Not long ago, however, it occurred to some enterprising publishers of what would be called in England 'penny dreadfuls,' that they might reprint in an extremely cheap pamphlet form, books protected by the courtesy of the trade. They accordingly began to bring out, at a price slightly in excess of the cost of manufacture, current English books. Issuing them in this form, at regular weekly intervals, and numbering them consecutively, they succeeded finally in having them classed by the Post-office authorities as periodicals, and therefore entitled to the cheapest rate of postage. The effect of this was of course to threaten the royalty system in its most vital part. Such houses as the Harpers could not afford to go on paying foreign authors a royalty if books were placed on the market at such a price as to make the system unprofitable. The only way to meet this new danger was to insist at once on an international copyright law which would absolutely prevent piracy, and enable them to keep the control of the market." Following the line of reasoning here suggested it is easy to see how, at length, and almost by accident, it has suddenly become for the direct pecuniary interest of some of the largest publishing houses in the United States that international copyright should be established with all possible speed. More difficulties are still in the way than are at first apparent. The interest of foreign authors, American publishers, and the American public have all to be conciliated, in any scheme on the part of the United States. Among English publishers, according to the *Nation*, there appears to be a hostility to any change. "This probably grows out of a dread lest the amount of their direct exportations to the United States may to some extent be curtailed. It is also their honest belief that any restrictions on copyright as to manufacture are in themselves unjust." Our contemporary does not think that a treaty would meet the case, and proposes a scheme of its own. "For any international system of copyright the consent of both England and the United States is required. But it is not so for the purpose of securing foreign authors' rights in this country. There is nothing to prevent Congress of its own motion from establishing these by law without a step being taken in Great Britain. . . . There can be little doubt that with the powerful support of the publishers such an act could be passed without serious difficulty, and almost as little that it would be speedily followed by some enlightened permanent system. The only class that could possibly object to such an act would be foreign

publishers; and the interests of foreign publishers we are not bound to protect. Curiously enough, such a statute has been introduced into Parliament by the British Government, in accordance with the recommendations of the Copyright Commission. This bill provides that any alien, wherever resident, may acquire English copyright by first publication in the British dominions. When such a law as this is being favorable considered in Parliament, and a reciprocal scheme is being advocated on this side of the water by the only great interest which may be expected to have the opportunity of influencing legislation in Congress, it seems as if the day of international copyright ought not to be very far off. The alternative now is either international copyright or a system of piracy compared with which that practised hitherto would seem like evenhanded justice." We quote at some length because from the proposition of such views as are here enunciated the suggestion is self-evident:—Could not the Japanese Government, without having recourse to treaty, spontaneously enact measures for the protection of foreign authors, whose works are now pirated in translations and direct verbal appropriations in Japan?

AS the punishment of Pra Preechah, that Siamese nobleman who married the daughter of Mr. Knox, British Consul-General in his country, has attracted considerable attention, and a great deal of sympathy, from Europeans, which but for his foreign connection would probably never have been accorded, it is only fair to pay some regard to what is averred to be the other side of the question. It will be remembered that the marriage of Pra Preechah with an alien lady was alleged to be the first cause of his disgrace, subsequent ruin, cruel imprisonment, torture and final execution, as well as the degradation of all the members of his family and the confiscation of their property. It will also be recollected that Mr. Knox threatened the Siamese authorities with the vengeance of the British government for the ill-treatment of his son-in-law, and that the young English wife of the prisoner who is said to have been ignominiously put to death, recently left for Europe with her infant child. An occasional correspondent of the *Siam Weekly Advertiser* now traverses the whole popularly received story of Pra Preechah's wrongs; and it must be admitted that his version has some colouring, at least, of reason, inasmuch as the king and his advisers have long had the reputation of being progressive, anxious to act according to new found lights, and in general conformity with justice. This "occasional correspondent," then, says that he has perused the judgment pronounced by the High Court of Criminal Justice. The document, a very long one, bears ten seals of the principal judges, who had only the charges, answers and depositions before them, submitted by the seven judges who investigated the case. Four counts are dealt with: 1st. Failure to account for 871,961 ticals (\$523,176.60) of Government money. 2nd. Appropriating to his own use seven and a half cetties weight of gold from the mint. 3rd. Causing the death of Nai Ket with the intent to prevent his informing the King of the speculations at the Gold Mine. 4th. Causing two Chinese to be bound and thrown into the river and drowned. The evidence in all these cases was examined, and weighed, and Pra Preechah was found guilty on every count. It will thus be seen that the accused was condemned for at least two crimes of which conviction would have meant death in any community where murder is capitally punished. After reciting the local laws bearing upon the charges, the judges conclude their memorial as follows:

"The facts and the laws being as above stated, our opinion is that Your Majesty graciously raised Pra Preechah, made him a Privy Counsellor, and appointed him to govern the province of Pachum and work the gold mine; and he

should have shown gratitude, appreciated the favour shown him and performed his official duties truly and faithfully. He violated gratitude, received large sums of the King's money and fraudulently made away with them for his own benefit, and furthermore fraudulently appropriated a large amount of the King's gold, acting against the law and presumptuously disregarding the royal power to punish. Nai Koet, a dutiful subject, knowing of Pra Preechah's fraud, wrote a statement which Pra Preechah intercepted. Pra Preechah had him handed over to Hlaung Pachau to flog, strike, and imprison in the severest manner. He had him chained with a ring round his neck and squeezed into a cage under a house only just large enough to hold him. He commanded that only three mouthfuls of rice should be given him each day, until he died—died so that Pra Preechah's wickedness might be concealed. Again presumptuously he made his servants and slaves seize two Chinese caulkers, beat them, bind them hand and foot and throw them into the water to sink and die. Pra Preechah had no feelings of kindness or compassion. He assumed authority to punish in excess of the powers of his office. He feared not the royal power to punish. He dared commit these three crimes, and his criminality is deeper than that of ordinary criminals. His offences are felonies of the worst kind, and the law directs that all his possessions be forfeited, his wives and children and slaves seized, his title and rank taken from him, so that he return to his former name Som-ang; that the wretch Som-ang be then flogged ninety stripes, and he be taken and executed—a warning to Government servants not to follow his example."

Grievous, however, as the crimes mentioned are, even if their commission has been indubitably established, their punishment should not have been accompanied by the judicial barbarities said to have been inflicted upon the accused, and still less by the concomitant destitution and reduction to slavery of all his family and dependents. Indeed the *Siam Weekly Advertiser* adds that, while there was nothing on the document seen to shew that the King mitigated the sentence, it appeared that, while sanctioning the execution, His Majesty remitted the flogging. "Moreover it is probable that the sentence will not be carried out in respect of the seizure of wives and children." In another place we read that the latest accession to the alleged delinquent's "harem—the prelude of his misfortunes,—was neither disturbed nor interfered with by the Siamese Government. Rumor has it that she left Bangkok in the last trip of the British Steamer *Ban Yong Seng*, and considering herself the highest member of that harem probably improved the advantages of her position in appropriating what she may have judged was her right. As the Siamese Government did not dare bring her into its courts, she is now safely beyond their reach and power." The whole affair, as far as the foreign family is concerned, is an unutterably unfortunate one; but it contains a social moral which is evident and should not be disregarded. Nothing has, certainly, so far, transpired to give it the importance of a state question, or to justify that British interference which was sought and has been wisely withheld.

**S**ERICULTURE appears to be making progress in Asia Minor. We observe that very interesting information is supplied by the Beyrout correspondent of the *Journal Officiel* respecting the increased cultivation of silkworms and the spinning of the cocoons in Syria since 1850. In that year only five mills existed in Syria, of which three were in the hands of French manufacturers; there are now some seventy silk works, nearly all belonging to native spinners. This rapid extension is attributable to the fact of the low price of hand-labour and to the incontestable security which has been granted to the district by the Lebanon administration. The Lebanon works at present employ altogether about 10,000 hands, and produce annually from 140,000 to 160,000 kilos. of silk. The silk crop of the present year amounts, it is estimated, to 2,000,000 kilos., whilst that of last year yielded

about 2,500,000 kilos.; the quality is, however, thought to be much superior to that of last year.

**I**N India, too, the growth of silk is looked upon as an important adjunct to the other productions of the peninsula, though, there as elsewhere, the extreme sensitiveness of this branch of enterprise subjects it to unforeseen and serious checks. A correspondent has furnished the *Pioneer* with some interesting notes regarding this industry in the Gurdaspur district. He states that it has declined somewhat since the lamented death of an owner of a filature; and several persons who would have been silk-growers, had that gentleman lived, have failed to keep silk-worms for want of encouragement and help in the way of advances of eggs, money, &c. The present season has, moreover, been an unfavourable one; in some instances all the silk-worms of a silk-grower have died off, and the yield has not been generally more than half that of an average season. This mortality is ascribed by the natives to the effect of the winter drought on the leaves of the mulberry trees; but it is more probably due to the lateness of the season at which the eggs are hatched. The price obtained for the cocoons is about eighty rupees per maund for unpierced cocoons, and at this rate there is a fair market; one native gentleman at Umritsur alone having, it is said, purchased ten thousand rupees worth last year. He has sent men into the district again this year to effect purchases. An agent of a Bradford firm has also been buying extensively, and it is probable that he will acquire the filature at Sujjanp, and rear silk-worms in the neighbourhood. The writer adds that "the silk industry of the Gurdaspur and Kangra district is one of considerable interest and importance; and at present, when it may be said to be languishing, every effort should be made by the local authorities to foster and increase it. The extensive purchases alluded to will, no doubt, have a good effect—probably much better than any system of cocoon exhibitions and distributions of prizes would have produced, though it is understood that these will be continued."

**A** TERRIBLE fate is probably reserved for the lately captured chieftain of the Kwangsi revolt, at the hands of his imperial vanquishers. The *Peking Gazette* in its manuscript edition of the 4th of December, translated by the *N. C. Daily Herald*, thus describes his defeat and hints at his expiation. "The several forces hurried forward, and gained a succession of victories, recovering Cho-yai and other places in that country that had been seized by the rebels, who were nearly all captured. Chang Shu-sheng and Feng Tzu-ts'ai have now surrounded the remnant, and captured their leader Li Yang-ts'ai at Lung-teng-shan, for which action they deserve a certain amount of credit. The penalties attaching to so great a crime as that of Li Yang-ts'ai a military officer, who had collected together lawless characters to create disturbance, are great indeed." Feng, the general above mentioned, who was under a cloud for not having put down the revolt more promptly than he did, "applied some time since for the bestowal of penalties on himself because he had not seized the head of the rebellion;" but the rescript "commands that, as an act of special grace, he be spared the infliction of this penalty, and that he further be handed over to the Board for the bestowal of the highest marks of distinction. Here follows a long list of rewards to be conferred on numerous officers engaged in the campaign." The foreign press in China thinks that, while there is no chance of the insurgent's life being spared, and that he will be fortunate if he escapes execution by lingering and cruel torture, yet some leniency will be shown to the remnants of his forces, Li Yung Chai himself being sent to Peking for adjudication.

JAPAN is not the only Eastern country desirous of preserving in the hands of its own people what profit and benefit may accrue from the coasting trade. Its mammoth neighbor, China, is working towards the attainment of the same object, but by less direct means than those adopted by the statesmen of this empire. In his report on the trade of Wengchow for 1878, H. M. Consul notices what he justly calls an "important point." He alludes to the competition of junks and foreign vessels and the "enormous advantage which the former possess in paying duty at the native instead of at the foreign Customs. Not only are the duties at the native Custom House much lower, but further, though there exists a fixed tariff, it is constantly lowered to suit circumstances, with the object of keeping the carrying trade, as far as possible, in native hands. The Chinese authorities have a direct interest in this, as a large portion of their income is derived from the farming of these Custom Houses. One sailing vessel came to the port seeking for freight, but could only succeed in getting a half cargo, at such a low rate as to offer no inducement to return. Up to the present time foreign vessels have been totally unable to compete with junks."

MISSIONARIES in China have not always the quiet lives and uninterrupted ability to devote themselves to their duties which characterize the career of their brethren in Japan. *Feng-shui*, that mysterious and often obtrusive superstition, frequently, as in the case of the English Church Mission at Wu Shih Shan, near Foochow, causes them grievous annoyance. A still more recent instance of assault upon a clergyman has occurred in the same district; namely, at Yenping Foo, an inland city about three days' journey from the treaty port. The *Foochow Herald* continues to ascribe the hostility of the mob towards the professors of Christianity to the influence of the literati, and gives the particulars of the outrage. A Mr. Sites, an American preacher, visited the station of his society in the first mentioned town, where, shortly after his arrival, he and his flock were denounced and threatened, and his church menaced with destruction. He was warned by a local functionary, to whom he applied for counsel which he is said to have followed, to avoid holding any meetings. In spite of his compliance, however, he was severely beaten by a crowd in the street. The magistrate to whom he had first applied arrived on the scene of the disturbance in time only to save the life of the person assailed, who was so badly injured that he was obliged to be placed under medical treatment. Although in the Wu Shih Shan affair the Chinese were certainly very far from acting without provocation, this last riotous attack upon a man who is said to have been walking quietly through the town, after careful abstention from any action which might offend the multitude, remains, facts being as they are stated, without the shadow of an excuse.

MR. Gagliardi, writing to the *Echo du Japon*, from Suwayama on the 10th instant, makes an announcement which, if it is borne out by subsequent results, may well be called one of great importance to the industrial future of this country. He says that, on the sixth of October, he received orders from the Japanese Government to visit the Ibaragi Ken for the purpose of surveying the marble-bearing mountains in that district. During six days he explored the hills, making discoveries of marble of different colours. On the 13th of October he went to the great Mount Suma, whence he sends his despatch, and which, he says, is entirely composed of statuary marble; and on the same day he made the remarkable discovery of a black and very handsome marble, in no way inferior to the very finest produced in Belgium, and Bardiglio Fiorito, Italy. He does not profess to be a

geologist, but, owing to some peculiarities in the mountains, has reason to believe that they are in some way connected with the mounts of Carrara, which are so rich in marble quarries. On the 17th of October, Mr. Gagliardi returned to Tokio, taking with him a collection of several qualities of marble upon which he made his report to the Government. On the 4th of December he again left the capital for the Ibaragi ranges, accompanied by Mr. K. S. Attori. On the 8th of that month they visited the quarry discovered previously on Suwayama, and on the same day Mr. Gagliardi received orders to commence excavations. Work was instantly initiated; with the consequence that the prospectors are able to "ensure the Government a certain success in the exploitation and sale of its marble." The correspondent adds: "Mondiale Carrara has for two thousand five hundred years been the premier quarry of the world. Japan is now about to take its place. It is impossible to describe the riches which I have discovered in these hills, and if the colossal enterprise is developed with ability and energy, it will soon be one of the greatest industries of Japan."

IN an article on intercourse between Europeans and natives of India the *Malras Times* arrives at conclusions which have a pertinent application in other countries than the great peninsula. The writer holds that "wherever a sensible European comes in contact with a respectable, worthy native, intercourse on friendly terms is always established. The difficulties in the way of such intercourse arise from a self-sufficient feeling on the part of the European leading him to be indifferent to the natives, and from a mode of treating the European on the part of the native which he would never think of manifesting in his dealings with men of the same rank among his own countrymen. That there also exists contempt for each other on the part of some of both nations, we cannot but admit, but," it is added, "as such persons do not wish for mutual intercourse, we do not take them now into account." The politeness of manner with which Japanese will treat a native equal or inferior, is often in marked contrast to the rudeness of their demeanor towards a foreign superior or employer. And decidedly the fault is not with the Asiatics so much as with the Western people who have fostered and encouraged the disrespectful attitude of which they complain.

THE question of Pilotage Regulations having now been disposed of, this would seem a favourable opportunity for establishing a similar ordinance for the proper government and order of harbours. More than two years ago the officer in command of the American squadron in these waters, drew attention to the serious consequences that might arise from the chaotic state of affairs existing in this respect. The Japanese Minister of Foreign Affairs replied by enclosing a series of regulations drawn up in 1872, and accepted by all the foreign Consuls, but which, nevertheless, seem to be wholly nugatory. A correspondent in a contemporary indicates the danger to life and property to which we are at present exposed, while Admiral Reynolds startled us with the statement, made, however on good authority, that the Yokohama anchorage is growing shallower on account of the quantity of ashes thrown overboard from steamers, a proceeding strictly forbidden in every properly regulated harbour. Ships, it appears, whatever their cargo or size, can anchor where and how the masters please, although they may be a source of danger, not only to other vessels in their neighbourhood, but also to people on shore, and this entirely because of the absence of a Harbour-Master with power to enforce a few simple and ordinary rules, such as can be found in every port in the civilised world. We cannot pretend to explain why the fair and reasonable regulations of 1872 have become

a dead letter; for, like many others, this is a case in which the introduction of order and regularity can only be of mutual benefit to foreigners and natives. As we now stand, a vessel ignorant of the harbour has no guide to a suitable anchorage ground, having due regard to her own requirements, as well as to those of the vessels around her. The question is one of importance, and we commend it to the careful consideration of the Government.

THE Order of St. Maurice and St. Lazarus which was, on the 13th instant, conferred by H. R. H. the Duke of Genoa, in the name of H. M. The King of Italy, upon Mr. Nomura Yasushi, Prefect of the Kanagawa *ken*, is one of considerable antiquity. Guillim, in his "Display of Heraldry," includes it in his list of "Degrees of Knighthood in Savoy." "These two Orders," he observes, "were erected by Emanuel Philibert, Duke of Savoy, in the year 1572, and at the request of the said Duke were confirmed and united into one Order by Pope Gregory XIII, who constituted the said Duke and his successors, Dukes of Savoy, Grand Masters thereof, obliging them to set out two galleys for the services of the Papal See against the Turkish pirates." As originally fixed, the Order was a green Cross of St. Lazarus (eight-pointed, and resembling the ordinary Maltese cross) charged with a white Cross of St. Maurice; this the knights wore suspended from a gold chain or from a ribbon. The robe was a gown of crimson, with a long train, and wide sleeves, and edged with white taffety, and a cordon with a tassel of white and green attached to its collar.

WE publish this week a translation from the *Choya Shimbun* on the subject of a National Assembly for Japan. The writer, who is evidently in favour of such an innovation upon the present form of government, regrets that the time has apparently not yet arrived, as the great bulk of the community is quite content with the continuance of the existing state of things. The agitation for a constitutional form of government proceeds, according to the native journalist, from a small but active minority, the vast majority looking on with apathetic unconcern. The *Choya* does not think that there will be any change made until it is imperatively and unmistakably demanded by the Japanese people, and not by a small and insignificant section thereof.

THE editor of the *Hochi Shimbun* is apparently much exercised in mind over the reported dispute between the Czar and the Czarowitch respecting the establishment of a constituent assembly in the Russian Empire. Native journalists, however, have a very astute way of ventilating their own opinions under various guises, and it seems probable that what the writer (of whose article we publish a translation elsewhere) really wishes, is to advocate a National Assembly for his own country.

#### CHAMBER OF COMMERCE MEMORIALS.

MEMORIALS, of which the following are copies, have been circulated for signature among the mercantile community of Yokohama:—

To the Right Honorable

THE LORDS COMMISSIONERS OF THE TREASURY.

We, the undersigned, being members of the foreign mercantile community of the Port of Yokohama, beg respectfully to memorialize your Lordships in regard to the discontinuance, after next month, of the postal communication by British mail packets between Hongkong and Yokohama.

At present the outward European mails are received here weekly,—alternately by Peninsular and Oriental, and Messageries Maritimes, mail steamers.

Very irregularly some mails are received via America. We desire to call special attention to this, because there is apparently some misunderstanding on the subject.

For *homeward mails* the postal route via America is of great value to Yokohama:—the passages across the Pacific are rapid, and there is no detention of letters in either New York or San Francisco. But for *outward mails* the route is of little value:—the passages across the Pacific are much longer than on the return voyage, and as the departures from San Francisco are uncertain, letters are liable to a long detention in that port, no through mail being made up in England.

Moreover, at this time of the year, there is only one steamer in about every three weeks on this line.

Should then this Port be deprived of the British contract mail service, we shall be left with only a fortnightly regular delivery of outward mails, viz., by the French steamers.

For those brought by the Peninsular and Oriental steamers to Hongkong, we shall be dependent upon such uncertain opportunities as may be afforded by steamers coming this way:—and, as already said, the American route cannot be relied upon for correspondence.

It may be well here—to prevent misconception—to allude to the fortnightly line recently established by the Mitsu Bishi Mail S.S. Co., between Hongkong and Japan, and to say that this will not be available;—*1stly*, because it would be only by pure chance that the steamers of this line would connect with the Peninsular and Oriental outward mails; and *2ndly*, because their route is not direct, but via Kobe to and from this Port.

We understand from the Agent of the Peninsular and Oriental S. N. Co., that without a subsidy it will be impossible for the Peninsular and Oriental S. N. Co., as a private enterprise, to keep sufficient steamers upon this line, to maintain a regular connection at Hongkong with both homeward and outward contract mail packets, and that in their own interests they will be obliged to connect with the homeward only: and indeed should the freights earned be insufficient, they will cease to run their steamers between Hongkong and Yokohama altogether.

We would here advert to the importance of British commercial interests in this Port.

We find in the British Consular Trade Report for Kanagawa (Yokohama) for 1878, that Mr. Dohmen, H. M.'s Acting Consul, writes:—"According to the Customs Returns, the Imports from Great Britain amounted to \$20,236,694, and from British Colonies to \$885,296, in round numbers to 21 million dollars out of a total value of Imports of 26 millions from all countries, thus showing that the share of Great Britain in the direct Import trade amounts to four-fifths of the whole." (The share of the other ports of Japan in this is insignificant.)

In the same document we find that the Export trade to Great Britain and British Colonies formed about one-third of the whole Export trade of the Port, and amounted to nearly seven million dollars.

Further, that one-half of the Foreign Shipping entered and cleared was British, and that British firms and residents constitute about one-third of the whole foreign population.

We would therefore respectfully submit that to have only one regular mail from Europe fortnightly is not sufficient for the trade of the place, and that the large share which British interests take in that trade, warrants the continuance of a British mail service.

It might be added that there are also important mercantile interests here connected with the Colony of Hongkong, with India, with Australia, and with ports in the south of China; and that all these must also suffer by the withdrawal of the British mail service: the more so as it seems likely that the French mail steamer will ere long not connect with Hongkong, but proceed via Manila from Yokohama to Singapore, and vice versa.

We trust your Lordships may take these representations into consideration.

We are,

Your Lordships' most obedient servants,  
Yokohama, 13th January, 1880.

To the Directors of

THE EASTERN TELEGRAPH CO.

THE GREAT NORTHERN TELEGRAPH CO.

Gentlemen,

We, the undersigned, being members of the mercantile community of the Port of Yokohama, Japan, beg leave to lay

before you our protest against some of the Rules and Regulations adopted at the International Telegraph Conference of London, 1879, and which, it is announced, are to come into force on the 1st of April next.

It seems to us that these Rules and Regulations are so framed as to exclude consideration of the public who use the Telegraph Lines, and to endeavour only to obtain the largest amount of payment possible from them.

We cannot but think that this must be inimical to the interests of the Telegraph Companies themselves, for although a combination may succeed in establishing such a monopoly as for a time to impose compliance, yet that it cannot be long ere such steps will be taken in other directions, as to place the public in a more advantageous position, and meet them on more liberal terms.

If it were found that the receipts of the Telegraph Lines at present were inadequate returns for outlays, we should have the less to say;—although even in such a case, all experience proves that a greater liberality produces a greater income. No more striking exemplification of this can be referred to, than the results of the reduction of letter postages.

Against two of the new Regulations we take leave especially to protest:—

1.—The limitation of groups of figures, to three figures as equal to one word.

2.—The exclusion of proper names, except in their natural sense.

The first is calculated to heavily tax the public, more especially in those countries where a decimal coinage is current, and where consequently four figures are required to express fractions of any value above nine.

The second—the reason for which it is difficult to understand—is entailing very serious inconvenience and expense on many whose Codes depended upon the use of proper names.

We trust that you will take these observations into consideration, and that these Regulations may yet be modified.

We are, Gentlemen,

Your obedient servants.

Yokohama, 13th January, 1880.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

#### CRUELTY TO ANIMALS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—So many innovations have been made by the Japanese during the last ten years, that one more, which I take the liberty to suggest through your much esteemed paper, namely the formation of a Society for the prevention of cruelty to animals, would certainly not be amiss.

Everytime I visit Tokio, I am disgusted at the ill-treatment of the cab or omnibus horses plying in the Ginza, etc. These poor animals, with their sore backs and flanks, caused by the ill-fitting, hard, dry harness, which apparently is not greased from one year's end to another; with their broken knees and spavined legs, ill-shod and ill-fed; are driven through the streets of Tokio by their brutal drivers at a gallop; one pony having often to draw at that pace, a carriage holding eight passengers and the driver; being whipped unmercifully until the poor brute breaks into a sort of shambling gallop, and is kept up to it by repeated blows and the yells of the driver.

It is really time that some gentleman, who has influence with the native authorities, should for once act in this country as Mr. Bergh has done in America.

It is curious that the Japanese hardly ever ill-treat their dogs, although I could never find out, during the many years of my residence in Japan, what benefit they derive from the curs which they keep and pet; while their horses, through whose hard work many a native makes his living, are ill-treated in all manner of ways.

Hoping you will grant space in your valuable paper for the above, and that it may be conducive towards ameliorating the treatment of animals in general in Japan,—I am, &c.

Yokohama, 14th January, 1880.

H. F.

#### REUTER'S TELEGRAMS.

London, 15th January, 1880.

The *Times* in a leading article announces that a strained feeling between Germany and Russia continues.

Germany suspects France.

London, 13th January, 1880.

There are rumours that Russian Troops are concentrating on the German Frontier.

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 17TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 1ST MONTH, 17TH DAY, DO-YO-BI.

#### NOTES OF THE WEEK.

##### DEATH.

On Jan. 14, F. C. BELMANNA, M.D., late Surgeon of the M.B.S.S. *Hiroshima Maru*, a native of Florida, U.S.A.

We have but scant mail news to record for the past week. The M. M. steamer *Tibre* left for Hongkong on Monday last, the 12th instant, at nine a.m., and was followed this morning by the P. & O. steamer *Malacca*, for the same destination. No European news has come to hand during the interval, but the M. M. steamer *Volga*, which left Hongkong on the 9th instant, may be expected to arrive at any moment. The Shanghai and way-port steamers have arrived and departed on schedule time.

Some months ago a rumour went the round of the native press an was translated into some English Yokohama papers, whence it has found its way into London journals in the following form:—

A learned Japanese has discovered, to his own satisfaction, that silkworms, which, as is generally known, are subject to many mysterious diseases, suffer from a defect of electrical current. We learn from Japan that one Sekimidsu Harukichi, of Fukuda Mura, Takaza Gori, Saigami, has invented an electric machine by means of which weak silkworms, treated to a current, are made strong and healthy. He has already experimented with his invention in Kurami Mura, and, finding that it is just the thing required, has applied for permission to vend it publicly.

A trade organ thinks that the same story has made the circuit of the world once or twice before, but is glad to reprint it, as the name of the inventor or discoverer was previously unknown. The writer sportively proposes "to ask the Lord Mayor to open a subscription list at the Mansion House, with a view to raising a testimonial to Sekimidsu Harukichi. His discovery will be really invaluable. Perhaps the *phylloxera* would disappear if the vines were treated to a few shocks from a galvanic battery; and possibly the potato beetle might be overcome by the same means."

Probably the most useful, although unobtrusive, adaptation of western ideas in Japan is the very efficient lighthouse system. The official list of lighthouses, lightships, buoys and beacons for the current year has now been published by the Department, and shews that considerable additions have been made to the means of protecting navigation on the coast during the past twelve months.

The limited attendance at the meeting of the subscribers to the Episcopal Church, Yokohama, on Thursday last, showed how little interest is apparently felt by those most concerned in the very important matters treated of in the report furnished by the outgoing committee. A failing revenue, a dilapidated parsonage, the speedy departure of a universally respected incumbent, and the arrival of another gentleman to take up his laborious duties, all urgently required attention; and yet not more than about eighteen or twenty gentleman who, with few exceptions, came late, could be got together to take into consideration matters of such vital importance. The departure of the Revd. W. Garrett alone should have secured a crowded and enthusiastic meeting to testify appreciation of the liberality shown by that gentleman, who out of his own private means has been so great a benefactor to Christ Church.

Properly refined petroleum oil, besides being a cheap, cleanly, and highly luminous means of artificial lighting, is far from

dangerous. When kerosene is perilous, it is when it is insufficiently purified, or adulterated after being refined. Under any circumstances, however, adulteration can be easily detected. A French professor of hygiene has recently announced a test that can be safely and surely applied by anyone. The process is as follows:—Pour a small quantity into a saucer, just enough to cover the bottom; then having first passed a lighted match over the surface, drop the match into the oil. If there is no adulteration, the oil will not take fire, and the match will be extinguished almost immediately.

It is reported that the "Shipowners' Combination" did not survive the end of last year, and that shippers in London are now left to take care, in their own way, of their own interests, as before.

A correspondent of the *Shanghai Mercury*, commenting on the late additions to the Chinese naval force, thus writes:—"The terrible alphabetical gunboats, which have inspired the *Pall Mall Gazette* with such alarm and such a lofty notion of Chinese warlike preparations, and of the value of China as an ally, are at Tientsin where they are to be frozen in during the winter, a singular use to put these tremendous engines of warfare to! They rather block up the fairway of the river, and as the steamer *Eldorado* was dropping down the stream, she managed to give one of them a blow with one of the blades of her screw; this made a hole in the side of the gunboat, but as the shot and shell were promptly removed to the other side, she did not take in much water. But if the hulls of these gunboats are so penetrable, where is the cause for the alarm of the *Pall Mall's* paragraphist, who is thought to be a gentleman for many years in the employ of the Chinese Government at Foochow? We have heard before of some defects in these vaunted vessels of war. It is said that when the guns are fired, the rivets of the plates start."

A fire took place this morning at about 1 o'clock on the Bluff, in a small house in the premises of the French Consulate near the English Hospital. Luckily the weather was perfectly calm, and the fire was easily confined to the building in which it broke out, and was speedily extinguished.

It is asserted in the native press that fragments of partially burned wood were carried from the scene of the recent disastrous conflagration in Tokio twenty-five miles across the bay, and deposited in Chiba Ken, at a village known as Kisaradzu. Ashes and portions of records of the Tokugawa government were also wafted to the same spot. Considering the gale that was blowing at the time of the conflagration, there is nothing quite incredible in this statement.

It is rumoured that the cattle-plague, in spite of municipal precautions, has made its appearance in Nagasaki.

The amount collected in Hiogo, at the United States Consulate, where General Stahel opened a subscription list in aid of the sufferers by the late great fire in Tokio, exceeded one thousand yen, which sum, the *Hiogo News* says, has been forwarded to the proper quarter.

Our attention has been frequently requested of late to the really distressingly delapidated condition, during almost its entire length, but especially at the Ishikawa end, of the road leading from the sea, through and beyond Honmura. It is terribly bad on either side of the Messageries Maritimes' Coal Depot, being full of holes and elevations, which are always unpleasant and sometimes dangerous to riders in jinrikisha and horse-carriages, pedestrians and equestrians alike. As the thoroughfare is very much used by persons passing from the Bluff to the Settlement, and vice versa, there is good reason why it should be renovated. In spite of the continuously fine weather which we have long enjoyed, a fall of snow and subsequent thaw may rationally be expected before the close of the winter; and then what the condition of the ground will be in the locality indicated may well defy conjecture. Another grievance of which residents, both foreign and Japanese, have to complain is the inordinate delay shown in the reconstruction of the Mayeda, or middle bridge, beyond that conveyed in the aspect of a pile of scaffolding poles, themselves a serious obstruction to traffic, on the side of the road near where the bridge was, is made, even to the eye, of any approach-

ing improvement. As for the temporary wooden viaduct which has been thrown up to do duty for the permanent structure, it is deficient in space, almost inaccessible on the further side, rickety, and probably as perilous as it appears to be. These are matters which really require the notice of the municipal authorities, who, we trust, will give the matter early and efficient consideration.

We learn on good authority that there is no ground for the announcement of impending change in the Ministry recently made by the *Echo du Japon*.

In a "portrait in words" of Mr. Toole, the well-known actor, the *Whitehall Review* gives the following amusing account of an incident in that gentleman's professional career as narrated by himself:—

"Some years ago, when I was playing in 'Dearest than Life' with Irving and Billington, after the play several gentlemen were in the general room of the hotel where we were staying, and among them a certain Mr. Jones, who professed to have a large acquaintance in the profession, and who appeared to have a local reputation as a judge of ages.

"Well, how old," said some one, "would you take Mr. Toole to be?"

"Well," said he, "sixty-five, if he's a day."

"Do you know him?" I asked.

"Oh, yes; know him very well indeed."

"Ah! and how old should you take me to be?"

"Well, I should take you to be forty, if you're a day."

Irving asked Mr. Jones if he didn't think Mr. Toole was nearer seventy-five than sixty-five. "No," he said, "sixty-five if he's a day;" and the company present seemed to put it down that that would be my age. They had most of them been to the theatre and seen me, for the first time probably, playing an old man, and as it was my first visit to the town, and we were going on by the mail train that night, I had a fancy not to go away and leave them under the impression that I was this very old gentleman. I found that Jones was a decent sort of fellow, and I said aside to Irving that before I went I should just give him my card and let him know what a mistake he had made. By and by, when our cab arrived, we said good night to our casual acquaintances, and taking Mr. Jones aside, I handed him my card, whereupon he said "Oh, indeed!" in a very offensive manner, turned upon his heel, and walked away.

"Well," I said to my friends, as we drove away, "that's the most impertinent fellow I think I ever met." Whereupon Billington and Irving went into fits of laughter, and presently confessed that they had warned Mr. Jones that I was continually passing myself off as Toole, and that he was to be quite prepared for my handing him a card and continuing the imposition with him."

In a very interesting account of an interview one of its reporters had with Mr. Rivers Wilson, the quondam Finance Minister for Egypt and Chairman of the Commission of Inquiry into Egyptian Affairs, the *World* has the following on the origin of those Turkish and Egyptian foreign debts which have created so much trouble and anxiety in the politics and finance of Europe. "It must be conceded in favour of Turk and Egyptian that, until after the Crimean war, they knew little or nothing of borrowing. The rulers got all they could squeeze out of the wretched fellahen; and when there was no more to be got, a check was given to the building of palaces and the purchase of beautiful slaves. But it fell out one day that Saïd Pasha, the ante-penultimate Viceroy, thought he should like a couple of millions sterling. It could not be got out of his people then and there, and some kind person suggested the expedient of a loan. Saïd Pasha, hardly believing anybody would lend him as much, thought the thing worth trying, and lo, the sum was subscribed six or seven times over; whereupon he exclaimed in amazement, 'God is great: let us take the money of the infidel!' It was, however, pointed out to the 'childlike' Mahometan that he could only have two millions just then. He sighed and surrendered, but his soul yearned for the balance. And he went on; for what were Oriental tales of genii in pots and caverns, or of magical lamps, compared with such wealth as the Stock Exchanges of Europe were ready and anxious to produce? It was like a dream, as subscribers to the Egyptian debt of about a hundred millions sterling have discovered. The blunder of the late Khedive was that he could never keep his hands off this Aladdin's lamp. He was a potentate of large ideas and expensive habits, and he continued rubbing the lamp till one day it went out; but had he kept within reasonable bounds and paid his interest, the credit of Egypt might to-day have been nearly as good as that of the State of Massachusetts. That cannot be now; but Mr. Rivers Wilson appears to have faith, to a certain extent, in the new ruler, Tewfik Pasha, whose personal habit of economy is a species of guarantee against that reckless disregard of the future which characterised the last two Egyptian Governments."

CHART EXHIBITING THE FLUCTUATIONS IN EXCHANGE ON LONDON AND NEW YORK.  
FOR THE YEAR 1870.

The Chart shows the rate of Exchange for Bank drafts at sight. The lowest rate during the year was reached on March 19th, 3/5 $\frac{1}{2}$  on London, and on March 28th, 84 $\frac{1}{2}$  on New York. The highest rate was reached on June 6th and again on June 16th, 3/11 $\frac{1}{2}$  on London and on June 6th, 96 $\frac{1}{2}$  on New York.

The mean rate for the year is 3/8 on London and 88 $\frac{1}{2}$  on New York.

### BRITISH EPISCOPAL CHURCH ESTABLISHMENT.

The annual general meeting of subscribers to the English Episcopal Church for the purpose of receiving the accounts and report for the past year, and for the election of office bearers for the current year, was held on Thursday afternoon at the Chamber of Commerce rooms.

The following gentlemen were present:—Messrs. Wilkin (Chairman), Kirkwood, Robison, Keawick, Whittall, D. Anderson, Dallas, Rickett, D'Iffanger, Ahrens, James, Enslie, Leckie, Reid, and others.

The Chairman (Mr. Wilkin), read the advertisement convening the meeting and called upon the Hon. Secretary (Mr. James) to read the minutes of the previous annual meeting and of the special meeting held in October last. This having been done the minutes were passed as correct.

The Secretary then read the following

### GENERAL REPORT OF THE COMMITTEE OF CHRIST CHURCH, YOKOHAMA FOR THE YEAR 1879.

#### TO THE SUBSCRIBERS, GENTLEMEN:

The Committee of the British Episcopal Church Establishment at this port in closing their year of office beg to submit their accounts and report for the year ending 31st December, 1879, which shew as follows:—

#### RECEIPTS.

Amount received for pew rents during 1879	\$2,450.00
" to credit of "passage money" transferred ... ..	10.67
" received from Easter collection ... ..	50.00
" Special subscription from juniors... ..	95.00
" " at meeting 21 Oct... ..	235.00
" " per Committee appointed at that meeting ... ..	610.00
Balance carried down ... ..	109.16
	<u>\$3,559.83</u>

#### DEPENDENCY.

Amount due for Seat Rents, but not yet collected	\$100.00
Special Subscription received from the Rev. W. F. H. Garratt.....	400.00
	<u>\$500.00</u>

#### DISBURSEMENTS.

Paid balance due Treasurer, 31 Dec., 1878 ... ..	207.88
" Incumbent's stipend for 1879... ..	2,400.00
" premium on fire policies on church, parsonage and organ for \$10,000 ... ..	252.00
" for sundry repairs during 1879 ... ..	146.79
" " incidental expenses during 1879, including ground rent ... ..	553.16
	<u>3,559.83</u>

Balance due treasurer on 31st Dec., 1879 \$109.61

The accounts now presented have been audited by Mr. R. D. Robison.

The receipts from pew rents shew a falling off of \$300 as compared with the past year, which is a matter of great regret, but is to be accounted for by a number of sittings having become vacant, owing to numerous departures from Yokohama. The expenditure remains the same.

It having become apparent as the year went on that the total expenditure would far exceed the receipts, your Committee called a special meeting of seat-holders on the 21st of October, to take steps for placing the Church finances on a satisfactory basis, and a list which was there circulated, produced the sum of \$235. A special Committee was also appointed consisting of Mr. E. Whittall, Mr. R. D. Robison and Mr. J. Rickett, for the purpose of collecting subscriptions towards reducing the expected deficit and owing to the exertions of these gentlemen a sum of about \$800 was raised, \$610 of which has been already collected and appears in the present accounts, and the Committee take this opportunity of thanking those gentlemen for the very able way in which they have fulfilled their duties.

Your Committee would call your attention to the present dilapidated state of the parsonage: from estimates received, it is found that a sum of about \$900 will be required to put it into a thorough state of repair, and it remains a matter for future decision whether it will not be better to rebuild than to repair. It is estimated that, using the old materials, a smaller, but at the same time more convenient and modern house than the present structure might be put up for about \$2,000.

If it be decided that the parsonage should be rebuilt, it is proposed to raise the requisite sum on mortgage, but in the other case some steps will have to be taken to provide the funds for repairs. Your Committee have thankfully to acknowledge the munificent donation of \$400, from the Revd. W. F. H. Garratt towards this object. A bell and tower have been added to the Church, the entire cost of which has been defrayed by the Revd. W. F. H. Garratt, and is another gift from this gentleman, for which your Committee have to tender their best thanks. On the 4th of February, the Revd. W. F. H. Garratt, the present incumbent, sent in a letter of resignation to your Committee stating that he wished to be relieved of his charge within six months from the date of his letter, and finding that he could not be induced to remain, it was with very great regret that the resignation was accepted, and immediate steps taken to fill the vacancy. After a great deal of correspondence, with various clergymen, who wished to obtain the incumbency, it was decided to leave the matter in the hands of the Right Revd. Bishop Burdon, who had very kindly expressed his readiness to undertake the task of filling the vacancy. A letter was written to this gentleman by your Committee, giving a general idea of the kind of clergyman required and guaranteeing a minimum stipend of \$150 per annum with free use of parsonage, for a period of three years, and also guaranteeing the expenses of a passage from England up to £100, which sum was raised by special subscription. His lordship's agent in London after receiving the necessary instruction, inserted several advertisements in various clerical papers the result of which is, that the Revd. E. Champneys Irvine, late Vicar of Hinton Christ Church, Hants, has been engaged to fill the incumbency and sailed from England with his wife on the 27th of November, and may be expected here in a few days. Your Committee wish specially to acknowledge their obligation to the Right Revd. Bishop Burdon, for the care, trouble, and time which he has taken in the matter. It is with great regret that your Committee have to announce the resignation, of Mr. J. T. Griffin as organist and leader of the choir, which post he has filled so well and ably during a period of four years and they wish to express their thanks to him, and also to the ladies and gentlemen who have so kindly helped in the choral services.

In conclusion your Committee wish to tender their best thanks to the Revd. W. F. H. Garratt for the many great improvements which he has made to the Church during his incumbency, and the uniform support which he has at all times given in furtherance of the interests of Christ Church.

We remain, Gentlemen,

Your obedient servants,

F. S. JAMES, Treasurer,  
J. J. KEWICK,  
MONTAGE KIRKWOOD,  
A. J. WILKIN,  
E. WHEELER,  
J. J. ENSLIE.

The Chairman stated that the next business would be the reading of the report and accounts for the past year. The accounts had come out better than he expected, for the sum of \$109 only was owing to the Hon. Treasurer, while this time last year, it was \$207. This looked pretty fair, but they must bear in mind that there had been a great falling off in the pew rents and that even a further falling off might be expected. They would therefore have mainly to depend upon the continued exertions of the gentlemen who took an interest in keeping up the list of subscribers to the funds. The report and accounts were now before the meeting for adoption or otherwise.

Mr. Leckie proposed the adoption of the report and accounts. This was seconded by Mr. Anderson and carried unanimously.

The next business being the election of a Committee, Mr. Rickett proposed the re-election of the outgoing Committee. Mr. Robison supported the motion which was carried.

The Chairman asked if any member of the meeting had a suggestion to make as to the repairing or rebuilding of the parsonage?

Mr. Rickett wished to know if the Committee had received a tender for the rebuilding of the parsonage for \$2,000?

The Chairman said they got two tenders; one for \$1,500, and the other for \$1,650. Extras, were invariably necessary as many gentlemen were probably aware, and they had therefore put down the amount required at \$2,000.

Mr. D'Iffanger asked how the Committee proposed to obtain the funds, in the event of its being decided to put up a new building?

The Chairman said the money would have to be borrowed, but he understood they could obtain it without any difficulty for the purpose of erecting a new parsonage. The repairs of

the present building would cost \$900; of this sum the Revd. Mr. Garratt had promised \$400 and the remainder would have to be borrowed.

Mr. Rickett observed that under the circumstances it would be better to build a new parsonage on the hill, than repair the present one.

Mr. Robinson asked if \$900 were spent this year in repairs, would a similar expenditure be necessary every year afterwards?

The Chairman thought no further repairs would be required for many years.

Mr. James gave it as his opinion that the existing building was wholly unfit for a parsonage; it was dark and although large, there really was very little accommodation in it. In fact it was more like a great barn than anything else.

Mr. Rickett had noticed that the insurance was very high; could not the amount be reduced?

The Chairman explained that the insurance policies were for \$10,000, which included the church, parsonage and organ, the latter was only insured for \$2,000 when it actually cost \$4,000. If they had to rebuild the church and parsonage altogether, it would cost about \$15,000.

Mr. Kirkwood thought the present a proper occasion for the subscribers to take steps to inform the Revd. Mr. Garratt of the universal regret felt at his departure, and to assure him of the high appreciation in which his services while here, were held by the subscribers. Mr. Kirkwood accordingly moved a resolution to the foregoing effect. Mr. Keawick seconded the motion which was carried unanimously.

The Chairman instructed the Hon. Secretary to write to the Revd. Mr. Garratt in accordance with the terms of the resolution.

Mr. Rickett observed that before the meeting separated it would be well to have some expression of opinion respecting the question of rebuilding or repairing the parsonage.

The Chairman thought the question had better stand over until the arrival of the new incumbent. He should be consulted in the matter, and besides many of the subscribers had not been inside the present building, probably never given the subject any consideration and therefore might not be in a position to vote either way.

Mr. Dallas asked if any portion of the ground could not be utilized, so that they could obtain an income from it if the parsonage had to be rebuilt?

The Chairman thought not, without spoiling the compound. Besides which, land in the locality was not sought after as sites for dwellings.

There being no further business the meeting then adjourned.

#### THE YOKOHAMA AMATEUR ROWING CLUB.

The annual meeting of this Club was held on the evening of the 13th in the Grand Hotel. Mr. J. Rickett occupied the chair and there was a very good attendance of the members, about thirty being present.

The minutes of the last meeting having been read and confirmed, the Chairman called upon the Honorary Secretary and Treasurer, Mr. G. C. Wood, to read the following report and balance sheet for the past year:—

#### NINTH ANNUAL REPORT OF THE YOKOHAMA AMATEUR ROWING CLUB.

In laying their Ninth Annual Report before this General Meeting, your Committee feel that the event of the year which most calls for attention is the removal of the boat-house from its late desirable site.

The necessity for this has, as the members are fully aware, been apparent since the last general meeting.

Thanks, however, to the extreme courtesy of the Mitsui Bishi Mail S. S. Company, the proprietors of the land, the building was allowed, upon the repeated solicitations of your committee, to remain until the end of the year just closed, thus enabling the rowing season and the Spring and Autumn Regattas to be enjoyed without disturbance.

The M. B. M. S. Co. required the ground, however, from the first of this month; and it devolved on your Committee to have the building removed. It was therefore taken down, and the materials, together with the boats, stored on an open lot on the Swamp, where everything is protected from the weather, and covered from risk of fire by the policy which formerly insured the boat-house.

The exertions of your Committee to obtain a new site have not been successful. Of the sites along the foreshore of the Settlement, two only appeared suitable; namely, the ground next the Custom House and the French Hatoba.

From inquiries made, your Committee found the former could not be obtained.

With the view of securing a place on the Hatoba, they addressed a letter to the Board of Consuls, laying the matter clearly before them, and requesting them to use their influence with the Governor of Kanagawa Ken to allow a boat-house to be erected thereon.

Your Committee regret they cannot at present say anything decisive on this important point, as the matter is still in the hands of the Board of Consuls and the Governor; but every hope is entertained that the request of the Club will be granted.

Your Committee cannot but think the members have reason to congratulate themselves on the financial position of the Club during the past year.

Early in the year the condition of the Club funds was such that your Committee considered it would be advantageous if the twelve remaining debenture bonds were paid off, thus saving half a year's interest. With the consent of the holders of the bonds this was done at an outlay, with the accruing interest, of \$635.50.

If it is remembered that the Club raised a loan for \$1,000 by debentures in the end of 1877, and that this amount has been paid off, with 10 per cent interest added, in less than two years, it will be apparent how prosperous the Club has been.

From the accounts presented it will be seen that a new "Canton four" has been added to the property of the Club, at a cost of \$210. A new supply of oars has also been received during the year, for which \$203.48 was paid.

The Spring and Autumn Regattas were held in June and October; and at both it was decided to have the races rowed over a course from Kanagawa to opposite the boat-house. The great advantage in this was the speed with which crews of boats could be changed, and the facility it afforded members and their friends of viewing the races from the boat-house.

The Spring Regatta produced some good racing; notably that of the International Fours in which the American crew were such popular winners. In the Autumn Regatta there was the splendid race for the Champion Pairs between Messrs. Playfair and Fraser, and Whitney and Gasper, resulting in a dead heat. Messrs. Playfair and Fraser ultimately won the cups which thus became their property.

The usual swimming and diving matches were held during the summer months, affording much amusement.

The Club has sustained a great loss by the lamentable death of Mr. J. J. Dare, so long one of its main supports.

Mr. J. Rickett has filled the vacancy made in the Committee. The necessity for the removal of the boat-house throws the Club back somewhat financially, but your Committee have no doubt that, with a roll of members such as there is at present, and with a new site definitely fixed, the accounts will soon show a large credit balance.

In conclusion, your Committee trust that their successors in office may be able to report the continued prosperity of the Club.

• Committee { C. P. Hall.  
A. H. C. Haselwood.  
J. Rickett.  
G. C. Wood,—Hon. Sec. and Treas.

• The Captain of the Club, H. C. Litchfield, is absent from Yokohama for a few weeks.

Yokohama, 12th January, 1880.

Removal of boathouse, Shed to protect boats, and two months rent of ground on swamp .....	100.00
Debit balance at 12th January, 1880 .....	\$299.23

## E. E.

G. C. WOOD,  
Hon. Sec. and Treasurer.

Yokohama, 12th January, 1880.

Mr. Leckie proposed the adoption of the report and balance sheet. Mr. Towse seconded this proposition, which was carried unanimously.

The meeting then balloted for office bearers for the present year, and, on the result of the ballot being made known, the following gentlemen were found to be elected, viz:—Captain, Mr. H. O. Litchfield; Honorary Secretary and Treasurer, Mr. G. C. Wood; Committee, Messrs. Rickett, Hall and Haselwood.

The Chairman then addressed the meeting. He said:—The most important subject which we have to consider this evening is the question of the site for the new boat-house. I have heard many suggestions privately in the matter and as this is a full meeting of the Club, fuller indeed than I thought was likely to occur, I think it best to invite an expression of opinion on the part of the members present. The former Committee had tried everything, and found it wholly impossible to secure a suitable site. The only place that seemed adapted for the purpose was the French Hatoba, and the application made by the Committee for permission to erect a boat-house there, was still under consideration, no definite answer having yet been received. An objection had been raised to the Club getting the use of a portion of this Hatoba, on the ground that by their erecting a boat-house on it, a precedent would be established for building in front of Bund lots. There was nothing in the objection however, as it was patent to everyone, that buildings had always existed on the Hatoba, and it would surely be preferable to have a slightly boat-house there, than the present wretched structures. It had also been said that so many persons bathing at this Hatoba would prove objectionable. He thought this was very far fetched and the Committee would take very good care that bathing was conducted in an entirely private manner and that there would be nothing to offend the most scrupulous eye. It was foolish to talk about the undesirability of the members bathing there. Look at the naked bettoes who may be found all through the summer, splashing about and showing their advance in civilization by airing all kinds of Anglo-Saxon adjectives. Mr. Rickett concluded by saying, that he thought if they were the means of providing a pleasant place where people could enjoy a friendly chat and the cool evening breeze, they would be doing the members of the community good service.

Considerable discussion ensued on the question of a site for the new boat-house, and it seemed to be the unanimous opinion of the members, that unless a portion of the French Hatoba could be obtained for the purpose, the Club would have to collapse altogether. Ultimately on the proposition of Mr. Playfair, seconded by Mr. Mitchell, the matter was left in the hands of the Committee, who were empowered to call a special meeting to confirm any action they might take if the circumstances seemed to the Committee to warrant any such meeting being called.

There being no further business, the meeting closed after a vote of thanks to the Chairman.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

## COURT, POLITICAL AND OFFICIAL.

The *Mainichi Shinbun* states that His Excellency Inouye, the Minister for Foreign Affairs, will be appointed Ambassador to China, to negotiate the settlement of the Loochoo dispute. During the absence of Inouye, Admiral Enomoto will act in his stead.

His Majesty the Emperor attended a meeting of the cabinet on the 9th inst., returning to the palace at half-past ten o'clock in the forenoon.

It is understood that the Governor of Okinawa Ken will be represented, at the forthcoming meeting of local Governors, by his secretary, Mr. Hara. The condition of his prefecture precludes the possibility of the Governor attending in person on this occasion.

It is reported that Mr. Ando, the Superintendent of Police who arrested Messrs. Fujita and Nakano, and was dismissed on their discharge from custody, is about to petition the cabinet for redress.

We hear that Hirotsawa Kinichiro, the son of the late Hirotsawa, will be shortly by created a junior noble of the fifth rank.

It is rumoured that Mr. Kawaji Toshiyasu, the adopted son of the late General Kawaji, who lately received an appointment in the police force, is shortly to be ordered to Paris.

It is said that the number of persons to be admitted to the debates at the Local Governors' Assembly will be limited to six hundred.

It has been telegraphed to the authorities that Mr. Matsudaira Taro, Vice-Consul at Vladivostok, arrived at his post at the close of last year.

It is said that His Majesty the Emperor will visit the grave of Jimmu Tenuo, in the prefecture of Sakai, in March next.

It is rumoured that the head police station in Tokio, and the police stations in every *Fu* and *Ken*, are about to be abolished, and that the whole country will be divided into six great divisions, in each of which a head station will be established. The branch stations will remain as heretofore.

With regard to the disagreement between Japan and China, several rumours state that after the return of their Excellencies Sanjo, *Daijo Daijin*, Ito, Yamada, and Inouye, *Sanji*, to Tokio from Atami, a general council will be held in the Cabinet on the above subject.

The first meeting of the Central Board of Health, for the present year, took place at 3 p.m. on the 16th instant.

The Governor of Iwate *Ken*, Mr. Shima, arrived in Tokio on the 12th instant.

Mr. Yegi Takato, the First Secretary of Foreign Affairs, is expected to leave shortly for America.

It is reported that their Excellencies Ito and Yamagata left Atami for Shizuoka on the 12th instant, and that the Home and Finance Ministers will visit Osaka next month, to be present at the opening of the competitive exhibition.

The Genro-in (Senate) was reopened by His Majesty the Emperor in person on the 15th instant. His Majesty addressed the senators and exhorted them to use their utmost exertions to advance the welfare of the nation.

A rumour is current in the capital that a special meeting of the Tokio Local Assembly, for the consideration of important business of a pressing nature, will be held in the Hall of the Fuchu on the 23rd instant.

Mr. Tanaka, the Assistant Minister for Education, accompanied by Mr. Under-Secretary Kubota, left for Okinawa *ken*, (Loochoo), on Wednesday last.

On the occasion of the visit of Mr. Nomura, the Governor of Kanagawa *ken*, to the *Vettor Pisani* on the 13th instant, His Royal Highness the Duke of Genoa presented him on behalf of the King of Italy with the order of "Saint Maurice and Saint Lazarus" of the fourth class.

His Excellency Inouye, Minister for Foreign Affairs, returned to Tokio from Atami on the 11th instant, and resumed the duties of his office on the 13th instant.

It is reported that Prince Shimadzu is about to visit England, the continent of Europe and America.

General Kuroda, Chief of the Colonization Department, has left for Hakodate by the *Takao Maru*. He was accompanied by Chief Secretary Yamanouchi, and an escort of one police sergeant and two constables.

Chief Secretary Watanabe, of the prefecture of Kagoshima, arrived in Tokio on the night of the 13th inst. by the *Tsuruga Maru*.

His Excellency Sanjo, the Prime Minister, is expected to return to Tokio from the Atami hot springs, about the 25th instant.

The construction of the Imperial Palace will be commenced about the 20th instant. The Bureau of construction will be established within the castle, under the care of the Minister for the Imperial Household.

Judge Kishira, the President of the *Dai-shin In*, who has lately been indisposed, went to the hot springs of Atami a few days ago for the benefit of his health.

#### NAVAL AND MILITARY.

A number of new cadets were enrolled in the naval college on the 11th instant.

The Italian and Chinese Ministers visited the *Vettor Pisani* last Saturday, accompanied by Mr. Yoshida. A salute of fifteen guns was fired as they left the vessel.

The *Mainichi Shimbun* mentions a rumour that all the *Sangi* will shortly be enrolled in either the Army or Navy.

The Imperial Guard was inspected on the 13th instant by His Majesty the Emperor.

The *Nichi Nichi Shimbun* states that the Japanese man-of-war *Tsukuba Kan* will go on a voyage to North America, early in March next.

His Excellency Tokudaiji, Minister for the Imperial Household, visited the Italian man-of-war *Vettor Pisani*, on Saturday last.

His Excellency Admiral Kawamura, Minister for the Navy, on the 12th instant entertained, at the Eastern Admiralty Office, H. R. H. the Duke of Genoa, and the commanders of the war ships of the treaty powers. Admirals Enomoto, Nakamura, and Ito, the commanders of all the Japanese men-of-war in harbour, and Governor Nomura of this prefecture were also present.

The *Mainichi Shimbun* states that it is reported at the War Department that Sub-Lieutenant Ishimoto and two others, who went to France last year, accompanied by Lieutenant General Takashima, have successfully passed the required examination and have now entered the school of Infantry.

Their Excellencies Okuma, Oki, and Terashima, Admiral Kawamura, General Saigo, Prince Kuroda, and Governor Nomura of this prefecture, with seven or eight others, visited the Italian man-of-war *Vettor Pisani*, at 11 a.m. on the 15th instant, where they were entertained by the Duke of Genoa. On leaving the vessel they received the usual salute, which was returned by the fort at Kanagawa. They left for Tokio by rail, at 4 p.m.

Two hundred men belonging to the former third Special Military Corps, received a reward of fifteen yen each on Friday last, for their services during the Satsuma rebellion.

The *Choya Shimbun* tells us that the people of Okinawa *Ken* (Loochoo) are to be free from military conscription for five years, dating from the present year; but after the 18th year of Meiji (1885), they will be enlisted for military purposes under the rules and regulations that apply in other *Ken*.

#### INDUSTRIES, TRADE AND FINANCE.

From the *Nichi Nichi Shimbun* we learn that the imports of cotton yarn into Yokohama, during the past year, amounted to 81,110 bales. Of this quantity, 40,110 bales went to Tokio, 25,000 to Osaka and 6,000 to Owari.

The *Hochi Shimbun* reports the discovery of oil wells, which yield at present about one hundred koku of oil monthly, near Tanimura and Oyemura, in the prefecture of Shizuoka.

Mr. Sato, of Yamagata *ken*, has been very successful in his salt factory. He commenced operations only last year and already his premises have been greatly increased. Prior to Mr. Sato entering upon the business, Yamagata was entirely dependent upon other localities for the salt consumed by the population.

Mr. Ridock, the Minister for the Agricultural Department of the United States, has sent \$1,000 to Mr. Tsuda Sen, the chief of the Agricultural School in Tokio, requesting him to send whatever Japanese seeds and plants to America he thinks will be suitable for the soil there.

Mr. Ayabe, a merchant of Hiroshima, who lived in Loochoo for fifteen years, and is very well acquainted with the habits of the people and history of the country, has now discovered a coal mine on the island of Yayeshima, and has applied to the Public Works Department to have it thoroughly examined.

The funds subscribed up to the 25th ult., for the relief of the sufferers by the Hakodate fire, amounted to 12,600 *yen*, and 192 *koku 2 bu* of rice.

Prince Nabeshima, the *ex-daimio* of Hizen, has applied to the Colonial Department to be allowed to purchase 1,500,000 *tauho* of land in Yesso. When obtained, the ground will be shared among the Prince's former retainers, for the purpose of cultivation.

The paper currency that has been withdrawn from circulation, from July to December last year, amounted to 1,800,000 *yen*. The *satzu* now in circulation, with the exception of National bank notes, amount to 14,190,800 *yen*.

Subscriptions amounting in all to about twenty thousand *yen*, have already been received for the relief of the unfortunates who suffered from the recent fire in Tokio.

#### MISCELLANEOUS.

From the *Mainichi Shimbun* we learn that the sum of about thirty thousand *yen* was expended in the investigations, &c., connected with the charge brought against Messrs. Fujita and Nakano.

Passenger traffic between Yokohama and Yokosuka continues to steadily increase. Last month the steamers conveyed 14,416 persons, as against 14,264 the month previously.

The *Choya Shimbun* states that the authorities are investigating a report made to them, that a quantity of ammunition was concealed among the cargo of the *Shario Maru*, on her last trip between Okayama and Tokio.

It has been finally determined to proceed with the construction of the line of railway between Tokio and Takasaki, in the province of Joshu.

The Agricultural Department is said to have forwarded exhibits to the Fishing Apparatus Exhibition in Berlin, by the English Mail steamer *Malacca*.

The Aikokusha, or Patriotic Society of Osaka, contemplate establishing a branch at Nishi-Konya-cho, in Tokio.

Hakodate appears singularly unfortunate in the matter of fires this season. Another occurred there on Saturday last, and destroyed twenty-two houses.

It is rumoured that the head offices of Messrs. Fujita & Co. will be removed from Osaka to Tokio.

Mr. Uyeki, a prominent member of the *Risshi-Sha* (Patriotic Society), in Kochi *Ken*, has been permitted to resume his public lectures. He was forbidden to lecture on the 5th of November last. The *Aikoku Zasshi* (Patriotic Magazine), to be edited by Mr. Uyeki, will be published every Saturday, at Inabashi-cho, Osaka.

The cholera epidemic seems not to have entirely disappeared in Kochi *Ken*. Mr. Hamada Sukei, a member of the *Ken* assembly, was lately attacked by the disease, and after a short illness succumbed.

A fire took place at Sonejaki Mura, Osaka, on the morning of the 7th instant, which destroyed sixty-seven houses, and occasioned the loss of four lives.

A new port is to be built at Oita, in the province of Bungo, and the Governor of that place is shortly expected in Tokio to arrange respecting the work.

The volcano on the Island of Oshima has lately become active, and the smoke rising from the crater can be seen from Takamawa, near Shinagawa, Tokio.

The construction of the new buildings for the Colonization Department at Sapporo, will be commenced about the month of March or April next.

The number of cholera cases throughout the empire during last year, from the first outbreak of the epidemic until the 27th of December, amounted to 168,314; out of which there were 101,364 deaths, and 47,885 recoveries. There still remained under treatment 19,065 patients at the close of the year.

We learn from the native periodicals that the second line of rails between Tokio and Yokohama has now been laid and will be officially opened in March next.

The *Hochi Shimbun* says that an International Exhibition will be opened in New York, about the month of May, 1883.

The Osaka-yama tunnel, on the Kioto and Otsu railway, will be completed in the course of April next.

The *Korin Maru*, which left Yokohama on the 29th ultimo for Kobe, met with a severe gale at Yenshiu-nada, and drifted from her course over two hundred and sixty miles. The vessel's condition became exceedingly critical, and the passengers gave themselves up for lost, but fortunately, through the exertions of the captain and crew, she arrived at Kobe on the 4th instant. The vessel was much injured, but none of the passengers sustained any hurt.

The Tokio Public Library was re-opened on the 11th instant, after the new year's vacation.

#### IMPERIAL GOVERNMENT RAILWAYS.

Miles open, 47.

#### THE JAPANESE PRESS.

##### A JAPANESE VIEW OF THE QUARREL BETWEEN THE CZAR AND CZAROWITCH.

(Translated from the *Hochi Shimbun*.)

IN our issue of yesterday we published a telegram announcing that a quarrel had taken place between the Czar and the Czarowitch, in consequence of the latter desiring the establishment of a National Assembly, a concession which the former refused to grant. This telegram certainly surprised us extremely. Russia is our neighbour on the north, and is not only in close proximity to Japan, but has on various occasions interfered in the relations of eastern countries with each other; therefore whenever a dispute takes place between Japan and China, the public always look with anxiety for the action of Russia. On the present occasion it is currently reported that Russia has entered into a secret treaty of alliance with China. It is true that Russia does not possess as great influence in the East as England does, but in consequence of Russia being in such close proximity to Japan, our foreign relations are closely bound up with that empire. It must be evident then, that when any change takes place in the administration of Russian affairs, it attracts far more attention here than any similar occurrence in purely European countries.

The government of the Russian empire is completely despotic and wholly different from a constitutional monarchy. We will give our readers a brief sketch of the Russian form of government. The emperor is the ruler of the country and possesses absolute power. He is the uncontrolled head of the army, the legislature, the judiciary and even of the Greek church, the established religion of the empire.

The civil and military officers of the state are his servants, and dependent wholly upon his mere will and pleasure. The expense of the emperor's household amounts to nearly fifty millions of yen annually which is paid by the state, and his private revenues derived from the crown domains are twenty-eight millions of yen every year. It will thus be seen that the wealth of the Czar is something enormous, while his direct influence is vastly increased from the fact that all the heads of departments have to report to him every particular relating to their duties, and also to the Minister of the Household, who is, in addition to his other offices, always a privy councillor. It will thus be seen that the Czar of Russia exercises the most absolute power within his dominions. The people of Russia are reduced into a state of servitude; this having been accomplished by steadily carrying out the line of policy laid down by Peter the Great, and in a very marked degree from the fact that a long line of able rulers have, without exception, occupied the throne. Notwithstanding that Russia has for a long period been constantly engaged in foreign wars which have entailed much domestic trouble, the power of the Czar has been little affected, although it is doubtless true that, in the interior, a number of agitators have made their appearance who persistently attempt to disturb the peace of the community. Against these turbulent people the efforts of the police, with all their watchfulness, are utterly futile, and they have latterly gone so far as even to attempt to assassinate the emperor, in which crime they were unsuccessful, although so persistent and audacious are they, that it is impossible to say when they will succeed. Now these Russian conspirators are not confined to the lower classes; among them are to be found highly educated men and prominent members of society. Indeed, from what we have been able to gather, the greater part of the political prisoners who have been exiled to Siberia are students, a class who are well-known to be the most patriotic in Russia. It matters little however what section of the body politic supplies these offenders; the fact remains, that the reason of their crimes against the imperial person was the object of getting rid of the despotic authority of the emperor. We will not discuss the question whether the conspirators were actuated by a true feeling of patriotism, although it must be evident that the chief aim of the rulers of a country should be to administer its affairs in such a way as to afford no pretext for any revolt against the constituted authorities. Altogether it appears certain, that it has now become absolutely necessary for Russia to have a National Assembly, in order to preserve domestic peace and secure the safety of the person of the emperor. If this was done there would remain no pretext for rebellion, so that if any further efforts to create disturbances were made it would be evident that the persons implicated were not actuated by patriotic motives; and the movement, being unsupported, would easily be suppressed. We are not aware if the Czarowitch was impelled by those considerations when he proposed the establishment of a National Assembly, but if such was the case, he has undoubtedly proved his love for his country.

All disputes between father and son are serious. Although the Czarowitch loves his country, yet if his desires are opposed to those of his father, should he abstain from expressing them? Or, on the other hand, should he enunciate his ideas—because it is clearly the duty of a child, if he sees his parent falling into error, to caution him? The question is certainly a difficult one. There are numerous instances on record where father and son, and brothers, have quarrelled, but such a dispute as that reported to have taken place between the Czar and Czarowitch, respecting the establishment of a National Assembly, is entirely without precedent. The principle involved is truly a great one and we will now proceed to give our opinion respecting it.

Chinese history mentions many instances where disputes have arisen between a reigning emperor and his son, which resulted in the country being thrown into great confusion. These domestic broils were always occasioned by the insidious wiles of court favourites and even here, in Japan, our history is not entirely free from similar incidents. In western countries, the same unhappy state of things has also frequently taken place and invariably originated from the same cause; but a dispute such as that reported to have arisen between the Czarowitch and his father, is altogether without precedent. If the action of the Czarowitch proceeds from a desire to gain popularity, then

we certainly cannot approve of his conduct. But, on the other hand, if he has lost the affection of his parent from purely patriotic motives, we sincerely commiserate his misfortune. The question then arises—should the Czarowitch persevere in demanding the establishment of a National Assembly, in opposition to the wishes of his father? Regarded from a political aspect, and treating the Czarowitch only as a member of the community, we refrain from giving any opinion, but if the relationship which exists between them is only remembered, then we think the Czarowitch is bound to obey the commands of his father, although his doing so will be prejudicial to the interests of the people. We cannot pretend to say whether or not the opposition of the Czar to a National Assembly proceeds from his affection for his family, as he may perhaps have come to the conclusion, judging from former events, that if he consented to such an innovation it would ultimately result in the destruction of the imperial house. It is also impossible to say if the Czarowitch thinks a National Assembly would pacify the country and prevent any further attempts being made by conspirators on the life of his father. With the limited knowledge we possess, it is impossible to arrive at a correct conclusion regarding these matters. Suppose the Czarowitch's desire for a National Assembly proceeds entirely from a love for his country, while the Czar's opposition proceeds entirely from a love for his family, which of the two is in the right? We think the Czarowitch is in the right, but he should not disturb his affectionate relations with his parent. We, in Japan, have an old proverb, "For the furtherance of a great principle private feelings must be laid aside;" but in the case of father and son this is or ought to be impossible. If it is for the benefit of the whole of the Russian people to have a National Assembly, and simply in the interests of one single family that such an institution is not established, the question then forces itself upon our attention—"should the Czarowitch obey his father and abandon a just enterprise, or should he discard the parental injunction?" This is indeed very difficult a matter to decide. We know the feelings of a son towards the author of his being and how painful it would be to disobey him, and we also love our country and our fellow-countrymen and would die sooner than abandon a righteous cause. When we consider the awkward position of the Czarowitch, we feel as if we were wandering about in a thick fog. What then must be the condition of the Czarowitch. As far as the Czar is concerned he has now attained a ripe age, and has hitherto been singularly fortunate in escaping the attempts made to assassinate him. According to Russian law, as soon as the Czar is one hundred years old, the Czarowitch will ascend the throne in his stead; and as he is very popular, it seems probable that there will be no opposition made to his accession to power. It may be, that the new ruler will make no change in the present system of government, out of respect to his father, for three years; but sooner or later he will carry out his own ideas. With the establishment of a National Assembly, the imperial family would lose some of its authority, which would then be shared with the people, but this might be the means of confirming the Romanoffs on the Russian throne in peace and security, surrounded by a happy, contented and prosperous people.

#### A NATIONAL ASSEMBLY FOR JAPAN.

(Translated from the *Choya Shimbun*.)

CAN it be said with truth that the mass of the people of Japan have made any real advance in knowledge? Who can affirm that the Japanese of the thirteenth year of Meiji (1880) are in any way different from what they were before the restoration? Are they different from what they were in 1873 and 1874 or 1878, and 1879? On the contrary, when we make careful inquiry respecting the general body of the community, we find them still, so to say, in a state of intellectual childhood, and timid of every innovation. Are they then capable of voluntarily assuming direction of the affairs of the empire? They seem quite satisfied with their present condition and think they are enjoying "the golden age"! May we then aptly term our fellow-countrymen a simple-minded race, or ought we rather to put them down as without brains or self-respect? Whatever way the question is regarded, it affords matter for

much regret. While Japan remained isolated from the rest of the world, it was no wonder that the people were in a torpid condition, but how do we stand at present? Over thirty years ago the American expedition which opened the country to foreign intercourse visited our shores, and it is now thirteen years since the restoration, which wholly changed the internal affairs of Japan. If a person is thirteen years of age, although he has not attained full strength and vigour, yet he is able to move, walk and look after himself without any assistance from his parents. How then are we to account for the most energetic and active race of people in the East having passed thirteen years in daily intercourse with foreigners and still remaining in a state of political infancy? Remarks are repeatedly made, that Japan is daily advancing in civilization and knowledge. But what does this all really amount to? Ever since the restoration, the Government has been anxious to improve the state of the country; railways have been built, telegraphs and post offices established, and navigation improved. Science and literature have been fostered, but as long as the mental vigour of the great mass of the people is left untouched, all these proceedings are like drawing the picture of a dragon and omitting the cloud, or forming an image with eyes, ears, nose and mouth, which, no matter how natural it may appear, is still wanting in vitality. Outward show goes for little; and we grieve to say we are unable, notwithstanding appearances, to class our country as among the enlightened and civilized nations of the earth. It is incontrovertible that every nation should have a National Assembly; and that the people should participate in the settlement of the affairs of their country. Some years however elapsed after the restoration before the question began to attract attention in Japan, and the agitation on the subject was confined almost entirely to students and writers upon political subjects. This has continued to the present time and the general body of the people maintain the most profound apathy in the matter. Indeed, they are like persons sleeping so soundly, that no matter how loudly one may shout in their ears, they cannot be aroused from their slumbers. Consequently the Government have paid no attention to the representations of the agitators, judging from the indifference of the community in general, that they are still in their political infancy and therefore unfit to be trusted with such authority. How then can the Government be censured when the people have made no decided move to show their sentiments?

When the boon of Local Assemblies was granted in the 10th year of Meiji (1877), we certainly thought the establishment of a National Assembly was close at hand, and we therefore, in the month of February last year, commented upon the three important measures passed into law the year previously. We then, and indeed on several subsequent occasions, remarked that, "to establish Local Assemblies in the empire of Japan is like setting fire to a forest in the fall of the year when a strong wind is blowing, and it is unreasonable to suppose that the thirty-five millions of people in Japan will rest satisfied with the concession of Local Assemblies which may be likened to a morsel of meat to a hungry man. No! they will desire a full meal in the shape of a National Assembly, and their desire will become like the firing of the forest in autumn, and the flame of their wishes will carry all before it." Thus we thought and wrote and yet the people are still apathetic on this great matter.

We were however glad to see that a number of patriotic men assembled under the auspices of the *Aikokuha* (*Patriotic Society*) in Osaka, from the different provinces, had decided to forward a memorial to the Government urging the establishment of a National Assembly; the people of Okayama and Fukuoka have also held meetings on the same subject, and arrived at a similar conclusion. Can it be said from this that in Japan there are men capable of taking a part in national affairs? Alas! a man may be able to move a finger, and yet it would not therefore be said that his whole body was in sound health. Therefore the exceptional circumstances in Osaka, Okayama and Fukuoka prove nothing of any real value. In the thirty-five millions of Japan the memorialists are like a few men in a saupan floating in a large ocean, and even if they are able to take charge of public affairs, what is to be said of the vast number of the population who have yet made no sign? A National Assembly

will not be established for the convenience of the Aikoku-sha, and no one else seems to care anything about it. Nothing will be granted unless it is loudly demanded, and the apathy of our brethren on this momentous question astonishes and grieves us.

#### LAW REPORTS.

##### IN THE U. S. CONSULAR-GENERAL COURT.

Before General THOS. B. VAN BUREN, Consul General.

*Monday 12th January, 1880.*

**H. ANDERSEN vs. FRANCIS STILLFRIED.**

Complainant charged accused with, on or about the 24th of December last, feloniously stealing one hundred and eighty-two sheets, or thereabouts, of albumenised paper, valued at seventeen dollars, belonging to Stillfried and Andersen.

Mr. Lowder appeared for the defence; Mr. H. Andersen conducted his own case.

Accused pleaded not guilty.

His Honour said that as the case was an important one it would be necessary to have assessors unless both parties were willing to have the case tried without.

Both parties agreed to dispense with assessors.

H. Andersen, sworn: I am a photographer, living at No. 17, Yokohama. I know the accused. On the 23rd of last December I sent an invoice and bill of lading to Capt. Scott, of one case (marked 346, Stillfried and Andersen, Yokohama) of albumenised paper, for clearance. This case was by mistake, together with the invoice, delivered at accused's place, No. 80, Main Street, who signed a receipt, "Baron Stillfried." On Saturday morning, the 27th ult., Capt. Scott came and told me that the case had been delivered by mistake to Mr. Stillfried at No. 80. I told him to go and get the case. At 3 o'clock the same afternoon I wrote to Scott, who came to my office and gave the same explanation, and I again told him to go to No. 80, and get me the case or I would commence legal proceedings at once. Scott then went to No. 80, and brought me a case without a lid and with part of the paper abstracted. On the 29th ult., I wrote to accused (letter read, saying that unless case 346 was returned, legal proceedings would be taken.) I then received an answer (read, in which accused admitted having opened the case in dispute, and offering to explain about the matter, &c., &c.) Having received this reply, I brought the present charge against accused on the following day. The value of the paper abstracted was about \$17.

Mr. Lowder wished to postpone cross-examination till after the evidence of the next witness had been taken, but His Honour refused the application.

Cross-examined: The receipt accused signed is in possession of Capt. Scott. It was on a Saturday that Scott came and said Stillfried refused to give up the case delivered by mistake at No. 80. Scott said he expected a box from the same firm just then. Scott did not say that Stillfried told him that he was very sorry for having opened the case, and used some of the paper by mistake, and that he would pay for it. I told Scott I wanted the paper; he did not tell me that the whole of the paper could not be given to me. When he brought me the box he said "here is the box, and about half a ream of it is gone." He told me before that Stillfried had admitted using some of the paper, but did not say that Stillfried said he was willing to pay for it; I utterly deny that. I did not understand from Captain Scott how or why it had been used. I formed the opinion in my own mind that it had been stolen; that opinion was not altered at all by the receipt of the letter from accused on the 29th, because they could not by mistake break open a box marked "Stillfried and Andersen," when they had none to receive. I am still of the same opinion, for I would not open another man's box and wait two days without going and asking pardon, and I would not have used any paper out of it. I did not instruct Mr. Kirkwood to write accused a letter.

Mr. Lowder wished to read the letter, but

His Honour said it did not affect the case, and therefore to read it was unnecessary. He made a note of Mr. Lowder's application.

Cross-examination continued: Capt. Scott said accused

had abstracted the paper; he did not say he had seen him do it. The box was brought to me between 3 and 4 o'clock on Saturday afternoon, the 27th ult. Scott came three times that day to see me about it.

Court adjourned till 1.30 p.m.

On re-assembling, Mr. Andersen called

Capt. D. Scott, sworn: I am a Custom House broker. I received a bill of lading and invoice from you, and on the 27th ult. I cleared the box, and sent it to Stillfried at No. 80. I got a receipt for it, which is now in Court.

By the Court: My clerk wrote the receipt form. I did not leave the box myself. I did not send the invoice with the box.

To Mr. Andersen: On the 26th I found that the box had been delivered to the wrong place. I found out the mistake when I presented my bill and the invoice to Stillfried, who said he did not know if the box was his. I took the invoice to you. Baron Stillfried told me that he expected a box from the same party. Stillfried gave me up the box the first time that I asked for it. I was not clearing other albumenised paper then. I brought you the box on Friday, at 4 o'clock.

By the Court: I saw the box on the tatoba; it was about 2 feet by 10 inches or a foot. It was a wooden box; my boy handled the box. Mr. Higginbotham is my clerk.

To Mr. Andersen: I remember telling you that some of the paper had been taken out. Stillfried said that his brother had sold him some of it.

Cross-examined: Accused told me that he had bought some of it from his brother, to whom he said it belonged. When I handed accused the invoice he said he thought it was a mistake and that I had better go and see Mr. Andersen, and ascertain from him whether it was his. Mr. Andersen said it was his paper, and that he wanted it. I told this to Stillfried, who immediately gave up the paper. Stillfried told me that he was willing to pay for what he had used. I think I told Andersen that Stillfried had said he was willing to pay for the paper. I think Andersen said that he did not want paying, but wanted the paper. I did not tell Andersen that accused refused to give up the box. Accused never refused to give up the box. I told Andersen that accused had taken some of the paper. I did not say he had abstracted it. I have often landed cases for Stillfried; sometimes without papers, and the brother of the accused has received them and used the contents. Accused simply told me that he had taken some paper out of the box, about a sixth part, he said.

By the Court: When I took the invoice to accused's place I did not see the box. If Mr. Andersen swears that I did not tell him that Stillfried was willing to pay for the paper, I swear that I did tell him so.

To Mr. Andersen: My clerk sent the box to accused's place because he had sent goods before, marked Stillfried and Andersen, to Baron Stillfried.

By the Court: I am aware that there has been for some time a misunderstanding between the parties, and during that time I have not before sent goods marked Stillfried and Andersen to Baron Stillfried.

E. Amsden, sworn: I live in San Francisco. I was in your (Andersen's) office when Capt. Scott came in, he said that a case of goods belonging to you had been taken to Baron Stillfried's by mistake; he also said that a portion of the contents had been removed. You only said, "bring back the box." This was on a Saturday.

Cross-examined: It was between 11 and 12 when I heard this conversation.

David Welsh, sworn: I am now selling photographs for Stillfried and Andersen. I was in their office on Saturday, the 27th ultimo, when Captain Scott came in; he said that Mr. Stillfried had taken some of the paper out of the box. Mr. Andersen asked how much, and Captain Scott replied, but I do not remember how much he said. Mr. Andersen said it was impossible to have used so much in a day. In the morning, when Scott came into Mr. Andersen's office, he said that he had sent the box by mistake to Stillfried. I saw the box when it arrived at Mr. Andersen's; it had no lid on.

Mr. Andersen again took the stand, and stated: In my business now, the days are short, we do not use more than fifteen sheets a day of this paper. We also do not work on Sundays, and it is impossible for any photographer here

to use the quantity in his business that it has been alleged accused used of this paper.

J. R. Black, sworn: When very much pressed for time with the getting out of the *Far East*, I in one long summer's day used fifty-four sheets of paper. In any average business such a quantity would not be used; about twenty or twenty-five sheets a day would be rather an excessive average.

Cross-examined: When I said that fifty sheets a day could not be used I meant printed; two hundred sheets might be cut up, but it could still be used by another photographer to print on. There is no such thing as a permanent process on albumenised paper.

J. Douglas sworn: The average amount of paper used in the winter season I should judge to be about twelve to fifteen sheets a day. I should say it was impossible in the regular course of business to have used one hundred and eighty sheets in the time mentioned, two days. I do not know any permanent process in which albumenised paper is used. Albumenised paper cut up by one photographer could be used by another.

Cross-examined: It is certainly possible to use albumenised paper in the permanent process, but it would be very expensive, as the albumen would have to be removed. Plain paper is used in the permanent process.

H. Andersen, recalled: All cases coming to us are marked in full with our name and address and a running number.

Mr. Lowder asked that the case be dismissed, because the complaint had not been proved or even attempted to be proved.

His Honour said that it was proved that the case had been left at accused's place, and that he had opened the case and used a portion of the contents. This, unexplained, amounted to larceny. He would hear the defence.

Mr. Lowder then called

Baron F. Stillfried, sworn: I recognize the receipt shown. I do not know who brought it; one of my men handed it to me. It read: "Baron Stillfried, please," &c. No other paper came with the receipt. I did not see the box; I signed the receipt; I told my boy to open the box; I do not know where it was just then. I was busy, and afterwards I went out and saw the box without a lid on; I saw that it contained albumenised paper. I never touched it till it was given to me, or saw the box with a lid on. I was expecting paper which my brother had ordered and which I had bought from him. When my brother gave me the paper I used it, and knew nothing of a mistake till Scott came to me. On the 26th, I first saw the invoice; Captain Scott came to me and presented the bill and also the invoice. I said it must be a mistake, and he said he thought so too; he then went away. I thought he had only brought me the wrong document. The next day Scott came again and insisted that the invoice and goods were my brother's. He said that my brother often got goods addressed to Stillfried and Andersen. This was on the forenoon of the 27th ult. I told Scott to ask Mr. Andersen if they were not his goods. I insisted that he should go and ask; my brother was present; in the afternoon Scott came again and said the goods were Andersen's. I told him to take the box to Andersen, to tell him that I was sorry for the mistake; that some of the paper was missing, and that I would reimburse him. Scott's son was present, and assisted to put the box into the carriage. Soon afterwards both the Scotts came back and said that Mr. Andersen was very angry, and wanted the paper and not the money. A portion of this paper, twenty-five sheets a day, was used for the three days that I had it. I can easily use forty sheets a day. The balance was cut into sizes and dipped into alcohol, which removes the albumen, rendering the paper unfit for ordinary photographic purposes, but fit for use by the permanent process. About one hundred sheets of the one hundred and eighty were used in this way before the mistake was discovered. When I was using this paper I was unaware that I was not entitled to use it. On the Monday I received a letter from Mr. Andersen. On the 2nd January I was arrested on a complaint charging me with larceny, and was allowed to appear when called upon. Subsequently I received a letter from Mr. Kirkwood.

Mr. Lowder again wanted to read the letter and put it in, but

His Honour decided that it was totally unnecessary to do so, as it did not affect the case.

Witness, cross-examined by Mr. Andersen: I sign receipts for goods that I have not seen when they come from parties from whom I expect to receive goods. I manage my own business. My brother was in his room in my house when the box arrived; I went and told him the paper had arrived. I think he said, "strange I did not get any invoice." I had other albumenised paper in the house. I used the new paper to see if it was good; any good photographer would have done so. I did not try about that time to buy albumenised paper anywhere in Yokohama. I put the paper in alcohol because it was not good quality for ordinary photographing, and also because it would be better for the permanent process than ordinary paper. I used seventy-five sheets for photographs to get rid of it.

Court adjourned till 1.30 p.m., to-morrow.

Tuesday, 13th January, 1880.

H. ANDERSEN vs. FRANCIS STILLFRIED.

Mr. Andersen again conducted the prosecution, Mr. Lowder appearing for the accused as before.

Mr. Lowder called Raymond Stillfried, who, being sworn, deposed: I am the brother of the accused, and reside with him. I am in the habit of ordering photographic articles from Europe. About the end of December I expected to receive from Messrs. Myer & Co., of London, amongst other things, some albumenised paper. I remember my brother telling me, on the 24th of December, that a case had come from Scott. He opened it, and told me that the paper only has arrived. This I thought strange, as on previous occasions all the goods arrived before the invoice. I inspected the paper. The box was open when I saw it. The box was marked on the side "from Messrs. Myer & Co." I expected paper from them at the same time. I took some of the paper out, looked at it, and handed it over to my brother to use, as he had bought it from me. I gave him about one hundred and seventy-five sheets. I remarked to him, "the paper is good, but rather thick." Some of the paper was printed in the ordinary silver process, and some in the permanent process. The paper for the permanent process was used the same evening; the remainder during the next three days. I had no idea the paper was not mine at that time. I was not present when Captain Scott came first about the case; I was there the next day when he came. He insisted that the box was ours, and produced the bill and invoice. My brother said to Scott "that is not the invoice belonging to the case." Scott said it was. My brother asked me about it, and I said the invoice did not belong to me. My brother then suggested Scott seeing Andersen. He came back shortly, and said the case belonged to Andersen. My brother then said he was ready to give the case up, but had used some of the paper. The case was then given to Scott. My brother told Scott to tell Mr. Andersen he was sorry he had made a mistake and opened the case, but was prepared to pay for the paper. Scott came back again the same day, and said Andersen was in a great fury, and did not want money, he wanted the paper.

Cross-examined by Mr. Andersen: I am in the habit of receiving goods without any bill of lading or invoice. It has happened frequently. I do not know how many reams of paper I expected, a few. I saw no number on the box, nor did I see the lid.

By the Court: I made a mistake. I got the invoice of the goods I expected from Myer & Co. The goods were lost. I got a letter immediately after the case arrived to say fresh goods were re-shipped in place of those lost. I first heard of the loss of the steamer containing the goods about three months ago. I do not know what became of the cover of the box.

His Honour: It strikes me as something peculiar no one seems to know anything about that cover.

Examined continued: Since we dissolved partnership I have been on bad terms with Mr. Andersen. I have frequently received goods addressed "Stillfried and Andersen." I received some about six weeks ago. I swear there is albumenised paper mentioned in the invoice in my possession. No money was ever actually tendered to Mr. Andersen for the paper. I did not advise my brother to write the letter stating that after Andersen's conduct he

would not pay. The goods which arrived about six weeks ago, addressed to "Stillfried and Andersen," were some angle iron. These goods were ordered between July and September, 1878. They arrived here a long time before I received them. I received the invoice about a year ago. I have not received any invoice addressed "Stillfried and Andersen" since about a year ago.

To Mr. Andersen: The iron has been in Captain Scott's hands.

Mr. Lowder applied to put in evidence the two letters referred to on Monday, to prove that offer of payment had been made.

Application refused. Note of application made.

The witness then stated that any blame in the matter attached to him. He received the case and handed it to his brother.

Shimoka, a Japanese in the employment of accused, stated: I recollect a box of paper being delivered by Captain Scott. I think it was about the 23rd of December. The box was put near the back stairs. The receipt for the box was presented to accused. I opened the box by my master's orders. My master did not see me open the box, but came after it was open. I do not remember what became of the cover. Yamazaki helped me to open the box.

By the Court: There was writing on the cover. I suppose the cover is in the house. I have not looked for it.

Yamazaki, a Japanese, also in the employment of accused, deposed: I assisted the last witness to open a box about the 23rd of December. The cover was thrown away at the back. I do not know where it now is. I think I could find it.

Mr. Lowder stated that the case for the defence was now closed, and proceeded to address the Court on behalf of the accused. He said: "I stand here, your Honour, for the purpose of defending a citizen of the United States, against one of the most false and malicious charges that the name of the Deity was ever invoked to support. I believe that when the prosecutor, Andersen, came here, and took the holy book in his hand, and made this charge against the accused, he lied, and he know he lied. That he made this monstrous charge knowing it to be untrue, and for the purpose of branding a professional rival, in the eyes of the public with the name of a thief. The learned counsel then stated that the matter would be heard of again in another court and before another tribunal, and proceeded to comment upon the evidence, pointing out that the accused discovered the mistake himself and was the first to draw attention to it." Mr. Lowder characterized the statement of Mr. Andersen, that Captain Scott had not told him the accused was willing to pay for the paper, as "a malicious lie," when he was stopped by his Honour, who expressed the opinion that counsel, in making use of language which might lead to a breach of the peace, was overstepping his privilege. "Liar," said his Honour, "is not a proper word to make use of to anyone in a Court of Justice." Mr. Lowder then withdrew the objectionable expression and continued his comments upon the evidence, laying stress upon the fact that there was no proof of *animus furandi*, which is absolutely essential to support a charge of larceny. The learned gentleman concluded an able address by stating that his client had gone into the witness box in the hope that by his evidence he would reinstate himself in the opinion of the public, who had been called upon by the prosecutor to look upon him as a scoundrel, a felon, and a thief.

His Honour observed that a very bad feeling had existed between the parties for some considerable time past, and it was probable that if this bad feeling had not existed, the prosecution would not have taken place. If they had been friends, an explanation would have been made, the mistake rectified, and there the matter would have ended. He was not so sure that the prosecution was not justified. If a man becomes properly possessed of a package, and then breaks bulk, knowing it not to be his own, that constitutes larceny, as the law then implies an intention to defraud. In the judgment of the Court, the present could not, under the circumstances, be deemed a malicious prosecution. His Honour thought the accused and his brother, knowing the feeling that existed, should have been more than usually cautious to avoid the possibility of any mistake of this kind occurring. His Honour then reviewed the salient points of the evidence, and stated that under the testimony

he was bound to discharge the prisoner, who would therefore be discharged accordingly, the question of costs remaining in abeyance for the present.

## IN THE IMPERIAL GERMAN CONSULAR COURT.

Monday, January 12th, 1880.

Before E. ZAPPE, Esq., Consul.

KURATA MASAKICHI vs. H. W. HOHNHOLTZ.

This was a claim of yen 72.46 due for provisions sold by plaintiff.

Plaintiff, who is a provision merchant in Kanagawa, stated in his petition, that he, on the 14th of March, 1879, from his stall at the Sihou market, sold to one Kamingue for ship's use certain provisions for yen 72.46. The sale was understood to be a cash sale, but he was not paid on the spot, and a couple of days afterwards Kamingue, accompanied by defendant, came to his place, asked him to wait a few days, and told him that defendant would then pay the amount. The defendant expressed his assent, and Kamingue handed plaintiff a paper of the following contents:

"Good for 72 rios 46 sen for the following goods, received from Massa:

6 piculs rice at rios 1.33 per picul .....	20.00 rios.
15 piculs potatoes at rios 1.70 per picul .....	25.50 "
150 head of codfish, 6 for 1 rios .....	25.00 "
For barrels and salt .....	1.96 "

Total amount.....72.46 rios

G. KAMINGUE.

Payable by H. Hohnholtz, No. 55."

Plaintiff accepted this paper, which is attached to the petition, but whenever he afterwards called on defendant for a settlement, the latter asked him to wait a few days. Last summer defendant asked for respite on account of his dwelling and store at No. 55 having been burnt down. At last, when plaintiff became pressing for his money, and would wait no longer, defendant told him that he, defendant, did not consider himself as owing plaintiff anything, and at all events could not pay anything before the return of Kamingue.

Plaintiff appeared by a Japanese proxy, who put in a paper, in which it was stated that plaintiff was too busy to attend the Court.

Defendant appeared personally and denied the debt.

The Court refused to admit plaintiff's proxy on the strength of the document produced by him. It adjourned the hearing until Tuesday, the 20th instant, at 10 a.m., and ordered plaintiff to pay the costs of the present hearing.

Tuesday, January 13th, 1880.

POW KONG vs C. SEITZ.

This was a claim of \$150 with 12 per cent. annual interest from the 10th of October, 1879, and costs.

Mr. Kirkwood appeared for plaintiff, defendant did not appear, either personally or by attorney.

The petition set forth that plaintiff, who is a money-changer in Yokohama, on the 10th of October, 1879, lent defendant \$150, which amount defendant was to pay back the next day. Up till date the money has not been paid.

Mr. Kirkwood produced defendant's written acknowledgment of having received the amount now claimed; he further produced his own letter copy-book, containing copies of three letters written of late by himself to defendant asking for a settlement, to all of which letters defendant had replied verbally, admitting the debt. He finally proved that the defendant had been legally summoned by the Court to appear to-day.

The Court gave judgment against defendant in *contumaciam*, ordering him to pay \$150 with 12 per cent annual interest from the 10th of October, 1879, until paid, and costs.

Wednesday, January 14th, 1880.

H. W. HOHNHOLTZ & Co. vs. Mrs. C. ROEPKE.

This was a claim of \$53.25 balance of money due for provisions and liquors sold.

Mr. H. W. Hohnholz appeared for plaintiffs: defendant appeared personally.

Defendant admitted the debt, but pleaded inability to pay otherwise than by monthly instalments.

Plaintiffs asked for judgment.

Verdict for plaintiffs in the amount claimed, with costs.

#### JAS. WINSTANLEY vs. C. SKITZ.

This was a claim of \$220, with interest on \$200, and costs.

Plaintiff stated in his petition that defendant on the 3rd of December, 1879, gave plaintiff orders to sell for him by public auction a steam-launch, and received from plaintiff in advance on the sale-proceeds \$200. The sale was duly advertised, but before the day appointed it was countermanded by defendant, who, however, has not yet paid back the advance of \$200, nor paid the charge of \$20 for commission and advertising.

Mr. H. Andersen appeared for plaintiff; defendant appeared personally.

Defendant admitted the debt and declared his readiness to pay as soon as he was able to do so.

Mr. Andersen asked for judgment.

Verdict for plaintiff in \$220 with 6 per cent annual interest on \$200 from the 3rd December, 1879, until paid, and costs.

Friday, January 16th, 1880.

#### H. ANDERSEN vs. RAYMOND, BARON VON STILLFRIED.

(Adjourned from the 9th inst.)

The Court in the presence of the parties to-day delivered the following

#### JUDGMENT.

##### *The facts of the case.*

On the 26th of July 1879, this Court gave judgment in a lawsuit between the present parties to the effect that the defendant was for a period of ten years from the 30th of June 1878 prohibited from trading either in Japan or from Japan, in Japanese photographs taken by himself. The plaintiff now asserts, that defendant has nevertheless sold to his brother Francis von Stillfried at the price of \$6,000 besides other things negatives taken by defendant in Japan and pictures from those negatives, although he knew that his brother intended to trade in those articles. In proof of this assertion, plaintiff has referred to the register of deeds of sale kept in the American Consulate, on which register the deed of sale which was executed between the two brothers on the 6th of December 1879, has been entered. The plaintiff contends that defendant has hereby infringed the restrictions, which the judgment imposed upon his freedom of action, and demands that the said judgment be enforced. The defendant admits the deed of sale of the 6th of December, but denies that the same includes a sale of Japanese negatives and photographs.

He alleges that he has sold to his brother, Indian and Chinese negatives, from doing which nothing prevented him. With regard to the plaintiff's plea that the deed of sale expressly mentions *all* the negatives and photographs, which on the 6th of December, were in the dwelling-house of defendant and on the business premises of his brother, and that plaintiff by the evidence of Welsh wanted to prove, that the Japanese negatives and photographs in question were also there on that sale, defendant states that he does not deny, that those negatives and photographs were then there, but that they could not possibly have been sold by him on the 6th of December, because all his Japanese negatives had already, about four weeks previously, become the property of his brother, to whom he, defendant, had made a present of them and as for Japanese photographs none had passed from him to his brother.

The defendant produces the deed of sale in question and likewise an inventory of the objects sold, which inventory was taken a few days after the deed of sale was executed. On the strength of the above pleadings, the defendant asks that the plaintiff's demand be dismissed, while plaintiff denies the truth of defendant's allegations and again quotes the context of the deed of sale of the 6th of December.

##### *The reasons for the decision.*

According to general principles of law on the *onus* of proof, he, who alleges a fact, on which he bases a claim,

has, in case of denial by the opposite party, to prove that fact, and it was therefore undoubtedly incumbent on plaintiff to prove, that the deed of sale of the 6th of December, 1879, also included defendant's Japanese negatives and photographs. This plaintiff has not proved, for in the face of defendant's assertion, that he already, about four weeks before the execution of the deed of sale, had made his brother Francis von Stillfried a present of his photographic negatives, and that the latter has not received any pictures from him whatsoever,—it is an arbitrary assumption on the part of the plaintiff, that the word *all* in the deed of sale must necessarily also include the Japanese negatives and pictures. Nor is it, in order to cause defendant's plea that he made a present of the negatives to be disregarded and plaintiff's demand to be granted, sufficient that plaintiff simply denies the gift. And when on the other hand the defendant, in support of his assertion that the sale does not include Japanese negatives, produces a list of the objects sold to his brother, and this list only contains Indian and Chinese photographs, and the Court considers the entire *status*, established between the parties by the judgment of the 26th of July 1879, in connection with the sale of the 6th of December, by which defendant sold to Francis von Stillfried for \$6,000 the whole of his stock with the sole exception of the Japanese negatives now in litigation,—then the Court finds itself unable to distinguish between the truth and the untruth of the respective allegations of the parties, and it therefore makes use of the power with which it is invested by Art. 437 of the Ordinance of Procedure, and gives defendant the choice to swear that it is true, that the deed of sale of the 6th of December 1879, does not include those Japanese negatives and pictures, which are now used in Francis von Stillfried's business and formerly belonged to defendant, and that the same already several weeks previous to the 6th of December 1879, had by gift become the property of Francis von Stillfried.

For these reasons, the Court renders the following

#### Decision.

Plaintiff's demand of enforcement of the judgment of the 26th of July 1879, is granted unless defendant takes his solemn oath as follows: "I swear that the bill of sale executed on the 6th of December 1879, with any brother Francis von Stillfried did not include those Japanese negatives and pictures, which are now used in the business of Francis von Stillfried and formerly belonged to me, and that I already several weeks previous to the 6th of December 1879, had made my brother a present of the Japanese negatives. So help me God!"

If the defendant takes the above oath, then the plaintiff's claim is dismissed.

The costs are to be paid by defendant in case he does not take the above oath; otherwise each of the parties has to bear his own costs.

## TWO COURTS OF JUSTICE IN CHINA.

(From "Cynthia," a Chinese story: *Hongkong Daily Press*.)

### I. ENGLISH.—HONGKONG.

The Magistrates' Court with its dozens of reeking bare backs and expectorating mouths, is a sight worthy of trotting half over the globe to see at any time, but more especially during the summer months.

Having ascended the little go-cart termed a witness-box, Chop Dollar was declared. The Court of Hongkong being a partially sensible institution, and being decidedly economical, such tomfoolery as plate breaking and cock's head cutting is dispensed with.

While the complainant's story is being gradually filtered through the interpreter and placed upon paper, he takes stock of the stage of the Hall of Justice. Raised above the whole is the beetle-browed magistrate; before him the interpreter, beneath and around whom gather counsel, policemen, foreign spectators, newspaper reporters, and others of equal importance. The table in the centre partially covered with blue cloth, is blotched and splashed with ink; its legs have the rickets. The chairs—if it be not presumption to so term such articles as were before Chop Dollar—were of a piece with the table, and are not by any means improved in appearance by being painted "reporter," with such artistic taste as might be supposed to be the peculiar attribute of a Zulu savage.

There is no accounting for taste, but as Chop Dollar looked round the den before him, he could scarcely prevent himself from giving utterance to the thought, that it scarcely seemed the place for a display of the majesty of any law, however made. Cramped, dark, ill-ventilated and uncomfortable, it seemed as if constructed rather as a place of torture than a hall where the innocent were to be vindicated, and the guilty sentenced to meet the punishment decreed for outrage on well-ordered society.

At last the tedious complaint is down, and a few questions having been asked by the bench, the counsel for the defence arose.

Assuming that fatuous expression which long experience has enabled him to feel confident is the best outward and visible exponent of an inward and invisible idiocy, he says, "And so you think you met the prisoner on the steamer in Canton?"

The interpreter hesitated for an instant; but for a moment only, and then shouted "You met the prisoner this way, you think, on the Canton steamer?"

"Which way?" artlessly enquired Chop.

Determined not to have his own ignorance exposed, the interpreter thunders wrathfully, "Any way. Can't you give a straightforward answer. What do you mean by prevaricating. Did you see him or did you not?"

Very confusedly, "Yes."

Chop Dollar began to wish he had brought up that fifty dollar note.

"Now, sir, be very careful—do you know that if you tell lies in this Court you'll be sent to gaol?" This being interpreted in a give-and-take style, Chop Dollar indignantly denied he was telling untruths.

"How did he address you?" inquired the lawyer.

"How was he dressed?" asks the interpreter.

"As he is now dressed," was the answer.

"Just the same," glibly interprets the linguistic functionary.

"Just the same," repeats the magistrate, as he writes down the answer, and then, half-way through looks up with "Just the same! Just the same! What does he mean?"

"What do you mean?" shouts the interpreter.

"Oh! as is usually customary amongst Chinese on meeting," suggests the lawyer.

"Yes, yes," chimes the interpreter.

"Oh! to be sure. In the manner customary—amongst the natives," writes the holder of the Scales of Justice.

"Have you ever been an intimate of my client?" inquires the lawyer blandly.

"Did you ever intimate anything to that fellow (pointing to the prisoner)?" graciously questions the interpreter.

"Never," replies the complainant emphatically.

"He was never an intimate of my client, your Worship," states the lawyer.

"Is it within your own actual cognizance that the prisoner removed your effects from the steamer?" asks the counsel.

"Did you see that man take those things (pointing to the stump of a pencil, &c., on the table) out of your pillow-box?" interprets the official.

"No. How could I?"

"No," writes the magistrate; and asks, "and it is quite possible that the pillow-box came into his possession after he had quitted the vessel altogether?"

"Perhaps when you were standing altogether on the vessel the prisoner was in a position to take the pillow-box?" deliberately said the interpreter.

"I think it quite possible," replies Chop Dollar, not quite seeing what that possibility had to do with the matter in hand.

"I thought so," observes the self-satisfied magistrate.

"Exactly so, your worship, and I think matters have arrived at such a stage as to justify me in asking your Worship to immediately discharge my client. The witness in this case has not come forward yet, but if it were not that I feel I should be most unjustifiably encroaching upon your valuable time, I should almost desire to have his evidence that I might proceed against the two—that is the complainant and his witness—for conspiracy. I think your Worship will admit, that never in this court, nor, indeed, in any other under the British flag, that emblem of freedom, has such a base, determined attempt been made to brand as a felon, and deprive of his liberty, a Chinese gentleman, whose spotless character can be testified to by thousands, and by tens of thousands where he belongs to. Here, he is an utter stranger—"

"I can testify as to his character, your Worship if—" interrupted a turnkey.

"Hold your tongue," sharply cried the lawyer. "You are not a witness in the case. At least, so far as I am aware. Wait till you are spoken to."

"I was going to say, Mr. Emtint," said his Worship, "when you started off with such volubility, that there seem to be good grounds for supposing, from the straightforward and emphatic manner in which the complainant has given his evidence, that, at the least, the prisoner may be committed for trial for unlawful possession. But we—"

"I protest, your Worship, against such construction being put upon the evidence as yet before you."

"Very well. I will take some more."

The informer gave his evidence.

Amongst other questions the magistrate asked, "And seeing these two men running as if pursued, or as if in pursuit, you were struck with the idea that something was wrong and, therefore, followed them."

"Purshoot, and purshoot," muttered the interpreter to himself; "struck,"—"idea,"—"something."

"Here! when those men ran past you, did they strike you with—a pistol or anything of that kind or with a 'hightee'?" he asked of the witness.

"A 'hightee'! What's that?"

"Why one of those new kind of weapons brought from foreign countries, you dance."

"No."

"Ah!" interjected his Worship, "well, I'll commit this case for trial, Mr. Emtint. It seems to me that an offence has been committed. Of course, I suppose you will reserve your defence in such case. It is not the way of a magistrate to be dogmatic, and I should be sorry to injure the reputation of your client, Mr. Emtint, but commit the case I must."

## II. CHINESE.—ANYWHERE.

Taking charge of the runners, Hound led them straight to the residence of the hapless Lamb, and that gentleman found himself deprived of that liberty he had been trying so hard to retain. Nothing was found in his lodging belonging to Chop Dollar. Not even the pillow-box. He had been too cautious to keep his person and his booty together.

Arrived at the police quarters, Lamb was handed over to the custody of those individuals, who were rather wroth on finding they had been out-witted by Chop Dollar.

A day having been appointed for the trial by the magistrate, Chop Dollar faithfully attended. After waiting for some time, he began to feel particularly fatigued. Turning to a runner, he asked—

"Can you not oblige me with a seat? I have been upon my legs a great deal of late, and feel so tired now that I feel I must sit or fall."

"One hundred cash, my friend," said the man addressed, in a cheery way.

Chop Dollar pulled out a ten cent piece with the air of a martyr; and so disgusted was he, that in handing it over he did not ask for the difference of value between the silver coin and one hundred cash.

In due course he was called before one of the presiding assistant-magistrates, before whom, humbly kneeling much to the discomfort of his kneecaps, he related his deprivation of money. The proceeding was a tedious one. The magistrate being from the province of Oo Nam, had to have Chop Dollar's words interpreted to him, and these were then put down by the clerk taking down the depositions.

Chop Dollar was ordered to retire, and Hound was admitted. Furtively glancing round the place, he discovered that none of the people about—all officials or servants of officials—were known to him, and became somewhat bold in consequence. It had not been his intention to appear at all, but Chop Dollar, fearful lest the case should break down, insisted on his giving evidence, under the penalty of being deprived of the promised reward unless he did.

"Your name?" inquired the interpreter. "What age? Where of?" followed in succession.

"You are a witness in this case?"

"Yes," somewhat feebly from the witness, who already began to feel the kneeling process a hardship.

"Well, what do you know about it?"

"I saw the prisoner in the case carrying the complainant's pillow-box on to the steambot at Hongkong. I also saw him on the day it was stolen in company with his fellow thief now in gaol in Hongkong, and also saw him stand by in an hotel, while the other prisoner burst open the —."

"How do you know it was the complainant's pillow-box and no one else's?"

"From the description I afterwards got of it."

And so it went on until his evidence was all given, when he was allowed to rise, an operation he could scarcely perform, and retire. Lamb being brought in, was asked particulars as to age and so forth.

"The charge against you is—" and the interpreter went through the gist of the depositions, "what say you, guilty or not guilty?"

"Not guilty," very firmly indeed; and Lamb sought to prove an *alibi*.

"Have you any evidence of what you state?" asked the interpreter.

"How can I produce evidence now, when all the different people I was in company of, have become scattered?" objected Lamb.

"He lies," said the magistrate severely and emphatically.

"You lie," repeated the interpreter with added severity and increased emphasis.

"Call in the complainant and witness," ordered the magistrate. Being confronted with Chop Dollar and the informer, he persisted in his denial of having committed the offence, disclaiming all knowledge of either our hero or his companion. As to Lee, he had known a great many men of that name, but no one who had ever been to gaol certainly. He was far too respectable to associate with men of no principle.

"He lies," repeated magistrate indignantly.

"You lie," cried the interpreter, perfectly aghast at the enormity of such an offence. Evidently he had never met a liar before.

"Strike his cheeks," said the magistrate, determined to elicit the truth, whereupon the lictors struck Lamb's cheeks with leather kept for the purpose, in instalments of five blows, until they swelled up from the inflammation caused.

"I confess!" shrieked the agonized man.

"Where's the booty?" enquired the magistrate.

"All spent," replied the miserable wretch.

"He lies," sententially asserted the magistrate.

"You lie," iterated the interpreter shaking his head seriously, as if to say "what unaccountable depravity!"

"Strike his cheeks fifty blows," ordered the holder of the scales of justice, and the former ceremony was repeated to the extent of sickening our hero beyond measure. The miserable prisoner on his knees howled, shrieked, and went through all sorts of contortions, even to grovelling and rolling on the ground. He was determined, however, to give in no more than he had already done. Therefore, to every question as to the hiding place of the booty, he persisted that there was none of it left.

At last Chop Dollar could bear the sight no longer, and begged the magistrate, not in the name of humanity, but in that of graciousness, to cause the lictors to desist. He felt he would rather lose double the sum Lee and Lamb had robbed him of, than see again a fellow creature subjected to such terrible punishment, however dead that individual might be to all feelings of honesty and respectability.

In answer to the prayer offered up to him by Chop Dollar, the

magistrate relented, and ordered the removal of the prisoner, with the sentence of deportation two provinces northward; there to remain until such time as his Imperial Majesty the Emperor might choose to release him from supervision at the place to which he was to be deported.

In due time Lamb found his cheek tattooed with his clan-name, name, and offence, and his person being forwarded on to his destination.

## THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXII.

#### THE BRIDGE.

Three hundred knights who had followed the Lord Seneschal and some seventeen hundred friars, of whom not a few were men of passing prowess though the main part had never wielded a weapon except in sport: this was all the force the fugitives at Miidera could muster, and they knew that at any moment the Heiko chiefs might oppose a century of trained warriors to every score of these priestly tyros. As for the Genji in the provinces, there was little hope that they could reach Kiyoto in time to be of any solid assistance. Kiso Yoshinaka, being at once the most accessible and not the least interested, had, it was true, been summoned to Kiyoto and urged to lose no time in assembling the allies he had so long and so craftily laboured to enlist; but this was before the enforced flight to Miidera, and Yoshinaka, obeying the suggestion of his subtle adviser Nei, had carefully avoided engaging himself to anything that could necessitate a march beyond the mountain fastness he knew so well. There he might confidently look to hold his enemies at bay until a series of petty reverses, or at least the lack of signal success, should shake the prestige that helped so largely to keep the people in subjection. The Lord Seneschal had divined this strategy and could not but approve it, though he himself, placed thus in the van of an unsupported battle, might hope for nothing better than to drag his enemy down with him as he fell. That however the brave old knight counted as no small solace, and if he sometimes bowed his white head sadly when he remembered that in the crash of the coming onset, his three sons' lusty manhood would be of no more avail than his own ripe old, he never suffered this passing despondency to mar his own cheery aspect or damp his inexperienced followers' ardour.

To all the chief cloisters in and about the capital, where the guardians of the Genji sepulchres still cherished the memory of by-gone times, a memorial was addressed by the Lord Abbot of Miidera, praying for aid against the destruction that menaced his monastery and its inmates; but though favourable replies were returned in most cases, day after day passed and still the gazers from the watchtowers saw no glitter of either friend or foe's armour among the pass of Niui. The fact was that while most of the holy brotherhoods were not less willing than their fellows of Miidera to strike a blow in the Minamoto cause, none were bold enough to take the field alone, for this signified in all probability annihilation before a junction could be effected with their allies and under any circumstance the destruction of their shrines and cloisters left thus unprotected. The inaction of the Heike men was not so easily explained, except on the supposition that they desired to ascertain the limits of their enemies' strength before putting forth their own. Those friars of Miidera whose ministrations summoned them to the neighbourhood of Rokuhara, reported that palisades, military pits and such like muniments were in course of rapid construction about the Taira stronghold, but though bands of knights arrived almost hourly to swell the numbers of the garrison, everything seemed to indicate a defensive rather than an offensive programme.

Under these circumstances the Seneschal conceived a design worthy to be cited as the inception of a struggle between the two chief clans of the Empire. On the highlands in the vicinity of Miidera stood a thriving village that owed most of its prosperity to the patronage of Sanefusa, the Lord Deputy, in whose fief it lay. Now Sanefusa had been entrusted by the Heike chief with the mission of arresting Prince Mochihito, and after the fight at the palace

he had returned with his troops to Rokuhara, partly because his duty summoned him thither at such a time rather than to his own castle, and partly because he desired to secure the punishment of the refractory knight who had so stoutly opposed his search for the Prince. Learning subsequently that the rebels were in force at Miidera, he had remained in Kiyoto, detained at first by the expectation of taking part in an immediate attack upon the cloisters, and afterwards by the difficulty of regaining his castle without exposing himself to almost certain disaster on the road. Of all these things Yorinasa had information and they suggested the plan he proposed to his knights and the chiefs of the esnobites at a solemn conclave in the hall of the principal fane on the fifth evening after his retreat to Miidera.

If the Lord Deputy's castle and the village in its vicinity were fired, the flames could easily be seen from Rokuhara, and whatever stratagem the Heiko chiefs were contriving, they might not sit with folded arms while the torch was set to their allies' strongholds. They would assuredly march to the assault forthwith, and Yorinasa proposed that in the meanwhile a party of six hundred picked men under his sons' leadership should make a detour so as to descend upon Rokuhara during the absence of its garrison, while the main body, falling back slowly through the defiles at the head of Lake Biwa, should suffer their pursuers to close with them at a certain place among the hills, where the ground was of such a nature that disparity of force ceased to be a serious difficulty.

The scheme was a bold one and it received the warm support of all the Seneschal's knights, for they understood that if no access of force was to be gained by waiting, their best and indeed their only chance of success lay in utilizing their friar-allies' enthusiasm before the chill of inaction overtook it.

Deeds followed fast on the footsteps of design in an age when the soldier's weapons and his harness were all the requisites for a campaign, and no complicated tactical movements interfered with those feats of individual prowess for whose achievement men were at any time content, to barter then lives. Looking eastward through the thick darkness at midnight, the Heike watchmen saw the sky redden with a lurid glow not easily misinterpreted by those dwellers in a wooden city, and in a moment the tidings were shouted from barbaric to barrack-room, "the rebels have fired the Lord Deputy's castle, and will serve all our friends alike if we hold our hands any longer." They were not too well versed in the art of self-restraint, these men of Hei, and certainly the insults they had suffered might have sufficed to stir calmer blood. Yorinasa's scheme seemed to be on the verge of success, for already the wardens were bestirring themselves to unfasten the ponderous gates and give egress to the armed multitude that surged against them, when a peasant boy, knocking hastily at the postern, handed in a letter for Munemori.

The Taira chief read the document aloud while his handmaidens huddled on his armour. "My Lord," it ran, "the flames you see in the east are intended to entice you to a battle-field where your enemies hope to make peaks and passes their allies. A troop of their best soldiers waits to assault Rokuhara in your absence, but I have succeeded in delaying their venture so long by adverse counsels, that though you never raise a sword to repulse them, the dawning will, I ween, show them still struggling among the pits and entanglements beyond your moats. With deep respect, your servant, Shinkai, Sub-prior."

Munemori laughed loud and long when he had finished the perusal of this letter. "They have sent me back a horse that many a one of them would be fain to borrow for his flight soon," he cried exultingly, "but to-night it will be sufficient if they learn that neither stratagem nor strength can bring them within striking distance without our consent. Let every man retire to his quarters. These wearers of amice and baldric need not trouble the rest of Taira soldiers; only if there be any who can find sport in aiming a shaft at tattered pates, he will do well to string his bow an hour before daylight."

The Seneschal's eldest son, Nakatsuna, commanded the force selected for the assault of Rokuhara. It was an unusually dark night, and the progress of the men-at-arms was necessarily slow, being measured by that of a company of serfs,

heavily laden with pavises, axes and mattocks, who were destined to act as pioneers. There was of course no possibility of ascertaining whether the garrison had been enticed forth by Yorimasa's device or not, but at any rate the attacking party encountered no active resistances when they set themselves to clear away the formidable barrier of obstacles that separated them from the fort, the men-at-arms holding up the huge pavises to protect their followers, who plied axe and mattock with might and main so that their own share of the perilous undertaking might be concluded before day-break.

It sometimes happens that the very absence of opposition has a more demoralizing effect than bloodshed and hard blows, for it inevitably suggests the idea of either confidence or stratagem on the enemy's side. Nakatsuna's men, toiling painfully forward foot by foot through the entanglements and pitfalls that covered every inch of ground beyond the counterescarp, and hearing nothing in the darkness save the sounds of their own labour, gradually began to picture to themselves some crushing concentration of force awaiting them beyond the fosse, or possibly a cordon of foes slowly enclosing them from behind, and so devoted perhaps more thought to precaution than was consistent with success. At any rate they were still separated by a considerable interval from the moat, when in the intervals of their toil, they heard a sound that made them pause with uplifted axe, and peer anxiously between the passes of the Nioi peaks. That sound was nothing more than the crowing of the cocks in the castle before them, but it caused them a dismay the war-cry of a thousand foes could not have produced, for it told them that the dawn was climbing the mountains, and that a shower of arrows might presently be added to the obstacles they had already found well-nigh insurmountable.

In truth the Heike men were at that very moment bending their bows behind the palisade, and promising each other rare sport so soon as there should be light enough to show them their arrow-tips and their enemies. But Nakatsuna was not one to lead his troops into hopeless peril. With bitter regret and despite the counsel of his more sanguine comrades, he gave the order to retire, and drew his men off so rapidly that those within the castle had no leisure to impede the retreat.

There were not wanting men who found many palliatives in the details of this failure. It was something to have marched unmolested into the very shadow of the Taira stronghold, and almost a triumph to have destroyed a great part of the obstacles so carefully prepared by the enemy. But Munemori's prescience proved in the end more than usually accurate. There was something grievously discouraging in the reflection that they had failed not only to disturb their foes' comfortable assurance, but even to come within striking distance of his position though no active opposition whatsoever had interfered with the exercise of their strength. Nothing could have been more subtly calculated to convince them of their utter impotence, and from that day the cenobites' enthusiasm began to be replaced by an ominous apathy. They did not understand the full extent of Shinkai, the sub-prior's treachery, but remembering the delay his frivolous objections had caused on the night of the assault, they sought to make him pay the penalty of their failure. Shinkai however escaped to Rokuhara, and after his flight the friars gave themselves less and less concern about the Prince and his prospects, so that after a few days the Lord Seneschal resolved to change his place of refuge to Nara, having received the most positive promises of aid from the priests of the principal shrines there.

The force that accompanied the imperial fugitive when he set out from Miidera consisted of some four hundred men, attached to whom in the capacity of guides were the Friars Mioju and Shishu, this the best glaivesman and that the doughtiest swordsman of all the cenobites at Miidera, and both sons of knights who had fallen at the Earl of Harima's side in his last fight. It was a sultry summer day and the Prince, wearied by the unwonted fellowship of fear no less than by the hardships of the route, fell six times from his horse before the first ten miles of their journey had been achieved. Speed was of course above all things expedient, since the only possibility of escape lay in eluding pursuit, but with such an encumbrance speed was not to be attained, and so towards mid-day the

little band were constrained to halt at the temple of Heito, in order that Mochibito might recover strength to proceed.

The Seneschal had probably by this time foreseen much of what was about to follow, for although no sound disturbed the silence of the noontide save the pleasant plashing of the river Yodo as it swept smoothly past the temple enclosure, he desired his followers to remove the planks of the bridge and posted look-outs on the watch-tower as well as on all the commanding positions in the neighbourhood.

The knights had scarcely bathed their faces and unbuckled some of the heavier pieces of their armour when one of these sentinels came running in to report that a column of armed men was just debouching from the hills that hid the eastern suburb of the city. Almost immediately after, the intelligence was received of another column marching parallel with the first, and a brief reconnaissance sufficed to show that the two were converging on the very position occupied by the fugitives.

If the handful of knights forming the prince's escort had set much store by their lives, it is probable that they might have experienced some perturbation at the prospect of encountering the overwhelming force of which they presently perceived these columns to be the van-guard; but it was afterwards related by the priests of Heito, that so far from exhibiting any alarm, their guests were careful to do ample justice to such rough fare as the cloister refectories furnished and that when they bethought themselves of leisurely refastening their harness, the enemy were already within bowshot of the river bank.

A broken bridge, and the Yodo, broad, deep and swift, were however obstacles not easily negotiated and after the Taira troops had crowded to the edge of the stream and shouted defiance to their foes on the opposite bank, there followed a momentary pause disturbed only by the twanging of bow strings, for on this side some of Yorimasa's men, themselves sheltered behind the pines in the temple grounds, discharged shafts every one of which took effect among the dense masses of their adversaries.

Then occurred an incident which with less terribly disproportionate forces might at once have turned the tide of battle in the prince's favour. Those that reached the river first, perceiving the state of the bridge, had made no attempt to cross, but it was not so with those that followed. Seeing their comrades here and there struck by arrows they had no power to return, and ignoring perhaps the true cause of the delay, they pressed forward so blindly that in a moment the bridge was covered with armed men. Now the planks forming the roadway having been removed for a space of about six yards, left exposed three balks of timber placed edge upwards, and these not being more than some four inches thick at the utmost, while the intervals that separated them were almost as many feet, offered a means of passage no man might venture to essay at such a moment. Thus then, when the leaders of the ever increasing crowd on the bridge, seeing before them this almost impassable chasm and beneath them the deep water in which an armour clad soldier might scarcely hope to live, turned and strove to win their way back to the bank, those in rear, fancying from the commotion that the battle had been joined, redoubled their efforts to advance, and it is related that in the rush which ensued some three hundred men were thrust off the roadway and swept away by the river before their comrades were made wise to their fate.

But three hundred men more or less made no appreciable difference in the many thousands that had marched from Rokuhara to annihilate the rebels, and as the Genji knights saw that sea of flashing weapons to which wave after wave was added every instant by fresh arrivals it seemed a force so ludicrously disproportionate to their own weakness that they greeted their foes with shouts of jeering laughter.

As yet the fighting had been confined to an interchange of arrows, many of which had proved fatal to the assailants, but the Heike men setting up their pavises or retiring from the exposed positions they had first occupied, presently ceased to be inconvenienced by their enemies' fire, and began to devise means of making the bridge practicable. Seeing this a band of twenty-eight men rode out from the shadow of the pines on the Genji side, and drew bridle at the bridge-head. They were clad in black armour from helmet to chausses and the housings of their horses were of sable bearskin, while at their head stood Miyoku, the champion swordsman. To many of the Taira soldiers

report had made the banners and devices of these knights familiar, and the estimation in which their prowess was held might have been easily inferred from the effect their sudden advance produced on the occupants of the bridge, but for all that the chasm on the brink of which they stood was not less formidable to them than to their foes. And since these had now taken measures to protect themselves against the Genji archers, it was difficult to see how the twenty-eight knights proposed to utilize their weapons.

But the mystery was soon resolved in a way that astonished both parties equally. Miyōju, springing from his horse and brandishing his long glaive over his head, stepped boldly on to the midmost of the three narrow timbers that had once supported the road-way of the bridge. Many of the Heike soldiers had, as we have seen, fallen headlong into the river during the early moments of their comrades' confused advance, and not a few were now clinging to the girders and buttresses below. From these, as Miyōju passed above their heads, ascended a yell of indescribable fury that might well have shaken the strong man's nerve, but for the rest his extraordinary feat was witnessed by both parties in perfect silence.

In truth it seemed much more reasonable that those in the river should concern themselves about the man's progress than those on the bridge, for so precarious was the nature of his footing that the slightest opposition must inevitably thrust him from his place and this was the issue all looked to see so soon as he should come within reach of his foes. He himself however, neither ignored his peril nor encountered it over rashly, for rapid as his advance necessarily was, he found time to disengage his glaive from the first weapon it met, launching it by the same effort with unerring aim into his opponent's gorge, and as the dead man fell backwards, Miyōju leaped into his place before the others had disencumbered themselves of their comrade's corpse.

All this was of course the affair of an instant, and though Miyōju's comrades crowding to the edge of the chasm, left no doubt of their longing to cross, not one dared trust his feet sufficiently to make the attempt. Indeed for the moment their aid seemed unnecessary. Miyōju's heavy glaive rose and fell among the multitude that surrounded him, and the bodies falling into the river as well as the blood that dripped from the bridge, showed plainly how seldom his strokes failed. No doubt such an achievement was less likely to be minimized than magnified in the memory of its witnesses, but it is certain that a goodly pile of corpses separated him from his adversaries before his glaive, wedged between the plates of a falling man's mail, broke short off above the blade.

At this moment a lad of some seventeen or eighteen summers, clad in light armour and carrying a long sword in his hand, ran at full speed from the temple enclosure shouting loudly to clear himself a passage. The Genji knights at the river's side, recognizing in the new comer, Ichirai, the favorite pupil of the man who was dealing their foes such stark blows, drew back hastily from the bridge-head; not because they had any prescience of the lad's design—that indeed was little likely—but simply in deference to his known friendship for Miyōju.

In another instant Ichirai had reached the edge of the chasm and then on this side and that of the river, from friends and foes alike, arose a tremendous shout of involuntary applause. At a single bound the boy had cleared the broken part of the bridge, and now stood by his master's side awaiting the fresh onset the Heike men were preparing.

This aid did not come a whit too soon, for though Miyōju showed no signs of exhaustion, he had been wounded by several arrows, and moreover the enemy just then executed a manœuvre to which, alone, he must have yielded from sheer inability to strike fast enough. This was nothing more than a combined attack of some twenty soldiers, who came on, shoulder to shoulder, the leaders bounding their heads and turning them to one side so that the curtains of their helmets protected their necks and faces. Such a method of advance, though practiced often enough in the teeth of heavy arrow flights, seemed almost ludicrously cautious under the circumstances and the struggle that ensued on the bridge was accompanied by loud shouts of derision from the spectators on the Genji side. Neither was it viewed with indifference by the Taira leaders. Furious that they should be thus held at bay by a broken

bridge and its two solitary defenders, they forced their horses into the stream and urged their men to attempt the passage at all hazards. The consequence was that a large number, eager to make a speedy end of Miyōju and Ichirai, rushed blindly along the bridge, while another and not less numerous party assayed to swim the river, some here, some there, but none acting with any idea of method or concert. To these Yorimasa and all his most skilled archers opposed themselves, shooting with such deadly effect that, as the priests of Heito afterwards recounted, the stream was dotted with corpses more thickly than with mere leaves after an autumn hurricane; while from those on the bridge, the two friars retreated so opportunely that the chasm once more engulfed some scores of unlucky soldiers thrust over the edge by their comrades, mad impetuosity.

After this repulse the pursuing force made no immediate attempt to renew the attack. They began to see that their previous failures were not more attributable to their opponents' address than to their own want of organization, and that since individually they might not hope to overcome such enemies, their only chance of success lay in utilizing their immensely superior numbers. To this end the leaders selected three hundred of their best mounted and most stalwart soldiers, and marshalling them at a convenient spot above the bridge, directed them to swim their horses over, making no attempt to return or avert their adversaries' missiles, but keeping their order knee to knee, and bending their heads so as to present the least possible vulnerable space to the arrows they had such good reason to dread.

Meanwhile the prince's escort, helpless witnesses of these dispositions for their destruction, essayed in various ways to renew the conflict after its former fashion. Yorimasa himself advanced to the river-bank, and waving his fan, defied the Taira men to advance. "Could Kiyomori," he asked, "find no grown men amongst all the vassals he had won by menace or bribe, that he was obliged to send such children to the fight, or was the story true that a surfeit of life's good things had begotten the distemper of cowardice in the House of Hei?" Similar but less measured taunts were shouted from the top of a pine tree by the strong-voiced friar Ikadzuchi, while others came forward to the bridge-head and offered to do battle with any of their foes on any terms they should name.

But the Taira leaders were not to be turned from their purpose by these empty words. Promising themselves a speedy and ample reward for their forbearance, they completed all their preparations with as much deliberation as they had before displayed precipitation, and when the long line of horsemen plunged into the river, leaving their places to be filled by an even greater number, the Genji men knew that neither harness nor blade could avert the end much longer.

Then the Lord Seneschal and the stoutest of the cenobites formed themselves into a body-guard for the Prince and turned their faces unwillingly towards Nara. The brave lad, Ichirai, indeed was lying senseless in the cloister at Heito, while Miyōju, well nigh crippled with arrow wounds and sword cuts, had doffed his armour and set out painfully in the van of the retreat; but of the rest few had any evidence of the fight to show, save perhaps their empty quivers. Yorimasa wore no helmet, and never at any time in his long life had men seen him look more cheerful and undaunted, but those that knew how often the old knight had proved his contempt for death, drew no over sanguine auguries from this tranquil mien.

As for the Prince, neither by word nor gesture did he display any symptom of the perturbation his previous conduct had disposed men to anticipate. Nerved in part by the imminence of peril, in part by the contact of such valour as he saw around him, he bore himself stoutly that at one time it seemed almost possible to hope for his escape. But even had he been capable of riding at a speed sufficient to baffle pursuit, it is doubtful whether his followers could have brooked anything so closely resembling a precipitate flight. At any rate the Heike men who had only delayed to assemble an ample force, soon came within bowshot of their foes, and even as the arrows rattled on the fugitives' harness, Kanetsura, the Seneschal's second son, heard a challenge shouted to him by the voice of an old enemy. The lad looked doubtfully at his father, but seeing that the old man purposely refrained from either encouraging or dissuading him, he suddenly turned his horse's head and rode straight towards the leading troop of the Taira soldiers.

Then for the first time those who were about Yorimasa

saw a shadow cross his tranquil face. Gradually, as though the vicinity of the foe exercised some irresistible attraction, he himself and nearly two hundred of his liegemen had slackened their pace until a considerable distance separated them from the main body of the fugitives, and now as Kanetsura galloped back, the desire to succour him made them unconsciously draw bridle, so that the Seneschal's signal to halt was obeyed almost by anticipation.

"Friends and liegemen," said the brave old nobleman, "I make you no excuses for this strait into which my fortune has led you. For such things you have always been ready, even as your forefathers were at my forefathers' bidding. The gods guard your lives for the good cause and make you not altogether unforgetful of your old master. And now since I, who have loyally served six Emperors, may not tarry here any longer with honour, win me, I pray you, from yonder rabble, so much leisure as may enable me to die in peace."

Just as Yorimasa began to speak, an arrow striking his knee above the links of the chausse, pierced the leg from side to side, but he scarcely even troubled himself to look at the wound, and as his followers closed round him, seeking to make their bodies a shield for his, he said the shaft was welcome since it afforded him another example of their devotion. Such men indeed were not likely to falter in their last act of obedience, and as they turned their faces once more to the foe, Yorimasa knew that not a few of them would presently travel with him to the unknown land.

Half a furlong from the road there was a little lake with sparkling waters and well wooded margin. Thither the Seneschal took his way, followed by three of his oldest liegemen. Choosing a nook sheltered from the sunshine and hidden from the pathway, the four dismounted and unbuckling the heavier pieces of their armour, concealed them among the thick bamboo grass at the edge of the mere. Yorimasa then drew his sword and sought to place it in one of his companions' hands, but it was long before any of them would consent to receive the weapon, for to this office alone the most loyal vassal might not readily reconcile himself. That difficulty, however, once overcome the rest was simple and speedy, and but a very minutes afterwards the waters of the lake closed over the bloody sword while the solitary survivor of the four men made his way back to the temple of Heito, not to seek succour or asylum but to hide his chief's head in the wall of the shrine behind the altar, and then himself to follow the example of those he had helped to die.

Meanwhile the Prince, fast losing nerve and hope alike, was scarcely enabled to continue his flight by the aid of the few faithful men that still remained with him. He seemed to understand what had befallen Yorimasa by some sympathetic perception, for though he made no comment nor asked any question, those riding at his side heard him presently pray for the Seneschal's soul as they were about to pass the portals of the God of Battle's fane. At that very moment, while Machihito's clasped hands were raised to his forehead, an arrow, shot at random, struck him in the left side. He fell from his horse without a struggle or a groan, and before his followers could replace him in the saddle, they were surrounded by their pursuers, and after a brief but desperate resistance, the ill-fated Prince's decapitated body lay side by side with the corpses of those who had been glad to die for the sake of the title he bore.

(To be continued.)

## DOUBLE ACROSTIC.

He's going home I hear  
So let us say "adieu!"  
Your readers all will miss him,  
And so I fear will you.

1.  
When I get a fine house on the Bluff,  
Then, I'll welcome you fast enough.

2.  
When you're aught to do,  
You must take care, I wis,  
To put the thing through,  
That you do not do this.

3.  
I'm known to every German student,  
At least I should be, were he prudent.

4.  
When I say I'm a dunce,  
Sure you'll guess it at once.

5.  
Am emblem of meekness awake or at rest,  
But hot, with green peas, I like you the best.

6.  
If you get in the hands of a Jew,  
You'll know me then, if you didn't before.  
And mind pay the Bill when it's due,  
Or each day I'mount up more and more.

7.  
A flower with little show,  
But prized every where,  
Around the place I grow,  
My sweet scent fills the air.

**NOTICE TO MARINERS.***No. 4 of the 12th Year of Meiji, (1879.)***SIRIYASAKI LIGHTHOUSE.****STEAM FOG SIREN.**

THE GOVERNMENT OF JAPAN hereby gives notice, that a Steam Fog Siren has been erected at Siriyasaki lighthouse.

Siriyasaki, at the entrance to the Tanguu Straits, is the extreme north-eastern point of the Province of Mutsu, in the Island of Nippon.

The Siren will be sounded during fogs, snow storms or other causes that may render the outline of the land indistinct during the day, or the light by night.

The blast from the Siren will be of six seconds' duration with intervals of one minute. During such time as may be necessary for getting up steam for the Siren, or if from any accident the Siren cannot be sounded, the Fog Bell, hung from the balcony of the Lighthouse and rung by machinery, will be sounded at the rate of fifteen strokes per minute as before notified.

YAMADA AKIYOSHI,  
*Minister of Public Works.**Tokei, 20th December, 1879.*

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing *quality* and  
*measure*, and the *strength* also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bonny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

## WOMEN IN JAPAN.

IT is satisfactory to see from time to time evidences of advance in the position of the female portion of this population. The late annual report of the Minister of Education shews a considerable increase in the means of culture within their reach, as well as openings for the employment of those ready to devote themselves to the task of teaching others. In addition to this, recent modifications in the laws of the country have undoubtedly added to the privileges of woman, and given her a certain amount of independence which she has not hitherto enjoyed. Great care and discernment are required in comparing the condition of ladies in Japan with that of those in Europe and America. It requires a thorough understanding of the different organizations of the countries compared, and of the different aspirations and tastes cherished by their several members. It is possible to pity people for their non-possession of advantages, which they never thought of wishing for and are happier without, than possessing. Women in all countries, leaving out of the reckoning a few agitators and discontents which no community of individuals is without, are of all people the most conservative in their retention of old customs, the most contumacious in their attachment to early prejudices and the most affectionate in their clinging to ancient faiths. Enjoyment of rights naturally supposes a capacity for appreciation of their value and advantage, and to confer at once upon the women of Japan the privileges and independent liberties that are demanded in some other countries would be to give them more than they could want or endure.

Everybody remembers the story, versified by Tennyson, of the Lady of Burleigh, and—

"How a trouble weighed upon her and perplexed her  
night and morn,  
"But the burden of an honour unto which she was not born."

The fate of this unhappy girl may be well remembered by those

who declaim loudly against the wrongs of Japanese ladies, and who think that changes in social systems are sudden and revolutionary. The lady of Japan is as incapable of desiring or using at present the independence claimed by her European sister, as the public press is still unfit to be trusted with perfect liberty of speech and action. In both cases education is the primary requisite; and it is in this matter that the greatest recent advances have wisely been made.

The fair sex, with all its simplicity of nature and humble submission to the rule and the will of the sterner half of the race, has played by no means an insignificant part in the history and romance of this country. We hear of woman as empress, poetess and heroine, and often as exercising over the destinies of men, that subtle influence through which the master turns slave. By the power of her patience, discretion and artifice she has often ruled and guided, in spite of her abject subjection to the government of father, mother, and husband. The training in youth consisted chiefly in the study of writing and a little history. Among the higher classes this would be supplemented by the study of music, poetry, and painting, and, till late years, by a certain amount of athletic training in the exercise of arms and horsemanship. So far then as concerns the former accomplishments of ladies they will compare well with those of any country. Ten years ago a young lady taken from the family of a man of rank would have been able to write letters and poetry in good style, to play tolerably well upon the koto—the chief instrument of the country—to paint a little, and to defend herself with the dagger sufficiently to make it extremely unpleasant for those who forced her to an encounter. The education of the middle classes was less complete, amounting to instruction in writing of the simplest kind, and in needlework, dancing, and the use of the samisen. With them, this training rarely lasted beyond the age of twelve or thirteen, the girl becoming too useful a member of the household for its heads to sacrifice her services to longer study. Sometimes, however, if intending to take up dancing and singing as a profession, she would devote two or three years to the acquirement of these accomplishments. Needlework, singing, dancing and serving in teahouses or mansions, represent the chief ways in which girls of the middle classes could turn their talents to pecuniary account. The lower classes applied themselves to spinning and weaving, and those agricultural pursuits at which in all countries the poor of both sexes unite together in the field to earn their daily bread by the sweat of their brow.

In addition to their accomplishments the better classes seem to have possessed an instinctive taste in toilet, dress, and the graceful arts which add so much to feminine charm. Combined with an almost childish dependence, simplicity, and ignorance of her own country and the world at large, woman in Japan has shown an amount of patience, discretion and philosophy from which western termagants might well derive lessons.

Though the life of woman has undoubtedly been dependent, and her position precarious, and though she has been bound by rules and formalities which indicate a servitude and humility opposed to our ideas; her existence was by no means without its gay side,—its pleasures and excitements. In the festivals of the year, the brilliant processions and the out-door sports and pastimes, she had, and has still, her fair share. The chief patrons of the theatres have been the women; and what would the haunts embowered in cherry and plum blossoms, or the rivers crowded with barges in the summer time, be without the graceful figures and gay dresses of the ladies of Japan?

The changes of late years, enlarging and extending the branches of study pursued by students in the country, have naturally suggested and induced improvements in the culture of women. The desire to accord as much as possible with the Western civilization in all things, brings with it a wish to place as much as possible the female portion of the population, also, on a corresponding footing. The easy grace with which many ladies have quitted their accustomed retiring life, to adorn some foreign court and to become in a few years conversant with the language and accomplishments of a foreign country, deserves its meed of praise. So does the ready way in which those who know no country but their own, accommodate themselves to new circumstances and modified customs. But we cannot help thinking that the conditions of the country may suggest to them other ways, apart from mere imitation, in which they may use their abilities and tastes, and thus excel in their own sphere. Schools are now opened in many parts of the country wherein the female scholar has educational advantages similar to those of male students. She can study, in addition to her own language, those of foreign countries, geography, history and mathematics. Besides this she learns needlework, embroidery and sometimes foreign music. Woman has moreover of late obtained more liberty as a wife and householder. It will be some time, let us hope, before she will claim for herself the right of studying sciences or of practising such professions as law and medicine; but meanwhile there are spheres of usefulness more within her reach and in which she may entertain every hope of attaining excellence. She is admirably fitted for nursing the sick, and for teaching the young; and both of these occupations are being gradually opened to her. The instinctively artistic taste which we believe the Japanese lady to possess, fits her, moreover, for far more intellectual employment. While men are engaged in scientific pursuits and political progress, might it not be part of the task of the Japanese ladies to preserve and perpetuate the arts and accomplishments which have made their country memorable in the past, just as they are said to have been instrumental in retaining the purity of the language in spite of the Chinese spoken by their partners? The woman of Japan is at the mercy of no milliner. She knows, without assistance or advice, what mode, colour, or form of dress, and what tricks of beautification best suit her own face and figure. She shows exquisite taste in the arrangement of flowers and ornaments, and in other æsthetic points upon which European ladies all claim, though few have, decided opinions. Compare for example the heartless exclamations of admiration for the puffed up pictures of fashionable painters to the neglect of the more deserving, or the unsympathetic plagiarisms upon scenery in fashionable resorts, with the beauty, enjoyment and pleasure evinced in the blossom groves or picturesque gardens of Japan. Pictorial painting, as well as the decorative arts applied to pottery, embroidery, and fabrics,

would provide a wide field for the exercise of the talents of women in this country.

## THE MILITARY POWER OF CHINA.

### I.

THE recent military and diplomatic successes of China in Central Asia, have attracted an amount of attention and discussion in political circles in Europe, which seems to increase as the European complications increase. Suggestions for alliances with this hitherto despised power have been numerous both in Germany and Russia. A short time since a leading military organ of the former country, devoted a long article to show that China was the natural ally of Germany against the incroachments of the Colossus of the north, and the possibility of such an event has been the subject of much excitement in France. Most foreign writers on the subject, however, have been compelled to acknowledge their almost complete ignorance of the military resources of the vast Chinese empire, and of the present organization of those forces that China may possess. In Japan, also, though the question is properly regarded as one of the last importance to the future welfare and independence of the country, this ignorance is almost as dense. These considerations move an evidently well-informed writer to devote a series of articles in the *Augsburg Allgemeine Zeitung* to the discussion of the military power of China, and we purpose now giving our readers a résumé of his facts and arguments.

The Chinese, it is well-known, do not give the same honour to the arts of war as western nations do; their forte is minute labour, and untiring diligence combined with rare skill. War is regarded by them as a misfortune and a disgrace to humanity. China is perhaps the only country in the world in which the military class has never played a leading part. It is the idea abroad that the war of twenty years ago, when the gigantic Empire lay at the mercy of twenty-five thousand English and French troops, and was forced to conclude a humiliating peace, awoke in the warlike Mongolian race the desire to emulate the military prowess of its conquerors; and that, during the last ten years, the advances which it has made in this respect are so astonishing that, in the issue of a contest between it and Russia, the result would be doubtful. These ideas however are far from being correct. Doubtless, efforts have been made to reorganise the Chinese army on a European basis; but these have been so superficial, and the results obtained so small, that one cannot, strictly speaking, say that an army in the usual sense of the word exists in China. What she has at present is a loose collection of badly disciplined, badly armed, badly trained, badly paid men, taken from the dregs of the people, commanded by officers not much better, and the whole in every sense lacking organisation. The few thousands of soldiers with modern arms, who are at present being drilled by European officers, do not as yet come into the scale. Even now, especially in the case of one of the great maritime powers, it would not be difficult to force a nation's will on the Government of Peking by appealing to the *ultima ratio* of war. Thus, a few years ago, that Government did not dare to oppose the comparatively small empire of Japan, contenting itself with innocuous protests, when the latter punished the inhabitants of Formosa. Notwithstanding recent improvements in her land and sea forces, China is not in a position to be a serious opponent of any European power, and her alliance, therefore, would not seem to be of much importance or use to any of them. An analysis of her military power, so far as is possible from sources perhaps

not wholly trustworthy, will show approximately the following result :—

The population has been estimated at four hundred millions, but it is doubtful whether, after the rebellions and famines of recent years, it is now more than three hundred and fifty millions. The number of Chinese troops, as given by the native authorities, is wholly unreliable. In 1828 it was said to have been 1,268,000 men; but subsequent careful inquiries reduced this to 602,000. Even that is probably too high an estimate, for it is notoriously the practice of Chinese officers to reduce their commands during eleven months of the year, drawing at the same time the full pay, and only bringing the force up to the proper standard when an inspection is feared. Coolies are then armed, and, without drill or discipline, are placed in the ranks, to be discharged again when the inspection has been held. This was the course pursued when troops were despatched to Formosa to threaten the Japanese. Many men were inveigled on board the troop-ships under false pretences; and, when they discovered the fraud and the danger which they might have to face, jumped overboard, and were drowned in Shanghai river. The habit of deception is too deeply embedded in the mind of the Chinese officer, and too profitable in itself, to be destroyed by simple regulations. But, even admitting the number of men in the army to be more than half a million, the most that can be taken into consideration as active troops is less than half that number; for it must not be forgotten that the army is scattered over an area of ten million square kilometres, and that China possesses no means of transport for troops. That this must remain the case for many years, any one who knows the strength and depth of *Feng-shui* in the Chinese mind will easily believe. The numerous rivers make up to some extent for the want of roads in certain parts of the empire, but they are navigated by means of flat-bottomed Chinese boats, which would be of small use in conveying an army. Moreover, the annual inundations, which leave only narrow paths for travelling, would cause almost insurmountable difficulties to a defending as well as to invading forces. The original germ of the Chinese Army was formed by the eight Manchu corps—*Pah-ki*—which was subdivided into two wings or divisions, of which the odd members formed the left, the even the right. These corps or banners are distinguished by white, blue, red and yellow triangular flags. They were established between 1601 and 1604, and then numbered 60,000 men. They conquered the country for the present dynasty. Subsequent Emperors added to these eight Manchu banners, eight Tartar ones, with a strength of about 16,840 men. Later on an army of Chinese was added. These had ranged themselves under the flag of the foreign conqueror; and, after the complete subjugation of the empire, were made vassals of the Tsing or Manchu dynasty. About the year 1643, eight banners, with a strength of 24,000 men, were established from their ranks; and the twenty-four banners thus formed, which exist at the present day, make up what may be called the first army corps, and, together with the garrison of Peking, of which more will be said hereafter, compose the chief support of the reigning dynasty.

All the officers and men of this army corps are supported in various parts of the land at the expense of the crown, and form the garrisons of the capitals of the twelve provinces. Their children are bound to enter the ranks; but high civil office is open to them by passing the necessary examination. The personal interests of every bannerman, Manchu, Tartar, and Chinese alike, are closely dependent on those of the present line of Emperors. Apart from the ordinary distinctions of rank, there are

also differences depending on birth among the banner-men. The aristocracy are the so called *Ukiuns*, or direct descendants of the founder of the Manchu dynasty, and the *Kiols*, or descendants of his brother and uncle. Notwithstanding the strict regulations enacted to keep the bannermen apart from the mass of the surrounding population, yet in the course of time they have adopted the manners, customs and modes of life of the conquered, and resemble their warlike forefathers in little. They are but seldom drilled, and, when called, assemble with rusty swords, spears, bows, and other ancient weapons of the most varied description. Their military pay being small, they are allowed to engage in occupations of all kinds. As soldiers they have long ceased to be of use; and until the banner corps undergo a complete and radical reorganisation, they can only be regarded in the light of superfluous pensioners of the Government.

There is only uncertain information at present as to their strength. It is believed, however, that they are as numerous now as in 1860, when their corporation was regarded as complete. At that time there were 678 Manchu, 221 Tartar, and 266 Chinese companies,—the company being, on the average, ninety men,—thus giving a total strength of 1,165 companies with about 105,000 men, including officers. In and around Peking alone, there are said to be 60,000 troops; in the province of Chihli, in which Peking is situated 40,000 more, chiefly infantry, quartered in seventy-five garrisons. But these figures are palpably wrong, because in this case there would hardly be any remaining for the other provinces. From the above description it will be seen that this portion of the Chinese army has but little military value; indeed the most that can be said of the banner corps is :—*Multi non multum*.

#### MONSEIGNEUR RIDEL IN COREA.

THE comparatively great success which has attended the labours of the French Roman Catholic Missionaries in the Far East, has been the natural reward of their energy, perseverance, courage and devotion. Their presence in these distant regions is almost contemporaneous with the first beginnings of foreign intercourse, and most of the information learned by Europe regarding the vast empire of China was, for several centuries, derived from their reports. They penetrated into all parts of the interior of China, Japan and Corea, adopting in many cases the dress, food and customs of the natives, sometimes, doubtless from necessity, but frequently also to be enabled thereby to bring themselves into closer communion with those amongst whom they laboured—to bridge over what has been called their mental parallax—and thereby render the success of their efforts more probable. Sometimes, it is true, fierce and ambitious spirits have arisen in their midst, who, not content with spiritual power over their converts, have also desired to seize upon political domination. The result of such attempts has generally been the same; namely, the martyrdom or flight of the apostles and a relentless persecution of their flocks. But the Church of Rome rarely completely relinquishes its hold on a country where it has once got a footing; and however cruel the persecution, however certain the prospect of death to the teacher, numbers are always to be found, who, at the command of the head of the order will gladly brave both, in the endeavour to rescue a country or a people from wholly falling back into its original idolatry.

These reflections arise naturally from the perusal of a small pamphlet entitled “*Relation de la captivité et de la délivrance de Monseigneur Ridel, vicaire apostolique de la Corée.*” The author was one of the few who escaped death in that furious persecution of Christians in the peninsula in 1866, wherein two bishops and seven missionaries, all

French, besides thousands of native Christians, were put to cruel death. He then returned to France, but, subsequently, in 1870, at the command of the Pope, again turned towards the scene of his former labors. Several years passed, however, before he was able, accompanied by four assistants, to pass the barriers on the China-Corean frontier. He found that the situation had in no way changed during his absence. There were still the same dangers, the same prohibitory edicts, the same hatred of Christianity. Soon after his arrival in the country Ridel wrote:—"We are truly in the hands of the good God. We are surrounded by a thousand perils, without force, without protection, expecting each instant to be arrested, and to see a new persecution break out; but up to the present, thanks to Divine Providence, all is peaceful and has gone on without accident." But this tranquillity did not last long. The couriers were arrested at the Chinese boundary; and the letters which they carried revealed to the Corean Government the presence of the five strangers, and occasioned the arrest of the Bishop, and a new persecution against the native Christians. The pamphlet which we have mentioned above, is in the form of a letter from Monseigneur Ridel to his relations in Europe, and narrates his experiences in prison up to the time of his liberation. Five months after his arrest he was conveyed to the borders of Mongolia, and there released; this unusual leniency on the part of the Corean authorities being due to the representations made by the Chinese and Japanese Governments. The remaining four priests had meantime escaped to China.

It is not our intention to dwell here on the sufferings of the prelate while in durance. They can be easily understood by any one who has read of Chinese prisons, more especially by readers of Loch's Narrative of his detention in Peking in 1860-61; and Monseigneur Ridel's description is even fuller and more appalling. Apart from this his little work possesses the value of containing much information as to the habits and customs of the Coreans and the general appearance of the country. The point worthy of chief notice is that the appearance of a vessel of war on the coast causes intense excitement throughout the whole nation, and such a visitor is invariably said to belong to Japan. The Japanese, indeed, seem to be the bugbears of the Coreans, and the Bishop remarks that the amelioration of his condition on one occasion was probably due to the appearance of a Japanese war steamer—doubtless a surveying vessel.

Regarded from a purely secular point of view, the inevitable result of each successful attempt on the part of the missionaries to enter Corea, is blood-thirsty persecutions, in which thousands of natives suffer death and untold miseries, and then silence and darkness until a new effort is made. The proselytizers themselves are sometimes gratified—any one who reads this narrative will feel that the word best expresses the idea—with the crown of martyrdom, but at the expense of widespread calamity among a peaceable people. Practically, the disciples have been led into breaking the laws of their country by instructors, who preach a religion which inculcates obedience to the powers that be. Whether any man or body of men, animated by no matter what motives, is justified in bringing such a scourge as the Corean persecutions on his fellow-creatures is a question we will not discuss.

CONSIDERABLE interest is now awakened in all parts of the world as to the possible results of Nordenskjöld's achievement of the north-east passage from the Atlantic to the Pacific Ocean. An Indian paper says that already there is a brisk intercourse between Europe and the mouth of the Yenesei, and there is no reason now why steamers should not ply between Europe and the Lena. "The produce of Siberia—and vast tracts of northern Asia can be readily developed,—will be floated down the great rivers of Obi, Yene-

sei, and Lena, and be shipped every summer for Europe. Nothing would prevent the growth of a large and profitable trade but the indifference or impotence of the Russian Government. If the Russians during the next decade must concentrate such energy as they have to spend in Asia on the regions south of the Jaxartes and Oxus, the enterprise of Nordenskjöld will go for nothing. If, on the other hand, the ambition which desires an advance towards India, can be exchanged for the legitimate pursuit of commercial prosperity in the north, Russia might soon be provided with an employment which would be profitable to herself and pleasing to other nations." Nordenskjöld himself has not the least doubt of the future of the country which he has explored and been instrumental in throwing open. His own account of Siberia should dispel many illusions as to its barrenness and unfitness for human habitation and enterprise. In a description of one of his trips up the Yenesei, the explorer says that even far north of the Arctic circle he saw snow only at one place in a deep valley cleft some fathoms in breadth; and the vegetation, especially on some of the islands which are flooded at spring tides, is of a luxuriance to which he had seldom seen anything comparable. "Already had the fertility of the soil and immeasurable extent and richness in grass of the pastures drawn forth from one of our walrus-hunters, a middle-aged man, who is owner of a little patch of ground among the dells in northern Norway, a cry of envy at the splendid land our Lord had given 'the Russian,' and of astonishment that no creature pastured, no scythe mowed, the grass. Daily and hourly we heard the same cry repeated, and in even louder tones, when some weeks after we came to the grand old forests between Yeniseisk and Turuchansk, or to the nearly uninhabited plains on the other side of Kraonjarsk covered with deep *tcherno-sem* (black earth); equal without doubt in fertility to the best parts of Scania, and in extent surpassing the whole Scandinavian peninsula. This judgment formed on the spot by a genuine though an illiterate agriculturist is not without interest in forming an idea of the future importance of Siberia." Nordenskjöld tells us of wild grapes and currants larger than any he had seen in European gardens. Siberia is said by him to possess a belt of land in most places more than six hundred miles broad, and stretching from the Ural to the shores of the Pacific. The most remarkable feature, perhaps, of the Swedish savant's discoveries is that they have been made in voyages, which, as the *Saturday Review* remarks "have cost less than a Lord Mayor's dinner or the maintenance of a pack of hounds."

WITH the closure of the British Post Office in Yokohama the staff was removed to other appointments. The French Post Office is to transfer its business shortly to the Imperial Japanese establishment, and with it the services of the present director, who, apparently at the request of his minister, is to be guaranteed for a short period a handsome monthly salary, for the equivalent of which sundry duties, more or less nominal, will be discharged. It is not too much to say that the post to be thus created is neither a necessary nor a popular one, even with the French community. The *Courrier du Japon* protests against it, saying that the republic is rich enough to recompense faithful servants out of its own funds, and that the postal department, in France or her colonies, has still places or promotion to give away. To doubt this, it is added, would be puerile and unpatriotic. The writer continues:—"If our representatives, in return for the abandonment of the French postal establishment, should impose upon Japan a formal condition to engage, at high salary, the present *Receveur des Postes*, or no matter what other employé of that administration, we could only understand the proceeding, to a certain point, if there were ground for mistrust or suspicion in regard to the manner in which the func-

tions of the Japanese bureaux are fulfilled. The obligation would only be admissible in such case, and to ensure the proper execution of the service. But the Japanese organization is perfectly arranged: it works with extreme regularity and to every body's satisfaction; and the annual statements of the chief of the department show that the proportion of lost or stolen letters is much less than that of those which miscarry in most European countries. Besides even these accidents only affect domestic service. The transport of mails to places abroad has never been a cause of complaint. Hence," continues the *Courrier*, "it cannot be admissible under existing conditions to burden the Japanese administration with a French officer. We cannot believe that means are thus employed to force the Japanese Government to pay the present titular a heavy indemnity in the form of a lengthened engagement: the time has disappeared, for Japan, for such compromises. Again, if we are sometimes regretfully compelled to admit that certain representatives of France in the east scarcely disguise their preference for the old order of things, and display their partiality for the friends of that régime, we are pleased to acknowledge that, in spite of these sentiments with which we do not sympathize, they do not remain in the rear, when it is a question of defending French interests, and their patriotism. This is one more reason why we find it impossible to suppose that, in this postal question, people have for an instant thought of placing the interest of an individual above that of two nations in particular, France and Japan, and in general of all the nations which constitute the Postal Union." The critic enumerates several reasons why the public would gain in the relinquishment of the French postal agency to Japanese hands. Among others is the evident advantage of having only one post office service. The Japanese office will deliver all letters at the houses to which they are addressed—a convenience that was not afforded by the foreign dépôts. Then payments will be made only in one kind. At the French establishment the accounts are kept in francs, which have no local currency; and mistakes are said to have occurred, not unnaturally, through the conversion of kinsatsu into dollars, and these again into francs. Given a single service, and that Japanese, stamps will be bought for yen, and the simplification thus promoted will cause the avoidance of error. The article terminates with the deduction that there is no advantage to be gained by maintaining the French post office. On the contrary, such a course can only result in inconvenience, apart from the vexation which it causes to the Japanese Government. "Why then not suppress the institution? Why be the only power to refuse to Japan the rights which her admission into the universal postal union confers upon her?" The establishment in question will, no doubt, be closed very soon. It is a great pity that its cessation should, in any way, have been made conditional on the employment in Japanese service of any member of its staff.

A PARAGRAPH of President Hayes's message to Congress refers to the Shimonoseki indemnity fund. After stating that "the treaty recently made between Japan and the United States, in regard to the revision of former treaties, it is now believed, will be followed by similar action on the part of other treaty Powers," the President says:—"The attention of Congress is again invited to the subject of indemnity funds received some years since from Japan and China, which, with their accumulated interest, now amount to considerable sums. If any part of these funds is justly due to American citizens, they should receive it promptly, and whatever may have been received by the Government in excess of strictly just demands should in some form be returned to the nation to whom it equitably belongs." After a few words on the relations between his cabinet and China on

the emigration question, Mr. Hayes refers authoritatively to the fact of the United States Government having taken measures to inform the Courts of Tokio and Peking "of its readiness to extend its good offices, for the maintenance of peace, if they shall mutually deem it desirable, and find it practicable to avail themselves of the proffer."

WE have received, from the Chinese Imperial Maritime Customs, a list of the Chinese light-houses, light-vessels, buoys and beacons for 1880 (corrected to December 1st, 1879.) The present is the eighth issue of this work, and is printed by order of the Inspector General of Customs. The get up of the pamphlet is distinguished by that detailed care and neatness which characterize the work of the printing office of the department; and the compilation will be indispensable to masters of vessels navigating the coasts of China. We observe that the number of lights is sixty-five: buoys forty-seven: beacons forty-five. The foreign staff of light-keepers consists of forty-five employés.

SOME of the London papers seem very gratuitously to take for granted that Russia is not alive to the advantages which the possession of the smiling and fertile regions, well tapped by large and navigable streams, which Professor Nordenskjöld describes, can confer upon her. There is no sufficient reason for this supposition. On the contrary, the Government appears to be making very thorough investigations into the rivers and districts referred to. The mouth of the Oli has been surveyed by an officer appointed by the Russian Minister of Finance; and the *Yenesei Gazette* publishes some particulars of interest from his report. It has been established that former charts of the gulf are incorrect, and that the approach from the sea is rendered difficult for steamers, as the shallowness of the water prevents large craft going up stream as far as Nadim, the port where the river and ocean vessels should exchange cargoes.

ANNOUNCEMENT is made by the *Temps* that a probability exists of a French protectorate being established over "Tonquin, and eventually over the neighbouring populations of Laos, Annam, and the Indo-Chinese peninsula, thus comprising the entire territory between the Gulf of Siam, British Burmah, Thibet, and Szechuen, with about 80,000,000 or 100,000,000 inhabitants. The Annamites have not performed their engagements of 1874 as to the free navigation of the Red River from the sea to Yunnan, a means of communication discovered by M. Dupuis, a French merchant, and they are about to be summoned to do so. In the event of their refusal a single battalion would easily effect the conquest of Tonquin, for the inhabitants, though deserted by France in 1874, would eagerly make common cause with it." However true this rumour may be, there can be no doubt that the number of the inhabitants of the district in question is enormously overstated. The *Hongkong Daily Press* asserts that of the Laotian nationality nothing remains but the name, and of its former capital, some stupendous ruins in the midst of a forest alone testify to its bygone barbaric splendour and importance. Since the conquest of the Laos by the Siamese in 1827, the country has lapsed into a state of utter decay. The population has woefully decreased, and vast districts formerly cultivated are covered with almost impenetrable forests. The same authority states that the eighty or a hundred millions mentioned by the *Temps* could certainly not be found in Indo-China, nor could the number be nearly made up, even with the addition of Yunnan, Szechuen, and Kwei-chow. As a matter of fact, the population of the whole of Cochinchina cannot exceed ten or twelve millions, while that of Laos is probably not more than one million. The writer

sums up the situation thus:—"Any attempt to interfere with Laos would be sure to excite the jealousy of Siam, to which kingdom most of the Laotian provinces are now subject. The possession of that country, moreover, would not be worth the cost of acquiring it. The French Government have a good field for their energies in Cochinchina, however, where a good deal remains to be done, if they desire to make their present possessions really valuable. At present the French trade with Cochinchina is but small, and so long as the apathetic policy hitherto pursued by the French authorities at Saigon is adhered to, it is not likely to expand. The bright dreams of future empire and commercial greatness conjured up by Mm. Lagr  e, De Carne, Garnier, and Dupuis are, we fear, likely to be long delayed in their fulfilment by the want of vigour shown by the French Government in consolidating their power and extending their influence since they obtained their footing in Cochinchina."

#### REUTER'S TELEGRAMS.

LONDON, January 23rd, 1880.

The First Lord of the Admiralty, in a speech, disavowed the annexation of Afghanistan.

Parliament is expected to be opened by the Queen in person.

Russia.—The *Invalide Russe* announces that pacific measures are being adopted in Russia.

The Council of the Empire are discussing the introduction of Municipalities.

(From *Straits Times*.)

London, 29th December.—The Shah has started on a pilgrimage to Meshid, with 10,000 troops.

Calcutta, 30th December.—Reinforcements have reached General Roberts who has re-occupied Cabul.

The enemy has been defeated and dispersed on all sides.

London, 31st December.—The number of persons drowned by the Tay bridge accident was 90, not 200 as at first estimated.

Calcutta, 31st December.—The country is quiet.

London, 2nd January.—Sir Garnet Wolseley returns to England in January.

London, 3rd January.—Diplomatic relations with the Porte will probably be resumed to-day. The dispute has been arranged.

London, 10th January.—There are renewed rumours of a concentration of Russian troops on the German Frontier.

The former President of the Transvaal has been arrested for treason.

### The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 24TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 1ST MONTH, 24TH DAY, DO-YO-NI.

#### NOTES OF THE WEEK.

On Sunday last, the 18th instant, the P. M. Steamer *City of Peking* came into port from San Francisco, and was followed by the M. M. steamer *Volga* and P. & O. steamer *China*, from Hongkong, on the 18th and 23rd respectively. This morning the O. & O. steamer *Gaelic* also arrived from the last named port, and is circulated to leave for San Francisco, on Monday evening next, at four o'clock.

The *Glengyle* left Singapore for Hongkong on the 5th instant.

The O. & O. Steamer *Gaelic* arrived this morning from Hongkong. While at the southern port, the *Gaelic* went over to the Cosmopolitan Docks and had a new propeller and shaft fitted in, and was also cleaned and repainted.

Letters from officers of the *Vega* announce the arrival of the Nordenfj  ld expedition in Ceylon, en route for Europe.

Ten students of the Dai Gakko will leave Japan early in February for Europe, there to complete their education. These gentlemen have been four years studying engineering in the college, of which two were passed in practical work. They will remain in England for three years, working at their respective branches. At the Dai Gakko, six technical subjects are taught; namely, Civil Engineering, Mechanical Engineering, Mining, Chemistry, Architecture, and Telegraphy. Six of the above mentioned students were taught in one of each of the above branches of science.

Mr. Yegi having been appointed Secretary of the Japanese Legation in Washington, whither he will shortly proceed, some of his friends, members of a society to which he belongs, gave on Tuesday last a very pleasant farewell entertainment in his honour, in the Nakamura Tea-house, Muko R  goku, Tokio. Several foreigners were among the guests.

Unostentatiously conscientious in the discharge of his parochial duties, the Reverend W. F. H. Garratt has also been a benefactor to the church where he has now long ministered. The edifice owes what internal beauty it may possess principally to the decorations which he has made at his own expense; and his parting gift is a bell and belfry. Not content with this outlay, he makes a donation of \$400 to the fund for the renovation or repair of the parsonage house which, during his incumbency, must have been a most comfortable residence. He hereby shows that he thinks more of the ease of his successor than he has thought of his own. We are happy to hear that the esteem in which the outgoing Chaplain is held by his congregation will be practically manifested, before his departure, in the presentation to him, by the ladies of his flock, of a handsome and suitable testimonial. Many poor Japanese families, when Mr. Garratt has left Yokohama, will have occasion to mourn the absence of a kind and generous patron. His successor, the Reverend E. Champneys Irwine, and Mrs. Irwine arrived by the P. and O. steamer *China*. Mr. Garratt preached his farewell sermon on Sunday morning last to a full congregation.

Among the passengers for Europe by the outgoing French mail is Dr. W. Anderson, F. R. C. S., medical adviser to the British Legation in Tokio. Mr. J. M. Dixon, President of the Tokio Christian Association, leaves for home in the same vessel.

The Freemasons of Hongkong gave a brilliant ball on the evening of the 16th instant. The number [of guests] was very large, and included His Excellency Major General and Mrs. Donovan, Lady Smale, and other notables of the colony.

A little skating has been possible recently in Tokio as well as the vicinity of Yokohama. In the former city a portion of the week has been available for the graceful exercise, and a few ladies and gentlemen have availed themselves of the opportunity. We regretted the other day to observe that some of the soldiery of the garrison, who were looking on at the sport, conducted themselves with considerable rudeness, behaviour which, were it known to their officers, would certainly entail rebuke if not punishment.

Mail intelligence confirms the statement which we published a week ago, to the effect that the shipowners' combination did not outlast the end of 1879. On the 5th of January the following notice was sent round to the mercantile houses in Hongkong:—"Notice to Shippers per Conference Steamers to London and America.—In consequence of intructions from England, the Conference rules as regards this Port are cancelled on and after this date.—A. McIver, Agent, P. & O. S. N. Co.; G. de Champeaux, Agent, M. M. Co.; Butterfield & Swire, Agents, O. S. S. Co.; Jardine Matheson & Co., Agents, Glen line; per pro. Adamson, Bell & Co., T. G. Williamson, Agents, Castle line."

We have received from Mr. N. McLeod—who has been so long before the public as a writer on the Japanese and Koreans and their identity with the lost tribes of Israel—a very excellent

album containing twenty-four pictures on Japanese subjects, painted by native artists, and mounted on thick paper. The album comprises a good variety of landscapes, birds, flowers, &c., and will make a pleasing *souvenir* of the country for visitors to take away with them, and is well adapted for residents to send to their friends in other places. The album, which is strongly bound, may be procured Mr. McLeod's Curio Mart, No. 28, Settlement.

On the evening of Thursday, the 22nd instant, the large audience gathered in the hall at No. 12 Sanchome, Ginza, enjoyed an unusually excellent entertainment, given under the auspices of the Tokio Christian Association. An uncommon feature of the meeting was the instrumental music. A piano had been kindly lent for the occasion, and the piano-forte music was furnished by some of the ladies, one of whom began the musical part of the entertainment with a pleasing piece, which was followed, later in the evening, by the Overture to Martha, arranged for four hands, and played with much taste and skill. A professional musician kindly consented to aid in making the reunion an interesting one, and performed two pieces on the violoncello, which were finely rendered and thoroughly enjoyed. The singing consisted of two solos, by ladies who have before assisted to make these entertainments enjoyable, a chorus for mixed voices, repeated by request, and a solo and chorus which was sung with much feeling and spirit. During the evening three readings were given, two prose pieces, which were well rendered although one of them was much too long for such an occasion, and a piece of poetry, very effectively given. At the close of the entertainment, Mr. G. W. Dixon, who has been the president of the association since its organization, two years ago, and who is to leave Japan in a few days, delivered a most excellent and feeling farewell address. The association will lose, in Mr. Dixon, an earnest Christian man, an active laborer for the good of the association and the objects for which it was organized, and an efficient presiding officer. He will carry with him the heartfelt well wishes, and the kindest regards of all of its members.—*Communicated.*

We hear with regret of the death of Mr. G. Stanig, the interpreter at the Italian Legation in Tokio, who accidentally shot himself when returning from a shooting excursion. The deceased gentleman was riding with a loaded gun in a jinrikisha, when the arm exploded, the charge entering his left side, and killing him instantly. The funeral took place on Thursday morning from the Catholic Church, in Yokohama. His Royal Highness the Duke of Genoa, the Italian Minister and Consul, officers and men from the *Vettor Pisani*, and a number of private persons, followed the remains of the deceased to the burying-ground.

The Rev. Edward Champneys Irwine, M.A., who has just been appointed to the chaplaincy of the English Church at Yokohama, was born at Richmond, in Yorkshire, and began his education at its ancient grammar-school. He is the son of a well known Yorkshire clergyman, the Rev. A. P. Irwine, M.A., Vicar of Bingley, and rural dean. In 1874 he graduated at Trinity College, Dublin, taking a place in the first-class at the final examination. In the same year he was ordained to the curacy of Monkwearmouth by Bishop Anderson, for the late lamented Bishop of Durham. The parish of Monkwearmouth contained 12,000 people, mostly sailors, colliers, and iron-workers. The vicar is the Rev. Canon Miles, a man of distinguished literary attainments, and a most active and able administrator. Mr. Irwine found in him a generous and sympathising friend, and an admirable guide and example in the first years of his ministry. On leaving this arduous post in December, 1876, for lighter duty in Yorkshire, the parish workers presented Mr. Irwine with a valuable gold watch, and the Sunday-school boys added their loving testimonial. In 1878, while curate of Roundhay, near Leeds, he was presented by Sir George Meyrick, Bart., to the vicarage of Hinton-Admiral, Hampshire, on the recommendation of the Bishop of Ripon. On Mr. Irwine's marriage last year Sir George and his family expressed their sympathy in most useful and valuable gifts, and his poorer parishioners united their contributions to give him an excellent timepiece. Mr. Irwine has always taken a deep interest in the work of foreign missions, and has been for some time an honorary district secretary of the Church Missionary Society.—*L. & C. Express.*

The Japanese and Chinese seem to be devoting great attention to legitimate kite-flying just at present. The swamp recently has been quite lively with the pursuers of the innocent amuse-

ment, and two kites in particular, one about three feet long representing a butterfly, and another some sixteen feet in length in imitation of a centipede, attracted much attention.

In the *Mainichi Shimbun* we read that Le Hang Chang, Sa So To, and other Chinese Generals, are diligently engaged in bringing the military system of the empire into a complete state, but that their progress is very slow, and there are as yet only 35,000 men fairly trained in the European military style and equipped with proper arms. About one-third of the efficient force is at present stationed in the northern part of the empire.

Mr. Shand, the agent of the Staffordshire Fire Insurance Company, had an interview with the Governor of Tokio on the 17th instant, and gave him full information on the system of fire insurance as practised in western nations.—*Nichi Nichi Shimbun.*

A Tokio correspondent informs us that the amount received through General Stahl, in aid of the sufferers by the recent great fire, is:—From Kobe 1,140 yen, and from Osaka 188 yen. These handsome contributions were placed at the disposal of the Reverend Mr. Piper; but as that gentleman has closed his relief arrangements the sum has been handed to the Tokio Fu authorities for distribution.

The ship *Paul Herve* cleared from New York for Yokohama on the 1st of December, with the following cargo:—39,900 cases kerosene, 125 tons coal, 200 lbs. tobacco, 40 boxes acid. The following vessels have sailed from New York to Anjer for orders:—December 3rd, *Frank Penulten*, 47,722 cases kerosene, 100 tons coal, 1 case tobacco; 6th, *Charles G. Rice*, 22,111 cases kerosene; 6th, *Hants County*, 21,216 cases kerosene; 6th, *Electra*, 32,295 cases kerosene; 18th, *Clarissa B. Carter*, 33,700 cases kerosene, 34 pkgs trunks, 9 bales domestics, 2bbis. twine, 1 case oil cloths.

We are informed that the protests against the withdrawal of the P. & O. postal service to Yokohama, and the new Telegraph Regulations, (which have already been generally circulated for signature) were left at the Chamber of Commerce Rooms, on Friday and Saturday this week, for the convenience of any of the mercantile community who had not seen the documents and might wish to sign them.

The sale of the Spring Valley Brewery took place on Tuesday last, when it was bought by Mr. Copeland for \$12,000. As some time has elapsed since judgment was given, we reproduce so much of it as refers to the application of the proceeds of sale. Our readers will therefore be able to form some idea of the relative position, to each other, of the parties in the suit of Weigand vs. Copeland.

It is therefore ordered that the property of the partnership of Copeland and Wiegand consisting of lands, buildings, plant, furniture, stock in trade and property of whatever description be sold at public auction, under the supervision of the U. S. Marshal upon full public notice of not less than thirty days, and the proceeds thereof paid into Court, that the debts due the partnership be collected as far as possible by the parties or their book-keeper up to the time of the sale of the property, after which the balance of said accounts shall be placed in the hands of and collected by the U. S. Marshal, and that the proceeds of all of such collections if any, after paying the running expenses of the partnership business, and the \$150 per month which each of the partners is entitled to draw out of the profits, shall also be paid into Court.

That out of such aggregate amount so paid into Court, there shall be paid:

First.—The expenses of the sale and collections.

Second.—The court costs, including the fees of assessors and witnesses.

Third.—The fees of the accountant, Mr. C. H. Dallas.

Fourth.—The fees of Mr. George E. Rice, accountant, for account made previous to suit by request of both parties.

Fifth.—The debts due by the partnership. The second, third and fourth of these payments shall be charged to the plaintiff, the others shall be charged to each party equally.

If after such various payments it shall be found that the amount remaining in the hands of the Court is less than sufficient to pay over to the parties the sums adjudged as due to them to wit; to the defendant (Mr. Copeland) \$26,287.19 and to the plaintiff (Mr. Weigand) \$6,250.04 (after deducting from the latter amount the costs and fees made payable by the plaintiff) then, of the deficit one-half thereof shall be deducted from the sum due each, and the respective balances paid over. But if said sum shall be found to exceed the amount so found due each, as aforesaid, one-half of said excess shall be added to

said respective sums after the deductions aforesaid, and the said sums be respectively paid over.

No costs, as such, are allowed either party.

It is permitted that either party may bid at the sale of the property, in his own name.

A fire occurred on Thursday afternoon, at about half-past two o'clock, in the premises on the Bluff occupied by M. Pernet, of the French Consulate. The place was entirely destroyed before any assistance could be rendered, as a very strong wind was blowing. The building was insured: but a similar precaution had not been taken with regard to M. Pernet's effects, who has had the misfortune to lose, together with his furniture, a valuable library and many manuscripts which cannot be replaced.

The mail which arrived on Thursday, was altogether forestalled by the American mail by the *City of Tokio* which brought dates to the 26th of December. Some of the telegrams are very misleading. Anyone would think there had been a fresh outbreak of bushranging in Australia, to judge from the telegram in the *Hongkong Daily Press*. Such, however, is not the case; and to shew the extreme novelty of the item now heralded as a "telegram" we may mention that, on the 7th instant, we reproduced in our daily, from the *Sydney Mail*, a full account of the fight between the police and bushrangers, in which the latter were either killed or captured, and also the chief incidents at the coroner's inquest held subsequently.

#### PARIS LETTER.

(On Scientific Subjects.)

PARIS, December 22nd, 1879.

It has been recently demonstrated that rabbits, when bitten by a mad dog, become attacked with hydrophobia. They exhibit also the peculiarity that, once inoculated with the virus, the disease manifests itself in three or four days, so that if a person be bitten by a dog presumed to have rabies, it is only necessary to communicate a little of the saliva to a rabbit; and the fears of the person wounded can be either dissipated or confirmed, as it has just been demonstrated by Dr. Raynaud, that the saliva of a man suffering from hydrophobia is contagious and can be communicated to a rabbit. In October last, a man was admitted into the hospital, La Ribosière, suffering from hydrophobia; during an interval of calm between the paroxysms, he consented to allow a little of his blood to be drawn; a rabbit was inoculated and three days later died from madness. When the man succumbed a portion of his saliva was communicated to a rabbit which expired in the course of four days. Hence the importance of observing great care when dealing with the salivary organs or their secretions, of individuals suffering from hydrophobia. The deceased in question had been bitten in the lip; two hours afterwards he burned the wound with lunar caustic, but this evidently did not destroy the virus. Indeed it is now certain that nothing but immediate burning with a red hot iron, or blazing charcoal can be depended upon. Those who travel much carry with them phials of carbolic acid or ammonia, to neutralize the stings of insects. The Moser pencil is manufactured for a similar end—for mad dog bites; it is a stick of carbon, that a common match will set on fire and it will continue blazing when in contact with the wound.

Professor Peter, in his *Cliniques* just published, treats exhaustively the important subject of phthisis. For him, as for Laennec, as well as for the modern French school, there is but one form of consumption—the tubercular. Invalids suffering from tubercles are not consequently phthisical. In neither case is there a specific. But a great number of affected persons can be saved by curing the organism and treating the lung with revulsive remedies. Professor Peter demonstrates that the tubercle can become fibrous, just as well as purulent. The object is to place the lung in a condition to effect the fibrous state—and chiefly by avoiding all causes of inflammation of that organ. It is not inflammation which is the cause of the tubercle, the latter is only an affection in process of termination. The first can arrive to persons of robust health and without morbid hereditary tendency; the second—tubercle, manifests itself in constitutions worn out by themselves, or by the intermediary of diabetic, gouty, or scrofulous ancestors. Note the families distinguished or humble, which die out: they will be seen hovering during some generations between affections of the head, the heart, the kidneys, gout and rheumatism, finally disappearing after a struggle more or less long, between scrofula and phthisis. It has been said, that birds of prey have for duty, the cleansing of a battle field; phthisis seems to be charged with the task of scouring humanity, by extirpating the sickly, the degenerated and the feeble, who cannot struggle successfully for existence. Prudence

counsels to protect the robust first from becoming phthisical, and which can be largely effected by preventing all over-crowding in barracks, schools, workshops—those for females especially—offices, cafés and clubs. Every place of reunion is a fire-side of infection, where air respired by a hundred persons becomes impure and hence deleterious. It is through this agglomeration of people, that the peasant when he comes to reside in a city so soon loses his health. Laennec attributed to passions, sad, deep and of long duration, the most predisposing cause of tubercle, and he accounts for the prevalence of phthisis in cities to the inhabitants having reasons for chagrin more frequent and more profound; to the greater corruption of manners, and to the feverish, anxious life, divided between business and pleasure. However, sadness and melancholy have an important influence on consumption: these diminish appetite, compromise digestion, and interrupt the work of assimilation. "Melancholy is composed of bad blood," says a proverb, and bad blood produces tubercles. Dr. Bergonier has shown that melancholy madness finishes, in thirty-six cases out of a hundred, in consumption; the poor afflicted do not eat, they waste away; the body becomes cold; respiration becomes less frequent and more feeble; organic combustion slackens, and the bed being thus prepared, the seed tubercle arrives and does its work. If phthisis sometimes be the termination of madness, the latter is often the termination of phthisis. Professor Peter urges that studious attention be paid to the commencement of consumption; the respiration ought to be minutely noted, and the chest sounded with extreme precision. He has discovered, by diagnosis, that the temperature of the skin at the level of the summit of the lungs, is abnormally high and further, more elevated on one side than the other; he resorts to revulsive treatment to reduce this exceptional temperature. The selection of a climate, not only during winter but summer, is important; cold induces inflammation and obstructs the healing of the lung; excessive heat weakens the strength, and of course the action of the organs of nutrition. The *sauatoria* he recommends are Italy, Spain, and Southern France. He does not approve of a wintering in the Upper Engadine, or at Davos. The sick cannot live there in the open air, and are obliged to be housed sixteen hours out of the twenty-four, sometimes for days, when the snow falls thickly. Now living in balmy air, and indulging in fresh appetizing food, are essential for invalids on the road to convalescence; the stomach is the great auxiliary in the process of cure, and ought to be watched like the apple of the eye. Dry friction of the skin, cold or tepid baths, ought to be resorted to wherever practicable.

While the problems of cheap illumination and practical motive power, by means of electricity, are being studied, Professor Marey received from Para a present of a *gymnote* (a name meaning "new skin") or electric eel; it measured over twenty-eight inches, was black, with stripes still blacker. If a five franc silver piece be thrown into a basin full of water, having a wire in connection with an electric pile, and a person holds the other wire in his hand, the moment he plunges his fingers into the basin to pick up the coin, that instant he receives a shock—more or less severe. The *gymnote* acted—it has died within the last few days from cold—similarly; it gave a shock to exhibit its displeasure; but if touched with silk, glass, or any other non-conductor, no sensation was experienced. Humboldt has described a mortal battle in Central America between electric eels and wild mules; two of the latter were killed, and others paralysed. The fishermen of Italy and ancient Greece were aware of the nature of this animal—called *torpedo*; it was cited as possessing the power to cure gout and rheumatism—hence perhaps, why the latter disease is now treated by electricity. The *gymnote* produces the shocks by its own will, and if its fins be pinched, the shocks arrive in quick succession; but these discharges end by weakening the animal, and a long rest is essential for the recovery of its virtue. The electric fish have no scales, and the *gymnote* had a veritable electric apparatus, consisting of a series of tubes, or prisms, in juxtaposition, like the orifices of a honey-comb, it charged these by a nervous action, in a manner that science cannot explain. The *gymnote* ate gudgeon freely, and before doing so indulged in a "discharge" on its prey.

Réaumur, the inventor of the thermometer, described in 1847 a plan for obtaining heat without fire. It consisted in collecting the heat generated during the decomposition of organic substances;—stable manure for example. In America, the principle has been applied to hatching eggs; in France to heating water for soldiers' baths. In the cavalry barracks, some old puncheons, tarred inside, are surrounded with layers of stable refuse above and below, a hole in the top being free to draw off the heated water. In the space of six days the temperature of the water rises from 28 to 152 degrees. Several dragoon regiments have thus their daily supply of 1,000 quarts of hot water, and the fitting up of the barrels and piping does not cost more than fr. 60 per regiment.

Heat and light are necessary for the continuance, as well as for the enjoyment, of life. Now the streets of our cities appear to have been constructed, in respect to their width and the height of the houses, to exclude both light and heat. In Paris, houses

in point of altitude must be in proportion to the width of the street. M. Vogt of Berne draws attention to the neglect of securing as much of the sun's light as possible, in the construction of our houses, and more especially for the winter months, when a few hours of the merry sunshine means health. M. Vogt asserts that a street deprived of sunshine for two consecutive months is insalubrious. Further, instead of making the streets run north and south, so as to receive the largest share of sunshine, they are inclined eastwards and westwards, or north-east, and south-west. Sombrely situated houses are humid, and devoid of ventilation, provoking serious alteration in the health of the occupants. Vogt adduces statistics showing that in Berne there was an augmented death-rate of 13 per cent in the case of a side of a street in the shade as compared with that exposed to the sun.

A copper wire can be covered with a thin coating of gold or silver, and thus converted into "lace." Attention has been devoted for some years to the problem of coating vegetable fibre with silk. No substance in point of fineness, resistance, elasticity and brilliancy, can be compared with silk. It has no rival; but then it is very dear. No machinery can turn out a thread as fine as that spun by the silk worm. Five and a quarter millions of yards weigh but thirty-five ounces avoirdupois; it is costly in proportion, and it is calculated that one-third of that produced by the worm is "waste." Since a thread of silk can no more be divided than that of a spider's web, this "waste" has been chemically dissolved, and then employed to coat cotton thread. The result is a silky material, but where all brilliancy has disappeared, and the thread is so coarse that it has been confined to China grass and coarse flax, representing 110,000 yards per thirty-five ounces, or fifty-one times coarser than silk thread.

Meteoritic stones are dangerous; one has just been laid before the Academy of Science, weighing 7 lbs. that fell last January, in La Becasse, at noon, beside a laborer at work in a field. It sank into the soil to the depth of twelve inches, scattering up the earth like a bomb-shell: the noise of its descent resembled the discharge of a battery of artillery or the rolling of a railway train. The noise was heard "100 miles east and west." (?) The stone has the form of a pyramid with a quadrangular base.

#### ASIATIC SOCIETY OF JAPAN.

##### TOKIYO MEETING.

A General Meeting of the above Society was held at the Shōheikuwan, Seidō, Tōkiyō, on Tuesday, January 13th; Dr. Divers, President, in the chair. The minutes of the last meeting were read and approved. The election of Mr. J. Morris and Mr. J. M. Dixon as ordinary members was announced. The librarian reported the receipt of various exchanges and donations, amongst others a copy of Bancroft's "Native Races of the Pacific Coast," in five volumes, presented by the late President, the Rev. Dr. Syle. The Society voted its thanks.

The introduction to a "Catalogue of the Birds of Japan," by Capt. Blakiston, and W. Pryer, Esq., was read by the corresponding secretary, in the absence of the authors, and the "Catalogue" was laid on the table. The introduction was as follows:—

#### CATALOGUE OF THE BIRDS OF JAPAN.

##### INTRODUCTION.

Since the publication of Temminck and Schlegel's *Fauna Japonica*, the materials for which were mostly supplied by Dr. Franz von Siebold, who may be fairly styled the father of Natural History in Japan—no comprehensive treatise on the ornithology of this country has been written, although various papers have been published in scientific journals on collections made; notably:—"Cassin's Report on Commodore Perry's U. S. Expedition";—"Blakiston, 'On the Ornithology of Northern Japan,' published in the *Ibis* of October 1862; Mr. H. Whitely, "On Birds collected near Hakodate," *Ibis* 1867, p. 193; and several contributions by the late Mr. R. Swinhoe on the birds of Yezo, to the *Ibis*, from April 1874 to April 1877; as well as a preliminary catalogue furnished by the present compilers to the *Ibis*, and published therein in July 1878.

Few persons living in Japan, unless specially interested in ornithology, have probably seen any of the above, and the nomenclature having been only scientific, it has been suggested to the authors of this paper, that a contribution to the "Transactions of the Asiatic Society of Japan," which has so large a local circulation, might, if not made too scientific, be of assistance to persons interested in the ornithology of Japan, as well as of interest to sportsmen and others who incidentally obtain specimens of birds and who may frequently be able to contribute information of much value. Consequently the following catalogue has been compiled, which however must not be taken as in any way complete, the authors trusting only that its publication will elicit fuller information on the range of known species, as well as tend to the discovery of the existence of others; so that they, or some more competent persons, may at a future time be able to revise it with a view to republication. They

will therefore be happy to receive specimens, either skinned or fresh, of any birds whatever, and will undertake to furnish the senders with the names, when known, or any other information in their power; specially recommending collectors to pick up birds of unattractive appearance, as it is usually among such that rarities are to be found. They will also undertake to make public the names of the finders, and to return the specimens if so desired after comparison. In this way it is hoped that very considerable additions may be made to the knowledge of the avi-fauna of Japan, which has a special interest among ornithologists owing to the situation of these islands off the extreme east of the continent of Asia.

As an sample of what may be done by very limited research, the compilers may mention that the "*Fauna Japonica*" list, which included many very doubtful species, and others on the sole authority of Japanese drawings, did not number two hundred distinct species, whereas the present catalogue extends beyond three hundred, and, as has been mentioned before, is probably very far from being a complete one.

The compilers have examined and compared most of the specimens of birds existing in the government museums at Tōkiō, namely in the 'Yamashita Hakurankai' of the Naimashō, in the 'Kujōku Hakubutsukan' of the Mombushō, and in the 'Kaitakushi' at Shiba; besides the museum of the 'Kaitakushi' at Sapporo, in Yezo. They have moreover a number of specimens in their private collections, and the Hakodate Museum—which is open to public inspection—contains most of the specimens collected principally in Yezo and the Kurile Islands by Mr. N. Fukushima—Chief of the Survey Department of the Hokkaidō—and one of the authors.

The compilers' thanks are due to several persons who have supplied them with specimens, and to Mr. Tanaka, director of the "Hakurankai," who allowed them to examine a collection of drawings by native artists; while Mr. Ota's intimate knowledge of the birds of his own country has been of much assistance.

The arrangement of this catalogue is that of Dr. Carl Claus in his *Grundsätze der Zoologie*, a perhaps rather unusual classification; but the best ornithological authorities so differ on this matter, that it is of very little consequence what system is followed.

All species included in the following list, have the authorities on which they rest stated; and duplicates have in most instances been sent to Europe for comparison to the late Mr. R. Swinhoe—the greatest authority on the birds of Eastern Asia, Dr. P. L. Selater, Secretary of the Zoological Society of London, and Mr. H. Seebohn, whom the compilers are still in correspondence with. Such identifications are enumerated under each species, and the volume and page of the *Ibis*, the best ornithological magazine in Europe, referred to.

At the conclusion of the paper, and after a few remarks by the President, Dr. Faull said that he thought the paper would prove to be a valuable addition to the 'Transactions,' not only in itself but as a stimulus to many more contributions in the same field of observations. In reference to the sharp line of demarcation which had been shown to exist between Yezo and Nippon similar facts had been observed elsewhere, notably so in the Malay Archipelago between Borneo and Celebes. These were supposed to depend on past geological relations which had impressed habits on birds, and these habits remained with great persistency even after the condition which originated them had ceased to be. The migration of birds, in many respects so utterly mysterious and difficult, were now seen to depend to a certain extent on the same causes. On this point much knowledge might be obtained by utilizing the lighthouses which are now numerous in Japan. This had been done with extraordinary care in the West and the exactness of the observations when first heard of usually excited the most perfect incredulity, the sexes and numbers of birds being noted with scientific accuracy. The practical benefits of such observations persistently carried on, would almost certainly be of immense benefit to agriculturists, sportsmen and others, and their scientific interest would be very great.

Mr. Dallas then read a paper by the Rev. Dr. Edkins of Peking, "On the Japanese letters *chi* and *tsu*;" and Mr. Satow read a reply to Dr. Edkins' paper. Both of these communications were of a highly technical character. Some discussion ensued as to the desirability of allowing any member who might desire it an opportunity of seeing the manuscript of a paper about to be read before the Society, in order that he might come prepared to make critical observations, and the President intimated that the Secretaries would be glad to allow any member of the Society this facility if he chose to request it. Owing to the lateness of the hour the reading of a paper by Mr. F. V. Dickinson "On the Kana Transliteration system" which formed part of the programme, was postponed to a future meeting.

#### TOKIO CHRISTIAN ASSOCIATION.

##### LECTURE ON MATTER.

On the evening of January 15th, Professor Ewing, of the Tokio University, delivered a lecture entitled "What is Matter?" in the rooms of the Tokio Christian Association, before

a large audience. Mr. Dixon, president of the Association, was in the chair.

The lecturer began by pointing out the meaning of the question "what is matter?" We might consider the question answered if we could frame a theory of the intimate nature of matter from which all the observed properties of matter could be deduced as direct consequences of Newton's Laws of Motion. The enquiry was by no means new. Democritus and Epicurus had attempted a solution of the question and their views are to be found in the well known poem of Lucretius *De Naturæ rerum*. According to Lucretius matter is composed of atoms, that is, of pieces which are incapable of being divided, and this property of the atom was, in his view, due to their being infinitely hard. The lecturer observed that it was still a doubtful point whether or no there were such things as atoms, but it has recently been shown that we can have true atoms without crediting them with the almost inconceivable property of perfect hardness. He then proceeded to speak of molecules, which he defined as the smallest possible pieces into which a given kind of matter could be cut, and still retain the properties belonging to that particular kind of matter. According to the modern scientific theory, matter is built up of an enormous aggregation of moving molecules, to the movement of which its observed properties are due. In solid and liquid bodies the molecules are probably continually in contact with each other or nearly so, but in a gas they are, on the average, separated by comparatively long distances. They are however all moving with enormous velocities and one never travels far without coming into contact with another. Being perfectly elastic they rebound along new paths, in which they continue until another encounter takes place. The hotter the gas, the greater is the velocity of the molecules. The pressure which a gas exerts against any surface in contact with it is due to the impacts of the molecules, and is therefore increased when we increase the density of the gas, or its temperature. So many of the known properties of gases have been already shown to be necessary deductions from this theory that we are justified in assuming its truth. We are even able to estimate the size and number of the molecules and their rates of motion, but the magnitudes involved are such that the mind is wholly unable to grasp them. If a single drop of water were to be magnified until it equalled the earth in size, each molecule would be about as big as a Japanese orange. The number of molecules in one cubic inch of the air in the room is about 300,000,000,000,000,000,000, and they are flying about in all directions, at an average rate of about 20 miles per minute, and the average distance through which any one of them travels before it comes into collision with another is only about  $\frac{1}{1000}$  of an inch.

The lecturer showed a number of experiments in illustration of the theory, and then went on to explain Sir William Thomson's theory of vortex atoms, according to which each atom of matter is a vortex ring in a frictionless, incompressible fluid, filling all space, and having no property except inertia. Sir W. Thomson has proved that such vortex rings, if once set in motion, could not possibly be brought to rest, cut, or in any way destroyed by natural means, and they are therefore true atoms, although not, like the Lucretian atom, perfectly hard. They are also incapable of being produced by natural means. Mr. Ewing showed some of the properties of vortex rings by producing them in air, rendering them visible by means of dense smoke. It is possible to produce them in air because it is not, like Sir W. Thomson's imaginary fluid, frictionless. At the conclusion of these experiments the lecturer continued as follows:—

Before I close I wish to say a few words about the light thrown by the scientific theories and scientific facts which we have been dealing with to-night upon questions which have interested man from the beginning of time, and which will interest him to the end far more than purely scientific questions can ever be expected to do. Does the knowledge we now have of the nature of matter help us at all to a knowledge of the origin of matter: does it help us to trace the history of the universe backwards till we come to some point of contact between the visible and the invisible; does it shadow forth however dimly the action of a creative hand? These are questions which crowd in upon us, and by all of us, whatever our belief or unbelief may be, they are reckoned as of transcendent interest and importance. I do not hesitate for a moment to say that our modern knowledge of the nature of matter does help us to answer these questions, and in saying this I am not advancing speculations of my own, but am only repeating views which have been advanced by some of the most distinguished and clear-sighted modern physicists.

First then let us see what the theory of Sir William Thomson has to tell us as to the origin of the atoms. If the atoms consist of vortex ring movements in a perfect, that is a frictionless, fluid, we have seen that they are indestructible—no action such as we have at our command can destroy one of them. But not only this: they are also incapable of being produced except by an act of creative power. You cannot stop the motion when once begun, but also you cannot institute the motion. To produce the vortex motion which constitutes a single atom of matter would be an act of requiring the creative power of a

supreme being, even if all the raw material so to speak was ready to hand.

But you may perhaps object and say, "granted that the atoms are unproduced by natural means, are we not at liberty to suppose that matter is eternal and that the present universe has existed for ever under its present laws?" To that again the student of physical science must answer, no. I will not trouble you now with the steps of the argument, but only say that we know, with scientific certitude, that the universe as it now exists has had its origin in time and will have its end in time, at least so far as the possibility of living existence is concerned. The visible universe is in the position of a wound up clock, gradually, but surely running down. We are able to look forward and say, a few more turns of the wheels, a few more ticks of the pendulum, a few more strokes of the bell, and then all will be silence and rest and death. And so looking backwards too we can see a time when a hand must have interposed to wind up the weights and start the machinery, and set all the parts to move in the orderly paths they pursue in working out the designer's will.

Now whether we accept Sir W. Thomson's theory of vortex atoms, or not, and remember it is still only a theory, we do know that there are molecules, and we know that these molecules have certain properties, one of which is that all the molecules of any one kind of matter are exactly alike. Let us see whether this fact helps us to a knowledge of the origin of the molecules.

There is a certain class of speculations now much in vogue, according to which various things as we now find them are to be accounted for by saying that they are the result of spontaneous evolution or development. I dare say that you are all tolerably familiar with the doctrine of evolution, and with the phraseology of its advocates. If you are not it is surely your own fault, and cannot be ascribed to the unwillingness of the disciples of evolution to make their opinions known. Far as we are from home, we in Japan have not been wholly out of reach of the sound of the voice of this "Goliath of modern thought."

The doctrine of development is far from new, but it has of late obtained remarkable prominence, chiefly through the support which Darwin has shown that it receives in the department of biology. I think we must all recognise that Mr. Darwin has done good service to science in showing how important a factor the principle of "Natural Selection" and the survival of the fittest is in the history of species, and we may do this whatever be our view with regard to the full application of his doctrines in relation to the origin of man. To my mind the scientific objection of want of time is insuperable, but we cannot dwell on that here. It would be fortunate if all Mr. Darwin's followers had half the scientific temperateness and care to avoid overstatement that exhibit themselves in the writings of their master. The reverse of this has been the case. Principles shown to be applicable in one special branch of science, and no doubt, if carefully handled valuable in their application to Sociology too, have been applied with the most reckless generality. We hear of evolution of man, evolution of conscience, evolution of morals, evolution of religion, evolution of life, evolution of the idea of God. The very name of evolution seems to be regarded by some as a kind of *open Sesame* at which the bars and bolts of all the mysteries of the universe are to fly back. And worst of all, this goes on under the name of science, especially of that quasi science, which is, I hope, mis-called popular. It is consoling to think that, if the survival of the fittest implies the extinction of the least fit, this evolution mania ought soon to come to an end, so that the important basis of truth which the doctrine of development includes may be able to take its proper place and be recognised without exaggeration or detraction. Now there is one thing I want especially to draw your attention to in connection with the origin of matter. It is an essential characteristic of evolution wherever it occurs that its products are characterised by minute differences. We do not find that they are exactly alike; they differ more or less, and it is because of these very differences that development is possible. The products of evolution are not like bullets cast in a mould or sovereigns coined in a mint—they are rather like the sons of one family, or the sheep of one flock, alike in some things, but markedly different in others. It is quite otherwise with the molecules.

We can procure specimens of any particular kind of matter, such as oxygen, say, from very different sources—from the air, from the sea, from rock formations deep down in the earth and from meteoric stones. The circumstances of these specimens have for thousands of years been very different, but the most delicate tests which can be applied to them fail to show any difference in any of their properties. They all have exactly the same mass, they all unite with exactly the same quantity of hydrogen to form water; and they all vibrate when struck to precisely the same note of light. Nay more, we can detect the same identity of properties, revealed to us by the spectroscopic, between the particles of any one kind of matter in the most distant star, and those close to our hand.

But this identity can only be the result of absolute identity in form. The molecules of one kind of matter, wherever they are taken from, must be exactly alike:—alike with a degree

of exactness which not even mints produce in sovereigns. Now such an identity can never be produced by any process of evolution. Evolution implies continual change—gradual variation of form and of properties: and variety is always one of the characteristics of its results. But the molecules are absolutely alike. There are no slight differences—no intermediate sorts amongst them. They bear as Sir John Herschell has well said the stamp of *manufactured articles*. They are all as it were cut to the same gauge, all cast in the same mould. Hence we are inevitably led to the conclusion that the molecules have not been produced by any process of spontaneous evolution, a conclusion to which we are led on other grounds if we accept Sir W. Thomson's theory of vortex atoms.

There is a special but melancholy interest at this time in the subject we are considering. A fortnight ago the mail brought us news from home of the death of that physical philosopher to whom credit for a very large share of the molecular theory is due. I mean Prof. Clerk Maxwell of Cambridge, who has just passed away in the prime of a life of splendid performance. It is to him that we are indebted not only for the greater part of the development of the molecular theory of gases, as well as for discoveries of the first importance in other branches of physics, but also for the extremely acute and philosophic suggestion that the molecules bear internal evidence that they cannot have been produced by natural development. In Maxwell we have lost a mathematical physicist who had few if any equals, and to his transcendent powers in this respect he added the charm of a brilliant imagination and poetic fancy, a rich humour, and unrivalled clearness as an exponent of scientific truth. In the death of such a man science and the world suffer an incalculable loss, which every student of physics must feel almost as a personal bereavement. But it is pleasing to be assured, on the testimony of one who knew him well, that he died as he had lived, a simple-hearted Christian, a living and dying protest against the popular fallacy that there is a natural antagonism in the claims of science and religion. "Two or three weeks before his death, Clerk Maxwell said that he had examined every system of atheism he could lay hands on, and had found, quite independently of any previous knowledge he had of the wants of men, that each system implied a God at the bottom to make it workable. He went on to say that he had been occupied in trying to gain truth, that it is but little of truth that man can acquire, but it is something to 'know in whom we have believed.'" I refer to this not because the Christian faith of a true man of science is at all a rare or wonderful phenomenon, I believe it is quite the reverse, but because there is a good deal of error prevalent on this point which a concrete example may help to dissipate.

We have been led to-night to a point at which science is compelled to stop. We have traced the path backwards until we have come to the footprints of a creator, and there we must pause or seek other guidance. One lesson nature may perhaps yield us. Unbeheading alike the individual and the system.

"She cries 'A thousand types are gone;  
I care for nothing, all shall go.'"

We can trace her destroying hand in the slow but sure change even now going on in the earth's own orbit. We may predict certain destruction to our planet and final extinction of our central luminary. But whether we turn to the fires of dying suns, or to the nebular mists of yet undeveloped universes, this we find that strong through all catastrophe, constant in all change, the molecules remain unbroken and unworn. "They continue (says Clerk Maxwell) this day as they were created, perfect in number and measure and weight, and from the ineffaceable characters impressed on them we may learn that those aspirations after accuracy in measurement, truth in statement, and justice in action, which we reckon amongst our noblest attributes as men, are ours because they are essential constituents of the image of Him, who in the beginning created not only the heaven and earth, but the materials of which heaven and earth consist."

## ARRIVAL OF THE AMERICAN MAIL.

### TELEGRAMS.

London, December 20th.—Steps for procuring a writ of error in the case of Arthur Orton, the Tichborne claimant, were taken by Lord Rivers and Guildford Onslow, under advice of Dr. Kenealy, who applied for a similar writ in 1874, but it was then refused, that the case will be taken to the House of Lords for final decision, and Dr. Kenealy will exercise his right as a member of the Irish Bar to appear for Orton before that tribunal.

Alexandria, December 20th.—All the Powers which are concerned in the Present Judicial system in Egypt have sanctioned a decree making the Rothschild mortgage the first charge on the surrendered Khedival estates. This removes the last obstacle to Anglo-French control in Egypt.

\* See an obituary notice of Prof. Maxwell, by his assistant, Mr. Garnett, in *Nature*, of November 13th, 1879.

London, December 20th.—The Duchess of Marlborough has written to the Lord Mayor of London, asking his aid to inducing wealthy citizens of London to contribute to the relief of the starving poor in Ireland. She expresses fear that distress will be terrible, unless private benevolence comes to the assistance of the sufferers. The Lord Mayor has announced his readiness to cooperate with the Duchess.

Berlin, December 20th.—Requisite measures have been taken to prevent any dangerous extension of the prevailing famine and disease in Silesia. Its ravages have hitherto not been extensive, and the authorities have voted 1,500,000 marks, for directly mitigating the hunger of the sufferers, and 880,000 marks for the construction of roads and other relief works. The Emperor has placed at the unconditional disposal of the Poor Law officers 400,000 marks, which had been contributed in commemoration of his golden wedding. Generous sums have likewise been given by the Empress, the Crown Prince, and other members of the Royal family, and by the public.

Berlin, December 20th.—Bismarck is again severely ailing of rheumatism.

Vienna, December 20th.—The *Press* was confiscated by the Police for reproducing an article of the *Paris Figaro* insulting to Gaubetta.

London, December 20th.—A despatch from Bombay says: It was reported on Thursday that Gen. Gough would probably retire upon Peizeran, three miles west of the Surkub River, but it is now believed that he will remain at Jagdallak, and shortly clear away the Ghilzees in his front.

General Arbuthnot's brigade is distributed along the road between Gundamak and Jagdallak. Contrary to expectation, the tribes below Jellallabad continue quiet. Had Gen. Bright advanced with his whole force, Mohmunda and Afreedia would have risen, but the system of forwarding troops from Jellallabad only as reinforcements arrived from Peshawur, affords them no opening. Great efforts are making for speedy concentration at Peshawur. Many native Princes have given their assistance.

Constantinople, December 20th.—The British Ambassador has authorized the British Consul in Eastern Roumelia to use the remainder of the Relief Fund in aid of the starving Mussulman refugees, and has telegraphed to Miss Burdett-Coutts for assistance.

General Roberts' statements of his ability to hold his position and take the offensive on a favorable opportunity have been so positive, that the anxiety at first felt on behalf of the garrison in the Shirpur cantonments is much abated.

The Russian press is very violent in its criticisms on affairs in Afghanistan. The *Gazette de St. Petersburg* says: "we must candidly confess that Russia would not break her heart in the probable event of General Roberts' column sharing the fate of Cavagnari's Embassy."

An official despatch from Gen. Bright, dated December 18th, informed the Viceroy of India that if Gen. Gough was unable to force his way to Cabul with his brigade, Bright proposed, as soon as arrangements could be made to hold posts from India to Gundamak and advance on Cabul with a division numbering 8,000 men.

A telegram from Peizeran, dated to-day, says: "There is no serious fighting. All is well."

The Governor of India publishes an explanation of the military situation in Afghanistan, stating that General Roberts has ample transportation and ammunition. Besides his force, he has many captured cannon, many of which are rifled. His intrenchments can easily be held by 2,500 men, leaving 6,000 free for offensive operations. General Bright has 1,200 men between Jamrood and Jagdallak, with thirty cannon, two months' supplies, and a complete divisional and brigade transport. Including the forces at Candahar and in Kurum Valley, the total field force is 45,000 men, with 160 guns, which is considered ample for present requirements.

Paris, December 20th.—The Senate passed the Public Worship estimates, after rejecting a motion to restore the salaries of Archbishops and Bishops to the figures from which the Chamber of Deputies had reduced them. Premier Waddington then read a decree closing the session.

In the Chamber of Deputies, Raynol accused General Grealy, Minister of War, of not taking disciplinary measures against Senator Carayon Latour, who, though a Lieutenant-Colonel in the Territorial Army, attended the Legitimist demonstration.

Grealy replied that he had acted in conformity with the advice of a Commission of Inquiry. Grealy then quitted the Chamber, and, it is reported, went immediately to the Elysée and tendered his resignation.

All of the newspapers announce that the Cabinet will resign in January, and that DeFreycinet will form a new Ministry, but that they will first hold a meeting to-morrow at Waddington's residence.

Vienna, December 20th.—The Lower House of the Reichsrath has adopted the Government's Army bill by a vote of 223 to 105.

Berlin, December 20th.—Intelligence from St. Petersburg represents that several officers of Artillery and Engineers have been arrested, charged with complicity in the recent Nihilist attempt

on the Czar's life at Moscow. The Winter Palace is now illuminated all night with electric light, as a precaution.

St. Petersburg, December 20th.—An official bulletin from Cannes states that the Empress of Russia, on the 19th, felt severe pains in the right side, caused by inflammation of the lung membrane. The symptoms of pleurisy have ceased since the 17th instant, but the Czarina's general health causes anxiety.

Rome, December 20th.—The Vatican has authorized the Papal Nuncio at Vienna to receive proposals made on behalf of the German Government for the settlement of minor questions, so as to establish a *modus vivendi* pending the settlement of large questions. It asserted that Monsignor Jacobini, Papal Nuncio, will again visit Bismarck.

London, December 20th.—A despatch from Rome says that negotiations between Germany and the Vatican are about to take a new departure. As the abrogation of the May laws seems to form an insuperable difficulty, it is now proposed to drop all mention of these laws, while agreement may be come to that the Prussian Government should present a new project of law regulating the relationship of Church and State. The Vatican considers that the Church would thus protect her rights and would obtain what she has been demanding ever since the enactment of the May laws.

Berlin, December 20th.—The Bavarian Chamber of Deputies have rejected the proposal to abolish embassies.

Cairo, December 20th.—The Government continues military preparations, though little doubt is felt as to the favorable issue of the negotiations with the Government of Abyssinia.

Rome, December 20th.—The Vatican has congratulated the Irish clergy on their attitude with reference to the political agitation in Ireland.

London, December 20th.—Sir Stafford Northcote, Chancellor of the Exchequer, delivered an address to-day at a great Conservative demonstration at Leeds. He made a detailed reply to the recent speeches of members of the Liberal party, and complained that Gladstone's comparison of the expenditures of the Liberal and Conservative Governments was fallacious, as he made no allowance for the extraordinary war expenditure made necessary by Eastern complications. The tone of John Bright's recent speech, at the Potter banquet, was remarkable. Bright had gone as near as possible towards recommending a Republic in England, and in comparing the United States with the British Empire, he has pointed out that the wide extent of the latter was merely cause of weakness.

The Chancellor asserted that the policy of the Government in Afghanistan was one of defence, not one of annexation. They still adhered to the main to the policy set forth in the Treaty of Gundamak, but wished Afghanistan to receive a Government suitable to its population, so that the country might form a barrier between India and any Power that might encroach upon it. He assured his auditors that the Government were concealing nothing relative to the situation in Afghanistan.

The Government, he said, would take measures to alleviate the distress in Ireland without pauperizing the population, but while careful of the material prosperity of Ireland, would, above all, insist upon the maintenance of law and order, and would never coquette with any demands for Home Rule, which responsible statesmen of all parties knew to be impossible.

Paris, December 20th.—In the Senate, to-day, Lepère, Minister of the Interior replying to a member of the Right, said the Municipal Council, in abolishing the annual charge of 12,500,000 francs in the Municipality of Paris for the repairs of the churches and the maintenance of the clergy, had exceeded its powers, and that he had annulled their decision.

London, December 21st.—The popular demand of the Liberals for the leadership of Mr. Gladstone is temporarily denied. Officialism triumphs, and the Whigs retain control. Mr. Gladstone declined personally to second his friends' efforts. Earl Granville and Lord Hartington continue the nominal chiefs. Private Liberal advice expresses much apprehension in regard to the Sheffield contest. The whole Catholic influence—the Duke of Norfolk leading—supports the Tories, and nearly all pseudo-Liberals, formerly supporting Mr. Roebuck, oppose Mr. Waddy, the Liberal candidate. Mark Smith, a leading local benefactor, supports actively Mr. Wortley, the Tory candidate. The Irish vote is divided. The priests support the Tory candidate, while leading Irish members of Parliament advocate the cause of the Liberal candidates. Mr. Mundella, the Liberal member for Sheffield, yesterday pledged himself ready to prove that the Government had resolved to annex Afghanistan, and had ordered 7,050 miles of railway to be constructed there. Mr. Miller, who was nominally a Republican candidate, has withdrawn. Jewish efforts are being made for the Tory candidate, but Mr. Cohen, Baron Rothschild's nephew, advises the Liberal Jews to support Mr. Waddy.

John Bright's fine eulogy of America at the free trade meeting at Rochdale elicits numerous acrid comments. The Tory journals castigate Mr. Bright and America equally. Mr. Bright partly excuses American protection on the ground of the necessities of war. His declaration of the impossibility of making an American visit only re-affirms the resolve he has

often privately expressed. Doubts respecting his health are the sole reasons.

The Duchess of Marlborough's letter, soliciting aid for Ireland, is considered an official admission of the severity of the distress in the western districts. The Irish of all parties welcome her proposals. The Duchess writes also to the Lord Mayor of London, who promises to help. It is believed that her appeal foreshadows the purpose of the Government to give substantial relief. The Government papers now say that the distress, while confined to a limited area, is undoubtedly severe, and urge employing the Irish Church surplus in relief.

The national memorial to Prince Napoleon is abandoned. The Westminster Abbey statue, it is believed, is also relinquished.

Private friends applied to the Duke of Sutherland for permission to erect a statue outside of Stafford House, which was granted, provided the statue is approved. This apparently ends the national Napoleonic demonstrations.

Professional opinion is divided in regard to the application to reduce the Tichborne claimant's imprisonment to seven years, which it is reported is based on the American precedent in Tweed's and other cases. The granting of the fiat by the Attorney-General does not prevent his opposing the application. The papers profess horror at re-opening the case, but the question is purely legal. The argument is expected to take place in February.

The Afghan dispatches excite general alarm and Tory consternation. The Queen is reported to be greatly distressed, and the public blames Lord Lytton for suppressing and distorting information. There are many demonstrations of public indignation at the official disingenuousness. The Press, long patient, now denounces the infatuated, insolent restrictions imposed on correspondents. The result is perilous for the Government. The private remonstrances are numerous and emphatic. The best authorities on Indian affairs say that General Roberts was utterly ignorant of the enemy's preparations, and was obliged to fight his way around Cabul to the Shipur cantonment, where he is completely surrounded.

The Behmarao hills command the position from the west. General Roberts' position is extremely critical, but he may hold out, provided the reported supplies exist. It is doubtful if the supply of water is secure. Fuel is abundant, but forage is scarce. The number of effective troops is now reported at 6,000 with an equal number of camp followers. It is expected that General Roberts will be compelled within a month to fight his way through the enemy. There is no possibility of reinforcements advancing before January, the transport service being deficient.

The German staff derides the imbecility of the Indian Commissariat Department and regards General Roberts' position as most critical.

The English papers, while admitting the seriousness of the situation since General Roberts' communications were cut, assert ostentatiously that there is no cause for anxiety; but profound anxiety, nevertheless, exists. Liberals and Tories equally admit the necessity to reconquer Cabul; nobody knows what next. The evidence is irresistible that all Afghanistan is in arms. Every assurance which Lord Beaconsfield gave has been falsified by events. The "scientific frontier" has vanished and a friendly Afghanistan is impossible.

Queenstown, December 21st.—A deputation composed of tenant farmers, leading citizens and Town Commissioners of Queenstown, bade Parnell "God speed" to-day on his embarkation for America. A large crowd assembled to witness his departure, and a band played a number of Irish airs at the parting.

London, December 21st.—The Princess Louise sails for Canada, January 22nd.

Ryde, December 21st.—Right Rev. John Sutton Ullerton, Bishop of Guilford, is dead.

Calcutta, December 21st.—A dispatch from General Roberts, dated the 18th inst., urges General Gough's immediate advance in light order without tents, and only taking ammunition and supplies for five or six days. General Roberts states there is no enemy between Jagdallak and Cabul to oppose General Gough's advance, and adds that he shall be able to settle affairs in Cabul when General Gough joins him. General Gough will leave Jagdallak to-day with 1,400 men and four guns, picking up 700 men and two guns at Lataband.

London, December 21st.—A dispatch from Bombay, dated yesterday, says: General Roberts reports, under date of the 18th instant, that he has learned that General Gough has not yet advanced beyond Jagdallak.

Paris, December 21st.—All the Ministers were at Waddington's residence to-day and signed their resignations, which were transmitted to President Grévy. De Freycinet has been entrusted with the formation of a new Cabinet.

London, December 21st.—A Paris correspondent thinks the formation of the new Cabinet must not be expected until the end of this or the beginning of next week. Waddington will retain the Foreign Portfolio. Farre is likely to succeed General Greley in the War Office. After General Greley's departure from the Chamber yesterday, Fierraro tried to smooth matters and demanded the order of the day pure and simple, which was carried by a vote of 244 to 168; but 117 members of the Right

figured in this majority, and reckoning the Republican vote alone, the Cabinet were outvoted by 158 to 125.

London, December 21st.—A Paris dispatch says: The incident in the Chamber of Deputies yesterday, before General Gresley took his departure therefrom, after replying to Kaynol, created an exciting scene. General Gresley was very much excited and protested against civilians interfering in military matters.

London, December 21st.—Telegrams from Sophia state that sixty Mohammedan refugees, whom the Bulgarian Government had refused to admit to their former homes, died of cold and starvation in the open fields.

London, December 21st.—The Montenegro representative in Constantinople has demanded his recall in consequence of the difficulty of his position in regard to the Gursinje question.

London, December 21st.—A Calcutta dispatch says: Executions continue in the Palace at Mandalay. Five princes were recently murdered. The Burmese Ambassadors are still at Thotmyo.

Vienna, December 21st.—The Austrian Army bill was passed from patriotic motives, but its passage should not be regarded as a vote of confidence in the Ministry.

Rome, December 21st.—The Chamber of Deputies has passed bills authorizing the Government to take steps for the immediate prosecution of public works in order to relieve distress among the working classes.

London, December 21st.—The famine in Silesia is gradually increasing.

Madrid, December 21st.—The Senate will not adjourn for the Christmas holidays until the Cuban Slavery Abolition bill is voted upon. The Chamber of Deputies will adjourn the 23rd, first appointing a committee on the bill.

London, December 21st.—A dispatch from Madrid says: The polemic tone of the press becomes more bitter daily, and the Government continues its prosecutions against newspapers. In the past ten days the Government has prosecuted seventeen journals of every shade of opposition. Numerous arrests of noted Federals have been made.

London, December 21st.—Dispatches from Madrid state there have been several riotous demonstrations during the past week. After the funeral of Gen. Al Jaquero, a riot occurred between the mob and the police, in which shots were fired and seventeen persons arrested.

Capetown, December 2nd, via London, December 21st.—Secocoeni's town was captured by British forces November 28th. Two of Secocoeni's Captains were killed, and two Lieutenants wounded. Secocoeni lost heavily. Total British loss, 25.

Sheffield, December 22nd.—The election for member of the House of Commons, to fill the vacancy caused by the death of Right Hon. John Arthur Roebuck, an ardent supporter of the foreign policy of Lord Beaconsfield, took place to-day. Samuel Danks Waddy, member for Barnstaple, who obtained the Chiltern Hundreds in order to contest the seat for Sheffield, was the Liberal candidate, and Charles Stewart Wortley, barrister, a cousin of the Earl of Warcliffe, the Conservative candidate. The polls closed at four o'clock this evening. The public excitement has seldom been equalled. It is believed that 80,000 out of the 39,000 electors on the register, voted. Aged and infirm voters were carried from their beds to the polling places. There are large crowds of people in the streets, and it is evident that when it becomes dark a small provocation will create a disturbance. The respectable inhabitants desire the Mayor to postpone the declaration of the result of the election till morning.

The total vote polled was 27,646; Waddy (Liberal) received 14,062 votes, and Wortley (Conservative) 13,584.

London, December 22nd.—The Lord Mayor's Mansion House Fund for the relief of distress in Ireland, amounted last night to nearly \$5,000.

Paris, December 22nd.—De Freycinet having declined to form a Cabinet, President Grévy has requested Waddington to retain the Presidency of the Council and reorganize the Ministry. Waddington has asked for twenty-four hours' delay, and has, in the meantime, urged President Grévy to entrust the duty to Leon Say. It is believed that if the Premier finally refuses to act, Leon Say will be charged with the formation of a new Cabinet.

London, December 22nd.—A Paris correspondent gives the following as the sole reason why De Freycinet declined to form a Cabinet; he does not care to set himself in opposition to Gambetta; he is disinclined to take office on sufferance, and many leading politicians to whom he applied, who would willingly serve under Gambetta would not do so under him.

London, December 22nd.—The Paris *Temps*, discussing John Bright's speech at the Potter banquet, says: Bright's ideal is a State without an Army, and the American Republic, with many of its soldiers reduced to police duties, is his example of it. He seems to entirely forget that the United States have no dangerous neighbors.

Berlin, December 22nd.—Intelligence from Cannes indicates the Czarina's condition so critical that there is little hope of her survival more than a few days.

St. Petersburg, December 22nd.—The first meeting of the Council of Ministers has been convoked for the 26th instant.

Berlin, December 22nd.—Russian Ambassadors abroad have received a circular purporting to issue from the Revolutionary Committee threatening that if Ambassadors do not represent to the Czar that the country wants a Constitution, the Czar will be removed from the throne.

London, December 22nd.—The St. Petersburg *Gazette* says the Afghan revolt is due to the cruelty of the English victors. It charges General Roberts with gross cruelty towards the Afghans.

Berlin, December 22nd.—The Russian Government has imperatively demanded that Slavophile associations discontinue political agitation.

Madrid, December 22nd.—General Martinez Campos was one of the speakers in the Senate yesterday who censured the Government for the dismissal of Generals who had withdrawn their resignations, but was not himself, as stated, one of those dismissed.

Madrid, December 22nd.—An official dispatch was read in the Cabinet Council to-day, announcing that the most important insurgent leader and two of his Lieutenants had been killed, and that the insurgent leader of the District of Cienfuegos and eight of his followers surrendered.

Berlin, December 22nd.—There being no restriction in the number of Russian troops in Poland and Lithuania, Austria, acting probably with an understanding with Germany deems it necessary to prepare to increase her forces in Eastern Galicia.

Berlin, December 22nd.—A Commission will meet after the New Year holidays to draft measures for the prevention of carrying yellow fever infection on board ships.

Bucharest, December 22nd.—Roumanian journals state that John A. Kasson, United States Minister to Vienna, has been ordered by his Government to negotiate a commercial treaty between the United States and Roumania.

London, December 23rd.—The Viceroy of India telegraphs to-day as follows:

Dispatches from General Roberts of the 16th, 17th and 18th instant, have just been received, as follows:

The defences of the Shipur Cantonments have been completed. The enemy occupies the heights over the city, but does not descend into the plains, which are patrolled by our cavalry. General Roberts was waiting the arrival of General Gough to make an attack, as he would then be strong enough to hold all important positions; but he will attack the enemy before the arrival of General Gough if a favorable opportunity offers.

Our loss on the 14th was sixteen killed and ninety-nine wounded, of whom eight have since died. The enemy's loss was very heavy. Osman Khan and other Afghan leaders were killed.

On the 17th instant, the enemy appeared on Siabann, but they were quickly dislodged without loss on our side. The enemy's numbers are diminishing.

Mahomed Janardak, the real Afghan leader, has proclaimed ex-Ameer Yakoub Khan's eldest son Ameer.

General Roberts writes on the 25th instant that a considerable quantity of grain had reached Lataband safely, showing that the road is open so far.

On the 19th instant, the British lost nineteen wounded, and Major Cook, who obtained the "Victoria Cross" for gallant services, died of wounds received in a previous engagement. Two officers are ill from small-pox. Pneumonia is increasing, owing to the cold weather and exposure of the men. Otherwise the health of the troops is good. The number of sick among the Europeans only amounts to four per cent.

Cabul, December 17th.—To-day the enemy assembled on Siabann ridge, lining it in thousands. We shelled and dispersed them. The engineers are making an inner line of defences.

London, December 23rd.—A Cabul correspondent reports that the British force has doubtless a religious war to face, but the fervor of Afghans will subside as reinforcements arrive. In the operations on the heights, on the 14th inst., two mountain guns were lost.

Odessa, December 23rd.—A court-martial having sentenced two political offenders to be hanged, they were executed on the 9th instant. Four others were condemned to imprisonment for terms ranging from ten to fifteen years in the mines.

London, December 23rd.—The *Standard's* Vienna special says: The police of Kiev recently surprised a secret Nihilist meeting, and captured ninety-eight men.

Paris, December 23rd.—President Grévy did not approve of the policy of De Freycinet, or persons whom he proposed as members of the Cabinet. De Freycinet consequently declined the task of forming a Ministry. President Grévy then urgently requested Waddington to provide for vacancies caused by the resignations of Leroyer and General Gresley. Waddington replied that he preferred that Leon Say be intrusted with the task, but as Say has not yet accepted the Presidency of the Council, Waddington is now fixing upon the elements of a new ministerial combination. He has called upon Chalemel Lacour, to whom he wishes to confide the Ministry of the Interior. Lacour will arrive in Paris on the 24th inst, to confer with

Waddington. Further action in the matter will be suspended until after this interview.

London, December 23rd.—A Paris dispatch, dated midnight, says: Leroyer has gone to Egypt for the benefit of his health.

A correspondent has just learned from an authoritative source that President Grévy has again summoned De Freycinet and that an arrangement has been definitely arrived at as follows: De Freycinet becomes Premier and Minister of Works; Waddington, Foreign Minister; Chaumel Lacour, Minister of Interior and Public Worship; Herald, Minister of Justice; Leon Say, Minister of Finance; Jules Ferry, Minister of Public Instruction; Turard, Minister of Commerce; Gen. Farre, Minister of War; Admiral Jaurequiberry, Minister of Marine, and M. Cockeney, Minister of Posts and Telegraphs.

London, December 23rd.—The *Standard's* Paris correspondent reports that local journals unanimously assert no Ministry not possessing the support of the Republican Left and the Republican Union can live.

Constantinople, December 23rd.—The American Consul-General has instituted a clothing society in his house for the benefit of sufferers from the severe distress now prevailing in Turkey.

Berlin, December 23rd.—Weber was elected in Magdeburg as a member of the German Parliament, defeating Vierick, Social Democrat, by 1,000 majority.

Madrid, December 23rd.—In the Senate, to-day, the debate on the Abolition bill was continued, and all clauses as far as article 7 were adopted. It is considered probable that the bill will be adopted in its entirety.

London, December 24th.—There is much dissatisfaction among Irish people because the Government has not applied the surplus of the Irish Church fund for the relief of popular distress, which they are empowered to do by the Disestablishment Act. The Directors and members of the Society of St. Vincent de Paul publish a declaration that eleemosynary systems are a mockery and a delusion, if not intended adequately to meet the deep and dreadful famine now approaching.

Archbishop McCabe, of Dublin, has issued a circular to the clergy of his diocese asking them to appoint a day for a collection in the churches, and to urge their parishioners to contribute.

London, December 24th.—The agents at Liverpool of the lost steamer *Borussia*, state that there were one cabin and sixty-four steerage passengers from Liverpool for New Orleans, and eighty steerage passengers from Corunna for Havana.

Liverpool, December 24th.—A steam tug just arrived reports speaking an inward bound barque having on board five more of the survivors of the steamer *Borussia* disaster.

London, December 24th.—The owners of the steamship *Borussia* allege that they believe the vessel is still afloat, as she is built with water-tight compartments, and that she is still in the track of American vessels. They also allege that they are hopeful concerning the crew and passengers. The third officer's boat was the last to leave the ship. Among the other boats was a large boat containing 20 Spaniards, and the mate's boat, containing 13 persons. These, when last seen by the officer's boat were doing well. The third officer made an unsuccessful attempt to tow another boat, containing two men. The crew of the steamer, when the boats left, were building rafts. The wind was then blowing a gale. It is asserted at the office of the agents that the Captain did his duty manfully.

In his statement the third officer of the *Borussia* says that after the large boat, containing twenty Spaniards, and the mate's boat, containing thirteen persons, had left the *Borussia*, a life boat containing two of the stewards of the steamer got adrift. He was sent after this boat by the Captain and took charge of it, taking his own boat in which five men were left, in tow, but the boat was swamped and all on board were drowned. The third officer again endeavoured to reach the *Borussia* which was fast sinking, but was unable to make headway against the wind. He was ultimately compelled to abandon the attempt and run before the wind.

London, December 24th.—A dispatch from Larnica, Cyprus, says: The cattle plague is spreading, and no horned cattle are allowed to leave or enter Larnica by sea or land.

Berlin, December 24th.—The *North German Gazette* publishes a letter from St. Petersburg, contradicting recent reports of difficulties between the Czar and Czarowitch. It says the latter goes to the Winter Palace daily, and attends the conferences between the Czar and his Ministers.

Rome, Dec. 24th.—A Russian Mayor domo and his Secretary have arrived at Catania, Sicily, to select apartments for the Czarina.

Calcutta, December 24th.—A telegram from Jagdalluk to-day says: Heavy firing has been heard in the direction of Cabul the past forty-eight hours. General Gough is close to Lataband, and it is expected he will reach Cabul.

London, December 24th.—The latest advices from Cabul, dated December 22nd, state that insurgents plundered the principal bazaar in the city, and it is said large numbers are leaving with their booty.

Paris, December 24th.—The Municipal Council has rejected three items of the city's obligatory expenses for public worship,

and the Prefect of the Seine has requested the Minister of the Interior to officially inscribe these items in the municipal budget.

London, December 24th.—The latest bulletin from Cannes, dated the 24th, says: The condition of the Empress of Russia is unimproved.

London, December 24th.—A dispatch from Pera says: The Montenegrin Ambassador at Constantinople, who demanded his recall in consequence of the difficulty of his position in regard to the Guisings question, will leave on Friday next.

London, December 24th.—A dispatch from Constantinople says: The Greek Boundary Commissioners have sent a note to the Porte demanding the resumption of the conference regarding frontier question.

Constantinople, December, 24th.—The Porte has granted 4,000,000 piastres for the relief of destitute persons in Constantinople during the winter.

London, December 24th.—A despatch from Cairo says: At the Council of Egyptian Ministers, at which European Controllers were present, the Khedive submitted a dispatch from Gordon Pasha, stating that taxes amounting to £250,000 remained to be collected. The Ministers expressed great surprise, and the Khedive demanded an explanation from Gordon Pasha. In another dispatch Gordon Pasha desires that Egypt should cede to Italy a port in the Red Sea, in order to produce complications between Abyssinia and Italy. The Ministers unanimously rejected the proposal. Other dispatches were submitted to the Council from Gordon Pasha, showing his inconsistency.

London, December 25th.—Three thousand Ghilzaia attacked Colonel Norman at Jagdallak, on the afternoon of the 23d inst., but were beaten off, with loss, and dispersed. Major Thackeray was badly wounded. One Sepoy killed and one wounded.

Bombay, December 24th.—A small column of infantry cleared the close country between Sherpur and Cabul. This action has restored confidence in the city, where the most influential people are with us. Were it necessary to save them, General Roberts says he would attack the enemy immediately. If no opportunity to strike a blow offers before General Gough arrives, General Roberts will make an attack the day following his arrival.

London, December 25th.—A dispatch from Cabul says: The first move of General Roberts will be to eject the enemy from Bala Hissar and the city. This effected, troops may be spared for defensive efforts during the winter. It is possible that the combination against us, which is not national but feebly religious, will collapse from irresolution. The combination has within the last few days apparently lost much strength.

Lahore, December 24th.—General Roberts reports his troops suffering from overwork, cold and exposure.

London, December 25th.—A Lahore dispatch to-day announced that General Gough has joined General Roberts without opposition.

London, December 25th.—The bark *Felda* has arrived at Liverpool with five Spaniards who were saved from the *Borussia*. Owing to their inability to speak English, it is difficult to get from them a connected narrative of the terrible hardships they have undergone. Their boat, before it left the *Borussia* contained, besides the Spaniards, the mate and three women; but no sooner was the boat lowered than it was partly stove by knocking against the steamer. The mate and women accordingly returned to the wreck, but the Spaniards partly staunch the hole in the boat with some clothes, and their rope breaking, they were cast off from the steamer. They had some provisions, but none of them knew anything of seamanship. For five days and six nights they were tossed about, suffering terribly, when they were observed by the barque. They know nothing of the fate of the *Borussia*.

London, December 25th.—The Board of Trade has ordered an inquiry into the loss of the *Borussia*.

London, December 25th.—Queen Victoria has contributed £500 to the Duchess of Marlborough's Irish Relief Fund.

London, December 25th.—The Lord Mayor's Irish Relief Fund reached nearly £2,000 last night.

London, December 25th.—In Gas shares there was yesterday a continuance of speculative sales by the American division.

London, December 25th.—The solicitor of Arthur Orton, the Tichborne claimant, writes to the newspapers denying that a writ of error in the claimant's case was applied for under Dr. Kenaley's advice and asserting the Doctor will not and cannot be employed as counsel in the case. He says there is no authority for the statement that the case will be taken to the House of Lords, as the argument cannot last longer than one day.

London, December 25th.—A colliery explosion yesterday, near Bolton, seriously injured eleven men, one fatally. Several others are not expected to survive.

London, December 25th.—The iron-masters of North Staffordshire have issued circulars, declining to receive further orders, except subject to prices current at the time of delivery. The trade is in a most flourishing condition, and additional furnaces are being blown in.

London, December 25th.—A heavy fog overhung London suburbs all Christmas day.

Paris, December 25th.—The *Republique Francaise* and the

*Pays* have articles which are calculated to cause serious concern, as they can only be regarded as giving evidence of the existence of serious differences between the friends of President Grévy and those of Gambetta. The article of the *Republique Française* is regarded as a plain intimation that Gambetta is ready to take office. The *Pays* states that there is no crisis at all; that there is nothing to do but to appoint a successor to Leroyer. The *Pays* is President Grévy's organ.

London, December 25th.—A Paris dispatch says: Several members of the old Cabinet met yesterday, and unanimously resolved upon presenting a proposal to Waddington, that as the maintenance or reconstruction of the old Cabinet is impossible, and Waddington or Say taking the Premiership being out of the question, De Freycinet should form a Cabinet. Waddington was deputed to acquaint President Grévy with this decision.

Paris, December 25th.—Waddington told President Grévy last night that himself and De Freycinet had agreed upon a programme and list of Ministers and Under-Secretaries. Waddington himself declined to form a Ministry, and recommended the task be entrusted to De Freycinet. The latter had an interview this morning with President Grévy, who requested him to reorganize the Cabinet. De Freycinet accepted the charge.

Paris, December 25th.—The *France* contains a letter from Emile de Girardin, stating he wishes to quit the sphere of militant politics.

Berlin, Dec. 25th.—In well informed circles in St. Petersburg, it is rumored that if the Czar visits Berlin and Cannes, the Czarowitch will be appointed Regent.

St. Petersburg, December 25th.—The *Vedomosti* announces that Prince Dolgorouki, Governor-General of Moscow, intends to resign, on account of ill health. General Ignatieff and Count Schouvaloff are mentioned as possible candidates for the post.

St. Petersburg, December 25th.—A Polish journal is to be established here.

London, December 25th.—A St. Petersburg correspondent thinks there is a prospect of an understanding regarding European peace and the settlement of difficulties in Asia between Russia and England.

It is also understood that favorable administrative measures regarding the Press may be looked for before the end of the Russian year.

Constantinople, December 25th.—Several hundred Musselman refugees have arrived here utterly destitute.

London, December 25th.—Telegrams from Adrianople report that the sufferings of refugees become worse daily and that the mortality among them is increasing frightfully. There are no resources for their relief.

London, December 25th.—A Vienna correspondent asserts a compromise has been unofficially suggested by France by which the line of frontier proposed by Turkey would be accepted in Epirus, while that proposed by the Greeks would be accepted in Thessaly.

Madrid, December 25th.—The Senate passed the bill for the abolition of slavery in Cuba by a vote of 134 to 14. Generals Riguelsma and Prendergast and eight Cuban Senators voted with the minority. Martinez Campos, General Jovellar, Count Valmasoda, General Concha and the remainder of the West Indian members abstained from voting. No Cuban Senator voted with the majority.

London, December 25th.—A Pesth correspondent hears from good authority that Count Sudolof, Austrian Minister at Madrid, will succeed Count Zichy at Constantinople, and that Count Kalnoky, Austrian Ambassador at Copenhagen, will succeed Baron Langonau at St. Petersburg. Both these appointments are said to have special significance.

London, December 25th.—A Berlin dispatch reports that 164,525 marks have been collected there in aid of the famine sufferers in Silesia. A thaw has set in, and the sufferings are less intense.

Rome, December 25th.—General Auezana, one of Garibaldi's most famous companions in the army, is dead. He was President of the Italia Irredenta Committee.

London, Dec. 25th.—The *Daily News* has been requested by the Peruvian Minister to state that there is no foundation for the report that a revolution had broken out in Moquega.

New York, December 25th.—News from Valparaiso, Chili, says: The Allies, after their defeat at Dalores, concentrated at Darapaca, where they were attacked by the Chilians and driven from their position with heavy loss.

New York, December 25th.—News from Buenos Ayres says: The prevailing opinion here is that the war on the west coast is practically over, the Allies being reported in a state of complete disintegration.

London, December 25th.—A correspondent at Lahore reports that a suspicious movement is noticed proceeding from the Afghanistan frontier. The Afghans, in small parties, are travelling to different parts of India. Every train for the interior takes from twenty to forty Afghans. The authorities are on the alert and will watch travellers. Another curious circumstance is the fact that large numbers of Arabs are con-

stantly arriving at Bombay, and, although they are stopped at railway stations whenever there is any ground for suspicion, they make their way to various cities of the interior by byroads. The matter is attracting the earnest attention of Government.

Cape Town, December 24th, via London, December 25th.—Secoceni is on his way to Cape Town, a prisoner.

London, December 26th.—A private letter from a British soldier in Cabul states that one of Yakob Khan's Generals told Sir Frederick Roberts that Yakob Khan himself signed the death warrants of the Embassy, and ordered the bodies of the murdered men to be dragged through the streets of Cabul.

The same letter reiterates the statement that £80,000 of Russian gold was found in Cabul.

Lahore, Friday night, December 26th.—Since General Gough passed Lulaband, no news has been received from him. The rumors of his arrival at Cabul were premature. The wire to-day was working as far as Gundamuk, but at night was interrupted between Peshawur and Jellalabad.

Candahar, Friday, December 26th.—To-day being a Mahomedan festival day, the fanatical portion of the population is much excited. Some mounted Ghazis ran amuck through the British camp. General Tytler was wounded and four of the fanatics killed.

Paris, December 26th.—Leon Say held a long interview with President Grévy on Christmas Day.

The *Temps* says: De Freycinet's Cabinet will be gazetted on Saturday. It is also said that President Grévy, having officially commissioned De Freycinet to form a Cabinet, De Freycinet is solely responsible. He will have to submit first the names of persons and later his programme. Should his selection of persons not meet with Grévy's approval, De Freycinet will have to definitely resign his commission.

If President Grévy rejects De Freycinet's Cabinet or programme, his only possible alternative is to summon Jules Simon and dissolve the Chamber of Deputies.

It is expected that De Freycinet will on Saturday submit to President Grévy the list of new Ministers, which will appear in the *Official Journal* on Sunday.

All the newspapers recommend Gambetta for the Cabinet. De Freycinet interviewed Gambetta, Wilson, Spuller, Deves, Allain, Targe and Lepère, and subsequently Waddington and Say, and they have again expressed to De Freycinet their determination not to form part of the new combination.

Constantinople, December 26th.—Following are some of the particulars in regard in the case of the priest, who was sentenced to death for translating the Bible into the Turkish tongue. In September the police arrested a missionary for distributing religious tracts, but he was soon discharged, the police retaining a book in the Turkish language, printed in London, containing a passage contrary to Islamism, and two manuscript pamphlets of the same character. On the day after the release of the missionary, the priest who is now under sentence, was arrested on the charge of being the author of the above mentioned pamphlets, and was remanded for trial. Sir Austin Layard has for the last three months pressed his demand for a restitution of the missionary's papers. The notes presented by Minister Layard remaining unanswered, he again renewed his request Monday last, but still receiving no answer, he sent a communication to the Porte giving them three days in which to restore the missionary's papers, release the priest, dismiss the Chief of Police of Angora, who ordered the arrest of the priest, and the military commandant of Van, who, as well as the Chief of Police of Angora, had used insulting language toward, England and the British Consuls in Turkey. Minister Layard announced that if his demands were not complied with, he would ask Lord Salisbury for instructions, and would suspend diplomatic communications with the Porte. The latter replied, stating that the missionary is not a British, but a German subject, and that it is untrue the priest has been condemned to death, as he has only had a preliminary examination.

Vienna, December 26th.—Notwithstanding Mukhtar Pasha's proclamation, the Albanians are not submitting quietly to the cession of Montenegro. They have created great disturbances at Prizrend, where they plundered and set fire to two Greek churches and several houses belonging to Christians.

Rome, December 26th.—Tuesday last King Humbert was going on a hunting expedition, when the gendarmes who proceeded him encountered a crowd, who refused to disperse, and fired on the gendarmes. The latter returned the fire. An active search for the culprits is in progress.

Buenos Ayres, Dec. 25th.—On the 17th Carr defeated the forces of Truj, at Salta, headed by Jaureno Sarria, near Humhuaca. A great many were killed on both sides. Torino came from Salta, escorted by armed troops of that Province.

London, December 26th.—Advices from Valparaiso to the 3d instant are that Iquique, Peru, is re-opened to commerce, the only restriction being in respect to arms and ammunition; that the President of Peru is marching with a force upon Lima, expecting a Chilian attack upon Callao and the Capital; and that the Bolivians sacked Tacna, and threatened Arica.

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

## COURT, POLITICAL AND OFFICIAL.

The representatives charged with the presentation of the petition of the people of Chikuzen, asking for the establishment of a National Assembly and a revision of the treaties, arrived in Tokio, and handed in the document, on the 16th instant. The Chief Secretary of the Senate received it.

The Foreign Affairs and Household Departments entertained the Foreign Representatives, His Royal Highness the Duke of Genoa, and several of the leading foreign residents, in the Enriokwan, on the 22nd instant.

In the Genro-in (Senate), a discussion has taken place on the advisability of amending the law of libel as far as it affects newspapers.

Mr. Makimura, Governor of Kioto, is on his way thence to the capital.

His Excellency Ito, Minister for the Interior, is expected in Tokio from Atami in a day or two.

His Majesty the Emperor visited the Empress-Dowager at the Awoyama Palace on the 16th instant, and Her Majesty the Empress also called there the following day.

Their Majesties the Empress and Empress Dowager, have visited the Princess Tenshoju, the mother of the late Shōgun, Tokugawa Iyeshige.

His Majesty the Emperor dined with the Daijin and Sangi on the 17th instant.

Prince Nagaoka, an attaché in the Foreign Affairs Department, entertained all the foreign representatives for the new year's festival, at his mansion at Oyuwamachi, the day on Thursday.

Governor Narasaki of Nagano *ken*, left for Tokio on the 17th instant, Governor Takasaki of Okayama *ken* and Governor Yamayoshi of Fukushima *ken* on the 18th instant, and Governor Iwamura of Ehime *ken* on the 19th instant. They will attend the forthcoming Local Governor's Assembly.

Mr. Yoshikawa, chief superintendent of the Telegraph Department, was honored with an audience by His Majesty the Emperor, on the 19th instant.

His Excellency Sanjo and General Yamagata, are to leave Atami for Tokio, about the 25th instant.

We learn from the *Choya Shimbun* that Supreme Courts are to be established in Nagoya, Hiroshima, and Niigata.

His Excellency Tokudaiji, Minister of the Imperial Household Department, has issued a notification, that the 23rd instant, being the birthday of Her Majesty the Empress Dowager, the Princes of the Blood, the Daijin, the Sangi, and the *Chokunin* officials should proceed to the Awoyama Palace to offer their congratulations.

His Excellency Shishido, Envoy Extraordinary and Minister Plenipotentiary to the Court of China, having lately returned home, a *Chargé d'Affaires* is to be despatched to Peking in his place.

Prince Naga-oka, an attaché in the Foreign Affairs Department will, it is said, be shortly appointed Envoy Extraordinary and Minister Plenipotentiary to the Court of Rome.

His Excellency Inouye, Minister of Foreign Affairs, entertained the *Chokunin* and the *Sonin* officers of his Department, at the Enriokwan on Thursday.

The police sergeants and men, in all about three hundred, who formed the escort of His Majesty the Emperor at Kioto and Osaka during the last rebellion, are shortly to be rewarded.

Mr. Yasuda, the Governor of Aichi *ken*, left his prefecture for Tokio on the 20th instant, to attend the local Governors' assembly, and Mr. Kitagaki, the Governor of Kochi *ken*, and Mr. Mori, the Under Secretary of Fukuoka *ken*, representing his Governor, arrived in Tokio for the same purpose the day before yesterday. Mr. Shishido, the Chief Secretary of Osaka *fu*, will represent the Governor of that district at the meeting.

It is currently reported that the sum of 1,800,000 yen is to be added to the ordinary grant to the Department of Justice, which is 1,200,000 yen, and that sixty provincial Courts are to be established in different provinces.

Mr. Ishini, the Vice-Assistant Police Inspector, was

appointed a member of the Committee of the Central Board of Health, on the 20th instant.

The subjects to be discussed at the special meeting of the local Assembly in Tokio are; the means to be adopted for raising a municipal loan, and the question of protection against fire.

## NAVAL AND MILITARY.

The *Nichi Nichi Shimbun* states that there will be a meeting, early next March, in Tokio, of all the General officers in the Japanese Army.

It is said that a Commissariat service will be added to the garrisons at Sendai, Hiroshima and Nagoya, during the present year.

Lieutenant Nagamine who has been abroad, returned to Tokio on Sunday last by the French mail steamer *Volga*.

The different fortifications in Japan were all built by the late Shogunate Government and the Princes of the different provinces, for coast protection. The majority of them are at present in a ruined state, and even those that are in pretty good repair, are not strong fortifications. It is now rumoured that a fort is about to be constructed on Kwanonsaki point, on the coast of Soshu, and will be armed with twelve, thirty centimetre, rifled cannon.

Fourteen Japanese naval cadets have been appointed midshipmen, and are to be distributed among the different men-of-war.

We, (*Mainichi Shimbun*) learn that several Generals and Lieut.-Generals, in command of different detachments in the Army, are about to visit Vladivostock.

The *Kongo Kan* is shortly going on a cruise in Chinese waters.

## INDUSTRIES, TRADE AND FINANCE.

A native contemporary informs us that one million kin of rice has been ordered for export to America.

We, (*Choya Shimbun*) have now received information respecting the progress of the Shin Shiu Sha, (Progressive Company) formed by Mr. Iwasaki Hide-o about four years ago, for the exportation of timber to China. The Company began to fell trees last year in the district of Hiroshima, and it has also received a great accession to its members from among the people of Osaka and the different provinces, who have subscribed altogether the sum of 400,000 yen. Out of this large sum, 200,000 yen were raised in Hagi, 50,000 yen in Kuma-no-gori in the prefecture of Yamaguchi, 20,000 yen at Kokura in the province of Buzen, 50,000 yen at Matsuyama in the province of Un-shiu, 15,000 yen at Fukuyama in the province of Bingo, and 20,000 yen in Osaka. The head office of the company will shortly be moved either to Osaka, or Amagasaki, and the managers propose to purchase ships, and load them with timber for China.

## MISCELLANEOUS.

There was a small fire in the native portion of the town on Monday morning. The efforts of the fire brigade were successful in speedily extinguishing it.

The *Hochi Shimbun* states that small pox is rumoured to have made its appearance in the prefectures of Nagawo and Niigata. A hospital is to be established in Shitaya, Tokio.

A native paper states that four spies have been arrested at Osaka, and their confessions telegraphed to Tokio in cypher. It appears that the Court in which they are being tried is held with closed doors, and no particulars are known as to what they were spying or who employed them.

Prince Yama-no-uchi, ex-daimio of Tosa, entertained about one hundred and fifty of the Shizoku of Kōchi Ken, in Tokio, on Sunday last. The greater number were military officers who had taken part in the suppression of the last rebellion.

Prince Tori-i Tadabumi, a junior noble of the 5th rank who has been in America since 1871 for the purpose of study, returned home on the 18th instant.

The *Teito Shinshi*, a journal formerly published in the prefecture of Fukuoka, has been suspended for some time, but is now permitted to re-appear.

A fire took place at Matsugayecho, Kanda, Tokio, at midnight on the 18th instant, and soon spread over several streets, in consequence of the strong wind blowing. The fire was not extinguished until 2.40 a.m., when it had destroyed three hun-

dred and fifty-eight houses and one godown, and damaged thirty-six other dwellings.

A branch telegraph station is about to be established at Yoneko, in the prefecture of Shimane. The new stations at Daishoji, Toyama, and Tokebu, Ishikawa, will be open about the middle of next month. Telegraph stations have also been lately opened at Shibata, in the prefecture of Niigata, and at Kama-ishi and Miako, in the prefecture of Iwate.

Mr. Senator Sano entertained Dr. Anderson, one of the Committee of the Central Board of Health at a farewell dinner on Wednesday. The other members of the Committee were also present.

The *Hochi Shimbun* states that Mr. Nakano Goichi is going to bring an action against the Police Bureau, to recover damages for their recent proceedings with reference to himself and Mr. Fujita. Mr. Numa Moriichi has been employed as counsel for Mr. Nakano.

The lady of the Chinese Minister in Tokio has lately arrived here.

The *Mainichi Shimbun* says it is rumoured that His Royal Highness the Duke of Genoa is going to Kobe in a French man-of-war, which is shortly to leave Yokohama.

The total funds subscribed on behalf of the sufferers from the fire at Hakodate amounted to 12,100 yen, up to the 21st of December last.

Small pox has made its appearance at Atagocho, in the prefecture of Gumba. There were two fatal cases on the 17th instant, and it is reported to be spreading rapidly.

A new journal, called the *Tokio Jiyu Shimbun*, made its first appearance on the 18th inst., and a new periodical called the *Chugai Iji Shimpō*, on the 21st instant.

#### THE JAPANESE PRESS.

##### TREATY REVISION.

(Translated from the *Nichi Nichi Shimbun*.)

WE have frequently expressed ourselves so fully on the subject of the revision of the existing treaties with foreign powers, that little now remains to be added. Careful consideration of the signs of the times has convinced us that public opinion imperatively demands the Government to require, during the present year, the restitution of the independent sovereign rights of Japan. The grievances of the nation are almost endless; we wish to recover political, judicial, social and commercial rights of which we have been unjustly deprived, but the main object of our imme-

diate desire is the abolition; 1st, of extra-territoriality, and 2ndly, of the impediments to Japan framing a tariff to suit her own commercial and financial requirements, without let or hindrance from any foreign authority whatsoever.

An important question like that of treaty revision cannot be dealt with lightly. For ourselves, we believe we have thoroughly gauged public opinion on this matter; and as the negotiations are on the eve of being recommenced, we feel no apology is due to our readers for again taking up the subject with a view of placing the whole matter before the officials engaged in it, and strengthening their hands by acquainting them with the wishes and opinions of their countrymen.

In demonstrating the injustice and inconvenience of the treaties, it is necessary in the first place, in order to gain a proper knowledge of the position, to carefully consider the circumstances under which these agreements were entered into, and how the internal difficulties of this nation were taken advantage of by foreign powers, to wrest from it the rights invariably possessed by an independent sovereign state.

We shall pass over the treaty entered into with the United States of America through Commodore Perry, as so many years have since elapsed, and commence with the present treaties. We find that in 1858, when Mr. Townsend Harris, Consul-General for the United States, requested permission from the Shōgunate Government to visit Yedo for the purpose of interchanging treaties of peace and commerce, the Government found itself in a great dilemma, being pressed by the anti-foreign faction on the one hand, and on the other confronted by the unanswerable fact that, as one treaty had been entered into, it could never afterwards shut up the country to foreign intercourse. At last, on the 27th of July, 1858, the Government, in order to preserve peace and being afraid of foreign influence, concluded the treaty with Mr. Harris; thus arose what we may call "the present American treaty." When this compact was entered into, the officials of the Shōgunate Government knew as little of foreign trade, and what they were doing, as if they had been groping about in the dark. Indeed the prevalent ignorance is evidenced by the orders given by one of the Councillors of State to Higo-no-Kami, when he said, "foreign intercourse cannot now be put an end to, but you must arrange matters so that the export of rice will not be allowed!" For this short-sighted policy the Councillor was very highly applauded at the time! Fortunately, however, the Shōgunate Government comprised some able men, such as Iwase-Higo-no-Kami, Miyano Chikugo-no-Kami, Nagari Gamba-no-Kami, Hori Oribe-no-sho, &c., who realized the fact that the matter of the treaty could not be neglected. They then came to the conclusion to repose confidence in the probity of Mr. Harris and intrust the terms of the treaty entirely to his superior knowledge of the requirements of the situation. Mr. Harris accepted the task. Being a just and upright man, anxious not to take advantage of the ignorance of the Shōgunate officials, he drafted a treaty similar in most respects to those already in force in other eastern countries. After the document was signed Mr. Harris observed, "I am aware this treaty is not as perfect as might be desired, but this is unavoidable in the case of a country which is opened for the first time to foreign intercourse. As regards the provisions respecting extra-territoriality, not only are they irksome to Japan, but they are also inconvenient for the United States; and I earnestly trust that they will be abolished when the time comes for the revision of the treaty. Your Government has now an opportunity of deriving advantage from its customs' duties, and at the same time not crushing foreign trade by excessive imposts. The import duties are 35 per cent on wines and spirits, and 20 per cent on other articles; the duty on exports 5 per cent. An opportunity for a revision of this tariff will be afforded five years after the opening of Kanagawa to foreign trade. In the meantime, you will have had considerable experience, and will no doubt be able to devise a tariff which will be both profitable to your Government and beneficial for your people. The revision of this treaty can take place anytime after the 4th of July, 1872; and although the ten years or so which must necessarily elapse between this and then is a good deal in the life of a man, it is a very short period indeed in the history of a nation. I hope you will strive diligently to grasp the advantages of foreign intercourse and,

when the time for treaty revision arrives, I trust to see you stand firm for the rights of Japan." These remarks of Mr. Harris were freely repeated at the time they were uttered, and were mentioned in his official correspondence and several American newspapers. There can therefore be no doubt of their authenticity, and it is very evident that Mr. Harris was a sincere well-wisher of this country.

When it became known that a treaty had been made with America, ambassadors and emissaries arrived from Great Britain, Holland, France and Russia, one after the other. Each of these representatives signed a separate treaty, but the American treaty was a model for all the others, which were framed in accordance with it. Thus, then, the five treaties were entered into, and in conformity therewith the ports of Kanagawa, Nagasaki and Hakodate were opened to foreign trade on the 4th of July, 1859.

(To be continued.)

### THE LATEST ASPECT OF THE LOOCHOO QUESTION.

(Translated from the *Nichi Nichi Shimbun*.)

IT has frequently been rumoured that the Tsu-ri-Yamen of China addressed menacing letters to our Government on several occasions, respecting the conversion of Loochoo into an integral portion of the Japanese Empire. We have now received from a reliable source, information which may throw some light upon these rumours and explain the recent altered attitude of the Government of China. We learn that this important question has already assumed very different phases at various times. In the first place, a Chinaman resident in Japan, thinking he was aggrieved by the action adopted in Loochoo, wrote to the Chinese Governor-General Chin Ho Tei, stating falsely that, "many among the Japanese themselves were opposed to the step taken by their Government, and as to the Japanese fleet and army, they are too weak to deserve consideration," and a great deal more in the same strain, equally silly and misleading. The Governor-General to whom this precious epistle was addressed, ruled over the important district extending from Yangtze to Shanghai, and ranked among the Ministers of the second class. Chin Ho Tei was a man of the most extraordinary obstinacy, and strongly imbued with a hatred to Japan, of which he always spoke in the most contemptuous terms. He was also on bad terms with Li Hung Chang who took opposite views, and therefore when he received the letter we have referred to, he was exceedingly pleased as it suited his intrigue; although he admitted to his familiars that it emanated chiefly from the disordered brain of the writer. This letter and his own great influence enabled Chin Ho Tei to bring such pressure upon the Chinese Government that they addressed to the Japanese Government several very menacing letters on the Loochoo Question, which gave rise to the rumours current from time to time. Now, however, the position is entirely altered; the obstinate old mischief-maker died on the 6th of November\* and his clique is broken up. Moreover, the two spies from China who recently visited Japan, have recently returned home and by their report on the state of public opinion here, and the condition of our naval and military forces, have entirely disabused the minds of the Tsu-ri-Yamen of the false impression left by the letter sent to Chin Ho Tei, and convinced them that Japan was not a petty group of islands surrounded by Chinese waters and eyed by the "Middle Kingdom." Then peaceful counsels resumed their sway in the neighbouring Empire to the great joy of all. Oh! how fortunate for both countries was the death of old Ching Ho Tei!

### THE DEMAND FOR A NATIONAL ASSEMBLY.

(Translated from the *Akebono Shimbun*.)

NOTHING can withstand the force of water rushing down hill to find its level. Every impediment placed in its way is swept aside, and all attempts to restrain it are overcome after great damage has been occasioned to the surrounding country. This we learn from hydrostatics, and it is equally true that something very similar may be observed in the affairs of nations. How often do we find a

ruler attempt to curb the feelings of his people until at last they break from all restraint and he finds when too late, that making concessions will not avail him anything, and the country is thrown into disorder and revolution.

Japan is governed by able men and the work of administration travels with the exigencies of the times, as true as the needle to the pole and is equally in unison with the wishes of the nation. How would our rulers act if a great question arose which carried public opinion with it as the current of a river? Would they attempt to restrain it and thus lay the foundation of future discord? The reason we make these remarks is because of the rapidly growing feeling in favour of the establishment of a National Assembly in Japan. The "Patriotic" Society of Osaka determined last year at a general meeting, to memorialize the Emperor next March for a National Assembly, and circulars on the subject have already been drawn up for distribution among the people. This energetic society has also its emissaries actively working in all directions in furtherance of its objects. Then again, we see the "San-yodo" (central Japan) Society has also resolved to petition the Emperor for an Assembly, and a similar step is about to be taken by the "United," and "Familiar" Societies. Now these Societies are all very influential, members of the "Patriotic" Society in particular, being numerous all over Japan.

This question of a National Assembly has been gradually assuming larger proportions year after year, and has now taken deep root in the minds of the people. Although the influence of the people be not as strong as the power of a river-current, still at the same time is not as weak as that of a small rivulet which can be dried up. The petitions now presented by the associated Societies may not indeed threaten the employment of physical force in case of refusal as was the case when Messrs. Okubo, Komatsu, Goto, Fukuoka, &c., addressed the ex-Shōgun towards the end of the year 1867 requesting him to resign the executive power to the Emperor, but it is very evident that their demands cannot be lightly treated. Will the Government, confident in their power, refuse the wish of the people for a National Assembly. Nothing can be said against the reasonableness of the demand, and if the Government oppose the scheme, we cannot say if the force of public opinion may not prove like a mighty river in flood, sweeping away all obstacles in its course and carrying destruction even the adjacent land.

Public opinion in Japan has now attained such power and influence that the frowns of officials are of no avail against it; and whether or not the establishment of a National Assembly would prove prejudicial to official interests is now a matter of no moment whatever. A question of this kind cannot be settled by a Government resorting to violence; sooner or later the current of water must prevail. Is it not wiser to give it vent before it overflows the banks and destroys the cultivated ground?

Some people who are blind to the signs of the times say that, "the Societies are composed of a mere crowd of visionary students and political agitators, and to treat them as representing the people of Japan would be like regarding a cat as a tiger, or a needle as a great beam of timber, it is therefore evident that the time is not yet ripe for a National Assembly." Let us again resort to our simile of a river in reply to this objection. How does a flood begin? Is it not by continued rain the water rises, first gradually and then suddenly, perhaps several feet at once? The demand for a National Assembly has grown slowly also. No violence has as yet been threatened; but who can foretell what may happen in the future?

The agitators for a Constituent Assembly cannot be charged with any desire to obtain the reins of power, and it seems as if they are actuated simply by patriotic motives and a wish to advance the prosperity of the country. The course they have adopted, is similar to that of the patriots before the Shōgunate was violently overturned in 1858, when an attempt was made to arrange matters peaceably, an attempt which was however unfortunately not successful.

Some people affirm that it is only of those who are in opposition to the Government that join in the demand for a National Assembly. Suppose that this is true? Then the granting of their request would leave them nothing to complain about and turn them into peaceful and contented members of the community. But on the other hand, if the charge made is not true, how can it be disproved? and is a

\* According to the Chinese calendar.

bald accusation of this description to be constantly made use of successfully, and justify the refusal to Japan of Constitutional Government? Objections of the kind are mere hollow pretenses and may lead to very serious measures being adopted.

A writer who has formed a very decided opinion adverse to the establishment of a National Assembly in Japan states, "that no one individual can lead public opinion unless he be some very learned person who has rendered himself conspicuous by his public career, and thus attracts popularity and induces confidence in the wisdom and purity of his projects. How do the clamors for a National Assembly fulfil these conditions? We find that they are without exception newspaper editors and other writers striving for notoriety, visionary students or professional political agitators without any legitimate occupation. If the authorities should yield to the wishes of these parties in the vain idea of benefiting future generations, they will only incur the odium of knowing nothing of the true feeling of the mass of the people. It would therefore be better to postpone the establishment of an Assembly until some really influential leader makes his appearance."

Now this line of argument might, perhaps, have been well enough some years ago; but it is most decidedly inapplicable at present. No doubt, if any one man wishes to accomplish a great enterprise, popularity will be absolutely necessary before he can draw the people with him; witness the case of Saigo Takamori, people joined in the rebellion because he was the leader, when they would have declined to cast in their lot with either Yeto or Maibara. But then no man is great (in this sense) from his birth, nor a mighty warrior from his infancy. These things are the product of experience. Look at Napoleon I. When he was a poor subaltern of artillery, could anyone have foretold that he would become the conqueror of Europe, the mighty monarch at the rustle of whose banners the nations trembled, the proud possessor of the haughty title "Emperor of Emperors"? But then again the example of this great man is rather wide of the mark. Japan, unfortunately, possesses no such hero as Napoleon and the question of a National Assembly is very prosaic, and may be quietly discussed by commoners with kings and princes; its inherent justice will prevent suppression by violence. No scheming is necessary to procure the ultimate success of the movement, let all quietly use their influence, small though it may be, towards forming a correct public opinion on the subject.

Another very inconsistent writer has thought proper to place on record that, "the agitators for a National Assembly, are few in number, without popularity, and certainly not conspicuous for any remarkable amount of experience." We would ask this sneering gentleman to recall to mind Jean-Jacques Rousseau, of France, and our own patriots who lived and suffered before the Restoration. Could the rulers of France have thought that the needy dreamer Rousseau would inculcate theories, which when reduced into practice overturned the dynasty? Who imagined that a single sworder would dislodge from their proud preëminence the Shōgunate Government, which had ruled Japan for over three hundred years? The exigencies of a country invariably produce some man to fill its requirements; and who can say that the necessities of Japan have not impelled the memorialists to demand the establishment of Constitutional Government?

#### LAW REPORTS.

##### IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Wednesday, January 21st, 1880.

KURATA MASAKICHI vs. H. W. HOHNHOLZ.

(Adjourned from the 20th inst.)

This was a claim of yen 72.46, due for provisions sold by plaintiff to one Kamingi, for the payment of which it was contended that defendant had made himself responsible.

Defendant denied liability.

The parties appeared in person.

The plaintiff called as witness

A Japanese named Asano, who said that he was plaintiff's *banto*. As to the question before the Court, he de-

posed that Kamingi, on the 13th of March last year, came to his master's shop and bought a quantity of ship's provisions, which were sent on board the same day by a servant of the shop, who was to receive payment on delivery. The money was not paid, Kamingi telling the messenger that he would come and pay the next day. He came on the 15th, accompanied by defendant, handed plaintiff a paper,—the same that was attached to plaintiff's petition, and said that defendant would pay the bill, a statement which defendant confirmed on the spot.

Another Japanese servant of plaintiff's deposed that he, on the 15th March, carried provisions on board Kamingi's ship, and was to receive yen 72.46 in payment. He did not receive the money, but was told that the bill would be paid at No. 55 (at that time defendant's place of business). The witness, who repeatedly contradicted himself, added that already, before the provisions were taken on board, defendant had been to plaintiff's place and promised to pay for the goods. Plaintiff was not present when that promise was made, only Asano and witness.

Defendant denied the truth of the evidence, he said the plaintiff had been to his place asking him when the *Tori* was coming back, and as the original intention was that she should return within two months, he had answered: "in a few days; any moment."

The Court finding that the evidence, produced by plaintiff, was not satisfactory proof of defendant having undertaken to pay the bill against Kamingi, dismissed plaintiff's claim, and ordered him to pay costs.

Friday, January 23rd, 1880.

T. H. TRIPLER, M. D., vs. C. SEITZ.

(Adjourned from the 16th instant.)

This was a claim of \$179 for medical services rendered between May and November last year, including 43 visits at \$3 each and \$50 for attending a birth, with subsequent visits to the person confined.

Defendant declared himself ready to pay \$65, which he contended was all that he owed, namely, \$50 on account of the confinement, and \$15 for five visits at \$3 each. He asserted that what other visits plaintiff had made to his house had been unnecessary and not asked for.

Mr. M. Kirkwood appeared for plaintiff; defendant appeared personally.

The assistant of the druggists, Messrs. North, Thompson & Co., was in Court with the book in which were entered the prescriptions made up by the firm, and Mr. Kirkwood handed in a list of 10 prescriptions, written by his client for defendant and defendant's household, during the period in question.

The correspondence between the parties, which was read in Court, is as follows:—

"November 14th, 1879.

"My dear Seitz,

"I enclose your account as requested, and as the amount is larger than I expected before going over it, I have also sent a statement of the number of visits booked during each month.

"Yours faithfully,

"T. H. TRIPLER, M.D.

"Captain SEITZ."

This note was returned to the sender with the words in pencil: "All right, attend to-morrow."

"December 8th, 1879.

"Dr. Tripler.

"Dear Sir,

"I beg to inform you, that I have done my best to satisfy you on Saturday, but failed in doing so. I am sorry for it; all the money I could scrape up did not do to pay up my men.

"I try my best to-day, and may by the time this steamer is finished; there is plenty of work. Had I not the trouble with the Custom House, this would not have happened.

"Yours truly,

"C. SEITZ."

The Court now delivered the following

#### JUDGMENT.

##### The Facts of the Case.

Plaintiff has alleged that defendant owes him \$179 for 43 professional visits, paid to defendant and defendant's

household during the period May to November 1879, and for accoucheur services to Louise Wherum, who lives with defendant, and plaintiff has demanded that defendant be ordered to pay him the above amount. Defendant, however, is only willing to pay \$50 for the accoucheur-services, and \$15 for 5 other visits, total \$65, because he contends that the remainder of the visits were neither necessary nor asked for by him, and he demands that the balance of plaintiff's claim be rejected. The plaintiff replies hereto, that defendant by keeping the bill sent to him on the 14th of November 1879 has tacitly admitted its correctness, and that he had further confirmed that admission by his letter dated the 8th of December. Defendant admits that the copy of the said bill, which has been produced in Court, and in which \$129 are charged for 43 professional visits and \$50 for accoucheur-services, is conform with the original bill, received by him on the 4th of November, and he also admits having written the letter dated the 8th of December. But he denies that he by his conduct implicitly admitted plaintiff's claim, and contends that he never has considered himself to owe more than \$65, and that this was also the amount, which his letter of the 8th of December was meant to admit.

#### *Reasons for the Decision.*

It is admitted that there was an agreement between the parties that the plaintiff for a remuneration of \$50 should attend Louise Wehrum, who lives in defendant's house, during her delivery on the 14th of October, and this item in plaintiff's bill is consequently not in litigation.

The dispute is about plaintiff's claim of \$129 for 43 professional visits, which plaintiff alleges to have paid as medical adviser to defendant and his household during the period May to November 1879, while defendant is only willing to pay for 5 of those visits. He does not pretend that the remaining 38 visits were not made, but he pretends that he did not ask for them, and that they were unnecessary.

Without entering into the question how far the professional visits in dispute were either necessary or asked for, it has in the first place to be decided, whether defendant—as contended by plaintiff—by keeping the bill sent him on the 14th of November, admitted the correctness of the same. Defendant denies that his tacit keeping of the bill implies any such admission. And there certainly exists no law to compel a person on receiving a bill to make known at once or within a short time his objection, or at all events to notify his reservations, or else to be considered as having admitted the bill to be correct.

Whether a bill that has been received without reservation is to be considered as acknowledged as correct is, according to precedents established by decisions formerly given in superior courts, a mere question of fact, the answer to which is governed by the general rules, by which it is decided what meaning is to be attributed to a person's actions. The tacit receiving of a bill is merely a criterion, the force of which varies according to the attending circumstances, and to the shorter or longer time that is afterwards allowed to pass; but the attending circumstances may also invest it with the force of undoubted certitude.

(*Römer*: Collection of judgments rendered in the Supreme Court of Appeal, at Frankfort.)

Considered as a question of fact, the Court must in the present case assume that certitude to exist. Not only has the defendant on the 14th of November received and kept plaintiff's bill, but the accompanying letter from the Doctor, in which the latter expresses his own surprise at the large number of visits, he returned with the annotation: "all right, attend to-morrow." These words rather convey the impression that defendant intended to pay on the next day, than that defendant intended only to admit 5 out of the 43 visits charged in the bill.

This view is further confirmed by the letter, which defendant on the 8th of December, that is 3 weeks afterwards, wrote to plaintiff, in which he says: "I beg to inform you that I have done my best to satisfy you by Saturday, but failed in doing so, I am sorry for it; all the money, I could scrape up, did not do to pay up my men."

Thus writes a hard pressed debtor to his creditor but not the man, who is conscious of being able to strike \$114 off from his doctor's bill for \$179.

When defendant nevertheless has not hesitated now to

deny his former admission of the bill and to dispute the medical services, which he has received, then his conduct deserves to be characterized as objectionable and frivolous.

For these reasons, the Court gives the following

#### *Decision.*

Defendant has to pay to plaintiff the \$179 claimed, and to indemnify plaintiff for costs.

#### IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul,

Messrs. JUBIN and REYNAUD Assessors.

Thursday, January 22nd, 1880.

SCHINNE & FRANCKE vs. MESSAGERIES MARITIMES CO.

This was a claim of \$119.71 damages on account of five bales of pilot cloth, arrived in the *Volga* on the 10th Sept., 1879.

Mr. Kirkwood appeared for plaintiffs; Mr. Couil for the defendant company.

The Court to-day, in the presence of the parties, delivered the following

#### *JUDGMENT.*

##### *The Facts of the Case.*

On the 11th of September, 1879, the plaintiffs took delivery of their goods under a protest, which was accepted by the Messageries Maritimes Company; on the 29th of the same month they had a survey of the said goods by experts appointed by the Consul for France; on the 14th of October they demanded from the Messageries Maritimes payment of the damage declared by the experts, and on the 8th of January, 1880, brought this action against the company.

There has, consequently, elapsed more than thirty days from the date of the protest until the date of bringing the action.

The principal agent of the Messageries Maritimes Company has, in his conclusions, subsidiarily and jointly with his other exceptions, quoted Art. 436 of the Code of Commerce, which forbids taking cognizance of any protest or reclamation which is not followed up in a court of law within a month.

##### *The Law of the Case.*

Considering that the prohibition in Arts. 435 and 436 of the Code of Commerce is formal, and that plaintiffs are wrong when they contend that those articles apply only to the captain, and not to the owners of the ship, inasmuch as the company has always assumed the responsibilities of its captains, and that, consequently, the Messageries Maritimes Company is justified in availing itself of that objection;

Considering further that, although according to Articles 173 and 186 of the Code of Civil Procedure, all objections with regard to the formality ought to be brought forward before any other, this rule does not obtain where it is objected that the right of suing has been lost through limitation; that the Court, consequently, is both entitled and bound to receive that objection, although it was only brought forward simultaneously with the defence as reality, and that it is not necessary for the Court to enter into the question whether the Messageries Maritimes Company is responsible or not for the damage done by fresh water to plaintiffs' five bales of pilot cloth.

After full deliberation, according to law,

The Court dismisses the claim of Schinne & Francke against the Messageries Maritimes Company for payment of \$119.71, and orders plaintiffs to pay costs.

#### LADY MIZZLE'S JEWEL ROBBERY

There was a dinner-party at Redden Hall on the evening when Lady Mizzle's jewels were stolen; and it was her ladyship herself who was the first to discover the theft towards nine o'clock. The ladies had retired to the drawing-room, leaving the gentlemen sitting over their wine, and the conversation had turned on the setting of precious stones. Lady Mizzle, the young wife of Sir Richard Mizzle (a middle-aged and very wealthy squire, who had amassed his money in Australia), was known to have remarkably fine jewels, and, in particular, a "cat's-eye" set in yellow diamonds of peculiar brilliancy. At the request of her friend, Mrs. Harptree, the rector's wife, Lady Mizzle went upstairs to fetch this gem, in order to show it to the other ladies, who had all heard tell of its

beauty. She had scarcely been away five minutes when piercing shrieks were heard on the first floor, and her ladyship ran down stairs with a haggard face, screaming that she had been robbed. The echoes carried her voice all over the house, and while the servants came scrambling up in a fright from the kitchen, the ladies hurried out of the drawing-room, and the gentlemen left their wine. There were four gentlemen besides Sir Richard: Mr. Harptree, the rector; Colonel Deverill, the Chief Constable of the county; Mr. Nookes, a magistrate; and Percy Deverill, a young fellow in the Laurels, nephew of the Colonel. Into this group of five, Lady Mizzle ran trembling for protection; and pointing to the staircase faltered, in terrified accents: "Thieves! thieves! they've taken everything! Oh, oh!" After which she sank into a chair, and looked as if she were going to swoon.

While the ladies bustled in alarm and compassion round their hostess, the gentlemen bestirred themselves. Throwing down their napkins, they marched upstairs under the conduct of Sir Richard, half expecting to be confronted on the landing by some robbers with bludgeons and masks. But no such excitement was in store for them; and they simply found the usual traces of an easily executed burglary. The window of Lady Mizzle's dressing-room was wide open, and a number of jewel-cases were lying open and empty on the floor. Nothing seemed to have been taken except jewellery however, for on the dressing-table lay Lady Mizzle's tortoiseshell purse, which Sir Richard at once explored, and found to contain several sovereigns and a banknote. This curious fact excited wonder, and led to the conjecture that the burglars must be persons in very good practice indeed, since they could afford to despise gold.

"No, it is not that, they were afraid of the bank-note," said Colonel Deverill, luminously. He was a long, thin man, who generally spoke like an oracle.

"Well, but they might have taken the gold and left the note," opined Mr. Harptree, a little, round-faced parson of plain sense.

"I say, though," cried Sir Richard, interrupting them, "I see no ladder under the window; how on earth can the thieves have got off?" The worthy knight was craning out of the window, and all the others clustered round him. Staring into the night, they could see no sign of a ladder, and yet the ledge was so high from the ground that it was doubtful whether any burglar, however nimble in gymnastics, would have cared to drop off it on to the gravel path below. Again Colonel Deverill proffered the others his view of this matter, and seized the opportunity for showing his acumen by stating that it was only the novices in the burglar's art who left ladders under windows. "The knowing ones carry them to some distance off," added he.

"But why should they do that?" asked the parson.

"They know well enough," responded the Chief Constable, with a shake of the head; and he would vouchsafe no further explanation, not liking, apparently, that his remarks should be subjected to criticism.

By this time Lady Mizzle had somewhat recovered from her fainting fit, and came upstairs leaning on the arm of her friend, Mrs. Harptree. Her face was sorrowful, her step was unsteady, and at the sight of her empty jewel boxes she began to weep. The gentlemen tried in vain to offer consolation. Nothing they said could avail against the fact their fair hostess had lost property worth several thousands of pounds, and notably a "cat's-eye" that was quite unique. She kept alluding to this jewel as if she prized it above all the other things; so that at last poor Sir Richard was moved, and exclaimed: "Well, my dear, there are as good jewels in the shops as ever came out of them. If we don't find your own you must have new ones"—a sentiment which the ladies present thought most chivalrous, though it only drew from my lady a doleful whine.

While Sir Richard was speaking, young Percy Deverill, who stood near the open window, and had been attentively peering into the garden, suddenly exclaimed. "Why, look, there's Tiger prowling about the walk; and now I remember, he's been there all the time we were at dinner!"

"Well, what of that?" asked the Colonel, like an oracle who is not swift at seeing clues.

"Why, if anybody had gone out of this room through the window the dog would have barked like mad," answered Percy. "Egad, he'd have done more; he would have pinned at least one of them."

"What do you know about it?" ejaculated Lady Mizzle in irritation. She rose from her seat as she said this, shot an angry glance at the officer, and complained that it was bad enough to lose one's jewels without having nonsense talked about them. The company looked somewhat surprised at this outbreak.

"I did not mean to talk nonsense," stammered Percy reddening. "I only thought that by watching small signs we might be able to solve the mystery."

"I've lost my jewels; there's no mystery about that, and you had better leave the police to find out who took them," said Lady Mizzle sharply.

"Yes, quite right, leave it all to the police," assented the Chief Constable, and he led the way out. The other guests followed him, but Lady Mizzle tarried behind, and just as Percy was leaving the room she drew him back, pinched his arm severely, and whispered in his ear: "You fool!"

When all the guests had retired, Sir Richard, who was quite as much troubled about the robbery as his wife, begged her to make out a list of her jewels, that it might be sent to the police in London. My lady promised to have the list ready on the morrow, but begged her husband not to make her head split by alluding any more to the matter that night. This she said, because Sir Richard was beginning to mander some timid complaints as to her careless-

ness in leaving her jewels lying about. Like a prudent husband however, he now held his peace, for he disliked storms.

On the morrow a detective arrived at Redden Hall, sent by Colonel Deverill. He was a tall, sandy-haired, rosyfaced young man of about twenty-five, who had belonged to the county constabulary, but had been promoted to plain clothes duty on account of his great acuteness. He had the brightest blue eyes imaginable, and was altogether a most pleasant young man, whose deferential manners and smiling expression at once put him into the good graces of Lady Mizzle. Her ladyship had been rather nervous before his arrival, but on seeing him her brow cleared, and she proceeded, with great affability, to give him her account of the burglary. When her husband sought to interpose with some remarks of his own, she cut him short, saying: "No, Richard; let me explain things to Mr. Simpson. He will only get confused if he hears a dozen different versions. Isn't my version enough, Mr. Simpson?"

"Quite so, my lady," smiled that obliging young man.

"You say—h'm—that the jewels were of great value?"

"Oh, yes; worth ten thousand pounds at least," said Lady Mizzle with a sigh; "but I—I don't quite know how to describe all of them. I was about to propose that I should go up to London to see my jeweller and ask him for a detailed description of them."

"But the police will lose a whole day if you don't give them your list at once," demurred Sir Richard.

"Oh, no, Sir Richard; better let her ladyship get the correct list from the jeweller," rejoined the polite detective.

"You quite approve of my going to London, then Mr. Simpson?" inquired Lady Mizzle, affably. "If so, I will set off by the twelve o'clock train."

"You could not do better, my lady," answered the detective, bowing.

He was decidedly the nicest young man who had ever been employed in the dirty work of thief-hunting. He rose to hold the door open for Lady Mizzle as she left the room, and afterwards went out into the garden with Sir Richard, and talked about pheasants and field-mice. Only once did he allude to the subject of the burglary, and then it was to ask in a casual way:—

"There was a dog, I think you said, in the garden yesterday evening?"

"Yes, a big dog, called Tiger—very ferocious."

"And he never barked?"

"Not once."

"Ah! What a pretty maple-tree that is yonder, Sir Richard," said the detective, breaking off from the subject. "I think I will be off now to make my report to the Chief Constable."

"But may I ask, have you any suspicion as to who the offender can be?" asked Sir Richard, much puzzled by the officer's apparent lukewarmness.

"Oh, yes, I think I know who did it, sir," replied the detective. "And I think my lady won't be long getting her jewels back. Good morning, sir."

He lifted his hat, smiled sweetly at Lady Mizzle's husband, and strolled off at a leisurely pace through Redden park. But as soon as he was out of Sir Richard's sight, he ran like a hare across the fields towards the railway-station. There he whispered a few words to a porter, walked into the oil-lamp room, and presently emerged with a false beard and moustache on. Presently Lady Mizzle passed him on the platform without recognising him, and the pair travelled to London in the same train.

Lady Mizzle was accompanied by her maid; but, on arriving at Paddington, she took leave of her servant on the platform, and walked alone towards the cab-stand, where she hailed a four-wheeler. She carried a reticule in her hand and wore a thick veil. Mr. Simpson forthwith jumped into a hansom behind, and ordered the driver to follow the four-wheeler.

Lady Mizzle was driven to the establishment of a great jeweller and pawnbroker in the Strand—not her own jeweller, as Mr. Simpson knew. She remained inside half-an-hour, then came out much flushed, and, re-entering her cab, was taken to some chambers in St. James's-street. Of course Mr. Simpson followed, and this time he was made to wait an hour before he saw Lady Mizzle again. In the meantime he discharged his hansom, and employed his leisure in questioning the porter at the chambers, whose tongue he loosened with a half-sovereign. From this man he learned that Captain Percy Deverill lodged in the house.

So by-and-by, when Lady Mizzle came out alone, she was confronted by Mr. Simpson (without his false beard), who affably said: "Pardon me, Lady Mizzle, I am going upstairs to arrest Captain Deverill for stealing your jewels."

"Who told you that?" gasped her ladyship, who had turned deadly pale and trembled. "Whoever did—did so, told you a lie; he didn't steal them."

"You stole your own jewels, though, if I may use the expression and the Captain is an accessory by sharing in the proceeds of the affair, and as the jewels were in law your husband's, he is guilty of robbery."

"Captain Deverill was in want, he owed thousands of pounds, and he would have been dishonoured had he not paid," stammered Lady Mizzle, in violent emotion. "Mr. Simpson, don't expose me; how much will you take to hold your tongue?"

The detective cocked his head and cogitated for half-a-minute.

"You see, my lady, my professional reputation is at stake. If I expose you I shall have done a brilliant thing; if I fail to detect the robber of your jewels, I may pass for a duffer. So I want five hundred pounds, and as there is a police inspectorship vacant in our county, you must use your influence to get me appointed to it."

"Come down a side street with me," faltered Lady Mizzle, fumbling at her reticule; "but, I say, Mr. Simpson, not a word of this to Captain Deverill. He has no idea of how I got the money."

"By Jove, then, my lady, he is a lucky man to have such a friend as you," was the detective's admiring answer.

Mr. Simpson is now an inspector, and Lady Mizzle has a new set of jewels.—*Truth*.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXIII.

#### YORITOMO.

It was an evil omen for the Genji cause, this complete collapse of its supporters' first effort. In point of numbers indeed the victors had suffered far more than the vanquished, but this was scanty compensation for the loss of such men as the Lord Seneschal and the renowned knight Takeguchi. For the latter too had fallen, winning with infinite pains the death that came so easily to his comrades. To the very last the Heike men, remembering their chief's instructions and not unwilling themselves to assist the terrible revenge he had promised his insolent foe, exerted all their efforts to take the knight prisoner, but Takeguchi well understood what was in store for him should he fall alive into their hands. Fighting only with the object of selling life dearly, he and his son performed prodigies which were destined long to be recounted to breathless audiences beside the Taira camp-fires, and when their bodies were found on the river's bank after the fight, men fancied that the stream must have yielded up its dead to keep them company, so thickly were the corpses of their enemies strewn about the place where they lay.

Neither did any one of Yoritomo's sons survive their father. The youngest fell in the charge that rolled the wave of pursuit back from the place where the old nobleman kneeled down to die, and the eldest, cutting his way through and through his foes, reached the temple of Heito just as the knight who had carried thither the Lord Seneschal's head expired by his own hand before the chancel. Many days afterwards when the friars opened the cenotaph of their saint, some dark stains on the base of the pedestal attracted their attention, and searching behind the wainscot they found two heads, with difficulty identified as those of Yoritomo and his first-born. As for Kanetsura, who had ridden back alone to meet a clamorous enemy, he did no less valiantly than his brothers, for after a long and stubborn combat he carried off his challenger's head through a crowd of infuriated foes. But when, coming to the side of the lake, he found there his father's body, and knew that the old man waited for him on the road to the Happy Mountains, he made his way with one follower to the banks of the Yodo, trusting the deep river to grant him a grave his enemies might not disturb. There, not a moment too soon, for the tramp of pursuing feet was already audible, the man cut off his master's head, tied a heavy stone to the hair, and then stabbing himself, leaped into the water with his ghastly burden.

All tidings fly fast, and before Yoshitsune reached Oshiu the story of his uncle's suicide and the Prince's death was known in every province of Japan. The Lord Seneschal had been one of those that only need an opportunity to win affection, and Hidehira was not by any means the least warm of his admirers, so that the news of his miscarriage, following almost immediately upon the receipt of the Imperial Commission, prepared for Yoshitsune a welcome full of promise. Now for the first time there seemed to be hope of resolute action, and the old Earl declared himself ready to raise the white standard so soon as he received reliable assurance of coöperation from the provinces beyond his marches. In those days indeed, military chiefs found it more difficult to move their forces through a neutral country than an enemy's. Such a thing as an organized commissariat did not exist, and troops were obliged to depend on forced requisitions for the chief part of their supplies. Even within the boundaries of his own earldom, Hidehira had often experienced this embarrassment, and knowing famine to be stronger than either discipline or valour, it was not wonderful that he paused on the eve of an affair demanding such unimpaired strength as a struggle with the Taira supremacy.

So once more Yoshitsune was constrained to wait in-

active, and though his hope, finding often no sustenance save in the strength of his own purpose, waxed somewhat feeble as the summer months drifted by and brought the end no nearer, he was at any rate free from the doubts that had once caused him so much pain.

With the month of October, however, came tidings too glad to be at first altogether credible. His brother Yoritomo, they said, was encamped at Ichikawa on the borders of Shimotsuke with a force of from three to four score thousand men. Vague rumours of Yoritomo's doings had already reached Oshiu from time to time, but since they seemed to indicate a condition even more helpless than his own, they had only made Yoshitsune all the more anxious to obtain Hidehira's assistance. Now, however, his course was plain. Hastening to the Earl, he declared his intention of immediately going to join his brother and sharing whatever chances fortune might have in store for him. Hidehira warmly applauded this resolution and would have issued orders for the assembly of an ample force to follow his guests' pennoncelle, but Yoshitsune could no longer brook even an hour's delay. That same afternoon he set out from Oshiu with Benkei and Saburo riding at his side, and behind him three hundred knights and men-at-arms, most of whom bore names known beyond the borders of the northern provinces.

Some twenty years had elapsed since the sentence of death passed upon the Earl of Harima's eldest son had been commuted to one of banishment, ostensibly at the instance of Kiyomori's step-mother, Ikeno Ama. With the secret influences that really awayed the Heike chief the reader is already acquainted, but this action of Ikeno Ama's is not the less remarkable as an early instance of the strange attraction Yoritomo exercised upon all with whom he came in contact. The very man that took him prisoner and who, as a devoted liegeman of the House of Hei might have been expected to desire his death, was transformed, by a few days intercourse with his youthful captive, from a bitter enemy into a staunch friend. It was by his contrivance not only that Ikeno Ama's commiseration was excited, but also that the province of Idzu was subsequently chosen as Yoritomo's place of banishment; a selection which proved—as its instigator cannot but have foreseen—a most powerful factor in the result, since it established the exile in that part of Japan where of all others the friends and adherents of his clan were most numerous.

The rigours of political banishment in those days depended almost entirely on the disposition of the man to whose charge the exile was committed. There was absolutely no limit to the amount of restraint exercised, and if from its excess or any other similar cause the prisoner ceased to be a trouble to his enemies and a care to his keeper, the latter could be quite sure of immunity from all embarrassing investigation. Thus had Yoritomo been handed over to some warden who, besides being a staunch liegeman of the Taira clan, resided in a province where the Genji cause had few supporters, his name would probably be recorded by history only as another victim to the destructive might of the dominant faction. But neither of these conditions was fulfilled in his case, for the nobleman appointed to be his Governor was predisposed in his favour both by the memory of former benefits received at his father's hands and by the promptings of an allegiance which though abandoned was not forgotten. Thus it is not surprising to find that the restraint to which he was at first necessarily subjected gradually became of a most perfunctory character, and that before long nothing prolonged his exile but the absence of a useful occasion to terminate it.

At the time when the course of our story first brings him prominently before us, he was a man of medium stature, strongly built and well-favoured, but above all remarkable for a self-command so imperturbable that it was often mistaken for complete insensibility. That it was the outcome, however, of deliberate effort rather than of dispassion, not a few incidents in his most eventful career amply prove, though at the same time we may scarcely escape the conviction that one whom experience had often made intimate with the sternest forms of peril and grief, must in the end have acquired an almost unconscious mastery over the range of minor emotions.

Amongst those whom common interest and hereditary fealty attached to Yoritomo in the place of his exile, was one Ito Sukechika, a knight of considerable local influence

and holding a command in the Imperial Guards at Kiyoto. Sukechika had four daughters, of whom two were married but the third and most beautiful was still unbetrothed. Coming home one day from a residence of nearly three years in the capital where he had gone to perform his accustomed routine of duty at the palace, he observed in the garden of his house a lusty lad, whose age might have been measured by the same number of days as those of his own absence. Rendered suspicious by the evident anxiety of the child's nurse to conceal her charge, Sukechika made immediate inquiries, and found that the boy was his own daughter's offspring and that its father was no other than the exile, Yoritomo. There had been a time when the knight would have regarded such an event as the acme of honour and good fortune, but now, blinded by long contact with the unparalleled mastery and magnificence of the Heike, he was overtaken by a paroxysm of unreasoning wrath, and calling five of his vassals ordered them to carry the child to the 'White Waterfall' and throw it into the whirlpool of the cataract. The unhappy boy was just old enough to add his half incoherent supplications to those of the men who received this terrible commission, but without avail. The barbarity was perpetrated before sunset on the same day, and when the news reached Yoritomo that his child had been murdered and his wife given to another, an anguish so poignant may well have strained his hearts' chords beyond the possibility of easy vibration in the future. Yet even then he was able to separate his private sorrows from the interests of his cause and to postpone his revenge until its accomplishment might be undertaken without any sacrifice of the larger purpose that ruled his life. This subservience of passion and sentiment alike to one undeviating design affords the best possible index to the character of the iron-hearted man whose unhappy prejudice operated so sadly in the sequel.

Sukechika, however, did not credit the murdered child's father with so much forbearance. Deeming that impunity could only be purchased by Yoritomo's death, he set himself to compass that too, and would no doubt have succeeded, had not his son warned Yoritomo of his danger. That night the threatened man made his escape. To avoid attracting attention he took with him but one servant, who related afterwards that much of the time they could ill afford to waste, was spent by his master in prayer at the temple of the 'God of Battles,' and that he entreated the God again and again to strike him dead where he stood if he was destined neither to rebuild the fortunes of his house nor to be avenged on the murderer of his boy.

For many years after this Yoritomo's life was that of a defenceless outlaw. Now we find him winning the love of a noble lady; now dependent on the protection of a fraternity of friars, and though at no time in his career was he completely destitute of loyal followers, it is doubtful whether he could have commanded a score of swords for any enterprise when Prince Mochihito's commission reached him. Neither did the news of the Lord Seneschal's death and the complete failure of that first rebellion against the Heike rule by any means increase the enthusiasm of the Genji throughout the provinces. The Prince's warrant was of course rendered comparatively useless by his death, but an intrigue, into the particulars of which we need not enter here, had procured for the exile another document under the sign manual of the ex-emperor, authorizing him to assemble troops and drive the Taira nobles from their places of power at Kioto. Such a mandate seemed in truth a very mockery. As men said at the time, it was like giving the moth leave to beat out its life against the bronze lantern, but the astute old statesman, Kiyomori, knew better than to encourage that precursor of downfall, the confidence of unassailed strength. He declared that there could be no permanent peace in Japan until every Minamoto noble not yet attached to the Heike cause should have met with the fate a mistaken clemency had too long deferred, and the unfortunate ex-emperor, a very puppet in the hands of his uncompromising autocrat, actually signed a warrant for Yoritomo's death to be executed by the same power he had just authorized Yoritomo to overthrow!

It was the intelligence of this peril, intelligence conveyed by one who afterwards proved a wellnigh fatal foe, that decided Yoritomo to take the field at once. The muster-roll of those on whom he could certainly count contained only eighty-four names in all, neither might he look for

any accession of strength unless his first essay was crowned with signal success. Under these circumstances he resolved to open the campaign by a night attack on the castle of Kagetaka, vice-governor of Idzu, a staunch supporter of the Heike cause.

On the evening of the seventeenth of September, some three months after the events related in the preceding chapter, the little band assembled stealthily at their chief's house, and set out towards midnight on their perilous undertaking. Yoritomo did not accompany the party himself. A *mêlée* by moonlight needed nothing but stout hearts and tough sinews, and failure could only become disgraceful did the head of the Minamoto leader fall into his enemy's hands. The command was therefore given to a loyal knight, Tokimasa, Baron of Hojo, and it was arranged that the signal of success should be the firing of the Governor's castle, while in the event of failure, a messenger should be despatched to Yoritomo, who would thus have time to commit suicide before any active steps were taken to seize him.

Sympathy disposes us to linger beside the solitary watcher looking across the tranquil moonlight towards the woodland where Kagetaka's stronghold lies, rather than to follow the men on whose deeds his destiny depends. The strength of will that enables him to stand patient, importunate, until the flame shall leap up to inaugurate success, or the messenger of death come through the darkness, needs surely an exercise of courage in nothing inferior to the valour of those who so persistently renew their fruitless assaults upon the strong castle and its untiring garrison. Three hours have passed and there can no longer be any doubt that the attempt has proved unexpectedly difficult, if indeed it has not altogether miscarried, yet still Yoritomo preserves the same impassive mien, only now he has ceased to gaze across the valley, and sits with quiet eyes fixed upon a part of the road where the moon-beams fall unobstructed. It is there the messenger of ill tidings will first come into view, and before his shadow darkens the threshold, there will be ample time to complete all preparations for the deed his errand will necessitate.

And so indeed there would have been had Tokimasa's envoy been a foot soldier, but these two men riding furiously down the valley suggest a strange degree of precipitation. Yoritomo has hardly time to speculate on the purpose of their haste before they are kneeling at his feet and seeing that they are none of the eighty-four, but the brothers, Kotoda and Katoji, when an uncertain rumour had obliged him reluctantly to exclude from that night's enterprise, but of whose prowess none might suggest a doubt, he welcomes them with a warmth largely in excess of his wont.

The two men explain that they have divined something of the design on foot from their comrades' preparations, but that they cannot credit the misfortune of their own exclusion. If they have seemed to merit this mistrust, is it too late to reestablish their loyalty? To this Yoritomo replies, deliberately indeed but with his eyes still fixed on the moonlit road; that if their good faith has been for a moment in question, their coming at such a time completely removes all doubt. The white pennon has been unfurled to-night for better or for worse, and even now their comrades are engaged in an assault on Kagetaka's castle; an assault which has been continued so long without the signal of success that little remains but to prepare for the worst. Yet none the less will they merit his gratitude who have come in time to help their chief to die.

The brothers spring to their feet with a strength of energy that kindles even Yoritomo's dispassion. Whether friend or foe has failed, all is not lost so long as two blades remain unblunted, and though their arms may be weaker than many of those that have hitherto been numbered that night by the Heike arrows, they swear to bring back Kagetaka's head before dawn or leave their own in his hands.

With this they are hastening out when Yoritomo calls them back, laughing at their impetuosity. A sword he says is a bad weapon at night, for darkness often makes accident stronger than skill at too close quarters. Here is a glaive that belonged to his father and which has never hitherto failed in either point or parry. If any truncheon of steel be worthy to win the Genji cause its first victory, it is surely this; and as Katoji stretches out an arm in which the mountains of muscle are plainly discernible through the chain brassart, Yoritomo is possibly disposed

to add that if any man be worthy to wield the precious weapon it is surely the clear-eyed soldier who grasps it as proudly.

At the castle, however, the weariness of failure repeated and wounds unavenged, is beginning to daunt the assailants. They have retired behind a hill and are hoping against hope that their leaders may presently devise some means of bringing them within striking distance of their foes, when the two brothers gallop up. These, briefly describing their interview with Yoritomo and showing the well known glaive as a proof of his restored favour, ask permission to strike a blow while those who have hitherto borne the burthen of the fight are gathering strength for a fresh attempt. Tokimasa, the captain of the troop, is right willing to sanction this request, and would gladly give his old friends some information to lighten the peril they are about to encounter, but he has learned nothing himself in his five assaults, except that there is a deep fosse with a barbican and a raised drawbridge, and that at one of the tourelles stands an archer who names himself Sekiya Hachiro each time he shoots, and whose shafts have never once missed their mark.

"So be it," says Katoji. "You have made the way ready for us, and it will be a small thing to fall where you have not yet altogether succeeded. Give us, I pray you, a pair of stout shield-bearers, and half a dozen pavises to form a bridge. At the worst we shall help to expend the arrows in the castle armoury."

Many a victory has been on the verge of attainment when the battle seemed most hopeless. Arrived at the fosse, the brothers launch their bridge and gain a footing in the gateway unopposed, not knowing that the shower of shafts before which their comrades have been fain to retire for the fifth time, were the last in the quivers of the besieged. The gate is prized open, and some stark blows are struck at the foot of the barbican, for the few that still fight within are men that prefer death to flight, but castles are seldom garrisoned by soldiers that may match such swordsmen as Katodo and Katoji. The clash of arms has been exchanged for the groans of the dying, when there steps from the vestibule a man of huge stature carrying a mighty bow across his shoulder. "I am Sekiya Hachiro," he says, "If your leader be not a craven, I challenge him to come forward, for I have but one arrow left and it shall not be wasted on any common soldier."

The unerring archer's name had so often proved the prelude of death that at its mention the assailants involuntarily retire to the shelter of the gateway, and there this extraordinary dialogue is presently carried on.

"You have heard yonder knight's words, Susaki," says Katoji, addressing a man who has kept at his side through all the chances of the fight. "He will make good his promise, and there is neither corselet nor camail that can turn his last shaft aside."

"His aim may be shrewd, master," replies the other wonderingly, "but methinks I serve one who takes small note of such threats."

"Yet it is even as I say, Susaki. That arrow carries certain death and if I fall, the promise I have made our chief must remain unfulfilled. Can you do me a last service in this matter?"

"Speak on, master. My life is yours if it can be of any avail."

"And it is your life I ask you to give me. Take my helmet and pass within the portals calling yourself by my name. It may not be that Sekiya's aim will fail, but come what will, you shall be amply avenged."

"Nay, master, for am I not sufficiently rewarded by your confidence? Give me your helmet and let me begone quickly, lest I lose the occasion of so welcome an errand."

Katoji's fingers falter strangely as he unties his helmet, but the other lends him impatient aid. The details of the disguise are of small moment, for the moon is just sinking through a bank of heavy clouds, and the archer will have barely light to see his arrow tip. Susaki is turning to enter the court-yard when Katoji draws him back and says in a husky voice:—"Do you leave nothing behind you that will enable me to show my gratitude for this service?"

The eyes of the two men meet and neither speaks for a moment. At last Susaki replies with a light laugh: "I am not formed for winning hearts, master, and few, I trow, will be much the sorer for my loss. I might perhaps com-

mend my old mother to your care, but she was your own nurse, and my heart were less glad now did I not know that your memory is as unfailling as your sword."

With that he breaks away from the other's reluctant grasp and is immediately lost in the darkness. Katoji kneels down and listens with bated breath, great drops of anguish starting on his forehead. He hears the sound of raised voices within the court-yard, after which there is a moment of silence, then the twanging of a bow-string, and then a man staggers towards the gateway, groping his way with out-stretched hands like one stricken by sudden blindness. Katoji catches him in his arms and laying him down gently, sees that an arrow full fifteen hands long and twice as thick as an ordinary shaft has pierced his throat from side to side. He unlaces the dying man's helmet and closing his sightless eyes waits until the gasping struggle has ceased.

The next moment he is standing before the vestibule shouting angry defiance to the archer. This time, he says, the true Katoji is there, and Sekiya, understanding that he has been deceived, leaps forth angrily sword in hand. The two men are well matched, for if the Genji knight has the tougher sinews, his opponent's is certainly the nimbler foot. At last however, Katoji manages to grapple with his foe, and after a long struggle in which now one, now the other, is uppermost, the archer's head is thrown through the gate and falls at the side of the loyal Susaki.

Katoji takes up his glaive and passing into the castle searches warily for its master. His progress is only once opposed, and that by a friar who rushing blindly on the intruder, falls pierced from breast to backbone. "The glaive is in truth a wondrous weapon," soliloquizes Katoji, as he shakes the blood from the blade. "It divides bones as easily as though they were grasshoppers' wings."

So he goes on from room to room until presently he finds himself in one that shows evidence of very recent occupation. A lamp but lately trimmed is burning brightly before the alcove, and beside it are a bear-skin cushion and a silksurocoat. The searcher peers round cautiously, and through a half open sliding door in the path of lamp-light detects something like the end of a red crape girdle behind the pillar. Thereupon he unlaces his helmet, and poising it on the end of his glaive thrusts it through the open door. The ruse is completely successful. A sweeping swordcut crashes down on the steel curtain, and the blade meeting no opposition, sinks deep into the soft wood of the door-post. It was never withdrawn, for so soon as Katoji danced out of the vestibule with Kagetaka's head on the point of his glaive, the Genji men fired the castle, and Yoritomo at last saw the long expected signal flash up among the pine trees on the hill side.

(To be continued.)

#### DOUBLE ACROSTIC.

When winter stern  
And cold, begins to reign;  
Then let us turn  
To sports like these again.

1.

Would you obtain  
This light, then persevere,  
For all you gain,  
Well earned, will prove more dear.

2.

Soar, songster sweet!  
Above the world so high;  
It is a treat  
To hear thee in the sky.

3.

A Queen, most fair,  
Most false—did conscience bring  
No thought to spare,  
Her murdered Lord and King.

4.

Pay all you owe,  
You'll never be in trouble;  
But should this grow,  
'Twill doubtless cost you double.

5.

A gentle muse:  
Through whose soft tones we feel  
More, than the use  
Of words can e'er reveal.

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as seen as it can be made out.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, JANUARY 16TH, 1880.

Observatory of Daigaku, Moto-Fujimicho, Hong6, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

Dashed line—represents velocity of wind

.....percentage of humidity

Max. velocity of wind 32 miles per hour on Thursday, 9 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer was 30.430 inches on Tuesday at 10 p.m.; and the lowest was on Thursday at 7 a.m., being 29.865 inches. Throughout the whole week the barometer has been unusually high. The minimum temperature has been continually below the freezing point, the lowest record having been reached on Saturday, which was 23°. 5. On Wednesday, a very small quantity of hail fell, and there was also a trace of snow on the same day.

## REPORTS.

The French steamer *Tolga* reports:—Left Hongkong 9th January at 7.30 a.m. Had very heavy weather throughout, with heavy gales from the N.E., continually shipping heavy seas. Arrived in Yokohama on the 18th at 4 p.m.

The American ship *Titan* reports: Left Cardiff on the 2nd of August, 1879; had light N.E., and fresh S.E. Trades in the Atlantic. Ran the casting down on the 40th parallel before fresh westerly winds, and experienced fresh S.E. trades to Sandalwood Island. Came through the Gilolo passage with light winds and calm, and had 14 days' calm weather off Lord North's Island, in the South Pacific. Had moderate N.E. trades and fine weather, with fresh N.W. gales, off the coast of Japan. Arrived in port on the 19th of January. Passage, 168 days.

The British steamer *China* reports: Left Hongkong 4.48 p.m. 14th January. Arrived at Yokohama 1.45 a.m. 23rd. Experienced very strong N.E. winds with heavy sea throughout.

The Japanese steamer *Niigata Maru* reports: Experienced very strong N.E. winds and heavy sea to Kobe, from Kobe to Rock Island, fresh W. and N. westerly winds, thence to port, strong N.E. winds.

The British steamer *Gaelic* reports: Left Hongkong at 3 p.m. on the 17th instant, arrived here at 3 a.m. on the 24th instant, having had strong N.E. monsoon in the China sea, and moderate variable weather on the Japan Coast.

The Japanese steamer *Meiji Maru* reports: Left Kobe at 5 p.m. on the 22nd instant, arrived Yokohama at 6 a.m. 24th instant. Experienced very strong N.E. winds and heavy sea throughout.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's *seal* and *label* guaranteeing *quality* and  
*measure*, and the *strength* also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bonny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

**MEDICAL TESTIMONY.**

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.  
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL CAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a ten-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

## THE POSTAL SERVICE.

ONLY forty years have elapsed since Mr. Rowland Hill's scheme for the improvement of the British postal system came into operation in the United Kingdom. Since then the organization has been copied in almost every one of its first details, and subsequently in the added improvements, by every civilized nation in the world. One of the surest indices of the beauty and perfectness of the modern postal plan drafted by the English reformer is the ease with which it adapts itself to the requirements of every nation, and the symmetry which it everywhere displays. It is now nearly nine years since Japan under skilled guidance furnished, at her own request, by the United States, introduced a general postal system on the western model into her territory, with the result that at this day she possesses control not only of the domestic but foreign branches of transmission of all kinds of correspondence, and has shown that the department entrusted with the work is in no respects inferior in the detail and ensemble of its constitution to those of the countries from which she first derived instruction in the matter. Probably not one foreign nation is in a better financial position than Japan in regard to the postal part of its administration.

About the first thing that meets the eye when looking at the eighth report of the Japanese Postmaster General is the statement of profits accruing to his department during the fiscal year which terminated on the 30th day of June, 1879. Revenues exceeded expenditures by Yen 122,978.08 or 14.9 per cent, a return which would probably satisfy most foreign firms doing business in the East. We are told that "Every account has shown a more favourable balance than was anticipated. The estimated revenues for the past year were Yen 870,000.00 while the actual receipts were Yen 949,347.01, an increase of Yen 79,347.01 over the estimates. The estimated expenditures

were Yen 799,952.00 while the actual disbursements were Yen 826,378.98 or Yen 26,426.98 more than the estimates. The increase of the revenues over those of the preceding year was Yen 138,198.57 or a little over 17 per cent, and Yen 255,245.09 or about 36.8 per cent, over those of the year ended the 30th day of the 6th month, 10th Year of Meiji (1877). A comparison of the expenditures with those of the preceding year shows an increase of Yen 85,819.75 or about 11.6 per cent, and Yen 57,162.51 or a little more than 7.4 per cent, compared with the expenditures of the year ended 30th day of the 6th month, 10th Year of Meiji (1877)." Within about Yen 5,000, the whole of the revenues were derived from the sale of postage stamps and cards, wrappers and envelopes, and money order fees, the small balance being contributed by box rents, transportation of closed British mails between this port and Shanghai, Savings Banks, and Yen 169 from miscellaneous sources. The future of the institution seems to be as full of promise as the past has exceeded anticipated results. The estimated revenues for the next fiscal year are Yen 1,050,000.00 which is Yen 100,642.99, or a little over 10.6 per cent, more than the actual revenues of the past year. At the same time, the estimated expenditures for the next fiscal year are Yen 1,050,000.00 which is Yen 923,621.02, or about 27.1 per cent, more than the actual outlay of the past year. The latter increase is for the purpose of extending postal routes, increasing the number and salaries of postal employes and for the erection of new Post Office buildings. In this connection confidence is expressed that, although the estimates for revenues and expenditures for the next fiscal year are equal in amount, the revenues will greatly exceed the expenditures, as has been the case in the past year. Reference is made to the past and present condition of the service to justify the prediction thus ventured upon.

The gross number of communications and parcels of all description forwarded through the postal department in the period under consideration was 55,775,206. Of these, domestic newspapers were 11,208,781, an increase of 2,587,624, or a little more than 16.5 per cent, over the number transmitted during the preceding year, and 8,831,175, being 52 per cent, over the number transmitted during the year ended 30th day of June 1877. This proof of the increasing circulation of newspapers; and the inference that may be drawn that the dissemination of knowledge among the masses is extending, are gratifying points to notice in connection with the report.

All the mail routes employed, in the domestic service, had an aggregate length of 36,052 English miles, showing an increase, though a comparatively small one, over the previous period. Such as it was however, the accretion was due to the opening of post routes to distant islands, and to and through mountainous districts, while the larger increase during the next preceding year was due to additional service upon post routes already established, New post offices to the number of 195 were opened between

July 1878 and June 1879. The same interval witnessed the foundation of 9 additional receiving agencies, 653 stamp agencies and 187 street letter boxes. The total number of these depots at the end of the fiscal year was, respectively, post offices 3,927: receiving agencies 163: stamp agencies 1,916: street letter boxes 1,483.

With regard to the department of foreign mails, which may now be said, in view of the approaching transfer of the French bureau, to be exclusively in Japanese hands, we note a few interesting particulars. Thus, the number of letters despatched from Japan to other countries was 170,869, being an increase of 15,179, or nearly 10 per cent, in excess of the number forwarded during the preceding year. A proportionate increase is noticeable in the number of newspapers and registered articles, while the advance in the number of postal cards was about 202.6 per cent. The increase in the number of letters from foreign parts over that received during the preceding year, is 16,889, or about 19 per cent. The number of newspapers received shows, on the other hand, a decrease of 18,987, or about 15.1 per cent, as compared with that received during the preceding period. His Excellency remarks that "the increase in the volume of international correspondence above noted is difficult of explanation, in view of the wide-spread and long continued commercial depression, the full effect of which has been felt in the East." As regards the native-born officials under his orders in this section, Mr. Mayeshima reports, with pleasure, that great progress has been made by them in the acquirement of a knowledge of the practical working of the bureau. "Much of the work of despatching and receiving mails is now performed by them, in the foreign sections of the post offices at Yokohama, Hiogo and Nagasaki in a manner entirely satisfactory; and such is their diligence and aptitude, that it will be quite possible, in my opinion, to relieve the foreign employés in the Hiogo and Nagasaki offices at the close of the present calendar year, and transfer the duties now performed by them to some of the more advanced of the Japanese officers acquainted with the work." The latter part of the change here suggested has been effected. The report adds that a reduction of the foreign staff in the Yokohama establishment can be made without injury to the service, which renders a trifle more inexplicable than before the contemplated transfer of a French employé to that very office. Considerable reduction in various items of expenditure is alluded to; and the future cost of working the department of foreign mails is said to be susceptible of further diminution. One economy we should be loath to see carried into excessive operation. In fact a portion of the prosperity of the department might well be bestowed in increasing, rather than curtailing, the sums expended upon the delivery of letters whether foreign or domestic. The carriers might be better remunerated than at present, with the laudable result of securing to the public a higher class of these servants, zealous and honest in view of the value paid for their services.

There is not much to dwell upon, in respect of the money order department, after noticing an increase of 22 per cent in the number, and 82.8 per cent in the value represented in the previous year. A decrease of 13.6 per cent in representative value is, however, recorded, as compared with the transactions of the next previous year; namely, that terminating in June, 1877. Savings Banks are evidently increasing in business and popularity. We read that the augmentation in the number of the deposits during the past year, over that of the preceding year, was 74,249, or 168.5 per cent, and the increase in the amount deposited was Yen 172,161.09, or 82.4 per cent. The

increase over the business of the year ended 80th day of the 6th month 1877, was 96,922, being 877.8 per cent, in the number of deposits, and Yen 324,635.55, being 574.9 per cent, in the amount deposited. The increase in interest paid to depositors, over the interest paid during the preceding year, was Yen 9,691.99, and over the interest paid during the year ended 80th day of the 6th month 1877, Yen 13,822.14. The increase in the number of depositors at the close of the year was 11,094, as compared with the number at the close of the preceding year, and 17,059, as compared with the number at the close of the year ended 80th day of the 6th month, 1877. The number of Post Office Savings Banks established was 805, and 2 were discontinued during the year, making the total number at the close of the year 595. The whole staff of all the postal departments consisted of 7,504 officials (including ten foreigners) of all ranks.

Most of the remainder of the report consists of statements of detail in the management, and memoranda of the few casualties which have occurred, such as losses of letters. Men have been rewarded for faithful service in face of such peril as would seem to show that the roads of the empire are not everywhere as safe as they are in this immediate vicinity. The families of two letter-carriers, who were killed in the discharge of their duty, have received awards of money. Account is given of the work of the Marine Office, the greater part of whose revenues is derived from the annual instalments paid by the Mitsu Bishi Company. This latter enterprise received a subsidy of Yen 250,000, and an allowance of Yen 15,000 for the maintenance of the Marine School. The examination of officers is part of the work of the office in question. The number of masters, mates and engineers examined during the past year, was 219. Of these, 150, of whom 144 were Japanese and 6 were foreigners, obtained certificates; and 69, of whom 60 were Japanese and 9 were foreigners, failed to pass examination. The issue or renewal of licenses to pilots and other duties done by the board are enumerated. Tables are given showing the casualties on the coasts of Japan during the whole of 1878. The number of vessels wrecked and missing in that year (including both those of home and foreign form, as also four foreign owned vessels) was 527, and the number of persons drowned, injured, or missing (including three foreigners) was 352.

It is again our task to congratulate the Chief of the department upon the efficiency which has been arrived at, and to express confidence that it will not only be maintained, but that the usefulness of the organization will continue to receive annual development.

#### JAPAN AND THE U. S. PRESIDENT'S MESSAGE.

THE recent message of the President to the Congress of the United States refers to several subjects of much interest to politicians in the Far East. Mr. Hayes expresses his belief that the action of the United States, in regard to the revision of its treaty with Japan, will now be followed by the other powers having treaties with this country; he invites the attention of Congress to the indemnity funds received from China and Japan, suggesting that if any portion of these funds be justly due to American citizens it should be given to them at once, and that the balance should be returned, in some form, "to the nations, to whom it equitably belongs." He also mentions that the United States Government has taken measures to inform the Chinese and Japanese Governments of its readiness to extend its good offices in the Loochoo question, "for the maintenance of peace, if they shall mutually

deem it desirable and find it practicable to avail themselves of the proffer."

Respecting the first of these points; namely, the revision of the treaties on the basis of the American treaty of 1878 between Japan and America, in which the right of the former to control her own tariffs is admitted, the President doubtless was not informed of the change of front in this matter on the part of the Japanese Government. He cannot have known of the proposed tariff recently published here, in which, although the duties are in nearly every case higher than those in the old Treaties, yet the general principle underlying both is the same. It would be interesting to know how the American Government will look on this changed aspect of the question. Nearly two years ago it acknowledged by a solemn treaty—negotiated, it is presumed, at the request of this country—certain rights of Japan *vis-à-vis* foreign nations; and now this agreement is to be wholly disregarded, and the revision of the treaties is to proceed on a basis opposed to the rights therein acknowledged.

The subject of indemnities from China and Japan, more especially that known as the Shimonoseki indemnity, has frequently been referred to in Presidential messages. General Grant ten years ago suggested that, on account of the crisis through which Japan had passed, and the advances she was making, the balance of this indemnity then due should be remitted. When Iwakura's embassy was in London, the same suggestion was made to the English Government, and the ambassadors, as a reason for granting the request, pointed to the fact that a system of lighting the coast of Japan was being inaugurated, which would be of the greatest benefit to foreign vessels and for which they paid nothing. Lord Granville, however, made certain other demands, which the Japanese felt they could not concede at the time, and the balance of the indemnity had to be paid. The American Government accordingly also accepted the instalment due to them, and the money remained, and still remains, in the Treasury at Washington. In 1874, General Grant again returned to the subject. He said:—"Having on previous occasions submitted to the consideration of Congress the propriety of the release of the Japanese Government from the further payment of the indemnity under the Convention of October 22nd, 1864, and as no action had been taken thereon, it became my duty to regard the obligations of the Convention as in force; and as the other powers interested had received their portion of the indemnity in full, the Minister of the United States in Japan has, on behalf of this Government, received the remainder of the amount due to the United States under the Convention of Shimonoseki. I submit the propriety of applying the income of a part if not the whole of this fund to education in the Japanese language of a number of young men to be under obligations to serve the Government for a specified time as interpreters at the Legation and Consulates in Japan. A limited number of Japanese youths might at the same time be educated in our own vernacular, and mutual benefits would result to both Governments." Again, in 1877, Senator Wallace, of the Committee on Foreign Affairs, drafted a bill for the return to Japan of the original amount of the indemnity, the United States keeping the interest which had accrued on it. This absurd and illogical attempt to deal with the matter deservedly came to naught. These various suggestions for dealing with this large sum of money, show that the American people are not quite easy in their conscience with regard to the Shimonoseki indemnity; and now Mr. Hayes proposes to settle the question for ever. If any part of the fund be

properly due to American citizens it should be paid, and the balance, together with its accumulated interest, returned to the nation to which it equitably belongs. It will be noticed with interest that the head of the administration of the United States here distinctly and formally declares that, in equity, principal and interest belong to Japan.

The President's remarks touching the Loochoo question are very cautiously worded. But it is very doubtful whether this country, at least, will "deem it desirable" or "find it practicable to avail itself of the offer." That the United States Government, under the impression that war may possibly ensue, should tender its good office for the maintenance of peace, was only right and becoming, but they have probably learned by this time that the possibility of war between Japan and China is a remote one, and that, should it ever occur, Loochoo will not be the cause of the quarrel. And it cannot be doubted that the advice of Mr. Hayes' distinguished predecessor, as well as of other warm and disinterested friends of Japan, has had much effect in soothing the irritated feelings of both countries on this question.

#### THE MILITARY POWER OF CHINA.

##### II.

**B**ETWEEN 1723 and 1736 the then reigning Emperor of China established a kind of guard, whose duty it was to protect the Imperial residences and person, as well as the persons of all members of the Imperial family, and to accompany them when they went abroad. At the head of the whole army is the ministry of war, which especially deals with the troops of the guard; for it is no part of its duty to superintend the bannermen and other troops in Peking and the summer palace. Its power over the provincial army, also, is almost entirely nominal. The minister is a civilian, and so as a rule, are his chief assistants, the majority being Manchu. He receives ordinary reports from all commanding officers of the land and sea forces, from the governors-general and governors, in their capacity of military authorities, from the officials responsible for the transport of grain and the safety of embankments, and from those who are entrusted with the ruling of the nomad and only half subjugated tribes. In order to carry out these numerous and partly heterogeneous duties, this office, which we can hardly call a ministry of war in the European sense of the word, is divided into four bureaux, and these are again subdivided into smaller departments. There are altogether, employed in this ministry, according to the redbook, 197 individuals of whom only about a third are Chinese.

In the guard at Peking the three kinds of weapons are represented. The infantry consists of four battalions of 875 men each, who were up to a short time since armed with muzzle-loaders, and partly exercised according to the principles of European tactics; for some years since four hundred men were sent to Tientsin to be drilled there by foreign instructors, with the ultimate object of communicating the knowledge thus gained to their comrades in the capital; of one battalion of cadets, five hundred strong, carrying bows, arrows, spears and various other old Chinese weapons; of a battalion of five hundred with small matchlocks; of two battalions, of five hundred men each, armed with long matchlocks, called gingsals, of which every two men receive one, (this enormous weapon being six feet long, and when about to be discharged laid on the shoulder of the front man, and fired by the second); of a corps of 1,200 men, armed with swords and shields, and of

one of 200 men bearing Chinese weapons, who form the body guard of the first Imperial prince.

The cavalry is composed of two divisions of 1,000 men each, armed with carbines and chassepots, and of three squadrons bearing matchlocks. The artillery has twenty-four Russian field-pieces, with only two horses and six men to each. There are besides 1,000 artillerymen who have small iron cannon with calibres varying from four ounces to a pound, which are fired from an embankment or wall. Outside Peking, chiefly in the neighbourhood of the summer palace, there are two battalions of infantry, of 875 men each, armed with Russian muzzle-loaders, 1,600 men with large matchlocks, 2,000 with matchlocks and short swords, one battery with 125 European trained artillerymen and four field guns; and one howitzer battery, also with four guns and 125 men. Hence the troops in and around Peking amount to 10,250 infantry, 5,500 cavalry, and 1,750 artillery with 23 field guns—or, in all, 17,500 men. In addition to this, but not including the banner-men already mentioned, two special corps called the van and flank divisions, 15,000 strong, are found, whose special duty it is to guard the Imperial residence, and act as body guards to the Emperor. Finally, we must mention a division of infantry 20,000 strong, whose duty it is to keep order in the capital and neighbouring towns, and hence form a sort of gendarmerie.

These data all come from trustworthy sources, and are comparatively modern. It is possible, however, that some improvements may have recently been introduced into the forces here mentioned, especially in the matter of drill and arms, of which we have no information; but, speaking broadly, no essential change has been made in the Chinese army, so far as the banner-men and the Imperial Guard are concerned.

Besides the forces above mentioned, there is still a third, composed entirely of Chinese—the Green Banner Army—which, at least in the present century, has done almost all the fighting. Each of the eighteen provinces of the Empire has an army corps of its own, consisting of five divisions. One division forms five camps, each of which has from two to five stations. In positions of strategic or political importance, these latter are chosen with care, and are fortified. The governors-general, although civil officials, are placed at the head of the troops stationed in their provinces; except when a special military commission in cases of more than ordinary importance takes over their military duties. This was the case, for instance, in 1874 during the complications with Japan, when a commission of this nature was appointed for the defence of Formosa and the coasts, as well as for the administration of the Foochow Arsenal. They have the initiative in all military matters, and recommend to the ministry of war the promotion, &c., of officers. The governor-general and governor, in their capacity of chief military authorities, are aided by a chief of the staff, and two directors of the post-relays service. Next to these comes the Tartar general who, as already mentioned, commands the banner-men, but has also the right to communicate orders to the Chinese contingent. The total land force is under the superintendence of a general, who is also inspector of the military districts, which do not correspond with the political divisions of the provinces. General inspections are ordered every three years by the war minister through the governors. These are instructed to inquire carefully into and report upon all cases of negligence; but as a general rule, the governors declare themselves satisfied. Every camp and every station should have a certain number of troops, but it is rarely that even an approach is made to

this. Not only does the money of those absent go into the pocket of the authorities, but also many buy permission to engage in other occupations. Add to this that many even of those in the service are employed as police, couriers or tax-collectors, and it will be seen that but few remain for military service, and even these, as their pay is neither punctual nor sufficient, are forced to extort shelter from the inhabitants.

The total strength of this third army of China is said to be 651,677 men and 7,157 officers, on paper. From what has already been said, however, we can form an idea of the proportion between a Chinese army on paper, and a Chinese army in reality. The only troops that can in any degree be regarded as capable of mobilization and fighting are those stationed at Tientsin, Canton, Foochow and Shanghai, all of whom are armed with modern weapons, and instructed in the principles of European tactics, but the number is hardly greater than 50,000. A year ago, when the Kashgar question was under discussion, this force was estimated at 180,000 men, but engagements and losses of all kinds have reduced them largely, and subsequent recruitings in Shansi, Sze-chuen, Hunan and Hupeh, have not been very favourable. We are not in possession of any reliable information respecting the troops employed in the recovery of Kuldja. The other forces of the Green Banner army, still carry spears, matchlocks, and other antiquated Chinese weapons. Silk banners, however, are articles with which every Chinese army is lavishly provided. About every tenth soldier carries a long bamboo lance, with a small gay-coloured piece of silk at the end, and the general effect of the unfurling of these banners at a great review is very pleasing. Of the officers about ten per cent, are chosen from among the banner-men, probably with the object of keeping this body loyal to the present dynasty.

Finally, there is a kind of irregular volunteer corps, yecept "the braves," who are called together when the regular troops are employed in putting down a revolution or the like. Naturally they lack in a still higher degree, than the men of the standing army, skill in the use of their weapons, which are all old and frequently useless, and knowledge of drill. When the object for which they assembled is accomplished, they are promptly disbanded.

A WRITER in the London *Economist* argues that, though a revival of trade may be looked for with some confidence, it is not likely to be rapid, inasmuch as several causes exist to counteract the possibilities of swift expansion. First, there is the great length of time during which depression has lasted. What recovery is to be already noticed cannot be compared to that which occurred after the panic in 1866, after which there was dullness for a couple of years at most, whereas now business has been inactive since 1874. Commercial misfortune has been "a long, slow drag, not a sudden and sharp reverse. The commercial difficulties, failures, and fall in prices which marked 1874 became still more severe in 1875; the next year, 1876, presented no difference; and the time from that date is still fresh in our memories. No doubt all classes have not suffered alike during the five or six years which have worn generally so sad a complexion. No doubt, too, the savings of some sections of the community have gone on slowly accumulating during the whole time; but the current to many, if not to most, has been in the wrong direction. We cannot expect any revival, after so severe and long-continued a strain to be rapid; we can scarcely expect it even to be continuous. Eddies to and fro must be looked for before the stream

once more rises to anything like its former force." In the second place, last year's bad harvest must be taken into serious account; while the increasing dearth of money will also lessen the purchasing power of European communities. On the other hand, in certain enterprises there are indications of increased activity which, however, must not be too greedily believed in as tests of permanent enlivenment. One instance may be cited. One of the leading houses in the fur trade recently sold about 80,000 fur seal skins at an average of 84s. per skin, which represents a sum of 324,000 guineas. This, it is stated, is a material advance on previous prices, and the highest average ever before obtained. "Although this statement is strictly accurate it may easily lead to an exaggerated idea as to the condition of the fur trade at the present moment. As a matter of fact, it is looking healthy, and prices are improving all round, but the advance in seals is due partly to the increased demand for them. The Governor and Committee of the Hudson's Bay Company announce that in their forthcoming report to the shareholders they do not propose to recommend the payment of an interim dividend." Anyhow, the fur trade is mainly a lucrative one; and apart from the general condition of trade) Japanese may find a hint, here, to protect and encourage the constant production of valuable furs in the northern territory.

IN our advertising columns will be found the statement of the First National Bank of Japan, including the thirteenth semi-annual report of the institution, which has now either branches, sub-branches, or agencies for exchange, in every town or place of importance throughout the empire and its dependencies, and foreign agencies at Hongkong and Shanghai. The flourishing condition which the organization has attained under the able direction of Mr. Shibusawa Yeichi, the managing director, may best be seen by direct reference to the balance sheet. There we find that the reserve fund has been increased from yen 225,000 to yen 275,000, by the transfer, in the half-year, of yen 50,000 from the profit and loss account. After deducting from the gains this sum; an amount of yen 86,371 for one loss incurred; an allowance for handsome bonuses to officers; the maintenance of the special reserve fund for bad or questionable debts at its limit of yen 80,000; and the carrying forward to the current account of yen 34,994, there remains for partition among the shareholders, yen 120,000, being a dividend of eight per cent for the six months, or sixteen per cent per annum. Such a result may well excite the envy of some European banking establishments of larger business and much higher pretension.

WE have received from Mr. A. Harmand, Editor of the *Courrier du Japon*, a work entitled "The expedition of the *Vega*, and discovery of a north-east passage." Its contents have already appeared in the columns of our contemporary, into which they were translated, by Mr. Harmand, from Italian notes furnished by one of the explorers. The matter is of a highly interesting nature; and should find favor with readers beyond whose reach or inclination the voluminous and highly scientific volume promised by the Chief of the party may prove.

THE vast development of which the modern postal system is capable may well be realized by examining some of the results obtained in Great Britain. According to the annual report of the British Postmaster-General for 1876, there were then 896 head post-offices in the United Kingdom, 12,551

branch offices or receiving houses, and about 10,724 road or pillar letter-boxes; making more than 24,000 receptacles for letters, at least 19,000 more than existed under the former system. Above 1,018 millions of letters passed through the Post-office in 1876—more than twice as many as in 1861, and thirteen times as many as in 1839, the last year of the dear postage. In 1876, the gross revenue of the Post-office, exclusive of that yielded by the telegraphs was £6,017,000; the expenditure, also excluding the telegraphic service, £4,170,859; the net revenue, £1,947,141. The number of money orders transmitted within the United Kingdom, in 1875, was 17,822,921; the amount of money transmitted being £27,516,698. The postal service in the three kingdoms is under the immediate control of the Postmaster-General, assisted by the general secretary of the post office in London. There are also chief officers in Edinburgh and Dublin, with secretarial and other departmental staffs. The Postmaster-General is a member of the Privy Council, and sometimes a Cabinet Minister. He has a salary of £2,500, and is the only officer connected with the department who leaves office on a change of government. The secretary is his responsible adviser, and has a salary of £2,000. The receiver and accountant-general keeps account of the money received by each department, receiving remittances from branch and provincial offices, and taking charge of the payment of all salaries, pensions, and items of current expenditure. The surveyors are the connecting link between the metropolitan and provincial offices, each postmaster, with some exceptions, being under the superintendence of the surveyor of his district. In 1876, the staff of officers employed in the post-offices, including those partly engaged in ordinary postal duties and partly in telegraph work, was 88,370; and there were, besides, about 11,650 engaged exclusively in telegraph work.

IT appears that a curious and valuable property has been found to exist in Asiatic vines—no less a virtue than that of ability to resist the ravages of *phylloxera*. Plants from Asia, cultivated for some years by Mr. Lavallée, in his large nurseries at Legré, France, seem to have demonstrated the fact that they are always steadily, and perhaps purposely, avoided by the insect. Some cultivators have objected to the eastern vines on the merely sentimental ground that their appearance is not so pleasing, as is that of European trees of the same species. On the other hand we read that "Madame Ponset, the owner of the great vineyards of the Lande de Pomerol, accepted his presents and counsels. She planted three species of Asiatic vines—the *ampelopsis aconitifolia* of Northern China, and the *ritis pterophylla* and *ritis inconstans* of Japan—in the immediate neighbourhood of plants plighted with the insect. Whilst the devastations of the *phylloxera* went on all around, the three Asiatic immigrants thrived prosperously, and were externally unaffected. Madame Ponset, according to her adviser's counsel, next had the roots probed by three experts, all of whom reported that the vines were perfectly sound and free from the suspicious knotty swelling which is a symptom of the presence and operations of the *phylloxera*. M. Lavallée now proposes to graft the various French vines upon Chinese and Japanese roots." The result of these experiments should be carefully noted by Japanese arboriculturists, as a European demand will very probably arise for scions of their vines.

IN our weekly issue of the 17th instant, we called attention to the urgent necessity which exists for the establishment of the office of a harbor master for this port, and the enactment of such regulations for the control of shipping as obtain in maritime cities in other parts of the world. Our remarks are fully borne out by a memorial from captains of

merchant vessels now in the bay, addressed to the Superintendent of the Imperial Marine Department, asking for some alteration in the system, or want of system, allowed to prevail in the laying and maintenance of mooring buoys.

To the Superintendent

Imperial Marine Department,  
Tokai.

Sir,—We the undersigned, commanders of vessels trading to Yokohama, most respectfully draw your attention to an evil connected with the harbour accommodations here—one which we feel certain only needs to be brought to your notice in order to receive prompt attention.

The harbour space here is much cramped by the number of "mooring buoys" scattered about the harbour; and in taking up our anchorages we have to leave these buoys a "clear berth." This would not be quite so bad if there were at all times the steamer moored to them. But, it not unfrequently happens that these buoys are not used for weeks, and not being lit up at night they become dangerous to small craft, and perilous to life, causing damage from time to time like so many small rocks.

We have to request that you will cause this matter to be brought before the Imperial Government, as we believe that its permission has never been asked or given, or the public convenience been considered in any way.

We particularly wish to direct your attention to the utter want of system in the position and limit to the number of such buoys, and would suggest

1st.—That some well defined system and judgment may be exercised by the Imperial Government in regard to the position and number of such moorings.

2nd.—That in the event of the mooring buoys not being used or occupied by the vessels having permission from the Imperial Government, then any vessel taking up anchorage may not be required to allow such unoccupied buoy moorings a "clear berth" or "berthless."

We believe that by correcting this abuse you will largely extend the port accommodations of Yokohama, and have the honour to be,

Sir,

Very respectfully Yours.

Yokohama, Japan, 31st December, 1879.

WE have received a copy of the first volume of "Young Japan," by Mr. John R. Black, an author whose name is identified with the history of journalism in the Far East. We hope to have an early opportunity of reviewing the work.

LONDON papers state that a telegram has been received announcing that Admiral Duberquois, in command of the French squadron in Chinese waters, had been ordered to take possession of Tonquin. Our readers are referred to an Editorial note in the *Mail* of last Saturday, wherein rumours are alluded to of the possibility of a French protectorate being established over that country and the neighboring populations of Laos, Annam, and the Indo-Chinese peninsula. It appears that grounds for procedure on the part of the Government of the Republic will not be wanting. The *Indépendant de Saigon* of the 1st instant asserts that news has been received from Tonquin, announcing the assassination of Mr. Francelli, formerly a member of Dupuis's expedition, who had settled there and was intrusted by the Annamite Government with the com-

mand of one of its gunboats. Reports current in Saigon say that tacit assent was accorded to, if even positive orders were not given for, the commission of the outrage, by the authorities at Hué, who may have been glad of an opportunity to get rid of a foreign servant. The French colonial journal continues: "However this may be, let us hope that complete light will be thrown upon the murder, and that if, as is asserted, the Hué government had any part in the affair, the death of a Frenchman will prove the drop which shall cause the vase to overflow." It is added that the war vessel *Antelope* was to leave for Tonquin in a few days; and a hope was expressed that a few companies of troops would be despatched on board, in order to sustain, if necessary, any demands that might be made.

THE *London and China Express*, in its issue of the 5th of December, hazarded the idea that the profits derived from the Japanese Imperial Mint at Osaka are being hoarded with a view to the ultimate liquidation of the foreign debts of this country. A correspondent in the ensuing issue of the same paper, signing himself "A well-wisher of Japan," has swallowed the fallacy. Of course readers on the spot are aware that the surplus income of the Mint is handed over to the Finance Department in the same way as any other revenue, and applied to needs, as they arise, like any other Government funds appearing in the estimates. Again, people in Japan, and one would think in London, are not all ignorant that the interest on the foreign debt of this country is regularly paid, when due, by the London agents, and that the whole capital is being reimbursed in instalments of fixed amount at annual intervals, public drawings deciding the numbers of the individual bonds to be paid off.

IN a region where decapitation is the most ordinary method by which the death sentence is inflicted, it may be interesting to learn that experiments recently made in France, on the remains of a convicted and beheaded criminal, seem practically to set at rest the question whether or not life and sensibility to pain exist after execution. The *Figaro* sent a special reporter to witness the vengeance of the law being satisfied on an atrocious murderer named Prunier. The moment the guillotine had done its work the body and head were placed in a basket and taken to the cemetery, where Dr. Evrard (who had applied for and obtained the body of the criminal for experimental purposes) and several other medical men were ready in waiting. The subsequent proceedings are thus narrated by the representative of the *Figaro* :—

We followed with deep interest, for besides their purely scientific character, they related to a question so often discussed—does life survive decapitation? Five minutes have elapsed from the moment when the head was separated from trunk, and it was placed on a stone in the open air, in front of the little chapel of the cemetery. Comparatively little blood had flowed, and some drops were running from the carotid artery. Although the neck was very short the cutting had been very clean. Pinched, stuck with needles, submitted to the most painful experiments, the head never moved; the face remained unaltered, not a muscle quivered. The left ear was completely calcined in the flame of a candle without obtaining the smallest appearance of sensibility. Then they divided the skin of the head into four parts, and using hammer, scalpel, and the saw, they took away the upper portion of the skull and withdrew the brain. This occupied ten minutes. Immediately on being submitted to an electric battery the remains of the head at once displayed nervous contraction—the teeth chattered, the mouth shut, the eye and the cheek made those grimaces which are observed in sleeping people when tickled with a feather. With the body the same result was obtained. It was absolutely without feeling. It was opened, the heart, lungs, and intestines then removed, and then, on being placed in contact with the electric battery, the arms and legs instantly moved. At this moment Dr.

Evvard asked me what o'clock it was, and it appeared that forty minutes had elapsed from the time of the execution. Lastly came the concluding experiment. Under the action of the battery, a shred of hanging flesh, displayed by the operation, stood on end, oscillated, and quickly placed itself back on the spot from which it had been cut."

The conclusion arrived at by the doctors was that the movements observed in the bodies of persons guillotined on being subjected to the action of electricity are absolutely mechanical, and display neither any remainder of life nor of sensation. The experiment is to be made the subject of a memoir, which will shortly be presented to the Academy of Medicine by M. Evvard, and in which he will demonstrate that death by decapitation is instantaneous.

SOME short time since one of the journals published in Shanghai indulged in a characteristic sneer about the trade of Yokohama. Commercial affairs over the world have not been so brisk for some considerable time past as they might have been and appear likely to be. We have yet to learn that Shanghai was any exception to the general depression not only throughout the East but also in Europe and America. However, in Japan we have one slight consolation, viz:—that there have been no such disclosures of commercial morality here as have, from time to time, garnished the columns of the newspapers in the "model settlement." The following extract from the report of a case which appeared in the *North China Herald* of the 22nd instant, speaks for itself and requires no comment from us; we will only preface it by explaining that the action was brought by a Chinese comprador against the defendant to recover Tls. 600 on a promissory note.

"The defendant was then re-called and deposed—On the 9th April, 1877, the plaintiff did not lend me the sum of Tls. 500. Sometime about that date I did receive a sum of Tls. 600 from the plaintiff, for which I gave him no acknowledgment whatever. I did not give him a document such as he has described, an undertaking to provide him with 500 Chinese bonds for the consideration of Tls. 500. The Tls. 500 I received for a private transaction.

Mr. Wainwright said it would be better for him to give the details of it.

Defendant continued—At the time, acting on behalf of Messrs. —, I was negotiating a loan between the Chinese Government and some friends of mine in England. The loan fell through so far as Messrs. — were concerned by the thick-headed stupidity of the plaintiff.

His Lordship told the defendant not to use such language. It would not assist him in the least. He must state facts.

Defendant continued.—This was a fact. Subsequently I and others were successful in carrying the loan through. In April 1877, Messrs. — had it in hand. The Tls. 500 were paid to me by the plaintiff as expenses for carrying out the loan. I received it and paid it out the same day. None of it came to me. It was paid to a Chinaman, a third party, as a commission or bribe—bribery and corruption, or whatever you like to call it—to assist us in negotiating the loan on behalf of Messrs. —. It did not pass through my books. It was given to me by the plaintiff to hand to the Chinaman, so that he might not appear in the transaction—a blind of the kind that is customary in China every day. It was a cash transaction, and I gave plaintiff no acknowledgment for the money. Plaintiff never applied to me to repay him, and the promissory note I gave him for Tls. 600 had nothing whatever to do with the Tls. 500 paid to me as I have just described. I believe it was paid to me by a native bank order.

The Lordship said that was a story which the defendant, as a commercial man, seemed to be ashamed of.

Defendant answered in the negative, and said it was a thing that was done constantly in dealings with the Chinese.

His Lordship meant to convey the idea that it was a story the defendant would not care to have attached to him. Was it regular or irregular?

Defendant replied that from his Lordship's point of view it would perhaps be considered irregular. From his point of view it was not, but a common everyday custom.

In answer to further questions by his Lordship, defendant said the irregularity was not such as to impress the transaction upon his memory.

Mr. Wainwright remarked that it was a common custom in dealing with the Chinese officials—palm oil used to facilitate business, to make things move along more smoothly and more quickly."

The result of the action was a verdict for plaintiff, so that the financial agent of the Chinese Government was evidently discredited by His Lordship.

#### JAPANESE POTTERY.\*

TO form a sound judgment upon the Ceramic Art of any country, two distinct faculties are required, which are rarely possessed in common by amateur collectors. A thorough knowledge of the processes of manufacture, and a true appreciation of the difficulties of fabrication, need to be supplemented by a refined and educated taste, and a perfect acquaintance with the principles of decorative art. It is quite possible for results, entailing the utmost skill and the practice of years, to be entirely devoid of artistic effect, or even the merit of suitability to a required purpose. On the other hand, the prettiest shapes and embellishments are often the most easily produced. Many prejudices are cherished by professed admirers of *faisance* which bias and pervert the justice of their choice. Putting altogether upon one side the dealer whose selection is guided only by the consideration of what will best please wealthy buyers, and procure the quickest payment, we notice only those who take up the subject as an intellectual pleasure and pursuit. An article may be valued on account of its rarity as a relic of ancient history, and also, with less reason, from the fact that but few of its kind were produced, and that the process, perhaps given up at the time as a failure, has been afterwards forgotten.

There is the collector well versed in the artificial value attached to certain names and dates, well practised in detecting signs of reputed mechanical skill, in such matters as thickness of shell, evenness of colour, or size of crackle; and prizing the merit of purity above all the beauties of a real work of art. There is, moreover, the collector who is an artist by birth or education, and whose choice is regulated merely by the consideration of real æsthetic worth. He admits old and new alike into his emporium, preferring the antique only inasmuch as it possesses merits of design violated in later days. The former tendency, carried as it often is to ridiculous excess, may be well likened to the admiration for the extravagant execution of a rapid pianist, compared with the passion for less showy and laboured but far more artistic music.

The object of all ornamentation applied to clay fabrics is to add beauty to their general effect without detracting from their fitness for a definite purpose. It is difficult to see how an uninterrupted monotony of colour, or uniformity of cracks in a glaze, can be more beautiful than varied combinations of lines, or than the changing harmony of colour, which dissolves from shade into shade, like the plumage of some tropical bird. Yet some of these effects are easy and accidental and are consequently prized much less by the orthodox than a tamer result denoting more care and mechanical skill. The fact of difficulties surmounted simply because they are difficulties gives to such products a fictitious worth. "A work of art may represent skill alone. Add, to equal skill, the second essential, beauty, and the work will rank higher in art. Invest an object for use with both skill and beauty and it is raised still higher." To form however a just appreciation of the excellencies of Chinese and Japanese pottery and porcelain, it is necessary to consider it from every point of view, and without depreciating the value of any kind of knowledge of the subject, we wish only to shew how undue weight is often given to trivialities. The student of industrial art in this country must unquestionably bring to his task a familiarity with art generally, and with corresponding manufactures among other nations. More lessons, then, can be learnt about Japanese pottery from a work treating exhaustively the different forms which ceramics have assumed.

\* The Ceramic Art. A compendium of the History and Manufacture of Pottery and Porcelain. By Jennie J. Young. New York, Harper and Bros. 1879.

ed in all parts of the world, and in the various stages of its civilization, than from a more elaborate and less comprehensive treatise confined to this country alone. The authoress of the volume before us, shews a thorough acquaintance with the materials, processes, and styles of ornamentation, employed by the potter among various peoples. Several chapters are devoted to the explanation of technical terms, and to the chemical analyses and classification of all kinds of porcelain. We confess surprise at a work which is so comprehensive in range, exhibiting such minute information upon the details of preparation and manufacture in Japan, unequalled, in completeness, by any single volume confined to the fabrics of Dai Nippon alone. In such juxtaposition it is valuable to be able to compare them, and to comprehend their intrinsic merits. Many points of similarity are noticed between the Ceramic Art of Persia, China, Corea, and Japan, notable alike for the rich and tasteful employment of colour which distinguishes Oriental from Western nations.

"These are branches of the arts which the Greeks either did not study, or studied without success. They give little evidence of having been able to appreciate colour or to understand its uses. . . . They attained to a certain insurpassable elegance in shape, and the beautiful outlines of their human figure ornamentation can at times hardly be sufficiently admired; but their colouring was purely conventional and its application but little understood. . . . The Orientals went to the opposite extreme. They delighted in bright and gorgeous decoration to an extent, that, but for their many intensely realistic works, would lead to the belief that the production of certain effects, in colour, was the highest object of their artists." Again the same writer says:—"On the one hand are the Greeks pursuing beauty of form with assiduity and marked success; on the other are the Orientals occupying themselves with mechanical skill and the beauty resulting from colour."

A close connection undoubtedly exists between the manufactures of China and Japan. So great is this in some cases as to have led the two to be confounded. Japan's first efforts in the potter's art were instigated by China, and the early processes were entirely learnt from that country. "Japanese Art is of Chinese origin but was modified as it developed. It adapted itself to Japanese tastes and to the ideas of a people quick to imitate but possessing a marked national individuality upon which to modify its imitations." It must be remembered that Japan received its religion from China and with it, its mythology and its symbols. The ancient historical events of the Celestial empire were drawn from, for subjects of decoration, by the neighbouring islanders, who regarded its ancient lore with the same reverence as is shewn by us for the antiquities of Greece. The painters of this country, in depicting such subjects, avoided as far as possible unnecessary anachronism. Rembrandt painting a *Last Supper* represented a group of feasting Dutchmen in the garb of his time, and the Saints and Apostles of the early schools of painting were shown in the apparel of Italian peasants of the fifteenth century. But what has helped us to confuse Japanese and Chinese pictures upon porcelain is that the delineator has tried, so far as lay in his power, to present his characters in the dress and appearance of the times and the country intended. Bearing in mind these and similar considerations it will be found that Japan has always shown great individual skill and originality, such as could be evinced by no mere copyist. So far in fact was all the borrowing or imitation from being on the side of the smaller kingdom, that we read—"The Japanese are said to have gone to Kin-teh-chin, even in early times, to buy porcelain. According to Dubalde, the Chinese repaid the compliment by loading their vessels with Japanese porcelain on returning from their country. This is corroborated by the missionaries at Peking, who state that the people there highly prized the Japanese porcelain, which was in consequence both rare and dear. They even used it in preference to their own in making presents to the emperor and grandees. De Terc states that, when the Emperor wished to send a present of porcelain to Peter the Great, he chose that of Japan, where, says the writer, the people surpass those of China in all the arts and industries. We know, moreover, that the Chinese have borrowed the designs of the Japanese, and that

the Japanese have borrowed those of China." A great difference exists between the character of landscape as used by the decorators of the two countries; and in this point as in others the Japanese artist has shown his selection of nature, as he saw it around him, for his master, to the rejection of the formalisms of his early teacher. By him nature is more closely followed, and his ornamentation is more telling and less profuse.

The permanent nature of painting applied to ceramics, as compared with the ephemeral nature of pigments in many valuable pictures, is a point not to be lost sight of in giving to the art of pottery its true place among the fine arts. The drawings of the Greeks upon their vases alone are sufficient to prove them to have been the greatest artists of the human form that the world has ever produced. Apart from their skill in delineation and composition of designs, we gather from these vessels much of our knowledge of their ancient costumes, customs, musical instruments, ceremonies and utensils. Save the discovery of two cities destroyed, and at the same time miraculously preserved for centuries, owing to the sudden eruption of Vesuvius, near the commencement of the Christian era, we have very few memorials of the painter's art among the ancients, except the pottery exhumed from their tombs. It is only, however, when such arts have assumed a certain degree of perfection that they are valuable as indicating peculiarities of civilization sufficient to prove intercourse, between or a common origin for, nations. The book before us may help to enlighten those who desire to found theories for the origin of the people of this and other countries on the remains of rude and primitive pottery. Useful as certain forms of conventional ornament, representations of natural objects, or architectural embellishments may be in enabling us to trace the connection between different nations, the meaningless scratches, zig-zags and lozenges which are found in all early art, like the scribbles of a groping infant, give us no clue whatever on which to fasten any conclusions of origin. Such primitive forms of ornamentation (if it can be called ornament) as are found in North American pottery, are found alike in Assyrian, early Greek, Mexican and Aino specimens. When art has attained to a system requiring a peculiar and thoughtful application of principles of design, such as must exhibit the individuality of the creator, we may then find in resemblances a sign of connection: but to found reasoning upon formless scratches is as if we should think to trace a common origin between the English and the Japanese, because the infants of both countries cry for the moon.

A point not to be lost sight of is the modification requisite in painting applied to decorative purposes. In the understanding of the decorative principles, as contrasted with the pictorial principles, of painting, lies the superiority of mediæval and Eastern industrial art over that of modern times. In the neglect of these laws many of the most noted modern European ceramics have ignominiously failed to be excellent. One of the greatest examples of failure is in the Sèvres porcelain so much prized by collectors. Of this *faience*, tea sets valued at \$15,000 are mentioned as being in the royal collection in England; while a vase sent by Napoleon to the King of Etruria is said to have been worth about \$60,000. The shapes of the old Sèvres porcelains are acknowledged by all to be ugly in the extreme. Besides this, the system of ornamentation applied to their surfaces violates all the ideas of sense of suitability. A medallion in the centre of one side generally represents some miniature landscape which adds nothing to the effect of the vessel being rendered dirty and undecorative by the addition of shadows and attempts at aerial perspective. Again, the works of Paliessy give another example of undaunted perseverance combined with mechanical skill, but applied without the simplest regard for suitability or beauty of effect which was so well studied and understood by the orientals. Any one who has visited the Louvre will be able to recall to mind those heavy shapeless dishes of the great potter, overloaded with representations in relief, of snakes, lizards, frogs, snails and all things that creep, heaped pell-mell upon the surface. There is here the most careful realistic imitation of nature in form and colour, but complete ignorance of decoration and destruction of utility.

In speaking on this subject Miss Young says:

"They made the mistake of thinking that the artists work is independent of the surface on which it appears, whereas perspective is altered and sometimes destroyed by the curvature of a vase, and the brilliancy of the enamel. The artists of the Orient, on the other hand, either restrict themselves to subjects which can be treated upon a judiciously limited part of the surface, or throw aside composition, entirely, and trust to floral designs, isolated figures, repetitions of decoration without unity of design, or to beauty of colour alone." \* \* \* It would be a violation of good taste to demand pictures upon plates, or that a soup-tureen should resemble a sarcophagus."

It is a very melancholy fact that the Ceramic Art of Japan is deteriorating from its contact with the west. This is more or less inevitable, and in this point history is only repeating itself. It would be interesting at some future time to inquire into the causes at work helping to debase art in this, as they have done in many other countries. Blinding passion for the new and for everything western, combined with different conditions of the national system and the commercial relations with the merchants of the nationalities, are causes which at first sight suggest themselves.

#### REUTER'S TELEGRAMS.

LONDON, January 30th, 1880.

The increase of the German Army has been taken quietly by France.

It is affirmed that the French occupy Tonquin.

LONDON, January 27th, 1880.

GERMANY.

A bill has been introduced by Bismarck to increase the army by 60,000 men, which is justified by the strength of the forces of the neighbouring states.

(From the *Daily Press*.)

London, 14th January.

The Russian Budget for the year 1880 has been published. The revenue and expenditure are equal. The Military and Naval Budgets are increased by eleven millions.

The *Golos* recommends the gradual cession of Kuldja to avoid disturbances on the frontier.

The *Times*, in a leading article, states that the ill-feeling between Germany and Russia continues, and that Germany suspects French influence to be at work.

The *Times* urges a settlement of the Afghan difficulty.

#### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JANUARY 31st, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 1ST MONTH, 31ST DAY, DO-YO-DI.

#### NOTES OF THE WEEK.

##### BIRTH.

On the 30th of January, at No. 223, Bluff, the wife of A. H. COLE, of a son.

At Yokohama, on the 30th January, the wife of GEORGE W. MUIR, Naval Accountant, of a daughter.

On Monday morning last, the M.M. steamer *Tanais* left for Hongkong with the European mails, and was followed in the evening by the O. & O. S. S. *Gaelic*, bound for San Francisco. This morning the *Tibre* arrived with the home mails. Her latest dates are London 12th and Marseilles 14th, ulto.

With reference to one of our last week's notes written on information furnished by a correspondent in the capital, regarding the contributions received from Hiogo and Osaka in aid of

the sufferers by the great fire in Tokio, the Reverend J. Piper addresses us:—

"I beg to inform you that the Committee (of which I am a member) who administered the money raised by the foreigners in Tokio and Yokohama for the relief of the sufferers by the late fire in this city, have received about *yen* 1,500 from General J. Stahl, United States Consul, Hiogo, and are administering the relief in the same way as that which they received from the neighbourhood. They have *not* handed the money over to the Tokio fu."

As we called attention to the delay in renewing the Mayeda Baahi, the non-existence of which is a great inconvenience to the public, it is but fair to state, now, that the work of reconstruction has commenced. The fourth bridge,—that over the creek at Ishikawa,—is also being repaired. In both cases, however, the work proceeds but slowly.

Nightly frosts continue to be brisk; and the anomaly has to be recorded that the last day of January has arrived, and yet no snow has fallen during the current winter—at least in this vicinity. The streets of the Japanese quarters continue to be watered by the occupants of the houses which line them, rendering the roadway slippery, and not always safe for horses. This custom, in weather with the thermometer below freezing point, might advantageously be abandoned.

Probably many of the late speculators in *bagatelle* boards have found that they were mistaken in their investments, that is, unless they very rapidly recovered their outlay, and gained something for forfeiture of legitimate business. The mania has passed and play is now virtually abandoned. In places the frail tables may be seen, piled up in neglected corners awaiting decay or conversion into fuel. The boards which are still accessible for play cease to attract the passers by.

The objurgations which our local French contemporaries have been hurling at each other, have exceeded the limits assigned to themselves for forbearance by the contestants on one side of the dispute. Failing an adjustment on the field of honor, the matter has been taken into the French Consular Court, where, during Wednesday and Thursday next, their difficulties will be discussed, subject to judicial instead of bellicose arbitrament.

Measures for the opening of a new cemetery for foreigners on the site proposed, near the rifle range, will probably soon be completed. Then the old burial ground, which has for so many years received the remains of western residents who have died in this vicinity, will be closed.

The following notification appears in the *Hongkong Government Gazette*:—"His Excellency the Governor has provisionally appointed Ng Choy, Esquire, Barrister-at-Law of the Honourable Society of Lincoln's Inn, to be a Member of the Legislative Council, pending the receipt of Her Majesty's pleasure thereon, in place of the Honourable H. B. Gibb, absent from the Colony." This nomination is not popular among the English residents, although, as the gentleman in question is a British subject, a scholar, and legally qualified for the post, it is hard to imagine that objections, other than those of race, can be found to his occupancy. The *Daily Press* argues that, if such an appointment were to be made at all, a new seat should have been created.

A Hongkong paper has reason to believe that rumours, afloat in Haiphong, that the export of rice from that port will be resumed in April next, have good foundation.

Mr. Eli T. Sheppard, at present one of the legal advisers to the Foreign Office, leaving for America in May next, Mr. H. W. Denison, has been appointed in his stead. The latter gentleman is very popular, and deservedly so, in the communities of Tokio and this Settlement, having served as United States Vice-Consul General in the latter place for several years. In this nomination will be found a fresh proof of the anxiety of the present Minister for Foreign Affairs to surround himself with men of ability and experience, and such as are familiar with the wishes and sentiments of foreign residents.

Official information was received some days ago in Tokio, of the degradation of Chung How, the ex-ambassador from Peking to St. Petersburg—he who negotiated the retrocession of Kulja to

China for a money indemnity. The event should dispel any idea of a close alliance between the two empires, as it demonstrates that the arrangement made, though it will no doubt be adhered to, is not satisfactory to the Tsung Li Yamen. An account of the envoy's dismissal appears in North China papers, received since the intelligence arrived here.

There was an alarm of fire at the Grand Hotel on Monday evening, at about seven o'clock. The engines were quickly in attendance, but as the fire, which broke out in one of the upstairs apartments had already been got under, their services were not required.

Telegraphic instructions having been received from the Foreign Office to that effect, Mr. W. G. Aston, Assistant Japanese Secretary to H. M. Legation, is appointed to the Kobe Consulate, *vice* Mr. Marcus Flowers, and left on Wednesday for his post.

We have still a few copies remaining of the New Regulations for the prevention of collisions at sea, republished by us from the *London Gazette*, some short time since. Price 25 cents each in sheet form or mounted on cardboard, suitable for hanging up in a cabin, &c.

Mr. Conil, the local agent of the Messageries Maritimes Company, will leave Yokohama in an early steamer on leave of absence. M. Falcon de Cimier, an inspector of the Company arrived here by the *Tibre*, and will occupy Mr. Conil's place until his return.

The steam yacht *Lancashire Witch*, belonging to Sir Thomas Hesketh, Bart., now on her way from Nagasaki to this port has been on a very prolonged cruise from home. She is a sister ship to Mr. Bramsey's *Sunbeam* which visited Japan some short time since and is another specimen of the yachts for which England is so famous. From the *Straits Times* of the 23rd of October, we extract the following interesting account of the cruise of the *Lancashire Witch* up to the time she reached Singapore. From Singapore the vessel sailed for Bangkok and thence to Nagasaki.

"We have been favoured by Captain Douglas, Commander of the steam yacht *Lancashire Witch*, with the following particulars of that handsome vessel. The *Lancashire Witch* was designed by Mr. St. Clair Byrne, of Liverpool and built and engined by Messrs. Steele & Co., of Greenock in 1878; her tonnage (builder's measurement) is 500 tons and her nominal horse power is 75. She sailed from Cowes on 15th of January last for Madeira arriving there on January 24th, thus making a voyage of 1,450 miles in 9 days, only 125 miles being under steam. She left Madeira on January 28th for Montevideo where she arrived on February 24th, making 5,025 miles in 26 days, 774 miles under steam. Here Lord Queensberry joined Sir Thomas Hesketh, and the party left Montevideo on 8th March, for San Francisco, via Magellan Straits. The yacht arrived at Egg Harbour, Vuldes Island, on the Patagonian coast, on March 8th making 870 miles in 4 days, 270 miles under steam. Here the party shot some fine guanaco and ostriches. Sailed from Egg Harbour on March 15th and anchored in Possession Bay, Magellan Straits, on the 19th of March, doing 521 miles—160 under steam—in 4 days. Here the party went ashore with an armed company of seamen, shot 7 guanaco and wounded others. Sailed from Possession Bay on 22nd of March to Gregory Bay. Here the shooting was not good, owing to a settlement having been established and the yacht proceeded to Sandy Point which she reached on 24th March. Here a stay was made to await the arrival of the outward English mail. This brought them news of the outbreak in Zululand, and the intelligence prompted Sir Thomas Hesketh to shape his course for Natal, whereupon Lord Queensberry left the party. The *Witch* sailed from Sandy Point on 21st March, arrived at Stanley, Falklands, on the 30th of the same month, making in three days 635 miles, 295 under steam. Sailed from Stanley on April 1st, passed Meridian of Cape of Good Hope on 17th April, and reached Natal, experiencing head winds on the way, on April 24th, thus making 4,458 miles in 23 days and 8 hours, 912 miles under steam. The yacht anchored in the outer roads to await spring tides for crossing Bar. Sir Thomas landed and went to the front where he joined the staff of Colonel Buller, V. C., and Brigadier General Sir Evelyn Wood, V. C., and was present at most of the principal battles, and took part in the famous fight at Ulundi. Mr. Francis Francis joined Sir Thomas in Zululand and both with Mr. Sadlier left Natal on the 29th July, arriving at Majunga, Madagascar, on 9th August, making 1,564 miles in 10 days, 28 miles under steam. Sailed from Majunga on the 12th August, and arrived at the Johanna Comoro Islands on the 14th August, 254 miles—34 under

steam—in 2 days and 4 hours. Sailed from Johanna Islands on 15th, arriving at Zanzibar on 19th August, 461 miles—76 under steam—in 3 days and 21 hours. Steamed from Zanzibar to the mouth of the Wani river. On Sunday 24th, the party landed on a shooting expedition and returned to the yacht on 30th, having shot several good specimens of hippopotami. On Saturday 31st, yacht returned to Zanzibar. On September 3rd, sailed for the coast on a shooting expedition, Dr. Kirk, H. B. M.'s Consul-General accompanying, touched at Melind on the evening of the 4th where a guard of soldiers was obtained from the Sultan. On the 5th proceeded to Formosa Bay and anchored under Ras Gomany; on the morning of 6th shooting party set off for the coast where they had excellent sport. Returned to the yacht on the 11th September and sailed for Zanzibar arriving there on the 13th, a distance of 526 miles, 326 under steam. Sailed from Zanzibar on 18th September arriving at the Seychelles on the 25th September, making 1,023 miles in 7 days 2 hours, 268 miles under steam. Here the ex-Sultan of Persia visited the party on board. Sailed from the Seychelles on 28th September, passed through equatorial channel on 8th October at 6 p. m., passed Acheen Head on the 16th, and arrived at Singapore on Tuesday morning, 21st October, thus in 22½ days making by Dist. Log 3,233 miles, by observation 3,264 miles, 1,363 of which were under steam.

The yacht will leave here in about seven or eight days hence for Bangkok and the party hope to get some good shooting in Siam. Hongkong and Japan will afterwards be visited. Her owner, who has been in Singapore before, is Sir Thomas George Fermor Hesketh, Baronet, of Rufford Hall, Lancashire."

The *World* in a notice of the party says:—"After a spell of campaigning in Zululand as galloper to Colonel Buller, Sir Thomas Hesketh steamed away from Durban in his fine yacht, the *Lancashire Witch*. He had no particular views as to destination, speaking vaguely about the Malay coast, the Andamans, and the Loochoo Islands. His travelling companions on this vague cruise were Captain Thornburgh Cropper and young Mr. Francis Francis, who so efficiently represented the *Times* in the Zulu campaign. This last gentleman writes from 'Mahi, Seychelles,' telling of successful buck-shooting in Madagascar and of two hunting trips from Zanzibar to the African mainland, under the experienced guidance of Dr. Kirk. The bag on these two expeditions seems to have been curiously mixed: 'We slaughtered fifteen hippopotami, and got a lot of wilde beeste, harte beeste, Torpe, &c., besides a couple of zebras, and some wild pigs. I wounded a giraffe badly, but too late in the evening to follow him up. The whole party had touches of fever. We are now en route for Singapore; no definite plans for the future.'"

There were two fires in the capital last night one at Ushigomi which destroyed fifty houses, the other at Kanda by which ten houses and two godowns were burnt down.

This year's issue of the Hong-List and Directory published by the *Japan Herald* is a worthy successor to the previous volumes of this useful work. Of very attractive appearance and great accuracy which, after all, is the principal feature in a compilation of the kind, the *Herald* Hong-List should meet with a large demand, in fact we can scarcely imagine a desk or drawing room in Japan without a copy of it.

We learn from Hakodate that a very sad affair has occurred there lately which will probably have a fatal termination. Two English gentlemen, one a baronet, have been for some time past engaged in bear-hunting. Owing to the severity of the weather and want of sufficient precaution, one of them was severely frost-bitten. Mortification set in and the unfortunate gentleman's life is despaired of. We understand he now lies at a tea-house, some considerable distance from Hakodate, under the care of a Japanese doctor.

The *Glenfulas* left Shanghai on the 20th instant, and the *Craiglands* on the 21st, both for Nagasaki.

At the opening meeting of the Graduates' Section of the Institution of Engineers and Ship-Builders in Scotland, held last November, Mr. John F. Miller, the president, in his opening address, dealt with the subject of steel as against iron for ship-building, boiler-making, and rail-making purposes. As showing the increase in the use of steel for ship-building, they had, he said, only to look back twelve months to find what a large proportion of vessels were now built with steel as compared with iron. About two years ago comparatively few vessels had been built with steel, and even then there was great suspicion as to the lasting power and stability of the new material for such purposes. During this year many of the yards on the Clyde were almost solely employed in building steel vessels, and there were very few yards that had not been doing something in that way. One yard had turned out eleven

such vessels this year up to the present time. These vessels varied from a few tons to about 4000 tons register, and ranged in construction from yachts and light-draught river steamers to ocean traders. Only a month ago the largest steel vessel afloat was launched at Dumbarton for Messrs. Allan, and now a large number of other shipowners were following their example. He alluded to the proposed construction of large vessels for the Cunard and Allan lines, and also to the yacht which is being constructed on the Clyde for the Czar. Scrap steel had been utilized for making bars, which stood a strain of 26.6 tons to 28.3 tons per square inch, and it had been made for £2 less per ton than bars got direct from steel manufactories. The price, however, would of course depend on the price of scrap. In his opinion, steel had a great future before it for constructive purposes.

We observe in the *Scotsman* that Sheriff Lees of Glasgow has decided a case in which James Galbraith, boot and shoe maker, sued Harry Alfred Long, "printer, book-seller, stationer, and missionary," for £5, and also asked the Court to interdict Mr. Long from publishing a pamphlet of his, entitled "Moses and the Egyptian." The defender (defendant) pleaded that there was no sufficient averment made with regard to the copyright, and that the pamphlet, being of an irreligious and immoral tendency, could not be subject to copyright. Sheriff Lees found that the act of the defender in publishing the pamphlet did not constitute an infringement of the pursuer's (plaintiff's) copyright, and assolied (gave a verdict for) the defender, with expenses. In a note, the Sheriff says that in August 1877 the pursuer and defender differed in the course of conversation as to whether Moses was a murderer or not. To settle the matter, the defender proposed that they should have a public discussion, and after the discussion had taken place each issued the views he maintained in the form of a pamphlet. Subsequent events led the defender to undertake to show that the pursuer's pamphlet contained "fifty errors in composition, history, orthography, geography, and Biblical knowledge: that its logic was paralytic, and its style bombastic." With this object he compiled and issued a pamphlet in which he reproduced bit by bit the pursuer's pamphlet, interspersed with his own criticisms, and it was this pamphlet which the pursuer wished the defender interdicted from publishing. The defender had urged that the pursuer's pamphlet, "being of an irreligious or immoral tendency, cannot become subject to copyright." He could not agree with the defender. It was unfortunate that neither party seemed to have reflected or remembered that to commit a murder, and to be a murderer, are not used by every one as synonymous expressions. Indeed the two phrases are given in logic text, books as an example of a common fallacy. To describe a historical character as a murderer would convey to the mind of most people that that was the general characteristic of the man's career, and therefore most people would demur to Moses, Bruce, and Alexander being described generically as "murderers." As a matter of fact, the Bible did not expressly say whether the act of Moses in killing the Egyptian was murder or not, but he (the Sheriff) would only say that on the details it did give us, if the act was not a murder, he did not know what murder was.

As a politic concession to the vehement indignation excited throughout Germany by the scandalous attack upon German women recently published in the *Wiedomosti*, of St. Petersburg, the Russian police authorities suspended for three months that journal's privilege of street sale. It appears that the wrath aroused in Teutonic minds by the article alluded to, which, as will be remembered, stigmatized the matrons and maidens of the Fatherland when of a lively disposition as "prancing cows crowned with rose wreaths," and insolently asseverated that "they are not altogether human beings at any time," has brought down upon its author a very deluge of irate letters from all parts of the German empire. One of these, which may serve as a specimen, has been made public by its recipient, as well as the reply which it elicited from him:

"Berlin, 30th October.—It is lucky for you, sir, that you reside in a city far distant from Berlin, otherwise I would punish you in a highly exemplary manner for your abominable article upon German women. As, however, the distance separating us prevents me from so doing, consider yourself as having been properly thrashed by me. B. NOCUSTETTER, 132, Oranienstrasse."

The Russian feuilletonist, however deficient he may be in good taste, is certainly a very funny person, as the following answer to the above convincingly demonstrates:

"Petersburg, 4th Nov.—Honoured Sir: At the very moment in which your raised your cudgel to belabor me I succeeded in drawing a revolver from my pocket and in shooting you dead on the spot. I therefore request you to consider yourself shot. My address is No. 14 Wladimirskaja."

#### SOCIAL ENTERTAINMENT AT THE TOKIO CHRISTIAN ASSOCIATION.

A very successful Entertainment was given at the Tokio Christian Association on Thursday evening, the 22nd inst., at the conclusion of which the retiring President of the Association (Prof. W. G. Dixon) who has left Japan, gave a farewell address. After pointing out that the Association had done much to bring together the missionary and the non-missionary elements in the foreign community at Tokio, which had formerly been abnormally wanting in mutual interest, and after urging the irrationality of coldness on the part of professing Christians to the missionary cause, since it is of the very essence of Christianity that it should be a missionary religion. Prof. Dixon proceeded to say. "There is a crying need for the manifestation before this (the Japanese) people of the fact that the religion of Jesus Christ is something that enters into the whole nature of all who receive it, a vital transforming principle, making life nobler in all, even its most trivial, aspects. I feel convinced that there is a wide and promising field here for those lay men and women who desire to live true to their master Christ. The Japanese are a much too acute people not to notice and be influenced by even a silent Christian life. It is possible for them to hear missionaries preach, and even feel some little admiration for the doctrine they hear, without being so thoroughly affected as when they see a man engaged in secular pursuits living up to his conviction that the man who walked the streets of Palestine eighteen centuries ago is really the living Saviour of men. Silently we may sow the good seed, and if we find a fitting occasion for testifying more distinctly we may be surprised to find with what attention we are listened to. It would need no prophet to foresee that, if even one-half of the foreigners in Japan were thorough-going Christians, the coming of Christ's kingdom in this country would be at hand. A tremendous responsibility lies on the shoulders of those who here name the name of Christ. They stand in the fore-front of one wing of the Christian army, and if they are but true to their colours, victory lies before them. Do we believe in Christ? If so his life, death, and resurrection are to us the most momentous facts in history, whoever or wherever we may be: and if any hour of our lives fails to be influenced by this belief, then that hour is thrown away: it has been lived in vain.

"My object in the above remarks is to show the crying need there is especially in such a country as this for the manifestation of Christian life among all members of the Church in every one of their lives. When, therefore, two years ago I was asked to become President of the newly instituted Tôkiyô Christian Association, I felt deeply gratified that such an office was to exist, and highly honoured in being invited to fill it. Amid many shortcomings, I have endeavoured during these two years to put into practice my intense interest in the objects of the Association, and beg you now to forgive those failings of which I have been very conscious, and to accept my heartfelt thanks for the support which I have received in the Association work. The ideal of this Association is a sublime one, a perfect one, the life of Jesus Christ, the Son of God. In Him it sees the only hope of the world's resurrection, the only hope of the elevation either of individuals or of communities, and therefore after Him it names itself the Christian Association. Looking back along the ages it sees that One Figure lifted up and drawing all men to Him. It believes in the triumph of good through Him who is the embodiment of all good. It looks at that wondrous life and sees no asceticism in it, no condemnation of the secular duties or the innocent enjoyments of life. The first miracle, that wrought at the marriage feast at Cana in Galilee, furnishes it with a noble lesson, the lesson that it is through Christ that

the water of this world is turned into wine,—that whatever He touches becomes transformed and infinitely enhanced.

"In the still abnormal state of the world, such a society as this cannot fail to excite opposition. The very loftiness of its ideal may serve only to make more apparent the defects of its members. But it is the noblest of man's prerogatives to be ever climbing upward towards the height of absolute perfection, and no sense of his own unworthiness should tempt him to be untrue to his nature by giving up the struggle. The ideal of this Association is invincible. Its opponents know that, and have to resort to side attacks upon the shortcomings apparent in the way in which the ideal is pursued. Knowledge of these, even if it come in the form of success, will always be valuable in helping on the Association; for it will rouse the members to pay more heed to their steps. But the opposition which this Association has evoked has been by no means remarkable. There is too much of a right-feeling among the residents of Tōkyō to allow it to be so.

"But I must not prolong these remarks. With ever-to-becherished recollections of the honour granted to me of presiding at this Association's meetings, recollections of eloquent lectures, readings and recitations both grave and gay, cheering vocal harmony, of heart-penetrating songs, of the society of friends whose acquaintance I shall ever deem it an honour to have made; of interchange of thought on the sublimest of themes, of communion, praise and prayer to God, I bid you farewell; and I do so not without the brightest hopes of the speedy resurrection of this land, and that in no small measure through the loyalty of this Association to Him whose name it bears."—*Communicated.*

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

##### COURT, POLITICAL AND OFFICIAL.

Dr. W. Anderson, of the Board of Health, who left for England on the 26th instant in the French mail, had an audience with His Majesty the Emperor and was presented with a porcelain vase as a farewell gift.

Visits of congratulation were paid to Her Majesty the Empress Dowager, at the Aoyama Palace on the 23rd instant, on the occasion of her birthday, by His Majesty the Emperor, the Princes of the Blood, the Daijin, the Sanji, and the Chokunin and Sonin officials.

It is said that an application has been made to the *Daijo Kwan*, requesting that a portion of the grant to the Home Department may be applied to the purposes of the Police Bureau.

Mr. Yamao, the Assistant Minister for Public Works, is going to Kiushiu at the commencement of next month, for the purpose of selecting timber and stone for use in the construction of the new Imperial palace.

The *Nichi Nichi Shimbun* reports a rumour that General Kuroda, chief of the Colonization Department, has proposed to build an Imperial palace in the neighbourhood of Hakodate, in order that His Majesty the Emperor may spend the hot season there, and also witness the progress of colonization in Yesso. The General arrived in Hakodate the other day, in the *Tokio Maru*.

The *Mainichi Shimbun* reports that the *Daijin* and *Sangi* are now daily holding meetings of the Cabinet, to consider the question of establishing a National Assembly.

His Excellency Okuma, the Minister of Finance, is to pay a visit of inspection to the Osaka Mint, about the commencement of next April.

Mr. Akiyama, a member of the Local Assembly in the prefecture of Miyagi (in the north), has issued circulars with a view of establishing a United Club of the seven provinces, in order to make an arrangement for forwarding a memorial to the Government, demanding the establishment of a National Assembly.

We hear that the Local Governors' Assembly will be opened about the 5th proximo, by His Majesty the Emperor in person.

The *Choya Shimbun* mentions a current report that a Supreme Court is to be established at Hakodate, and a Provincial Court in Yesso.

Prince Shimadzu Tadayoshi was honoured with an audience by His Majesty the Emperor, on the 25th instant.

The *Hochi Shimbun* notes the return to Tokio, on the 26th instant, from Atami, of His Excellency Ito, Minister of the Home Department.

Governors Makimura, of Kioto; Matsuudaira, of Miyaki; Shirane, of Saitama; Tomioka, of Kumamoto, and Chief Secretary Korenami of Gifu, and Under Secretary Mori of Fukuoka (both representing their Governors) arrived in Tokio on the 20th instant, to attend the Local Governors' Assembly.

His Excellency Yoshida, Envoy Extraordinary and Minister Plenipotentiary to the Court at Washington, is to leave here for his post about the 8th of next month. He will give a farewell dinner on the 3rd proximo, at the Shiba palace, which has been placed at his disposal for the occasion.

H. R. H. the Duke of Genoa, being on the eve of leaving Yokohama, had a farewell audience with His Majesty the Emperor, at 2 p.m., on the 28th instant.

The *Amaki Kan* left Yokohama on the 27th, for Atami, and returned on the 28th instant with His Excellency Sanjo and others on board.

The *Nichi Nichi Shimbun* announces that a telegram has been received stating that General Kuroda, Chief of the Colonization Department, left Hakodate in the *Kokonoye Maru* which arrived in Tokio on the 30th instant.

The new building for the Home Department has been completed at a total cost of 12,000 yen.

It is hereby notified that, in conformity with the 5th Article in the Treaty of Friendship concluded between Japan and Corea, in February, 1876, two ports are to be opened in Corea for the mutual trade of both nations, and it has been arranged that the port of Gensan shall, as one of the proposed ports, be opened from the 1st of May, 1880.

N.B.—Those who wish to go to Gensan after the above mentioned date shall keep the Notifications Nos. 128 and 129, issued in October, 1876, in their mind.

(Signed) IWAKURA TOMOMI,  
Acting Prime Minister.

January 28th, 1880.

It has been estimated that the forthcoming Local Governors' Assembly will cost the country 20,000 yen.

Mr. Nishimura, Governor of Oita *Kan*, arrived in Tokio on the 28th instant, and Mr. Sekiguchi, the Governor of Shizuoka on the 29th instant.

Prince Nabeshima visited the Italian man-of-war, *Vettor Pisani*, in Yokohama, on the 26th instant.

##### NAVAL AND MILITARY.

The total number of men raised by conscription this year, for military purposes, amounted to 24,293.

The *Jingri Kan* having now been completed, will shortly sail on an experimental trip to Hakodate.

It is rumoured that a man-of-war is shortly to be despatched to the ports of Fusan and Gensan in Corea, and that in all probability the *Amaki Kan* will receive sailing orders.

General Toriwo, the Commander of the Imperial Guard, has sent in his resignation.

There will be a distribution of certificates among the cadets of the naval college, about the middle of next month, in the presence of His Majesty the Emperor.

The steamer *Gembu Maru*, belonging to the Colonization Department, that lately went to survey the coasts of China, has now returned to Kotaru, and will leave for Yokohama early next month.

It is rumoured that the *Takao Kan*, which has lately returned from Corea, will proceed there again at the end of next month, after undergoing a complete overhaul.

##### INDUSTRIES, TRADE AND FINANCE.

A Chamber of Commerce was opened at Sakai, in the province of Izumi, on the 17th instant. The new Chamber already numbers about seventy members.

The Specie Bank in Yokohama commenced the transaction of business on the 25th instant, and is going to establish a branch in Osaka.

Mr. Nakamura Keitaro, a resident at Imabashi, Osaka, is about to establish a Life Insurance Company. The necessary capital will be raised by subscription.

The following return, shewing the exports and imports at the port of Yokohama for the month of December, 1879, has been issued by the Customs' Department :—

Exports .....	yen	3,232,252.80
Imports .....	"	2,986,631.72
Excess of exports.....		yen 245,621.08
Export of coin and bullion .....	yen	716,809.76
Import .....	"	58,363.00
Excess of exports.....		yen 658,444.76

## MISCELLANEOUS.

The wife of the man in whose house the recent disastrous fire in Tokio broke out, has been fined two yen, as the conflagration was caused through her carelessness. It was mentioned in Court that the usual punishment was eighty days penal servitude, but, in consequence of the sex of the accused, the sentence was changed to a light fine.

A branch telegraph station is to be established at Tsurugao-oka, in the prefecture of Yamagata.

About three hundred prisoners in the prison of Kioto, under sentence of penal servitude for over five years, formed a conspiracy to escape. On the evening of the 13th instant, when the servants of the prison were carrying in supper for the prisoners, the conspirators, who had armed themselves with pieces of wood, broke out into open insurrection, and the prison guards were unable to quiet them. A number of police were called in who quelled the disturbance, but in the confusion about twenty of the prisoners, who had got out of the prison when the riot commenced, broke down the northern gate and escaped in the direction of Sembon-dori. Here they separated into two parties, one of which went westward, and fled to Kuwado-gori in the province of Tamba, where six or seven of them were arrested on the 17th instant. The other party made off in an easterly direction along Sembon-dori, and three of them have since been captured at Yodo. Nothing has yet been heard of the remainder of the escaped prisoners, although a strict search is being made for them.

The *yashiki* or mansion of Prince Shotai, the ex-King of Lochno, has hitherto been guarded by police, but they have now been removed.

We learn from the *Akeshuno Shimben* that a fire broke out in Moto-machi, Takaasaki, at 9 p.m. on the 26th instant, and soon spread over several streets in consequence of the very severe wind. The fire was extinguished at 3 a.m. on the 27th, after destroying about 2,000 houses together with a large number of warehouses.

The *Hiriki Shimbun* states that His Royal Highness the Duke of Genoa leaves Yokohama for Kobe to-day, in order to visit Kioto and Osaka.

The *Hochi Shimbun* announces that, in Yamashiro and Settsu, the rivers are frozen and the roads blocked with snow. All traffic has been brought to a standstill, and the weather is colder than has been experienced for many years.

THE JAPANESE PRESS.

**TREATY REVISION.**

(Translated from the *Nichi Nichi Shimbun*.)

*Continued from last week:*

AS soon as this event took place<sup>1</sup> the Government were placed in a dilemma how to deal with the question of exchange. Previously, it had been the practice for foreign merchants to take their money to the local Government office, where it was exchanged for Japanese coin. The American treaty, signed at Shimoda in 1857, provided "that American money shall be exchanged for Japanese money, gold or silver *ichibu* as the case may be, of similar weight and fineness, an allowance of six per cent being made to the Japanese authorities to cover the expense of recoinage;" and under this arrangement one Mexican dollar was exchanged for two gold *bu* (each value fifty *sen*). Then the existing treaties were entered into, and it was agreed<sup>2</sup> "that foreign coin shall circulate freely in Japan on a par with Japanese coin of equivalent weight and purity," and that "the citizens of both countries shall be at liberty to use foreign and Japanese coin in the purchase and sale of all articles." It was also arranged that, "the Japanese subjects not being familiar with foreign money, an office shall be established by the Japanese Government in every port open to foreign trade, and shall, during one year after the port is opened, exchange foreign for Japanese coin when required," and further that "no allowance shall hereafter be made as heretofore for the expense of re-coinage." It therefore became imperative upon our Government to keep large stores of coin at the open ports in order to comply with these stipulations in the treaties. The Shōgunate officials soon discovered that in order to exchange Japanese for foreign coin of equal weight and fineness, three *bu* (that is three silver *ichibu*) would have to be given for one Mexican dollar, and the dollar being raised to over forty-five *momme*, the price of all the products of Japan would have to be increased. In consequence of this, a memorial submitted by Mizuno Chikugo-no-kami, the Superintendent of the Board of Finance and Foreign Affairs, was approved of, and the coinage was commenced of silver *nanrio*, two of them being equal in weight to one dollar. This step was notified to the Foreign Representatives in the following terms:—"The Japanese Government will in future give, in exchange for Mexican dollars, the newly coined silver *nanrio*. The existing *ichibu-gin* was coined at a time when the Government were in want of funds, and was put in circulation at the value stamped upon it. The *ichibu-gin* cannot be treated as the standard coin of Japan, any more than the *issu-gin* (one *shu* silver), the *nibu-ban*, or the *nishu-ban*. The standard coins of Japan are the gold *koban* and silver *nanrio* and these will, in future, be used for purposes of exchange." This was the project for treating the Mexican dollar as equivalent to one *bu*. Foreigners, however, never agreed to the notification and urged upon the Government that they had committed a breach of treaty stipulations. Great confusion then arose, and the Shōgunate authorities found themselves in this dilemma:—they had not a sufficiency of *nanrio* to exchange for the *ichibu-gin* already in circulation, and they were unable to withstand the pressure brought to bear by the treaty Powers. The result followed that the notification was rescinded a few weeks after publication, and it was arranged to exchange dollars for their weight in *ichibu-gin*. A notification was also made to the native merchants in the treaty ports, that dollars should be taken as worth three *bu* each. It was altogether unreasonable to imagine that the merchants would give three *bu* for what they had hitherto got for two, and sometimes only one *bu*, and they therefore refused to obey the notification. The foreigners then addressed the authorities on the subject and demanded that the Government should themselves effect the exchange as provided for in the treaties. This the Government were wholly unable to do, but they issued another notification couched in more stringent terms peremptorily ordering the acceptance of the dollar at the value of three *bu*. This last notification was of no more avail than the former one, and things remained in a very unsettled state until the month of June

<sup>1</sup> The opening of Kanagawa, Nagasaki and Hakodate.

2 See Article 5 of the American Treaty, and Article 10 of that entered into with Great Britain.

in the following year, (1860). It is worthy of remark that during all this period, owing to the low value placed upon Japanese gold coin, very large quantities of it had been obtained by foreigners and exported from the country.

It may perhaps seem that the foregoing statement of the exchange operations is not altogether relevant to the subject of this article, but, as a stipulation was inserted in the treaties providing for "re-coinage of bullion, &c.," and the Government were unable to carry it into operation, it was made the means of depriving Japan of some of her independent sovereign rights, and tends to shew how eagerly Foreign Powers took advantage of the inexperience of the Shōgunate officials to secure undue advantages. No other nation under Heaven would have consented to allow foreign coin to circulate within its territories at par with the ordinary currency of the country. The problem involved has been found difficult of solution both in Europe and America; and it was a most indefensible proceeding on the part of foreigners to benefit by the ignorance of Japanese, and induce them to submit to stipulations unheard of elsewhere.

When these questions arose respecting the currency and the impediments thereby occasioned to trade, we find, on looking into the internal state of the country, that a succession of civil wars had taken place, consequent upon the arbitrary proceedings of the Tokugawa family. The conclusion of the treaties with foreign Powers gave the Imperial House, then at Kioto, an opportunity of throwing odium on the Shōgunate Government, and a very strong feeling grew up in favour of restoring the power of the Emperor and expelling foreigners altogether from Japan. Ii Kiamon-kami became prime minister and dismissed from office Chiu-nan-gon of Mito, and together with him, as participators in his misconduct, all the able and energetic officials of the Shōgunate. Thus, with the exception of Mizuno, Hori, etc., there were no officials remaining in power who had devoted attention to the subject of relations with other countries, and they were prevented by others from carrying their ideas into practice. In fact, we are justified in saying that "the Shōgunate Government, owing to internal dissensions, had no opportunity of properly dealing with the question of foreign intercourse." Now, if this was the condition of the Supreme Government in Yedo, how much more so was it the case with the minor officials at the open ports?

Again we find that, when the country was first opened to foreign trade, many astute merchants flocked here who were accustomed to over-reaching eastern people, and took unfair advantage of the extra-territoriality clauses in the treaties, to escape from the consequences of any speculations or transactions in business which turned out unfavourably; but on the other hand, as our merchants seem to have been quite as astute as their foreign compeers, a system of mutual deception was very soon instituted. However, if we examine into which party derived the most benefit from these unprincipled practices, we find that our Government and people had become greatly separated by the operation of the feudal system, while the foreign officials and merchants were all on intimate and friendly terms with each other. Thus then, it was generally remarked that, when a lawsuit took place between a native and foreign merchant, the former invariably lost his case even when he should have gained it. The remembrance of this iniquitous state of things awakens feelings of resentment, even now after the lapse of nearly twenty years.

The reasons why this took place are very feasible; the foreign Consuls were always strongly inclined toward their countrymen, and overruled the Japanese officials, who being accustomed to despise the mercantile class willingly gave them up to be plundered by foreigners. The same influence prevented any of the notifications and orders issued by the late Government from being enforced against foreigners, just as if they were living in a paradise of unrestrained license. On the other hand, the Japanese, oppressed by their own officials on one side and foreigners on the other, found themselves, so to say, scarcely allowed room to breathe. This was the first result of extra-territoriality in Japan, and a similar disgraceful state of things has continued, although in a modified form, ever since.

The patriotic party, ostensibly actuated by loyalty to the Emperor and a dislike to foreigners, leagued together against the Shōgunate Government, and tried to prevent the treaties being carried into operation. Foreign intercourse has therefore from the first opening of the ports been a very

difficult subject to deal with. The Shōgunate officials were invariably trampled upon by the foreigners, and the public has already arrived at a verdict upon the acts and motives of the patriotic party of those days. It is therefore unnecessary for us to deal further with the matter, than to give our impartial opinion upon it. We consider that loyalty to the Emperor made the patriotic party anxious by every possible means to overthrow the Shōgunate. They observed that, by preventing the treaties being carried out, they would harass and weaken the Government. In this design they certainly succeeded; but unfortunately, in damaging the Shōgunate, they also inflicted enormous injury upon their own country, and paved the way for many subsequent national disasters and humiliations.

In the month of July, 1859—the year following the opening of the ports—Russian naval officers were assassinated in Yokohama, and subsequently one of the servants of the British Minister was cut down at the front gate of the Legation. Then came the murder of the interpreter of the American Minister, at Akabane, in November, 1860. This last outrage led Sir Rutherford Alcock, the British Minister, and some other Representatives of the Treaty Powers, to desire to haul down their flags and retire to Yokohama, holding the Shōgunate Government responsible for the crimes which had been committed. Fortunately, however, the American Minister declined to join in this step and a peaceful solution of the difficulty was arrived at.

In the summer of 1861, a night attack was made on the British Legation, at the Tosenji (a Buddhist temple at Takawawa, Tokio) in which the assailants were driven off. The result of these continued hostile proceedings was, that the Government were compelled to allow English and French soldiers to be landed and stationed at Yokohama for the protection of their nationals. Now no greater disgrace can possibly happen to any country than to be forced to submit to the presence of a foreign soldiery, more especially when there is no treaty stipulation sanctioning it, and it was a glad day for Japan when the English and French forces were removed some time after the Restoration.

After the assassination of the prime minister, Ii Kamouno-kami, in 1860, loyalty to the Emperor and a hatred of foreigners grew rapidly in intensity. This naturally resulted in a great diminution of the influence of the Shōgunate, and on more than one occasion foreigners took advantage of this to extort concessions which detracted from the independent sovereign rights of the country, the most important in its effects being the postponement of the opening of new ports.

Previous to this time the Government had despatched to America, with a view of concluding other treaties, Niimi Buzen-no-kami, Muragaki Awaji-no-kami and Oguri Bungo-no-kami. These ambassadors were received in America with an effusion of hospitality, highly pleasing to the Shōgunate Government, and accordingly they were very well disposed towards following the advice of the British and French Ministers to send representatives to the six other Treaty Powers viz:—Great Britain, France, Holland, Prussia, Russia and Portugal, asking for the postponement of the opening of the new ports. The Government fell into the trap thus artfully set for them, and despatched Take-no-achi, Shimotsuke-no-kami, Matsudaira, Iwami-no-kami and Kioyoku Moto-no-kami, in the winter of 1861, on a mission to the six Treaty Powers in Europe. This step was principally taken on the advice of Ando Tsushima-no-kami, one of the Privy Counsellors. At this time Mizuno had been dismissed from office, and Hori committed suicide, so that the Privy Counsellors, Ministers and members of the Board of Foreign Affairs, (with the exception of Oguri and two or three others) were a very mediocre collection, and quite willing to make every sacrifice for the sake of temporary quietness. Ando thrust himself prominently forward as a leader in foreign intercourse, and thus drew upon himself the suspicion and dislike of the patriotic party.

As already stated, the object of the mission to Europe was to ask for a postponement of the opening of new ports. Under the existing treaties the port of Niigata was to have been opened for foreign trade on the 1st of January, 1860, Yeddo on the 1st of January, 1862, and Osaka and Kobe on the 1st of January, 1863. The Government, however, found that in consequence of domestic troubles it would be

impossible to comply with the treaties in this respect, and therefore wished to postpone the opening of these ports for five years, when the popular dislike to the measure would have been allayed. The ambassadors succeeded in their object, and a treaty to the desired effect was signed in London. But the foreigners insisted upon some return, and it was accordingly agreed that the duty on wines and spirits should be reduced, and crystal ware classed among the articles paying an *ad valorem* duty of five per cent.<sup>3</sup> In this way the tariff was fixed, and through our own fault we had again to submit to foreign interference with our private affairs.

In the autumn of the year 1862, the retainers of Prince Shimadzu murdered two British subjects at Namamugi. This atrocity led to serious complications, the patriotic party assembling in great numbers at Kioto, demanding to be allowed to expel all foreigners from Japan; and the excitement was so intense, that Shōgun Iyeshige himself had to visit Kioto in order to restore quietness.

In the month of March following (1863), Colonel Neale, the Chargé d'Affaires for Great Britain, arrived in Yokohama, having at his disposal a powerful naval force. On the 19th of the same month he addressed a menacing letter to the Privy Council, stating that the retainers of Prince Shimadzu Saburo, who had committed the murders, should be executed, or else an indemnity of £100,000 paid by the Government and £10,000 by the Prince of Satsuma; and further that, if these demands were not complied with, war would be declared. Twenty days were allowed for an answer to this imperious mandate. All this time the Shōgun was in Kioto much troubled about the project for expelling foreigners and closing the ports to foreign trade, while the Shōgunate Government in Yedo were in great perplexities what to do respecting the demand of the British Representative. Ultimately, after making several ineffectual attempts to gain delay, the Privy Councillors Matsudaira Bungo-no-kami and Inouye Kawachi-no-kami on their own authority paid the £100,000 required, and shelved the difficulty.

But Prince Shimadzu had not paid his £10,000; and accordingly the British Representative sent seven men-of-war in the month of June to Kagoshima, to enforce his demands. Payment was again refused, and hostilities commenced on the 1st of July. Many were killed and wounded on both sides; and the British bombarded Kagoshima, thus committing a savage act repugnant to civilized nations. The ultimate result was that the Satsuma men had to sue for peace; and some of them came to Yedo in a British man-of-war and borrowed the money from the Shōgunate in order to satisfy the claims made on them.

From the time this defeat was inflicted upon our countrymen, the contempt of foreigners for our nation and Government increased greatly, and they indulged in their high-handed behaviour even to a greater extent than previously. At the same time, the Imperial desire for the closing of the ports became more imperative, and the Shōgunate Government ordered Ikeda Chikugo-no-kami, Kawadzu Izu-no-kami and Kawada Sagami-no-kami, &c., to proceed to Europe with a view of arranging for the closing of the ports. However, when the mission arrived in Paris they found that it would be impossible to attain their object, and they were induced to sign a treaty arranging for the continuance of foreign intercourse. It was also agreed by this treaty (which was signed in 1864) that "we" (the Japanese) "shall pay £140,000 as an indemnity for the Shimonoseki affair, and open the straits of Shimonoseki to foreign shipping, and join with France in putting down by force any opposition on the part of the inhabitants. And also that tea-land shall be imported free of duty and the duties on wines, spirits, machinery and curios reduced to six per cent *ad valorem*."<sup>4</sup> Here again our tariff was made to suffer through the interference of foreigners.

When the Imperial mandate was issued to expel all foreigners from the Empire, and close the ports against foreign trade, the clans in the south-west were eager to carry it into effect. The Prince of Chōshū, in particular, was very active in the matter, and constructed strong fortifications along the sea-coast of his territory, in order to protect it from foreign aggression. At this time, vessels sailing from Nagasaki to Yokohama were accustomed to go

through the Inland Sea, and the Shōgunate Government became much alarmed lest a similar difficulty should arise as had already been the case at Kagoshima. Accordingly, the authorities requested the Foreign Representatives to prevent the vessels of their respective countries from navigating the Inland Sea for a short time. This request, which was, under the circumstances, certainly very reasonable, was not only refused on the ground that "by the treaties, foreigners are clearly to be permitted to travel in the interior;" but it actually seemed as if the Foreign Representatives rather encouraged the navigation of that particular water. What the Government anticipated actually happened. In the year 1863, the Prince of Chōshū caused vessels sailing under the flags of Great Britain, France, the United States of America and Holland to be fired upon, and then the Representatives of those Powers at once demanded the payment of an indemnity and the opening of the Straits of Shimonoseki to foreign ships. The Government now found themselves in a position of extreme difficulty, and adopted a temporizing policy, delaying by every possible means a settlement of the question.

In the same year (1864) Ikeda and the other ambassadors returned to Japan and presented a copy of the Paris Convention to the Government. Now the Shōgunate authorities were perfectly aware, from information they had received through private sources, that the failure of the ambassadors to accomplish the object of their mission, viz.—the closing of the ports, and their having signed a treaty agreeing to the payment of an indemnity, arose out of circumstances which really gave them no option in the matter. However, the authorities were afraid to incur the further displeasure of the Imperial House, and, with a view of shielding themselves, degraded Ikeda and the other emissaries and cast them into prison.

In the month of July in the same year (1864), the Chōshū men committed several acts of insubordination against the Imperial authority, and the Shōgunate officials issued orders that an expedition should be prepared for the purpose of punishing them for their misconduct.

The Representatives of Great Britain, France, the United States and Holland, had by this time come to a mutual understanding to send an allied fleet to force the Prince of Chōshū to submit to their terms. The Shōgunate Government represented that it was manifestly inconsistent for these four Powers to make war upon any part of a nation with which they were in friendly alliance, and that, as an expedition was being prepared to punish the Chōshū people, the Government would accept the responsibility of the hostile proceedings of the Prince of that province. These representations had not the slight effect, and the allied fleet, consisting of eighteen men-of-war, bombarded Shimonoseki in the month of August, 1864, and forced the Prince of Chōshū to accept any terms dictated for his acceptance. The treaty then made provided for the payment, to the allies, of \$3,000,000, which is known as, "the Shimonoseki Indemnity." As far as the Prince of Chōshū was concerned, he agreed to the greater portion of the treaty, but the Shōgunate, as the chief governing authority of the nation, had to pay the indemnity out of the general revenues, the Prime Minister, Sakai Hida-no-kami, being forced into doing so by the Foreign Representatives.<sup>5</sup>

Looking back on the state of Japan at this time we are reminded that there were two Governments in existence:—the Imperial and the Shōgunate. Orders were issued by both Governments indiscriminately, and the clans in the various provinces were almost altogether independent and acted as if there was no central authority in the country. The confused state of our domestic affairs afforded Foreign Powers the opportunity they desired to compel the Shōgunate to accede to their demands, but the fact that such undue advantage was taken of our internal troubles, conclusively shews how little regard is paid to considerations of morality in the conduct of diplomatic relations. The various Conventions entered into between the Shōgunate Government, and Great Britain, France, the United States and Holland from 1864 to 1867, are public property, and the reader of them can judge for himself if the proceedings of the Foreign Representatives were creditable to nations who boast of their civilization, enlightenment and liberality. For ourselves, we have arrived

<sup>3</sup> See the London Convention of 1862.

<sup>4</sup> See the Paris Convention.

<sup>5</sup> See the final Convention of Shimonoseki, 1864.

at the conclusion that at that particular time in everything relating to foreigners, whether of a public or private nature, and no matter who was right or who wrong, the Empire of Japan was more in the condition of a country where Foreign Representatives had uncontrolled power of interference than one where a mere extra-territorial immunity was provided by treaty stipulation.

Notwithstanding the treaty concluded at Shimonoseki, the feeling against foreigners continued to gain ground, and the Representatives of the Four Powers proceeded in company to Osaka for the purpose of urging the Imperial Government at Kioto to confirm the treaties already entered into with the Shōgunate. The policy of the Imperial Government was, at this time, opposed to foreign intercourse, and the Shōgunate authorities found themselves in the difficult position of standing between two contending parties and having to keep on friendly terms with both. As usual, the Foreign Representatives mastered the situation and took advantage of it;—they demanded a revision of the tariff.

In the seventh article of the Trade Regulations it had been arranged that the tariff might be revised any time, five years after Kanagawa was opened to foreign trade. This revision could have taken place after the month of June 1864, so that the Representatives of the Treaty Powers persistently urged upon the Shōgunate officials, the necessity of reconsidering the tariff and demanded the reduction of the import duties to five per cent *ad valorem*, according to the London and Paris Conventions.

If the Shōgunate officials had paid the most superficial attention to foreign trade they would not easily have been brought to acquiesce in these demands. But what could be expected? Unfortunately for the country, towards the close of the Shōgunate, the officials were frequently changed: in fact it was not uncommon for a man to receive an appointment in the morning and be dismissed from it in the evening. The result was that, at the time we write of, there was not a single prominent official, except Oguri Kozuke-no-suke, who had the slightest knowledge of the foreign trade. In addition, the Shōgunate was then tottering to its fall, owing to internal dissensions; and it was willing to make any and every sacrifice to retain its grasp of the reins of executive authority. The Shōgunate amid its great dangers and difficulties, engaged as it was in a struggle for existence, looked upon the revision of the tariff as a matter of very secondary importance, and thought moreover to secure the good-will and moral support of the Four Powers by acceding to their wishes. Accordingly, the Privy Councillor Midzuno Izumi-no-Kami, signed a treaty revising the tariff on the 13th of May in the 2nd year of Keio (1866) and fixing the import duties at five per cent *ad valorem*. This was a ruinous proceeding: not only was Japan deprived of the twenty per cent duties formerly fixed by Mr. Harris, but the revenue received a blow the evil effects of which have been felt yearly ever since.

The Shōgunate now made preparations to throw open to foreign intercourse in the month of January, 1868, in accordance with treaty stipulation, the two cities of Osaka and Yedo, but as, just at the time, the Shōgun was about to resign his authority into the hands of the Emperor, another opportunity was given to the Foreign Representatives to meddle in our domestic affairs, an opportunity of which they amply availed themselves.

With the retirement of the Shōgun one central authority was established in Japan; and the feeling against foreigners and intercourse with foreign nations immediately subsided. Friendly relations have since continued and been continually cultivated; while, as the Foreign Representatives have been kept in their proper position, we have been gradually gaining confidence to try and recover the independent sovereign rights so insidiously inveigled from the weakness of our Government.

Since the Restoration, the Government of Japan has actively striven to promote intercourse with foreign countries, and secure for the Empire recognition on an equal footing with the other nations of the world. In carrying out this liberal policy, so opposed to the traditions of our ancient country, a country in which the teachings and example of former generations are perhaps more revered than in any other under the canopy of Heaven, except, indeed, the neighbouring Empire of China, a Minister Plenipoten-

tiary was despatched in the year 1871 to the English and other European Courts and the Washington government. Again in the year 1872, the Junior Prime Minister, Iwakura, the Privy Councillor Kido, the Finance Minister, Okubo, the Assistant Minister for Public Works, Ito, and the Vice-Assistant Foreign Minister, Yamaguchi, were despatched on a mission to visit the different countries of Europe and America to try and arrange a revision of the treaties. The Mission commenced operations in America; but from some unexplained cause the negotiations proceeded no further, and it was determined to let all consideration of the questions involved be settled in Japan. It was made patent to the world, from this time, that we desired the restitution of our independent national rights, the abolition of the noxious principle of extra-territoriality, and free liberty to impose customs duties according to the requirements of the country, without any outside interference.

As the existing treaties could have been revised any time after the 4th of July, 1872, our Government notified to the different Treaty Powers as early as the year 1871, their desire that such revision should take place and expected, with reason, that the matter would receive immediate attention on the return of the Mission from Europe and America. Unfortunately, however, this was not the case. Great changes occurred in the cabinet in the year 1873, then followed the Saga insurrection, the troubles in Formosa, and, shortly afterward the terrible rebellion in the south-west which engaged all the energies and taxed to the utmost the resources of the Government before it was finally crushed. These pressing affairs caused the question of Treaty Revision to remain for the time in abeyance, but in 1877, when tranquillity was finally restored to Japan, the Government recommenced negotiations on the subject. The Foreign Representatives here were made acquainted with the wishes of the authorities, and at the same time our Ambassadors abroad were instructed to make known to the Courts to which they were accredited the requirements of Japan. However, up to the present, Foreign Governments, and the Foreign Representatives here, have procrastinated and delayed consideration of the matter, first upon one pretext and then another, and it may justly be said that nothing has, as yet, been accomplished.

We have now laid before our readers a résumé of the different events which have occurred during the twenty-one years that have elapsed since the signing of the treaties opening Japan to foreign intercourse, and will now proceed to treat, in detail, the various matters in the treaties which require to be altered.

The 22nd article of the existing treaty with Great Britain provides that, "either of the high contracting parties may demand a revision of this treaty and of the trade regulations and the tariff annexed thereto on and after the first of July, 1872, with a view to the insertion therein of such modifications or amendments as experience shall prove to be expedient. It is necessary, however, that one year's notice must be given before such revision can be claimed." We do not say positively that this treaty lapsed at the end of June, 1872. The arrangement made was for the purpose of securing the advantages of peace, trade and navigation, and these must always continue so long as an open rupture does not take place between the two countries. Revision, however, is a different thing altogether, and it is only right and reasonable that alterations should be made which have been found necessary by actual experience. Notice having been given by our Foreign Minister, in the year 1871, that Japan required to have the treaties amended after the 1st of July, 1872, the right to have the alterations made certainly accrued on the latter date, and it is quite clear that if no fresh arrangements were entered into the Japanese Government had the most perfect power to consider the treaties void. Theoretically, therefore, the treaties no longer exist, but practically they are still being acted upon. In all discussion of the subject this should be carefully borne in mind.

The time having happily arrived when Japan is entitled to demand the restitution of independent sovereign rights, how is it that the public are dissatisfied with the action hitherto taken in the matter by the Government?

The demand heard on all sides throughout Japan has long been for the abolition of extra-territoriality and the resumption of power to arrange our own tariff. In com-

pliance with this general wish, His Excellency Iwakura and others went abroad some years since, and made strong representations in America protesting against foreigners, resident in Japan, being exempt from the territorial laws. These remonstrances led to nothing at that time, but in the seven years which have since elapsed the vast strides which have been made in the improvement of our internal administration amply justify the functionaries now charged with negotiating the revision of the treaties, in firmly reasserting the position taken up in 1871-2.

Considering all the circumstances, it certainly affords us matter for great surprise to hear the opinion constantly expressed in high quarters, that "the extra-territoriality question will be left in abeyance, and the efforts of the Government directed entirely to obtaining control of the tariff." We could well understand this course being adopted if the Ministers of the existing Government were in a similar position to the Privy Counsellors in the latter days of the Shōgunate, whose only object was to temporize at any cost, and who took no heed for the future. But then the present Ministry are very differently situated: they are looked up to as the leaders of civilization in Japan, and are to as great an extent the guides of the people as the polar star is the guide of the mariner. It is utterly incredible that they can ignore such a pressing, vital question as that of extra-territoriality and we refuse to believe the current rumours, —well founded although they may seem.

Public writers often treat the questions of extra-territoriality and control of the tariff as on exactly the same basis, and maintain that we should recover the privileges we have lost in both cases. This is no doubt perfectly correct, but when we come to consider which is of the most importance, the question assumes a very different aspect. We will now give our own views in the matter. If it be said that, "our desire for the abolition of extra-territoriality arises from the fact that a portion of our country is practically held by foreigners," then we quite agree with the opinion expressed; but if the desire to regain sole control of the tariff is said to spring from "foreigners now having control of it," then we must altogether dissent. The laws of Japan have no force or effect in Consular Courts: foreigners are punished according to their own laws and by their own tribunals: this is extra-territoriality. With the tariff it is different. The Japanese Government has no power under the existing treaties to alter the tariff, but neither has any Foreign Government. The only way in which any modification can be effected is by a conference of the different Powers interested. It is correct to say that the tariff, which ought to be under the sole control of Japan, is interfered with by foreigners, but as regards extra-territoriality a separate and independent jurisdiction in Japan is claimed and exercised by Foreign Powers. The two questions are therefore very dissimilar. In the case of the tariff the injury we sustain is only trivial, but the seizure of our judicial rights is a very grave and serious matter. Tariffs are frequently arranged by friendly conferences between independent nations, and, as compared with a claim of extra-territoriality, are of secondary importance. It is evidently the usage of treating both cases as on the same footing that has led many people into the error of deeming it sufficient, at present, to get rid of interference with the tariff (a minor consideration) and postpone to a future period the settlement of what practically amounts to a foreign occupation of a portion of our territory.

We will now deal with the two great questions involved in an alteration of the compacts made between Japan and foreign nations:—our judicial and commercial rights. As we desire to progress in regular gradation, we shall commence with the minor question of the tariff first. This question naturally divides itself into two branches; 1st, the right of controlling the tariff; and 2ndly, the proposal to increase the customs' duties. For the sake of convenience and perspicacity we shall treat each branch separately.

Every independent country possesses the most perfect right to impose taxation, to suit its own requirements, regardless of the wishes of any other country. As the existing treaties are in opposition to this most just and reasonable usage, it was found necessary to stipulate that all imported goods on which the duties have been paid, may be transported by the owners into any part of the Japanese Empire without the payment of any further tax or transit-duty whatever,

and further where goods have once paid duty they may be landed at any other port without further payment. In addition, it was, as we have already mentioned, distinctly agreed that the treaties and tariff were to be revised five years after Kanagawa was opened to foreign trade. Now how are we to account for these stipulations? We should imagine that the Foreign Representatives who first concluded the treaties were apprehensive the Japanese Government would become averse to foreign intercourse and try and crush trade by imposing prohibitory duties. They therefore protected themselves by the precautionary stipulations we have quoted above. The Foreign Representatives may have known perfectly well that they were taking undue advantage of Japan, and justified to themselves their action in the matter on the ground of expediency, the welfare of trade being, from their view, at stake. Granted that such was the case, Foreign Governments must now be convinced that neither the Government or people of Japan have any desire to prevent or injure foreign intercourse or trade. The cause of all anxiety on this score being removed, what possible reason exists for the continuance of these stipulations in the treaties? The refusal to consent to their abolition is now positive proof that Japan is not regarded in the light of an independent Empire. This is a national ignominy no longer to be borne, and to remove which every Japanese should be willing to sacrifice his life. If, however, Foreign Powers have no desire to interfere improperly with the sovereign rights of Japan and cast disgrace upon the Empire, then our Government has only to take a firm and determined stand to recover the right to control the tariff without let, hindrance, or interference.

It must however be matter of apprehension to Foreign Governments, that, when we obtain the uncontrolled regulation of the tariff, measures may be adopted prejudicial to foreign trade, such for instance as the imposition of protective duties, which would entail great losses upon foreign subjects resident in Japan. Although this apprehension is altogether groundless, yet it is quite excusable in persons who are ignorant of the actual state of affairs in the Far East. When Japan has once obtained the control of the tariff such commercial treaties should be arranged with other nations, as is now the custom amongst independent countries. These trade conventions are made, not from any "right" which one nation has to force them upon another, but from motives of mutual benefit and advantage and it will certainly be to the interest of Japan to conform to the ordinary procedure. We will now show how Japan is deeply interested in preserving friendly mercantile relations with foreign countries. Suppose that we were to levy a duty of sixty per cent on English cotton yarn and seventy per cent on French woollen goods, no Foreign Government would have any right to prevent us, but then England and France might very easily retaliate and levy a duty of eighty per cent on Japanese silk which would ruinously affect the staple product of this country. It is therefore evident that mutual self-interest will lead to the arrangement of a tariff which will be satisfactory and beneficial to all parties concerned.

It is only natural that we should advocate an addition to the present import duties. We have already given our reasons why we wish to be rid of foreign interference: we will now deal with the question of an increase in the duties.

(To be continued.)

## LAW REPORT.

### IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Messrs. F. GRUNWALD and M. RASPE, Assessors.

Thursday, January 29th, 1880.

Joseph Heid was charged with having bribed a Japanese newspaper boy named Ogawa to deliver for a monthly payment of one yen a nightly copy of the *Japan Gazette* during the period August 1878 to October 1879, at his house the "German Tavern," No. 121.

The accused pleaded *not guilty*, saying that he had not

asked the Japanese boy to bring the paper to his house. In reply to the questions put by the Court, accused stated:—

I am by profession a tailor, but have for many years been keeping bar in public houses. I am now in the "German Hotel," No. 179. From the month of June or July until 1st instant I kept the "German Tavern," No. 121, which I took over from one August Nebbe, when the latter went otter-hunting. During that time, I received a copy of the *Japan Gazette* regularly every night: a Japanese newspaper boy brought it into my house. I had not asked him to bring it, and had no conversation with him about it. Only once when he had missed to bring the evening-paper, I asked him the next day the reason, and he told me that he had no surplus copy. At the end of each month he asked me for one yen, which I paid him. He told me that my predecessor in the place, Nebbe, had paid him the same amount. Before I took No. 121 I had a public house at No. 31, "Travellers Club," and was then for two months subscriber to the *Gazette*, I know that in Germany it is usual that the employes in printing offices take a copy of the newspaper home with them. It never struck me that the Japanese boy stole the copy of the newspaper which he brought me every night. I thought, that the carriers of the newspapers might have some copies for sale for the proprietors, besides those copies which they brought to the regular subscribers. It would of course be strange if the newspaper proprietors sold for one yen a month on the evening of publication, the same papers for which they charged their regular subscribers \$2.50 a month. In October last I was invited to go to the *Gazette* office and see Mr. Anglin; when I went there, he called all the newspaper boys into the room, and asked me to point out the boy, who used to carry the *Gazette* to my house. I did so, and Mr. Anglin sent for a policeman, to whom he delivered the boy on a charge of theft. I did not know that boy until I came to No. 121. I did not tell Mr. Anglin that the boy had formerly been my servant. I used to find the *Gazette* in No. 121, when the place was kept by my predecessor, Nebbe.

Mr. J. R. Anglin, sworn:—I am one of the proprietors of the *Japan Gazette*; Mr. Talbot is my partner. One evening in October last, on the 25th I believe, in going home I happened to see one of our newspaper-carriers enter Heid's place with newspapers. Knowing that Heid was not a subscriber to the *Gazette*, and knowing also that the practice exists among grogshop-keepers to bribe the boys to sell them newspapers, I watched Heid's house the next evening, and again saw the same boy enter it with newspapers. On the following day, which was a Saturday, I went in the afternoon to No. 121; I saw the *Gazette* lying on a table in the bar-room, I asked for Heid, but was told he was not in; I then left word for him to come to my office. When he came, I called all the boys into the office, and in the presence of Mr. Talbot I asked Heid to point out the boy, who was in the habit of bringing him the *Gazette*. He did so, and I sent for a policeman, to whom I handed the boy. He told me that the boy had formerly been in his service, and that he had brought him the papers for the last two years. He offered to pay me the subscription for that time if he could thereby hush up the matter. I refused, and on the following Monday I sent my complaint to this Consulate. The boy has been punished in the Saibansho for having stolen a copy of the *Gazette* every night during one year, and he has there stated himself that he had formerly been in Heid's service.

The accused denied having told Mr. Anglin that the boy had been in his service.

Mr. Anglin added, that the monthly subscription to the *Japan Gazette* evening number, is \$2.50 per month, and that single copies sell for 25 cents each. They only print a very few copies over and above the number subscribed for. No gratis copy is given to any of the Japanese employes.

August Nebbe, warned to speak the truth, said:—I am by profession a sailor. On the 1st January, 1876, I established the "German Tavern" at No. 121. When I in June, 1878, went otter-hunting I left the establishment in the hands of Heid. I never subscribed to the *Japan Gazette*, but a copy came nevertheless mostly every night to my house, and was read by me and my guests. A Japanese boy brought the paper; how he came to bring it I don't know. I never asked him to do so. Now and then he

asked me for \$1.00, which I gave him. I took no thought, whether the paper was stolen. It is just the same thing with newspapers, as with coal: one may buy a number of baskets full from the Japanese boys for a trifle. I have often done so myself.

Ozawa, a prisoner in convict-dress, admonished to speak the truth:—I used to take the *Japan Gazette* to "Schneider" (Heid), while he was living at No. 121. I continued to do so for 15 months, every evening. I had previously done the same thing for "Peter" (Nebbe), while he was at No. 121. It was "Peter" who persuaded me to steal a daily copy of the *Gazette*, and sell it to him. I know him from having lived in the same compound with him. I did not deliver the *Gazette* so regularly to him as I afterwards did to "Schneider." He paid me one yen about every three months, when "Peter" left No. 121, "Schneider" told me that he had now taken over the place, and that he wanted me to continue the delivery of the paper. I did so, and he paid me one yen every month. I am now in Kanagawa prison under sentence of one year's penal servitude for having stolen and sold my master's property, viz. copies of the *Japan Gazette*.

Nebbe re-called denied that he ever spoke to witness about procuring him the *Japan Gazette*. He does not know how that paper was first brought into the house. Nor did he, when he handed over No. 121 to Heid, tell the latter that the *Gazette* was brought every evening to the house, by a Japanese boy, who therefore was to receive one yen per month.

Accused Heid was confronted with Nebbe, and contended that when Nebbe handed him the house No. 121, he told him that the *Gazette* came in the house every evening, and that the Japanese boy was to have a yen per month. Asked whether he had anything to say in his defence, he repeated that he had not asked the Japanese to bring the newspaper. He was not conscious of having bought stolen property and demanded to be acquitted.

The Court now retired, and on re-entering the Court-room, the President read the following:—

#### SENTENCE.

The Court finds the accused Joseph Heid guilty as a receiver of stolen goods, condemns him to imprisonment during seven days, and orders him to pay the costs of the prosecution.

#### Reasons.

Any person who, with a view to make a profit, conceals, buys, receives in pawn or otherwise brings into his possession, or who assists in transferring to others, goods of which he knew, or from the circumstances must have presumed, that they were obtained by a crime, is liable to be punished as a receiver of stolen goods.

By the admission of the accused and the evidence of the witnesses and of Ozawa Shidzuyo, it is proved, that the accused daily or almost every day, during a period of 15 months in the years 1878 and 1879, bought from Ozawa Shidzuyo for one yen per month a copy of the newspaper, the *Japan Gazette*, although he knew that the monthly subscription for that paper amounted to \$2.50 a month.

It is further proved by the official correspondence between this Consulate and the Court of Kanagawa Ken, as likewise by the evidence of the witness Ozawa Shidzuyo, that the newspaper-copies, which during the above-mentioned period were sold to the accused, had been stolen by the seller.

The defence of the accused, that he acted under the impression that Ozawa had a right to sell the copies for his own account, is unworthy of credit, considering that the accused as an old resident of Yokohama must have known, that it is not the custom among the Yokohama newspaper-proprietors to furnish their native employes with newspapers to sell for their, the natives, own account.

All these facts have thoroughly convinced the Court, that the accused Joseph Heid has for a period of fifteen months during the years 1878 and 1879 almost daily bought from Ozawa Shidzuyo a copy of the newspaper, the *Japan Gazette*, although he from the circumstances must have supposed that those newspapers had been obtained by a crime, and also that he bought the copies with the view to making a profit, and thus according to Art. 259 in the penal code has made himself liable to the punishment provided for receivers of stolen goods.

The Article just quoted punishes that offence with imprisonment, and the sentence of imprisonment during seven days is thus justified, the good character hitherto enjoyed by the accused having been taken into due consideration.

As to the costs, the sentence is in conformity with Art. 497 of the law on criminal procedure.

#### INCIDENT OF PEASANT LIFE IN BRITTANY.

The great attraction of Brittany is "the peasantry," and no wonder, for they are quite *en genre*, quite different from all other populations. They combine the sombre, taciturn nature of the Spaniard with the droll, wild life of the Irish. It is difficult to understand how the same people can be silent and noisy—reserved and running over with jollity. Yet so it is. There must be a strain of tiger in a population which could amuse itself as lately as 1847 in cutting the life out of friends with a whip made after this fashion:—Lash, eighteen feet long, swelling at a little distance from the handle to the thickness of a man's arm, from whence it tapered to a twisted and strongly knotted end, made more like a knife by the help of a mixture of glue. This plaything was fixed upon a strong, stiff stick, and often not only cut a man into steaks, but sometimes cut out the life of him at a single stroke. Yet a local historian gives an account of a fête which he attended in 1847, at which the chief attraction was a contest between twelve men, six on a side, with these deadly weapons. The smack of these whips made, he says, much more noise than a gun shot; they could be heard at the distance of two and a half miles, and when several smack their whips in concert the noise is so terrible that one must either run away or stop up one's ears. These twelve men were ranged opposite one another at a distance almost corresponding to the length of the lashes of their whips. They stood up, having for protection in the shape of dress only short felt breeches, and shirts made of stout sailcloth. Like all Breton peasants of the old style, their hair hung down their backs in long tresses, but was cut straight across the forehead after the fashion of Gainsborough's "Blue Boy." They wore no hats or head-covering. The left arm was naked, but the right arm, which held the whip, was protected from the fist to the neck by an armet or shield of thick leather. The sides were distinguished by the colour of the tuft of their whips, the one being white, the other red.

These men thus standing face to face were there to be wounded almost to death for the glory thereof, and also for the prize, which consisted of half-a-dozen striped pocket-handkerchiefs and a pound of tobacco. The signal given by an old peasant, the combatants put themselves into the attitude of defiance, the whip raised, while the lash was held in the left hand. "Strike," said the same voice, and the twelve cables were let loose in an instant, but no smack was heard as they met, twisted, and struggled in mid-air.

Those most renowned quickly disengaged their lashes and dealt the second and dreadful blow upon the persons of their antagonists, opening up long seams of livid or bleeding flesh; on the third stroke all the faces except two were seamed and flowing with blood. These two were the leaders—one tall, the other short; one heavy, the other light; one all flesh, the other, although only five feet high, all nerves and sinews. An outsider would have backed the giant, but the boys of Pipriac knew too well the prowess of the dwarf to risk their money against him.

The combat now raged with fury; men disdained to parry, they were only eager to strike. The sound was that of a volley of musketry. The lashes soften into tow, but harden again and glue themselves together with blood. The faces are no longer human; the long hair hangs down in front, bathed in perspiration and blood. But not one blow has fallen on either champion. They have reserved themselves; they have guarded and parried, knowing that upon them the issue of the fight did depend. But now the tall man has hit home. A long, blue, spiral mark, which here and there squirts blood, twists round the left arm of the little Joseph, and makes him stagger with pain. He recovers himself; launches his whip at his foe, and but six inches intervened between its deadly point and the face of Joseph the great. Animated by his first success, Kaer stepped forward bent his whole strength to the blow which he aimed at Josille. The little man never parried the blow, but pirouetted as it were; while, without any effort, he threw out his lash softly. The blow of Kaer missed; but when Josille sharply drew back his lash, the whole face of Kaer was cut in half—a gigantic gap opened up the very bones. These two stood alone in the lists; the rest had made a truce, and were engaged in attending to their grievous wounds. Kaer, blinded by the shock, put his armet of leather before his face and paused. Josille, so far from profiting by the occasion and pressing his advantage, coolly took out his pocket-handkerchief and loudly blew his nose, to the great amusement of his backers, who thought it an excellent joke. The laughter made Kaer mad, threw him out of his *sang-froid*, and made him wild. He struck, stamped and made wonderful points; but Josille was calm; and at the end

of ten minutes the giant, covered with wounds, his shirt cut into ribbons, his mouth foaming, his eyes blinded, fell heavily upon his knees. "Don't give in!" cried some voices still; but the effort to rise was vain. Josille, apparently incapable of pity, like a true Breton peasant, again blew his nose, and prepared to give the falling man his *coup de grâce*.

A shiver ran through the crowd; but Josille was better than he seemed, for instead of cutting the poor flesh, he dextrously drew the whip out of the hands of the victim, and folded his arms upon his breast. Kaer shut his eyes, and laid his burning head upon the sand. The whites were proclaimed the victors. Each subaltern had a pocket-handkerchief worth sixpence, and Josille the pound of tobacco. I know not whether any of these scenes are enacted now, but this account is so recent that it throws light upon the Breton peasant as I find him.—*Cornhill Magazine*.

#### THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

#### CHAPTER XXXIV.

##### THE BATTLE OF THE WILD FOWL.

This open attack upon the chief stronghold of the Heike power in the province was a challenge which the Taira chief might not underlie. The so called rebels were as yet but a very insignificant force, and their first success could only be counted a fortunate chance, but in the ancient prestige of the Minamoto name and in the slumbering—though by no means lifeless—fealty of the provincial barons, a less astute leader than Kiyomori might have seen signs of no despicable danger. Moreover a long habit of unchallenged autocracy had made the old man so intolerant of anything resembling opposition that the news of this revolt roused him to the fiercest wrath. Ill at ease in mind and body alike, he began perhaps to forecast the decadence of the huge fabric his iron grasp alone had sustained, and though the capital presently resounded with preparations for the equipment and march of an army that should crush the rebels under foot, the supposed tardiness of his liegemen or the apparent apathy of his allies kept him constantly in a ferment of impatience.

Meanwhile fate was preparing for Yoritomo a buffet that well nigh overwhelmed him. The victory he had gained at the outset did indeed bring him some small access of force, so that he presently found himself at the head of about three hundred men, but on the other hand Oba Saburo, a powerful baron of the neighbouring province and at one time a staunch supporter of his old liege-lords, the Genji, suddenly conceived the idea of establishing an everlasting claim on the gratitude of the Taira chief by destroying his dangerous rival. To this end he summoned all his vassals, numbering more than three thousand, and took the field with such promptitude that the rumour of his design scarcely preceded its execution.

Yoritomo and his handful of knights had taken up a position at a place called the 'Stone Bridge,' among the precipitous hills of Hakone. Here they had thrown up a breast-work, and added what their rude skill might to the natural advantages of the ground, for their only hope consisted in being able to hold out until the arrival of promised aid in some degree remedied their grievous inferiority of force. Oba, however, was not less cognizant of this necessity. He had no sooner come within sight of his enemies' position than he gave the order to attack forthwith, regardless of the difficulties his men had to encounter in their advance.

The battle that ensued was on this side a heroic defence, on that, a dogged repetition of assault after assault. The Minamoto knights used hollow-headed arrows, whose humming sound was designed to conceal their paucity, but neither device nor desperation might make head against such odds, and in a few hours nothing remained of the Genji force but half a dozen men who followed Yoritomo in his flight towards the seashore.

Never did fugitives find themselves in harder case. Between them and the point where they hoped to embark lay a jungle-clad hill, so intersected by watercourses and precipitous ravines that a man might not trust himself beyond the pathway, though in following it he was often obliged to cross rocky spurs entirely visible from the valley beneath. Yoritomo understood that nothing could save him but some negligence almost intentional on the part of his enemies, and unwilling that his now apparently inevitable fate should include

those who had already suffered so much for his sake, he dispersed his followers, desiring each to provide for his own safety, since by holding together they only facilitated pursuit.

It thus happened that when Oba reached the valley he saw but two figures climbing the steep pathway before him, and in one of the two he recognized the man whose head was needed to make his triumph complete. Urging his horse rapidly up the rocky track, he was just in time to see the fugitives leave the road, and conceal themselves apparently behind a fallen pine tree, whose branches the wisteria and other creepers had found such a convenient trellis that a bird could scarcely have discovered space to roost among the luxuriance of leaf and tendril. Here Oba dismounted from his horse and would have continued the pursuit on foot, but he was outstripped by one of his knights, Kajiwaru Kagetoki, who ran forward and passed first behind the tree.

Oba's eyes had not deceived him. Yoritomo seeing that it was hopeless to continue his flight, had taken refuge in the thicket, not more with the design of saving his life than of winning leisure to end it honourably, and when Kajiwaru descried him, he had knelt down and was just in the act of turning the point of his dagger towards his own bosom.

From the incidents of that moment depend a chain of consequences illimitably powerful for good and evil in the future. Kajiwaru had outstripped his chief by the strength of his zeal for their common cause, but when his glance encountered that of the hunted man kneeling in the shadow of the pine tree, something more worthy to be called an inspiration than a caprice changed him suddenly from an enemy to an ally. Making signs to dissuade Yoritomo from his design, he came softly to his side and pledged himself to devise some means of baffling his pursuers, adding a request—which seemed almost a mockery under the circumstances—that if by any chance fortune should favour the Genji arms, the service rendered at that critical moment should not be easily forgotten.

There was ample motive to mistrust so unaccountable an offer of service, but since the alternative was death, Yoritomo sheathed his dagger while the other hastened back to oppose his comrades' advance. Oba of course had no suspicion of Kajiwaru's treachery, but for all that he refused to be persuaded against the evidence of his own eyesight and insisted on exploring the thicket himself. Too resolute an opposition could only have excited doubt. Kajiwaru was therefore constrained to permit his ally's passage, taking the precaution, however, of preceding him on the plea of acting as guide. He had not yet abandoned all hope, thinking perhaps that the fugitives would have employed their respite for some better purpose than that of abiding so hazardous an issue, but the fact was that Yoritomo had no choice, since he knew that the pathway along which his enemies were advancing, was the only possible means of escape from the ravine.

Thus Kajiwaru's merciful design was on the point of achieving his own ruin as well as that of the man he sought to succour, when there happened one of those strange accidents which so often interrupt the course of apparently inevitable events. A few yards on this side of its inner exit the leafy alley that led to the open space where Yoritomo sat, grew so narrow that a man might not pass without thrusting back the boughs on either side. Kajiwaru, advancing with the greatest possible leisure and peering cautiously before him, saw to his astonishment that in the brief interval of his absence a spider had spun its web right athwart the pathway. He turned immediately to Oba and asked him with a laugh whether he thought it possible that the passage of two full grown men in armour could have left these glittering threads unbroken, and whether it was not much more reasonable to suppose that the fugitives had only pretended to turn aside from the track and were even now reaping the benefit of their successful ruse. Oba was completely convinced by this argument, and so it fell out that the future ruler of Japan owed his life to the intervention of an unusually busy spider!

Yoritomo was not a whit discouraged by this disastrous defeat. He had firm faith in the vitality of his cause, and when he embarked that evening with a little band of liegemen who had joined him on the seashore, he turned his eyes northward with a confidence that did not fail to reassure his followers.

In the province of Kadzusa, whither the fugitives shaped their course, reasons more cogent than even hereditary fealty disposed men to succour the Genji chief. Not a few of the most powerful barons had charges of insult and injury to prefer

against the ruling clan, so that when Yoritomo raised his standard on the plains of the River Sumida, he soon found himself at the head of a large and enthusiastic force.

Oba Saimuro was the first to take the field on the Taira side, but the triumph his numerical superiority had enabled him to gain was now avenged by a crushing defeat, inasmuch that he recognized the futility of resistance and prayed permission to return to his old allegiance.

This victory established the supremacy of the Genji arms in the north-eastern provinces, but in the meanwhile an immense host had marched from the capital to punish the so-called rebels. More than two hundred thousand men were pressing northward by the great shore route, and though Yoritomo could scarcely muster a fourth of that number, he determined not to shun the offered combat.

Along the shores of the Suruga sea lies a wide expanse of wooded slopes, intersected by deep ravines and rivers whose rocky channels hardly suffice to contain the rushing torrents of melted snow that Mount Fuji shakes from his comely shoulders in the early summer. This was the place Yoritomo selected as a battle ground, partly because every nook and knoll was familiar to him, and partly because in the event of defeat, he could withdraw his troops over the Hakone hills, easily holding the precipitous passes against any attempt the enemy might make to force them.

Here then the two armies were encamped on the banks of the river Fuji in the middle of November, seven hundred years ago. The weather was fine but bitterly cold and every day their snowy covering seemed to creep farther and farther down the hill-sides. Knight and vassal alike found scanty shelter in caves or wooden hut from the biting frosts at night and the keen blasts by day, so that men looked forward with ever increasing impatience to the moment when the heat of the fray should drive the chill from their numbed limbs.

If this was the case with the Genji knights, most of whom habit had inured to even sterner hardships, it was still more so with the Taira nobles, already wearied by their long journey and yearning to resume their luxurious fashion of life at the capital. Yoritomo seeing how ill his own people brooked the delay that succeeded their arrival at the battle-ground, was at no loss to understand how it fared with the enemy, and seeking like a skillful commander to profit by every opportunity chance threw in his way, he selected an admirable position for defence, and determined to await the assault his opponents superior numbers and more irksome circumstances would surely impel them to deliver.

But there was something far less endurable to the Heike host than either cold or discomfort, and that was the prospect of encountering the men they had come out to annihilate. An extraordinary trepidation, based in part upon weird stories circulated amongst them by secret partisans of their foes, and in part upon experience of the things that had actually befallen them at the bridge of the Yodo, made them huddle over their camp fires at night, expecting every moment to see the flash of smiting weapons or hear the shout of fierce onset. Surely if their commanders had not shared this disquiet they could not have endured the semblance of hesitation in the presence of an enemy comparatively so inferior, but whatever their motive was, it is certain that day after day of inaction diminished the confidence of their troops and increased that of their foes, until Yoritomo at last persuaded of the truth, resolved to assume the offensive and deliver an assault forthwith.

At dawn of the day preceding the execution of this design he ascended a hill in the vicinity of the camp to observe, as was his custom, whether any change had taken place in the relative positions of the two armies. Every detail of the scene was perfectly familiar to him, and as the mists rolled away from the undulating slopes and the sound of the sea began to be borne nearer by the morning breeze, he stooped down and peered into the recesses of the valleys and shadows of the woods with an intentness that nothing might escape. But no change whatsoever had taken place since the preceding evening. The Fujikawa crept quietly shoreward, like a huge silver serpent, washing the bases of reedy slopes and reflecting the eaves of deeply thatched farmsteads, while here and there among the hillocks on its further bank the smoke of the Heike camp fires curled slowly upwards, and the rising sun shone on the many-coloured silk hangings that surrounded the huts of these luxurious warriors.

Yoritomo had turned to descend the hill when happening

to look northward, he observed a band of sixty or seventy men grouped about a white flag on a little plateau above the roadside. They were so near that it was almost possible to distinguish their features, and Yoritomo perceived from their attitude as well as from the weary look of the horses standing saddled beside them, that the dawning must have been some hours distant when they commenced their journey.

The arrival of allies was happily an event of so little rarity that this troop of cavaliers caused no surprise either to the Genji chief or his attendants. Nevertheless Yoritomo scanned the new comers with unwonted curiosity, and presently turning to one of his followers desired him to ride forward and ascertain who might be this handful of friends who reached the camp at such an opportune moment.

Yataro, the recipient of this commission, marvelling not a little at the interest his lord displayed in so unimportant an occurrence, moved off discontentedly enough for this departure from the ordinary routine of etiquette seemed altogether unjustifiable under the circumstances, and to prevent any misconception on their part to whom his mission lay, he deemed it expedient to execute it with the least possible display of deference.

Riding therefore directly up to the plateau of the white pennoncelle, he did not draw bridle till he found himself face to face with one in whom he easily recognized the leader of the new-comers. This was a young knight dressed in gold-enchased armour and seated on a bear-skin cushion at the foot of the bandlerole. The comeliness of his countenance, otherwise almost faultlessly perfect and of unusually fair complexion, was somewhat marred by a slight projection of the upper teeth, while his frame, though slender, was so well knit and perfectly proportioned that it suggested an uncommon union of sinew and suppleness. Indeed it was scarcely possible to believe that he had shared the fatigues whose effects were so plainly perceptible in the bearing of his followers, for while these for the most part lay upon the ground in attitudes of utter weariness, his face was as fresh and his eye as clear as though his waking was no older than the sunrise. This power of endurance seemed also to be possessed, though in much smaller degree, by two of those that stood beside him; the one a soldier of gigantic proportions, carrying his heavy plate armour as easily as a silk surcoat, and leaning on a glaive fully ten feet long; the other also a man of massive limb and ample chest, but showing by his white hair and shrunken features that the interval between the prime and the decline of his life had been suddenly bridged over by some harrowing catastrophe.

Yoritomo's envoy delivered his message without dismounting. The Earl of Kamakura\* had sent him, he said, to enquire the names and purpose of the new-comers. Judging from their pennon they were allies, but on the eve of a battle it was necessary to be heedful of friend and foe's positions alike.

The young knight listened at first to Yataro's words with quiet courtesy, but at the mention of the impending conflict, he sprang to his feet and clapped his hands in an ecstasy of delight. "Few days in my life have brought me such glad tidings as these of yours," he said to the messenger. "We have journeyed as fast as horse might travel or riders' endure with the hope of joining in this mêlée, but it seemed scarcely possible that our desire should be achieved. Pardon me, however, for thus delaying your errand. Tell the Earl, I pray you, that one whom he remembers perhaps as Ushiwaka, but whose name is now Yoshitsune, has ridden from Oshiu to fight under his banner, and that deeming one sword before the battle better than a clump of spears after the victory, he has neither waited for those that were not ready nor tarried for such as fell behind."

Before Yoshitsune had ceased speaking, Yataro was kneeling on the ground with his forehead bowed in the dust. He had often heard the Earl mention his youngest brother in a way that left little doubt as to the nature of the welcome Yoshitsune would receive, and men were not a little astonished when they compared the impetuous speed of the messenger's return with the leisurely dignity of his departure.

Not one of Yoritomo's most intimate friends could remember to have seen him so much moved as he was by the receipt of Yataro's intelligence. He desired his brother to be immediately conducted into his presence, and summoned all his chief liegemen and allies to bid the new-comers welcome.

\* The title by which Yoritomo was known.

Yoshitsune accordingly found himself presently ushered into a huge enclosure, festooned on all sides with curtains on which the Minamoto arms were emblazoned, but scarcely sufficient despite its spaciousness to contain the crowd of knights and nobles whose bear-skin cushions were spread on every available spot within. Yoritomo was seated on a richly bordered mat forming a sort of slightly elevated dais, but he no sooner caught sight of Yoshitsune than he hastened forward, and led him at once to the place of honour beside his own. Here for a moment the two men, unconscious of everything beyond the joy of this meeting, were content to gaze at one another without seeking to frame any form of question or greeting, until the buzz of congratulation that rose from the assembled nobles recalled Yoritomo to the memory of his position.

"Believe me, brother," he said, "next to that of our murdered father, there is no face among the living or the dead I could have wished to behold before your own. Your coming at this moment is to me a better omen than the addition of ten thousand allies. But we have many things to tell each other that are ill-fitted for alien ears; neither, I ween, will such an apt soldier as fame calls you be content to waste in words the time we need for preparation. On the issue of to-morrow's struggle depends in a great measure the success of our cause. Let us bestir ourselves to complete what we have in hand, that we may gain the more leisure to renew our memories of the past."

So saying Yoritomo turned to the assembly, and explained his intention of attacking the Heike army on the following day. He pointed out in a few concise words the just inference to be drawn from the enemy's inaction, stating however very plainly that unless that inference were correct, nothing but disaster could be expected to result from this change of attitude. Not a single voice was raised in opposition to this proposal. The nobles, one and all, welcomed the announcement of the coming struggle with an eagerness that showed at once how weary they had grown of waiting and how little they were troubled by the consideration of the enemy's superior numbers. They were unanimous in ascribing the southern army's idleness to timidity, and prophesied an easy victory over such craven opponents.

Yoritomo then described the method he proposed to pursue in the attack. It was to be delivered on two fronts simultaneously; one by a direct advance on the enemy's position, the other by a flank march through the passes of the western valleys, and of this, the more difficult as well as the more important manœuvre, he entrusted the conduct to Yoshitsune.

That was indeed a glad and a busy day in the Genji cantonments, and it was not till long after nightfall that all the necessary dispositions having been completed, the two brothers found leisure for their much desired meeting. Yoritomo then shewed Yoshitsune the commission he had received from the ex-emperor and recounted all the adventures of his past life, unfolding at the same time his already matured plan for the establishment in the north of a court and a capital that should yield in nothing to the magnificence of Kiyoto. He confessed however that until his brother's arrival he had scarce dared to reckon on the realization of this scheme, for loyal as his allies seemed there was not one amongst them on whose sympathy he could surely count; neither might he forget that their allegiance to the House of Hei, so long observed, and so lately laid aside, was liable to be resumed at the instance of any freak of fortune. The Taira power could never be completely broken till its strongholds in the south were captured or destroyed, while on the other hand the fealty of the northern barons could not be trusted to endure for a month in the absence of the only man they dared not deceive. Of this dilemma Yoshitsune's aid afforded an easy solution. To him Yoritomo could commit the leadership of the forces he proposed to despatch southwards as soon as the highways were cleared of these two hundred thousand obstructions encamped beyond the river, and even as Yoshitsune swore to undertake this and any other service possible to man, the first step towards the fulfilment of his promise was in process of achievement by an agency the most extraordinary that ever influenced the issue of a battle.

Benkei and Saburo had been the first to receive intelligence of the part their young master was destined to take in the engagement of the morrow. Neither of them had any knowledge of the paths by which the force under Yoshitsune's command would be obliged to advance, but they both understood the fatal mischief such ignorance might cause, and they

therefore determined to devote the early part of the night to exploring the valleys on the west of the Heike position.

Saburo joined in this undertaking with something of the alacrity that had always distinguished him before Ino's death. The prospect of the impending combat had already roused him a little from his wonted apathy, but this night reconnaissance was particularly suited to his mood, since it included a remote possibility of discovering whether Hiramori was among the southern troops, and if so, in what part of their camp his pennoncelle might be found.

The two men disguised in farmers' clothes and carrying only their short swords, crossed the river a long way above the Genji camp and soon struck the path they desired to explore. It was a moonless night, but yet there was sufficient light to show them the general features of the country, and they had proceeded unchallenged to within about a mile of the enemy's position, when the road emerged upon a wide plain in the centre of which was a large sheet of water with reedy banks and deep marshes on its outskirts. The vicinity of this plain to the Heike camp made its examination especially expedient, and so the explorers, leaving the road, followed a sort of bank or causeway that led directly towards the margin of the lake. After a time their progress was interrupted by a forest of reeds and alders through which they forced their way with considerable difficulty and no little noise, startling at each step flocks of wild fowl which wheeled round and round above their heads in ever increasing masses.

Benkei had just suggested that these birds might perhaps give inconvenient warning of their approach, when his sandal catching upon an alder stump, he staggered forward and fell with a heavy splash into the shallow water on the edge of the lake. The noise of his fall startled the countless myriads of water fowl that were feeding on and around the water, and as they rose and swept seaward, the beating of their pinions sounded like the rush of an immense host. Even Saburo and his companion were alarmed by this sudden din bursting forth in the midnight silence. They turned and retraced their steps at full speed, remarking to their astonishment and perplexity that the noise of the birds' flight seemed to increase more and more until it merged into a clamour amid which they fancied they could distinguish the shouting of men and the neighing of horses.

The next morning before daybreak, the two divisions of Yoritomo's army, following their appointed routes, marched to the attack of the Heike position. Their progress was at the last somewhat slow, for the complete absence of opposition and the silence into which they advanced suggested the idea of an ambushade. Halting within bow-shot of the place where the enemy's pennons had waved on the preceding morning, they shouted three times, and even discharged a flight of random arrows, but when this too failed to elicit any response, they rushed forward and threaded their way unmolested among the entanglements and pitfalls that constituted the sole guardians of the position.

Throughout all the length and breadth of the southern army's cantonments, the only living being was an unfortunate woman, who had been knocked down and so grievously mangled by horses feet that it was long before any intelligent account could be elicited from her. When at last she recovered sufficiently to speak, all she had to tell was that the camp had been roused about midnight by a rushing sound like the tramp of many men, and that the Taira soldiers, overtaken by an unendurable panic, had saddled their horses and fled away into the night, casting away their armour and equipments and crushing every thing under foot in their precipitate retreat.

(To be continued.)

#### DOUBLE ACROSTIC.

To all my Eastern friends a kind farewell!  
Where we may meet again I scarce can tell.

1.

Off my aid you invoke when you wish to look smart;  
Even nature can't scorn the assistance of Art.

2.

Next, a hearty good cheer, known to different tongues,  
But it's best given forth from a Britisher's lungs.

3.

Take your map of Japan, and search through it aright,  
You will there find a *Kra* that will give you this light.

4.

Though the Radical class may assail me with jeers,  
Still I've always the right to be tried by my peers.

HOODLUM.

The arrival and departure of mails by the Pacific Mail, and Occidental and Oriental Companies, are approximate only.

#### LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag E. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, JANUARY 23RD, 1880.

Observatory of Daigaku, Moto-Fujimicho, Hougō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.

Light continuous line—max. &amp; min. thermometers.

.....represents velocity of wind

.....percentage of humidity

Max. velocity of wind 32 miles per hour on Monday, 9 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

The highest reading of the barometer was 30.380 inches on Saturday at 10 p.m., and the lowest was 29.570 on Monday at 2 p.m. The fall of the barometer during the middle of the week was accompanied by cloudy weather but no rain or snow has fallen during the week. The minimum temperature reached was 23° on Sunday morning. The range of temperature has been almost constantly 20°—for each day during the week.

It is hardly necessary to remark here, what must have attracted the attention of the most careless observer, that the diagram for last week was turned bottomsides up by the printer, resulting in only a mass of meteorological absurdities.

## SHIPPING INTELLIGENCE.

## INWARDS.

Jan. 25, British steamer *Glengyle*, Quartley, 1,263, from London via Hongkong, General, to Jardine, Matheson & Co.  
 Jan. 26, British barque *Campsie Glen*, J. Smith, 490, from Newcastle N.S.W., Coals, to Walsh, Hall & Co.  
 Jan. 27, Japanese steamer *Shinagawa Maru*, Kilgour, 908, from Hakodate, Mails and General, to M. B. Co.  
 Jan. 27, Russian schooner *Otago*, Isaacson, 46, from Bonin Islands, to H. Cook.  
 Jan. 27, Japanese steamer *Wakanoura Maru*, Christensen, 1346, from Hachinohe, General, to M. B. Co.  
 Jan. 28, American ship *Oakland*, F. H. Purinton, 1,237, from New York, Kerosene and General, to Fearon, Low & Co.  
 Jan. 28, Japanese barque *Kanagawa Maru*, Eckstrand, 1,184, from Nagasaki, Coal, to M. B. Co.  
 Jan. 28, Japanese barque *Sumanoura Maru*, Spiegenthal, from Nagasaki, Coals, to M. B. Co.

Per Japanese steamer *Genkai Maru* from Shanghai, and ports:—Treasure ... Yen 20,950.60

## REPORTS.

The British steamer *Glengyle* reports: Left Hongkong at 4.30 p.m. on the 17th January. Experienced very strong N.E. monsoon and heavy sea to the coast of Japan. Thence to port moderate N. and N. W. winds and fine weather. Arrived at Yokohama at 4.30 p.m. on the 25th instant.

The Japanese steamer *Shinagawa Maru* reports: Left Hakodate 25th instant, arrived Yokohama at 2 a.m. on the 27th instant.

Strong N. gales constant snow-squalls to Miyako, thence to port fine weather N. and N. W. winds.

The British barque *Campusie Glen* reports: Left Newcastle, N.S.W., November 29th. Experienced very boisterous weather off the Coast of Japan.

The Japanese barque *Kanagawa Maru* reports: Left Nagasaki January 23rd in company with Company's barque *Sumanoura Maru*. Light N.E. winds. Passed through Van Dieman's Straits January 24th exchanging signals with Company's three-masted schooner *Awajishima Maru*. From there until arrival very unsteady weather with hard squalls. Crossing Kii Channel passed barque *Nimrod*, shortly afterwards one of the sailors fell from the royal-yard and died 4 hours later. An hour afterward at 5 p.m. passed a disabled junk with two men on it, ship then going 12 knots, tried everything to save them, but failed to find them during the darkness of the evening and a very heavy sea running at the time. Arrived at Yokohama at noon on the 28th January in company with the Company's barque *Sumanoura Maru*.

The British barque *Nimrod* reports: Left Nagasaki 22nd instant, arrived Yokohama at 12 p.m. on the 28th instant. Experienced very strong N. winds and squally weather throughout.

The Japanese steamer *Genkai Maru* reports:—Left Shanghai 21st January 6 a.m. Arrived Nagasaki 6.30 on 23rd, left Nagasaki 12 p.m. 23rd. Arrived at Shimonoseki 2 p.m. 24th, left Shimonoseki for Kobe 4 p.m. 24th. Arrived Kobe 2.30 p.m. 25th, left Kobe for Yokohama 6 p.m. 26th. Arrived at Yokohama 1 a.m. 29th. From Shanghai to Yokohama experienced very strong N.N.W. winds with clear weather.

The Japanese steamer *Kokonoye Maru* reports: Left Hakodate 8.35 a.m. on 27th January, with fine weather throughout the voyage. Passed brig *Maul Marian* (off Siriya Saoki) bound to Hakodate.

## COMMERCIAL INTELLIGENCE.

IMPORTS.—Only a moderate business has been done during the past week. Yarns are firm and in fair demand, especially 28/32's, which have been forced up to same rates as are nominally quoted for 38/42's. These last counts are very quiet and neglected. Shirtings easier. Fancy Cottons dull, except Velvets and Lawens.

## COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$28.00 to 33.50
" " Good to Best ... ..	\$34.00 to 35.50

Japan Rice ... .. " "	\$2.60 to \$3.00
Kerosene Oil ... .. " "	\$1.65 to \$1.70
Newchwang Pens ... .. " "	\$2.20 to \$2.25

KEROSENE.—During the past week but little business has been done in this article; we hear of settlements, amounting to about 6,500 cases, at \$1.65. The *Kate Davenport* has arrived from New York with a cargo of 38,468 boxes.

## EXPORTS.

SILK.—During the past week our silk market has been rather dull, and during the first part of the term scarcely a transaction was reported. Since Wednesday last there has been some activity, and 567 Japanese bales have been brought to buyers' godowns. It is however rumoured that much of this silk is either being inspected for native account, or has simply been deposited in foreign godowns against advances. Prices are to a great extent nominal, and at the Japanese have done well during the first part of the season, it does not appear probable that they will make important concessions for some time, even if the news from home continues unfavourable. A few parcels of filatures, for the American market, have been sold at full rates.

Stocks in Yokohama about 5,000 Japanese bales; Total export to date 14,401 bales against 14,844 bales at corresponding period last season.

## THIRTEENTH SEMI-ANNUAL REPORT

OF THE

Court of Directors to the Proprietors,

For the Half-year ending 31st December, 1879.

THE HALF-YEARLY MEETING of the Proprietors was held at the Head Office, on 18th January, 1880, at which the Directors had the honour to submit the annexed General Statement and Balance Sheet of the affairs of the Bank, as at 31st December last.

The net profit of the Head Office and Branches amounts to Yen 198,793.668 (deducting remuneration of the officers, their travelling expenses, and all other payments, inclusive of interest). Adding to this sum the unappropriated balance of last Half-year, namely, Yen 36,772.855, and Yen 80,000 set aside as a special reserve for bad and doubtful debts, the total comes to Yen 315,566.523. From this sum Yen 36,371.575 will be taken to extinguish the bad debt of Onogumi; Yen 50,000 will be set aside as a special reserve for bad and doubtful debts; and Yen 24,200 will be given to the officers as a bonus; and the remainder is Yen 204,994.948, from which Yen 50,000 will be added to the Reserve Fund, Yen 120,000 will be divided amongst 15,000 shares, being Yen 8 per share, which is at the rate of 16 per cent, per annum, and the balance, Yen 34,994.948, will be carried forward to next half-year.

The debt incurred by Onogumi has been written off, and amounted to Yen 36,371.575, taken from the Special Reserve of Yen 80,000, which has been supplemented by the addition of the sum of Yen 50,000, an amount which, the Directors are of opinion, will amply suffice to meet any further contingencies that may arise.

SHIBUSAWA YEICHI,  
Chairman.

General Statement and Balance Sheet of the  
First National Bank of Japan, for the Half-year  
ended 31st Dec., 1879.

tf.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard of*  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing *quality and*  
*measure*, and the *strength* also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bonny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

Their beneficial effect is speedy and certain. The old unfailling family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

## MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

## MISCELLANEOUS.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

## THE FUTURE OF JAPANESE ART.

MANY noteworthy writers could be quoted in defence of the opinion that the state of the Fine Arts in any country is entirely independent of its political advancement. It might even be shewn that the imaginative pursuits have achieved excellence inversely as the tide of national and social progress has swept on. The march of civilization appears in all countries to have eradicated from the minds of men that deep feeling of sentiment which a childlike veneration for the external manifestations of nature produces, and which finds its expression in poetry, painting and sculpture. The capacity of the human mind is limited. A man whose whole thought is devoted to astute calculations, will hardly be found to be rich in creations of fancy. As with individuals so with nations, the pursuit of political reforms and moral improvement will naturally tend to divert their attention from the simple voices of nature. So great will the infection be that those whose profession is still to be the seers of natural loveliness will lose skill for the want of a sympathetic patronage; like the children sitting in the market place and saying, "we have piped unto you and ye have not danced; we have mourned unto you and ye have not lamented!" The best periods of the arts have existed side by side with a distant devotion and reverence for the grand and beautiful in creation; and thus it seems that a familiarity with causes of phenomena, by robbing them of the awful and marvellous has helped to degrade the work of the artist. Superstition is the term that is generally applied to that fearful veneration for the awe-inspiring terrestrial appearances with which is connected the idea of divine wrath and punishment. With the departure of superstition also disappears the habit of observation and the sympathy with the grand and beautiful which are the great stimulants of the imaginative faculties. Japan has, during

the last decade, made remarkable progress in government, laws and in the acquirement of all modern advances in speed, comfort, manufacture and commerce. As this change takes place it is almost inevitable that there should be a tendency to a corresponding depression in the originality of her Fine Arts. Her former seclusion favoured the growth of a distinctive character among her poets and art workers. A parallel case may be instanced in the mountain-circled Montenegrins, of whom little was generally known, until the war of some years back revealed a secluded tribe possessing arms, implements, costumes and habits far superior in the picturesque, though perhaps not in the commodious, to those of the continental nations around. The feudal system of government and the consequent rivalry of provinces to compete with their industries, as well as the position of the high-class artisan being one of a salaried dependent, owing his reputation to the originality and exquisite quality of his work rather than to quantity and speed, may be mentioned as other circumstances in favour of former eminence. The introduction of machinery, degrading the industrial artist to a mere mechanic, naturally tends to deprive his work of the sentiment and spirit that it contained. Add to this the increased demand in all parts of the world for products of Japanese Art, which though still possessing a certain kind of distinctly national character, are rapidly deteriorating, both from the growing demand and from the bad taste of the buyers: so large indeed is the moneyed class who crowd their mansions with rich but debased specimens of Eastern Art such as a native artist fifty years ago would not have dared offer to his patron lord. The removal of the natural conditions that have fostered high art in the past, necessitates artificial means of culture. An ancient, whose daily life showed to him some gorgeous pageant, some mass of gaily moving colour, or may be the display in arena or in joust of athletic form or scenic effect, and whose existence was one of outdoor enjoyment and free communion with nature, received thereby a silent, almost unnoticed training of the mind. A modern who only sees around him sombre, shapeless vestments and ceremonies without pomp or show, and to whom nature is robbed of its charm by crowded habitations and the smoke of ghastly factories, must learn his lessons in the arts elsewhere.

In Europe, Art at one time indigenous has now become a growth of hothouses and forcing-chambers. The time has come for this country to provide itself with the same means of artificial encouragement and culture. A right step has been taken, in the institution of a school of Painting, Sculpture and Architecture, in good time, and before the national taste in such arts has been quite swept out by the absorbing interest in scientific introductions. Take any western country, and we shall find that it has passed from a period of original imaginative creations to a state of artistic chaos, succeeded by an artificial revival based upon studies from the past. Japan has happily started her school of Fine Arts before she has lost her originality

and before her chaotic period has arrived. Though in some instances we cannot but detect signs of decline in the popular taste, in others great excellence is still attained. Much of the metal work now produced is unsurpassed by any specimens of earlier times. No artisans in the world have ever shown greater skill or beauty in the design and execution of objects of virtue in bronze and other metals. The works in lacquer and inlay have deteriorated, and so have the decorative arts applied to screens, pictures and porcelain. Architecture is going through a kind of chrysalis change in which she cannot be said to present the most attractive exterior. This Art is of all other the most practical and most dependent upon altered modes of life, possessing however at the same time a claim to distinct national individuality on account of peculiarities in climate.

A visit to the school of Fine Arts in Tokio, under the able superintendence of Italian masters, is sufficient to show that the Japanese youth has a quickness of artistic perception, and power of delineation and composition of a very superior kind. Hopes are expressed that before long this important institution will assume an independent and exalted position as a national educational establishment. Picture painting in oils, and statuary, which are for this country quite new phases of the Arts, are gradually gaining ground; and in these the students have much to learn from their foreign teachers. Even in these branches, however, Japan will before long, we expect, strike out fresh paths for herself. Pictorial painting relies for its subjects chiefly upon native history, tradition, theology and the natural aspect of the country in which it exists. The scenery of the land is unique; and its history and romance are full of striking events which must be depicted in their own peculiar garb and with their own thoroughly individual surroundings and fierce feudal sentiment. To the painter as well as to the dramatist is left to recreate and bring before the people all that is illustrious and picturesque in the past. The industrial artisan will soon begin to need some means of educational training. There is a great risk of the latter artist confounding his work with that of the historical picture painter, portrait painter and sculptor, and letting pass forgotten the true principles of decoration which he has hitherto so well understood.

Museums, fully stocked with excellent examples of the best decorative works, important shrines, temples and palaces, carefully preserved from the hand of time, will help to provide examples which, aided by able precept, may keep public taste alive. With due care Japan may take as high a place in the Arts of the future as she has undoubtedly held in her former days.

#### LIGHT DUES.

IN our article in last week's *Mail* on the Presidential message, we mentioned that the Japanese ambassadors, when in England, pointed to the system of lighting the coasts of Japan, which had recently been progressing, as a reason for remitting totally, or at least deferring, the payment of the balance of the Shimonoseki indemnity then due. Full particulars of the unsuccessful negotiations here referred to will be found in the Diplomatic Correspondence of the United States for 1875. It will be sufficient for our present purpose to refer to article XI. of the Tariff Convention of 1866, which reads as follows:—"The Japanese Government will provide all the ports open to foreign trade with such lights, buoys, and beacons as may be necessary to render secure the navigation of the approaches to the said ports."

The Japanese pointed out, in a memorandum to the British Government, that these and other public works

beneficial to foreign commerce had been carried out at an expense far exceeding their original anticipations, and at a time following a severe revolution of a national character. Indeed the cost of lighthouses alone, up to that date (the latter end of 1872), was said to have been more than a million of dollars. In a memorandum of reply to the representations of the Envoys, Sir Harry Parkes said, *inter alia*:—"The cost of construction or maintenance of lighthouses may be met with light dues." This suggestion has never yet been acted upon by the Japanese Government, although the system of lights, buoys and beacons, has developed largely since 1872, and commerce along the coast, especially in native bottoms, has also increased. In the forthcoming changes which treaty revision will render necessary, this matter will doubtless receive due attention. Meantime it may be well to inquire how other nations deal with the question; for, as we have frequently insisted in approaching such matters, the Japanese should adopt, as far as possible, the course which the experience of most civilised nations has found necessary, and not the opinions of this or that theorist, however distinguished. Thus in the case of quarantine, much pressure was used to induce the Government to adopt a kind of medical inspection in Japan, because a commission of distinguished doctors at Vienna believed (not at all unanimously, be it observed,) that such a method was as effective as quarantine. The reply to this was obvious: "It will be time enough for this country to think of adopting advanced ideas of the nature suggested, when they have been tested and accepted by the experience of your own nation. Meanwhile, as long as the so-called exploded system is retained all over the world, we shall also adhere to it."

The principle on which light dues are levied is, that lighthouses, buoys, beacons, &c., being established for the benefit and protection of ships, these latter should defray the cost of their erection and maintenance. In Great Britain, the Government have now purchased the rights of local corporations and private individuals in certain lights, and have placed them under the control of the Board of Trade, and more directly under that of the Trinity House. The whole system is governed by the Merchant Shipping Act of 1858, which provides that all the light dues of the United Kingdom shall form one imperial fund under the control of the Board of Trade, and that the fund shall be employed in the establishment and repair of lighthouses. The Privy Council also is authorized to revise the amount of these dues, as well as to fix others for any new lights that may be erected. It was long the practice in Great Britain, in pursuance of the policy of discrimination between British and foreign vessels, to levy higher charges on the latter than on the former; and also to compel ships, forced by stress of weather into a harbour of the United Kingdom, to pay these dues. Both these regulations—the latter of which has been correctly described as "most inhospitable," have, however, been entirely abolished. It is also stated that the present dues are so calculated that their amount will, as exactly as possible, cover the various expenses incident to lighthouses; and there seems to be no desire to derive any revenue from them. The charges on over-sea vessels is also much greater, for obvious reasons, than on those engaged in the coasting trade. The highest charge for the former seems to be one penny per ton of the ship's measurement for each lighthouse seen, while the average charge is about half of that amount. It will thus be observed that in Great Britain the amount of light-dues depends on the number of lighthouses passed by a vessel on her course, and that this is the same for all ships, native and foreign. In the United States, on the other hand, there is no charge on native vessels, but an

annual tax of fifty cents per ton registered tonnage is assessed on every foreign vessel leaving an American port, whatever her course or courses may be; and the money thus collected is expended on the light service. In France, although the system of lights is said to be one of the best in the world, no light dues, under that name, are levied; but there are certain harbour dues, which doubtless accomplish the same end as if the vessels were held to contribute directly to the maintenance of the light.

The general practice seems therefore in favour of levying these dues. The light system of Japan has been brought, in comparatively few years, to a high state of efficiency, and hardly a week passes, that the Minister of Public Works does not indicate publicly some addition or improvement. This must have cost the nation an enormous sum of money, and no objection could reasonably be offered by either native or foreign merchants or shipowners to the payment of such dues as would maintain the lights, buoys and beacons of the coast of Japan in an efficient condition. It is a question for the Government itself to decide, whether it can afford to dispense with certain charges which almost every other country in the world, including the most wealthy, has deemed it necessary to levy.

WHILE it was yet unknown in America that the severe and barbarous sentence of nameless mutilation and shame passed by the Chinese subduers of the revolt in Kashgar upon the guiltless descendants of their opponent Yakob Beg, a benevolent association in the United States was making exertions not only to have their sentence commuted—a work in which they had been preceded by the English Anti-Opium Society—but also to make permanent provision for them if the request should be granted. Mr. E. T. Gerry, president of the New York Society for the prevention of cruelty to Children, has addressed a memorial to the President of the United States, sketching the horror of the fate reserved for these innocents, praying for his intercession with the Government at Peking, and taking upon the Society of which he is the representative the charge of their education and maintenance. He says to Mr. Hayes:—"I appeal to you as Chief Magistrate of this nation, and earnestly implore your immediate action in the matter. If the Chinese Government will commute the sentence of these wretched children to banishment, this society stands ready to receive and place them at its own expense where they will be properly maintained, educated and cared for. I feel that I but echo the wishes and sentiments of all humane people in making this appeal on behalf of these miserable little innocents, whose helpless condition and dreadful sentence plead more piteously than any words of mine. And I am confident that your intervention in their behalf will very materially advance the great cause of humanity which pervades the age in which we live, and especially characterizes this nation, over which you preside."

THE directors of the Gas works at Noge are probably only in part aware of the valuable substances which they allow to go to waste daily. In similar manufactories in England it has been thought that nothing was wasted—every possible product of the chemical changes utilized. Yet science is every day discovering fresh application of the great law of nature that nothing need be dissipated, there being a use for all matter of whatever kind; and it is possible that their economic mission has not yet been accurately assigned to all the residues produced in the distillation of gas. As regards the manufacture of coke from coal, unnecessary extravagance has been exposed by an experienced chemist, Dr. Angus Smith. He says that the

ammonia which is lost in the process would make, each year, as much as 130,000 tons of sulphate of ammonia, enough to fertilize 1,300,000 acres of land. "The plan has been successfully applied in France. It certainly does seem absurd to import guano, nitrate of soda, &c., from abroad; and to let tons upon tons of a home-made fertilizer escape into the air, in which condition it acts as a blight rather than as a benefit to vegetation." Great economy might be effected, and considerable profit made, in the various towns of this empire in which gas is made and consumed, by utilizing products which are now treated as mere refuse. Here the question suggests itself:—Considerable quantities of coke being imported annually for the use of factories, would it not be remunerative to make from native coal, if suitable for the purpose, all the coke required in the country? The problem could easily and inexpensively be solved.

HIS Excellency Lau, ex-Viceroy of the Two Kwang, arrived in Hongkong without previous notice and quite unexpectedly, on the 24th of January, for no other purpose than to make a friendly call upon Mr. Pope Hennessy, the Governor of the British Colony. As soon as possible preparations were made for his suitable reception, and a welcome, none the less cordial that it was quite *improvisé*, was offered to him on landing. After a visit to Government House, where he was heartily received and introduced to the principal personages of the island, His Excellency was escorted to the Town Hall, the Public Gardens and other places of interest. The *China Mail* commenting on the occasion says: "This visit of His Excellency Lau Kwan-yih is an extraordinary mark of the recognition and approval which Mr. Hennessy's policy secures from all the head Chinese officials. It is the first visit of this kind that has ever been made to Hongkong by any Viceroy. Many years ago, the Hoppo paid a similar private visit to the then Governor; we forget in whose time. This may be taken perhaps as a return visit for a similar one paid to the Viceroy last year by Governor Hennessy." The *Daily Press* adopts an equally enthusiastic view of the occurrence, on which it comments thus: "We have good reason to believe that this visit was really what it purported to be, a mere friendly call, prompted by feelings of personal friendship for Mr. Hennessy. But considering that His Excellency Lau is the Ex-Viceroy of Canton, and the Viceroy elect of Nanking, and that in his latter capacity he will be *ex-officio* Superintendent of trade for the south of China, this visit not only reflects favourably on the principles which governed the Viceroy's past career, but indicates also the friendly tendencies which will no doubt mark his Government of the two Kiang provinces and give colour to his future superintendency of the trade of South China."

LAST year one of the most popular of Yokohama residents met his death through drinking copiously of water in the cholera infected districts through which he passed on his way home to his residence, from a tour in the mountains of the Hakone range. Now, as a warning to tourists in all parts of the world, one of the best known dietetic authorities, Sir Henry Thompson, in a letter to the *Times*, maintains that the only way for travellers to avoid effectually typhoid fever, and presumably other epidemic diseases, "is to abstain altogether from drinking any of the water of the countries through which they travel, till it has been boiled. Generally, he says, you can get good mineral waters, though 'the siphon' is hardly more trustworthy than ordinary water, being, indeed, often supplied by tainted water. But where such mineral waters are not to be found, and the traveller objects to wine, the best plan is to secure cold, weak tea from the landlord, offering to pay for it at the rate of a franc a head, only insist-

ing that the water shall have been properly boiled, just as it is in making tea." Now in Japan there is no difficulty anywhere in obtaining the compound recommended by so competent an analyzer.

JAPANESE editors may well take warning from the dealings of the law of England with their English confrères. In Great Britain the press is free. It does not follow that defamation and scurrility may be freely indulged in. The law of libel, properly applied, has an effect capable of including a vast number of offences, which leniency or contempt often allow to leave unnoticed. We have recently heard of the trouble, well merited, which malicious defamation by the *London Town Talk* has entailed upon its propagators. Nor are other instances wanting. We read that "a prosecution commenced against the editor of the *London Figaro* for defamation of character has been altogether successful; and the culprit has been sentenced to the very stringent punishment of a fine of £100 and three months' imprisonment. The object of the Court in pronouncing such a judgment as this was plainly, and in fact avowedly, that of deterring other editors from admitting into the columns of their papers any scurrilous remarks whereby the good name of private persons may be dragged in the mud, and pernicious calumnies spread abroad without justification or excuse. There can be no doubt that the practice has for some months—if not some years past—been vastly on the increase, and it has done incalculable damage, not only to the persons principally interested, but also to the public taste, which was beginning to look upon such personalities as a natural and inevitable result of freedom of the Press. Such an idea has now been roughly dissipated, and while welcoming the result we can only regret that the victim chosen for a public example was not one of the more guilty offenders. The *Figaro* has not, to do it justice, been persistently offensive and ill-natured in its comments; and the publication of some wild letters from a person who is not very sane was an act, as it appears, rather of carelessness than of deliberate malice."

COMMENTING on the case of Proband v. Langton and another, originating in Shanghai, and recently decided in the Court of Appeal in London, the *Examiner* remarks that, hitherto, "no complaints, no proofs that the trade was departing from Manchester, seemed to convince our manufacturers that honesty was the best policy. They continued to 'size' their goods and to sell starch for cotton. No wonder that the American and home-made pure goods successfully competed in the markets of China. Our trade has been dwindling for years. But what warnings could not affect will probably be done by the Courts of Law. Mr. Proband has refused to pay for some 27,000 bales of piece goods, worth about £9,000, on the ground that they were so largely adulterated by size (starch and chloride of magnesium and zinc) as to be mildewed before they reached Singapore. It is fortunate that dishonesty thus defeats itself. Had the adulteration been more ingeniously contrived, so that the goods would have borne a three months' voyage without apparent deterioration, Mr. Proband would not have recovered. As it is, the wares were such rubbish that they were rotten before they reached their first destination. What they would have looked like after a week's wear on the back of a Chinaman we can leave our readers to imagine. The result of this trial will, however, we hope, convince cotton-spinners that *est modus in rebus*, and that when they profess to sell cotton at least a respectable proportion of the article must really be cotton, and that starch and chemicals will not be accepted in lieu of it."

A correspondent in London of the *Hongkong Daily Press* relates how, in December last, while passing along the Strand, on his way to the Lyceum Theatre he was instrumental in relieving a luckless Chinaman from the torments inflicted upon him by a street mob. In the most civilized countries, celestials have almost as much reason to complain of their treatment, as foreigners in out of the way places in the Middle Kingdom have to lament the reception they receive at the hands of the natives. It must be remembered that, in each case, it is the "natives" who are to blame. Even justice as dispensed from the magisterial bench is not always equitable to the stranger, especially if he wears the queue—that badge of servitude first imposed by Manchu conquerors and since fondly retained. A contributor to a Sydney, New South Wales, paper writes:—"In the name of humanity, not to speak of Christianity, the recent conviction of a Chinaman for vagrancy at Parramatta ought to be exposed; and the innocent victim released from prison. These are the facts:—A blind Chinaman went by train from Sydney to Parramatta on the 5th instant. Through some mistake his friends failed to meet him at the station. He was immediately apprehended by a constable, brought before the bench, and without an interpreter, sentenced to prison for six months for vagrancy. The man was no vagrant. He was simply on a visit, and going on to Bathurst, and shortly to China. He is now treated as a common felon in Parramatta Gaol. If ever 'one of England's neglected roughs' received the same treatment in China there is no telling what might be the consequences."

#### MR. JOHN R. BLACK'S YOUNG JAPAN.\*

IT will be seen that this latest addition to the foreigner's library on modern Japan, has a lengthy if not imposing title; but the author, in his preface, modestly states that he does not claim for it a very ambitious scope. "To the dignity of history" his work "makes no pretension. It is a simple narrative of the prominent events that have taken place in the beautiful 'Land of the Rising Sun,' in which foreigners have been more or less interested, and with which they have been more or less connected during the twenty-one years that have elapsed since the existing treaties were entered into in 1858." Opening with a brief sketch of the earlier history of the empire, the remaining part of the book is devoted to a history of events which have transpired in this immediate neighbourhood during the past twenty-one years, the present, or first, volume bringing the record down to 1868. It was hardly to be expected, in view of the numerous treatises on the same subject, and annals of the same occurrences, which have been published of late years, that the present author should have produced much that should be new to those at all familiar with such literature. In fact he himself admits that some portions of his narrative might justly be called a compilation; but, he adds, a compilation from his own writings in the ephemeral press, a conductor of which he has so long been. Except for an avowal made immediately afterwards the critic might find ground to cavil at the limited extent of this qualification; but Mr. Black also cordially admits having derived much assistance from the labours of others who have published works on Japan or on Japanese subjects. Alcock and Olyphant, Lowder's "Legacy of Iyeyasu," Satow's papers, have avowedly been largely drawn upon, and, we must confess, to the greatly enhanced value of the whole structure. Not the least interesting portion of the book is the "interpolatory chapter," between the eleventh and twelfth chapters, which, for ten pages, is an extract taken by permission from Mr. E. H. House's pamphlet on Kagoshima. It is introduced to give an insight into the character of Shimadzu Saburo and

\* Young Japan. Yokohama and Yedo. A narrative of the settlement and the city from the signing of the treaties in 1853 to the close of the year 1879. With a glance at the progress of Japan during a period of twenty-one years. By John R. Black, formerly Editor of the *Japan Herald*, and of the *Japan Gazette*; Editor of the *Far East*, Illustrated Monthly Magazine. Also the Proprietor and Editor of the *Nishin Shinjishi*—the first newspaper (worthy of the name) ever published in the native language in Japan. In two volumes. Vol. I. London, Trübner & Co.; Yokohama, Kelly & Co. 1880. (All rights reserved.)

his probable animus towards foreigners, which Mr. Black, in common so far with the commentator from whom he cites, thinks was not unfriendly, at least previous to the Richardson tragedy on the Tokaido. The extract also contains the dramatic account of the conference and struggle between eight of Shimadzu's retainers and the chiefs of an insurgent and intractable band of anti-foreign *ronins*, in a tea-house at Fushimi, near Kioto, resulting in the death of the outlaw leaders, and the subsequent dispersal of their force. As Mr. Black supposes, it is more than probable that the main facts of this extraordinary episode, which equals in interest—and as an example of the extreme devotion of which feudal vassals were capable only a few years ago, when the death-knell of the system on which they depended had already been sounded,—anything that has been written in tales of fiction or the past history of this country, were derived from the personal narrative of one who bore no small part in the event. With such sources from which to draw, with files of newspapers and of blue books at his disposal, with a long personal experience in which he himself had no mean part in recording the events which were passing around him, it would be strange if Mr. Black's book did not prove an addition of some value to the standard references already existing upon the matters with which he deals. To those whose book-cases are already furnished with the results of the toil of his predecessors in the same sphere, "Young Japan" will prove a useful compendium, and refresher of the memory. To others who are not so supplied, or desire merely a work such as this professes to be—a narrative of the modern history of this empire in its relations with the foreigners who sought its soil, this volume will be of still greater value. For this reason, it is perhaps to be regretted that it was not first published in London. The title-page indeed shows that the well-known firm of Trübner & Co. are the metropolitan agents or publishers, side-by-side with the local firm of Kelly & Co. Whether the advantages, however, incident on getting up the first edition on the spot and under the immediate eye of the author counterbalance apparent defects in appearance, both external and internal, is for the person most concerned to decide; and the matter has probably had his full consideration. Our own opinion is that the illustrations, for instance, of which there are thirteen, suffer from the plan pursued. They are all photographs; and most of them are certainly not so good as engravings of no high standard of excellence. The clearest and best of them are, "A Samurai fully armed," and "Osaka Castle." Such a view as that of "The Plains of Heaven" gives a very imperfect idea of that glorious landscape, even on a grey day, and the likeness of "A Kuge, or noble of imperial lineage," is certainly out of place in a good literary work. In this respect, beyond a doubt, "Young Japan" in its present edition can hold no place beside "The Capital of the Tycoon," or the more recent work of Mr. Griffin—"The Mikado's empire." There is another evil in connection with the employment of sun pictures as illustrations—their frequent want of adhesiveness, and consequent liability to develop dog's-eared corners, or to leave the page on which they were erst pasted a soiled and ugly blank.

For the historical part of Mr. Black's narrative we refer our readers to his work itself. They will find that his opinions are pretty evenly balanced; and that he tries to be fair to both sides, in this respect differing from many previous historians who have shown a decided bias for one side or the other, thus quitting their legitimate *rôle* for the functions of a partizan. The adoption of the line followed by our author may imply an apparent loss of vigor: but it has the incomparable advantages which impartiality commands. Its pursuance in the present instance is the more creditable that the writer confesses that his own personal sympathies are strongly with Japan and the Japanese. He says:—"I would have been glad if I could have avoided some of the more sombre texts which I have been obliged to use but too frequently in the series of pictures I am sending forth. As it is, I know that there are many who will think I have occasionally spoken too favorably. But it is not so. In good truth it would be easier to go to greater lengths, both in blame and in praise, and still leave considerable margins." Thus, in the treatment of the Richardson affair, the action of the Japanese and the Powers, and the various troubles and quarrels, and difficulties which marked the early relations of Japanese with their unwelcome guests, he endeavours to hold the scales of justice evenly before he commences to weigh conclusions. One point is specially worthy of note on the part of those who ascribe to

America the peaceful attitude towards Japan which contrasts so beautifully with that of other western nations—Great Britain especially—like a suave and smiling sunset above a rude and roaring sea. Hear Mr. Black:—

That Commodore Perry and Mr. Townsend Harris concluded their treaties peacefully is admitted. But in both cases it was a triumph of might over right. The first came with a force sufficient to overawe the gentle beings, who were "compelled by foreigners for the sake of their cursed dollars, to open their country:" and it did overawe them. The second attained his end, by picturing to the said gentle minds the terrors to be apprehended from an English and French fleet recently victorious in China, bearing down upon Japan with ambassadors from their respective sovereigns, to enforce a treaty from Japan as they had done in China. So much for the "peaceful triumph." So much for the "gentleness, firmness and incorruptible honesty." No! Commodore Perry himself makes this manly avowal.—

"In conducting all my business with these very sagacious and deceitful people, I have found it profitable to bring to my aid the experience gained in former, and by no means limited, intercourse with the inhabitants of strange lands, civilised and barbarian; and this experience has admonished me, that, with people of forms, it is necessary either to set all ceremony aside, or to out-Herod Herod in assumed personal consequence and ostentation."

This was in extenuation of his having refused to anchor at Uraga or Kamakura, both of which were urged by the Japanese, and his insisting on conducting his business at some place nearer to Yedo than either. He carried his point, and Yokohama became the honoured spot; though what advantage there was in Yokohama over Uraga it would be hard to tell; except that it 'marked one' to the side of the "peaceful triumph."

Mr. Black does not claim for his countrymen that they were decidedly better, or worse, than others in the method of their early dealings with Japan. He is content to show that in the, from a purely moral point of view, always questionable proceeding of forcing their acquaintanceship and communion upon the people of these islands, they were very much in the same position as the republicans who had preceded them. He continues:—

In like manner, we see Lord Elgin's delightful experience, which ended in "many demonstrations of affection on both sides." That experience "had been marked by an interest and novelty not to be surpassed, and by a success, in a political point of view, scarcely to have been anticipated."

Lord Elgin had written home from China his oft quoted declamation against the injustice of his countrymen against Asiatics; and yet he arrives in Japan, and, like Perry, immediately sets the Japanese Government at defiance, by refusing to treat with them anywhere else than at Yedo; persists in going there in the teeth of the most strenuous opposition on the part of the officials; and having come so far, signifies that he has come to make a treaty, in such terms that the Government see plainly enough, that very little choice is left them. A yacht as a present from the Queen of England to the Emperor (Tycoon) of Japan is made the pretext for his visit to Yedo.

We repeat that, for the historical details of Mr. Black's "Young Japan," our readers are referred to the book itself, which we are happy to be able to recommend them to possess. Our present object is to give a fair notion of its scope. As a specimen of the style we will, in concluding this notice, quote the author's account of an incident which happened in 1872, on the occasion of a state visit paid by the Emperor to the first "exhibition"—one held in the Confucian Temple:—

I entered into conversation with a man who seemed to have a great deal to do with keeping the street clear; and I think the circumstance worth relating. He was in a very seedy kind of European dress, with certainly no pretensions to be called a uniform.

There were many police, with whom for some time he was busy, going from one to another and evidently either giving directions or suggestions. At all events they received all he said to them with great respect, and seemed to hear all he had to say as if he had a right to say it. At length he came and stood by me, and after asking my nationality and one or two questions with which Japanese often commence conversation with a foreigner, I remarked that it was a pleasant thing to see the Mikado driving about the streets among his people, as the sovereigns of other countries do. He, out of politeness, agreed with all I said; and having done so, began to give me his opinion. He thought that all this was as it should be; that the people were attaining an amount of freedom that could not have been thought of formerly; although everybody in the service of the late Shogun knew that he was devising schemes for introducing all the changes that have since taken place; not excepting the placing the Mikado in his just position as the *de facto* Emperor. "But," he said, "all that, might and would have been brought about without the violent upsetting of the

prospects in life of hundreds of thousands of men. The plan of Yoshi-nobu he believed to be to make the Mikado in most respects what he is now. He would either have established a parliament of daimios, or have allowed them to be a kind of upper house, with a parliament consisting of men of ability appointed from each province. There would have been no civil war; the reduction of nobles into mere commoners would have been unnecessary: everything would have been settled by the parliament; (he spoke in Japanese, but always made use of the word parliament); "and Yedo would not have been destroyed." I enquired to what he alluded in this last remark. He said, "Perhaps you did not know the city when we called it Yedo, before its name was changed to Tokio." I answered that I had visited it during that time.

"Then," said he, "you have only to look around and find a meaning for my remark."

He took me a few paces down the street and pointed to a large temple, very deserted and dilapidated-looking, that stood at the end of a small street at right angles with the street in which we were, and asked:—

"Do you remember this temple as it used to be?"

"Yes, very well indeed."

"Had it the appearance then that it has now?"

"No."

"Indeed, no!" he said, bitterly. "It was always in good repair. The people flocked to it all day long: the priests were numerous and had the means and the will to do their duty to the temple and to the people: but now you may stand here for half an hour and not see a score of worshippers, and very likely not a single priest. Ah," he added as one came from the back of the temple, "there is one, but if you only read his thoughts by his looks, you can trace the altered condition of his circumstances."

He proceeded to tell me how the present Government had been persecuting not only the Christian religion but the Buddhist, which for centuries had existed with Sintoism, side by side, in the most friendly manner, often occupying the same temples. He said indignantly:—

"Why should Shintoism, which, although the religion of the Emperor, is the religion of only a small minority of the people, attempt to put down Buddhism, which is the faith of a very large majority? It may be a punishment to us, because too many of us have ceased to have any religion at all. But be that as it may, this Government has put its foot upon the neck of Buddhism, and if you go from one temple to another throughout the length and breadth of Yedo several times, although the name had been changed, you will hardly find one Buddhist temple that retains the glory of other days. Tokugawa protected Sinto temples, why cannot the Mikado respect ours?"

We returned to the spot where we had commenced our conversation, and for some time he continued to harp on this subject of the priests: at length the current of our discourse was changed by an officer passing along the street, who made a very low obeisance to him, stopping before him to show this mark of respect. He was remarkably well dressed, and I asked what was his rank. He replied, "Oh! he is only an officer of the police—like myself holding a very different position to that he formerly held."

"May I, without impertinence, enquire what rank you formerly held?"

"No impertinence, at all. I am an old Tokugawa batamoto, and on one occasion was sent by the Tycoon to Kioto, the bearer of a missive from the Yedo, to the Kioto Court. Then, as I passed along the road, the people were obliged to bow down even more submissively than you will see them do to-day when the Mikado comes."

"May I ask whether you hold any office now?"

"A very small one. My salary is under twenty rios a month, and I'm glad to get it."

As he did not tell me what his particular office was, I supposed he preferred to keep it to himself, and did not press the question.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

#### THE FRENCH POST OFFICE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—If the French Post-master displays as much activity in his new post in the Japanese Imperial service as he has shown in the French office, the Japanese are to be most certainly congratulated on the acquisition of such an energetic employe—one, too, combining urbanity of disposition with known courtesy to the public. They really have become possessed of a treasure in this, their latest addition to their European staff.

To give you an instance of activity it will suffice to say that the French mail arrived in the harbour at two o'clock this morning and the mails were probably landed shortly after, at least that is the course usually taken in mail steamers. I know of several firms who had not received their correspondence at 9.45 a.m. but then the weather is cold and the comforts of a warm bed are far more enjoyable than sorting letters early in the morning.

Truly our Japanese friends are to be congratulated at the grand prize they have drawn.

I am, dear Mr. Editor,

Yours sincerely,

CANAILE.

Yokohama, Saturday, January 31st, 1880.

#### WHAT WILL THEY DO WITH IT?

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—The first pronoun in the above sentence alludes to the Amateurs who advertise a prospective concert, and the second to the sum of money expected to accrue from the said entertainment. The question has puzzled me for the last two days and, as a last resort, I introduced the subject this evening with the postprandial Maraschino, but nobody seemed able to decide the point. We all agreed that, as ladies were to appear, the object must be a charitable one, but which of our worthy institutions was to be favoured on the present occasion none could tell. No. 1, a gay young dancing swell, who prides himself on knowing a good deal—immediately struck in with the answer that "everybody knew it was for the benefit of Madame Pernet," but, after much discussion we agreed that this could not be the right solution; as, however proper it might be for professional artists to take a "benefit" it would be entirely beneath the dignity of any Consular officer and his lady to ask or accept any charity whatsoever. Again, had not the omniscient *Gazette* stated distinctly that the Concert would have the benefit of Madame Pernet's valuable assistance, and not that Madame Pernet would have the benefit of the valuable proceeds? Further, did not the *Courrier* of this morning take special care to assure us that it had fallen into error when stating that Madame Claus was about to take a benefit? Lastly, in our community of Insurance agencies, is it likely that we should made up a loss to anyone who was so improvident as to remain uninsured, and thus induce people to tempt providence and save the premia? No. 2—hypochondriac, who carries a small mirror in his vest pocket, that he may periodically examine his tongue—suggested that "it" must be for the New Cemetery, but this suggestion was drowned with ignominy in a bumper to the Chairman's toast of *Dum riro bibo*. No. 3—a modest youngster and "honorary" Church member, who has got no farther at present than cigarettes and plain soda—said he believed that "it" was intended to augment the very miserable stipend of the new Incumbent. We all voted the object most worthy, and the idea gained strength, when No. 4 said he heard that two of the Church trustees were on the Concert committee. No. 5—a facetious punnist who will have his little joke—assured us that "it" was going to nourish that "Sleeping Beauty" whose present nap seems to have attained Rip van Winkle proportions.—our local Amateur Dramatic Corps. Several other suggestions were made but all voted "no thoroughfare:" and before the conversation changed into the sister art as exemplified in the recent Punch (Lord Glenlivet, Telemachus, and St. John the Bankist being freely discussed) it was unanimously resolved that No. 6 (your humble servant) should be deputed to write to you, in the hope that your musical critic might be induced to favor us with the correct answer to the conundrum.

Trusting that you will be able to set our doubts at rest,

I remain,

Your mystified and perplexed.

QUIDNUNC.

Yokohama, 5th February, 1880.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—In your Daily issue of the 6th instant, appears an anonymous communication signed "Quidnunc."

If the writer desires information upon the subject, about which he exercises so much painful wit, I beg to say, that I am in a position to furnish it to him upon personal application.

I am, Sir,

Your obedient servant,

E. DE BAVIER.

Yokohama, 7th February, 1880.

## REUTER'S TELEGRAMS.

LONDON, February 3rd, 1880.

RUSSIA :—The semi-official *Agence Russe* declares that the reports of concentration of troops in Poland are unfounded. It is intimated that Germany will not resume sales of silver.

LONDON, February 6th, 1880.

Reinforcements are being sent to Kandahar.  
It is believed that Herat will be marched upon.

**The Japan Weekly Mail.**

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

## NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER:  
And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 7TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 2ND MONTH, 7TH DAY,  
DO-TÔ-BI.

## NOTES OF THE WEEK.

## BIRTH.

On the 4th instant, at 29, Concession, Kobe, the wife of JOHN ARELL, of a son.

We have but little mail news to report for the past week, the only arrival being the P. & O. steamer *Sunda*, on Wednesday morning last.

The shippers' Association steamer *Escambia*, left Shanghai for this port yesterday afternoon.

In consequence of Mr. A. O. Gay, who was elected Chairman of the Yokohama Chamber of Commerce at the Annual General Meeting on the 2nd instant, being unable to accept the appointment, a fresh ballot was taken and Mr. J. J. Keswick elected. This will involve another ballot being taken for a Vice-Chairman.

It is pleasing to observe that the plan sometime since formulated by the Finance Minister for the gradual extinction of the national debt of Japan is being steadily carried out. In the introduction to the estimates for 1879-80 Mr. Okuma mentioned that 7,499,217 yen of the paper currency would be withdrawn during the financial year. This, we learn, has already been accomplished, and is another example of that strict accuracy in all dealings affecting the credit of the Empire which has given Japanese securities their present high position in the London market. As some misconception may possibly exist on the subject, we refer our readers to the notification which appears in our Japanese News, stating that the new paper money about to be issued is only to be used in substitution for kinsatsu already in circulation but torn or damaged by use or accident.

An attempt, which ought to be successful, is being made to float a lighterage company in Yokohama. The object of the enterprise is to establish an institution, with a reasonable amount of capital, which shall take charge of the conveyance of cargo from ships to shore, landing it on the latoba, and there handing it over to the consignees. This work has hitherto been done, with more or less success, by private firms or individuals. Any difficulty, when it has arisen in the business, has originated in a question of responsibility for the safety or integrity of the merchandise landed; and not unnaturally those consignees of cargo who have now and then had reason to complain of carelessness on the part of a landing-agent in taking delivery of goods deteriorated on board ship,—thus freeing vessel and insurance from responsibility,—or of damage to their packages in the lighters or on the wharf, have preferred to attach the onus to the agents of the ship rather than to one who was virtually their employé. Such a company as is now in course of formation should fill a useful place. It should

relieve captains, ship-agents, and consignees, of much anxiety and, simultaneously, secure a fair profit to shareholders on investment.

It is stated in the *Siam Weekly Advertiser* that the King of Siam contemplates visiting Hongkong and ports of China. In that case it would not be improbable that he would continue his travels as far as Japan.

The United States Consul General, observing that the Japanese Government has withdrawn the prohibition recently promulgated to import cattle from China, has notified the fact to his nationals, who had previously been enjoined to comply with the restriction while in force.

The *Courrier du Japon*, in its issue of the 2nd instant, writes :—"The delivery of the last French mail was delayed for some instants in consequence of peculiar circumstances, which arose in the following manner, if we can believe certain information which we obtained from a source whose authenticity we have no reason to suspect.

"The postal agent on board, in conformity, we are assured, with orders received from the Ministry of Post Offices and Telegraphs, delivered his despatch bags direct to the International bureau of the Imperial Japanese Post Office. Upon learning this fact the French Postmaster sent his clerk to the Japanese office to demand the surrender, to his own office, of the mail which had just arrived. Upon the refusal of the Superintendent of the International bureau, the Postmaster went himself to the Japanese Post Office, where a bag of communications coming from France, and addressed to the French Post Office, was handed over to him. The other bags coming from different countries of the Postal Union, remained at the Japanese Post.

"This fact leads us to believe, as we said in one of our previous issues, that there is some misunderstanding on the subject of the cessation of the French postal service to Japan."

On Wednesday night two burglaries were committed in the most populous and frequented parts of the settlement. Messrs. Bourne, and Annand's premises being both entered and robbed. As usual, no arrests have been made, and the experience of these and many similar cases certainly suggests something very defective in the police organization, as a means of preventing or detecting crime.

It is stated that a new code of rules are in course of preparation, for the regulation of the sampans plying in the harbour. Alterations will be made in the fares charged for passengers, luggage and goods.

We have received telegraphic information to the effect that another large fire broke out in Tachibana-cho, Tokio, on Wednesday night. Upwards of 2,500 houses are said to have been destroyed. It is reported that the conflagration was the work of incendiaries.

The following cases originally set down for hearing in the French Consular Court on Tuesday, have been postponed owing to the illness of Mr. Lévy:—Antoine r. Lévy, defamation; Harmand r. Lévy, defamation; and Lévy r. Harmand, threatening behaviour.

We learn from the *Hiogo News* that the *Sumida Maru* took on board at Hongkong a serpent of the boa species, about eighteen feet long and as thick as a man's leg, which was intended as a present from H. E. J. Pope Hennessy to the Mikado, but unfortunately it died, two days after leaving port. It seemed to be in a sickly state when put on board. There are a couple of fine storks a number of other birds on board also intended for His Majesty; these have done better, and seem to be likely to reach their destination safe and sound. The *Sumida* bears another present for the Emperor in the shape of a silver vase, but whether it comes from the Governor of Hongkong or from the British government we have not heard.

A correspondent signing himself "A Merchant, but not a Member of the Chamber of Commerce," writes us (*Hiogo News*) on the subject of the proposed change in the day of departure for Yokohama of the M. B. mail-boat. He entirely agrees with the correspondent whose communication on the same subject appeared in our issue of Saturday last, and says he knows of no one who

would be likely to suffer by the change save the hotel-keepers of the port and of Kioto and Osaka. We believe the principal objection to the change is that tea-men and those doing business with them would be kept at work, during the season, all day on Sunday, in order to get their shipments forward, were the steamer to be despatched on Monday evening instead of Tuesday evening. If it were not for this drawback, no doubt the change would be generally welcomed.

The police are on the track of two or three bad characters who were associates of the man whose murder we (*Mingo News*) reported yesterday, and who are suspected of having had a hand in his killing. The murdered man was a native of Awaji, and was about 29 years of age. He was released from the Kobe jail about six weeks ago, after undergoing a term of imprisonment with hard-labour, for larceny. The manner in which he met his death can only be conjectured, but it is supposed that he had got into bad odour with some others of the gang of thieves of which he was a member, and was waylaid and cut down. The police strongly suspect two or three men who lived near him, but who have been missing since the day the tragedy was enacted. When found, the body of the murdered man was lying in a shallow part of a pond in Shimoda Yamate Dori, Shichi-chome. A silk kimono of good quality was thrown over it loosely, but otherwise it was destitute of clothing. It bore 19 swordcuts.

The magnificent new wet dock, which has been in course of construction at Bombay for some time past, was formally opened with great ceremony by His Excellency Sir Richard Temple, Governor of the Bombay Presidency, on the 2nd Jan. ultimo and named "the Prince's Dock." In addition to the Governor's yacht, the following vessels entered the dock in pursuance of the opening programme;—

<i>Dalhousie</i> ,.....	990 tons, length 200 feet, breadth 28 feet.
<i>Cathay</i> .....	2,982 " " 330 " " 39 "
<i>Khandalla</i> .....	2,030 " " 316 " " 33 "

We learn from the *Bombay Gazette* that the dock, which is supplied with 100 ton hydraulic cranes, will now admit vessels drawing 20 feet of water, and this capacity will in a short time be increased so as to accommodate those drawing 23 feet.

The libels on Mrs. Langtry and Mrs. Cornwallis-West in *Town Talk*, have been an expensive amusement for both the proprietor and printers of that journal. Rosenberg, the editor, was sentenced to eighteen months imprisonment, and now we read in a home paper, that "Mr. William Wilfred Head and Mr. Henry Robert Marks, printers of the number of *Town Talk* containing libels on Mrs. Cornwallis-West and others, came up on Wednesday, at the Central Criminal Court, to receive judgment, and were sentenced to pay each a fine of £5 and the costs of the prosecution, fixed by Mr. Justice Hawkins at £600."

We notice in the *China Mail* an announcement that the following changes in the postal system between Hongkong and the Australasian Colonies:—New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, New Zealand and Fiji, came into operation on the 1st of February instant:—

The postage on letters *via* Torres Straits, by whatever opportunity, is reduced to 12 cents per half ounce. Rates on other articles continue as hitherto.

Letter postage *via* Galle alone remains 24 cents per half ounce. Mails will be made up for this route by each *French Packet*, instead of by each alternate one as heretofore. The service from Galle is now fortnightly instead of every four weeks as before.

No mails whatever are despatched to Australia, &c., by British Packet.

Enquiries are frequently made if, when a steamer is going, say to Sydney only, correspondence can be forwarded for New Zealand, Tasmania, &c. It is notified that mails for every part of the Australasian Colonies are made up by every steamer which calls at any one of them.

An alteration has also been made in the mail service to the Mauritius, E. Africa, The Cape, St. Helena and Ascension; persons carrying on correspondence with those places are requested to notice that Mails will in future be forwarded by each alternate British Packet, commencing with that of the 28th instant, and not by French Packet as heretofore. Notice of these Mails will be given in the Hongkong daily papers a fortnight in advance throughout the year.

The necessity of employing very intense temperatures in cremation, so as to convert the body into ashes, appears likely to be done away with by the experiments of M. Lissagarry. The difficulty in cremation is to decompose and reduce to ashes, tissues containing 75 per cent. of water; but M. Lissagarry overcomes this by exposing the body, first of all to the action of superheated steam, which chars the tissues and enables them to burn easily in an ordinary simple furnace at a very much less cost of fuel and without the least unpleasantness.

Truth says:—"The steel corvette *Comus* was being prepared for the stowage of nitro-glycerine in her magazines, she having been sent to the port where she was lying on purpose to ship that dangerous commodity, when, lo and behold! "it was fortunately discovered by a lucky accident" that the temperature of the magazine was higher than that at which nitro-glycerine explodes, the compartments being conveniently placed in close proximity to the boilers. So now some thousands are to be expended in altering the *Comus*; but we are lucky indeed not altogether to have lost vessel, cargo, and crew. How boundless must be the imbecility of all concerned in this affair."

A writer in the same paper who is evidently a sportsman writes thus:—"I am glad to see that Lord Ailesbury has come forward to protest against the battues, which are disguised with the name of sport. It may be an exercise of skill to stand for an hour or two with a man behind loading one gun as the other is discharged, whilst pheasants and hares are being driven by beaters towards the gunner, then to lunch copiously, and after lunch to renew the exploits of the morning, but sport it is not, any more than sitting in an arm-chair and shooting hares tied to the legs of the dining-room table would be sport. The labourer, the farmer, and the landlord, said Lord Beaconsfield, divide the produce of the soil between them. To these three he ought to have added pheasants and hares. A rich man may spend his money on a whim, and possibly the whim of killing more pheasants at a battue than any of his neighbours is not more hurtful than many other whims; but then those landlords who are not rich, and who are crying out for relief, must understand that, so long as they insist upon keeping their woods stocked with excessive, and absurdly excessive, quantities of game, very little sympathy will be felt for them."

A novel point in mercantile marine insurance law was decided in the Court of Appeal on the 8th of December. The West India and Panama Telegraph Company insured for £20,000, with the Home and Colonial Marine Insurance Company, a steamer which they had purchased to repair their cables. In January last year the boiler burst, and the vessel was so much damaged that it fetched only £250. The defendant Company refused to pay the policy, on the ground that the boiler plates had been worn out by fair wear and tear, and their bursting was, therefore, not a peril insured against. Lord Justice Baggallay gave judgment for the plaintiffs, holding that a boiler was as much a part of the navigating apparatus of a steamer as the sails were of a sailing vessel, and that its bursting, moreover, was the result of neglect and not of fair wear and tear.

The following account of the storming of Moiroi's stronghold appeared in a recent issue of the *Times*:—"The attack was made from five different positions, all parties, leaving the camp for their respective places at the dip of the moon, about 1 a.m. of the morning of Thursday last, and by a quarter-past 4 o'clock the British flag was flying on the mountain. The storming parties consisted of the following:—Captain Allan Maclean, with 200 Fingoes, was at the rear; Captain Bourne and 170 riflemen at the side; Captain Montague at Commandant's Cave, with 175 men; Captain Hook at the gully, with 200 Fingoes and Tambookies; Lieutenant Muhlebeck, with the Wodehouse Border Guard and 40 Fingoes at the Lip. A landing was first effected by Bourne's troop, afterwards followed by Maclean at the Spring, and Montague at Bourne's Crack. The enemy rolled stones and dead carcasses down. A scaling ladder of 25ft. was laid against a sloping rock, and Lieutenant Springer, the first man up, was fired upon point-blank by the Baphutis. He received the shot in his hat and another tore away part of the rock. He immediately shot one of his assailants, and a small body of riflemen then rushed up a schanze and held the position until

the remainder came up. They then formed with the Fingoes, and made a grand bayonet charge across the top, cheering loudly. The Baphutis retired to the crest of the mountain, from which position they were driven into the front schanzes. Lieutenant Mullenbeck at once rushed forward into them. For ten minutes there was a constant rattle of musketry, with volleys from both sides. Some of the Baphutis, who numbered 200, fought to the last and died at the schanzes without asking quarter. Over 40 were counted dead. A great number, however, made their escape from the mountain. Six men and seven women were all the prisoners taken. The casualties on our side were—Private Schwach, No. 1 troop, C. M. R., wounded in the hip-joint dangerously; Private Schorfield, No. 9 troop, C. M. R., wounded in the shoulder-joint dangerously. One Fingo was killed, and two others were wounded in the legs. Mirosi was shot in the first assault; a bullet struck him in the neck and he was found dead in a cave into which he had crawled. Doda, his son, is said to be the only man of importance who was not killed."

We learn by letters received on Wednesday from Kobe, that the import merchants of that port and Osaka have again combined for the purpose of making no purchases of imported goods for the term of twenty days. This action on their part, they imagine, will have the effect of raising the value of yen *satsu*.

Mr. Labouchere, in conformity with the eccentric manner in which he conducts his journal, *Truth*, shortly before Christmas offered a prize for the best recipe for the manufacture of a plum pudding. In response to this invitation some hundred recipes were sent before the next issue of *Truth*, accompanied, in many instances, by samples. Pleased with the success of his idea, Mr. Labouchere, in an unguarded moment, announced that he would personally taste every pudding sent. Before the expiration of another week several hundreds more arrived, and he then saw when too late, the magnitude of the task he had so thoughtlessly undertaken. Let the sequel be told in his own words:—

"At length, then, I have to decide the all-momentous question, which of the hundreds of recipes for Christmas Plum Puddings sent up to me is the best. I will admit candidly that, could I have foreseen the trouble it would have caused me, I should not have made this particular matter a subject for competition; or, at all events, I would not have guaranteed to taste all the samples forwarded to this office. It is more than a little wonderful, I think, that I am alive and able to record the fact that I kept my word in the above respect, for some of the specimens received were made neither wisely nor well, if I may be allowed to say so. One rich-looking compound, which, after duly tasting, I handed over to one of the office-boys has seemingly had a serious effect upon that youth's normal health. Since the evening when he bore off joyfully the dark, heavy slab in question, his official place has known him no more. I merely mention this to show that the post of Puzzle Editor, nowadays, may become one of danger as well as of difficulty."

The prize recipe has been produced for the benefit of the public, and as it may be useful to some of our readers, we give here what has gained the first place after "the most exhaustive and exhausting process of judgment yet gone through":—

1lb. raisins; 1lb. currants; 1lb. suet, chopped fine; ½lb. stale bread-crumbs; ½lb. flour; ½lb. brown sugar; rind of one lemon chopped fine; ½ nutmeg grated; 5 eggs; ½lb. mixed candied peel; ½ pint of brandy. Well mix all the dry ingredients; beat the eggs, and mix the brandy with them; then pour over the other things, and thoroughly mix. To be boiled in a basin or mould for six hours at the time of making, and six hours more when wanted for use.

STUART ELDRIDGE, M.D.,  
Surgeon-in-Charge.

## PARIS LETTER.

PARIS, December 16th, 1879.

The frightful fall of snow is said to have had a great deal to do with keeping in the ministry, which is, be it said in passing, neither better nor worse than former cabinets. It was alleged to be impossible to turn out ministers on a day, when one would not send a dog into the street without a wrap or an overall; and the poor fellows arrived covered with snow, suggesting the winding sheet of penitence, or a retreat from Moscow. It was remarked, that a bat flew over M. Waddington's head, as he paced along the hall of entry to the Chamber. The Prime Minister has not shown himself blinder than ordinary mortals; he may be more cautious, prudent many would say; he takes in account that politics cannot be solved like an algebraic problem, but that the feelings of a respectable minority must be considered, and social prejudices treated with toleration. French republicanism aims to clear off old ways with a Haussmann energy, and then reconstruct. Now it is in the rebuilding that the rub consists and the difficulty of finding successors to form a cabinet constitutes another reason for bearing whatever administrative ills we have. By playing plucky, ministers have lost nothing, and have compelled their opponents, who are also unfortunately their supporters, to show their hand. The majority is not a triumph to celebrate by bonfires or a *Te Deum*; it merely means, do better for the future and act as a nest-egg.

Paris appears as if suddenly covered with a loose crust of Mont Blanc; such an avalanche of snow in a day and a night, has not been witnessed since the retreat of Beresina. The tramways are laid up as completely as the goat-carriages of the avenue of the Champs Elysées; a cab is as extinct as the dodo, and a special carriage, when obtainable, is a thing of beauty. The streets have the air of a battle field; deserted vehicles of all kinds, and railway vans in distress like great steamers disabled at sea, and compelled to heave to. Citizens look like black ants, and march in strings across a snow path like wild ducks; an inch to the right or left, pops you into a pile of snow knee deep or breast high. Another reason why traffic has ceased is, that drivers were falling victims to congestion, and it is not in any of their bonds, that they were to remain at their post till frozen to death. Such a clause suits only Arctic voyagers, who have glory—and frost-bites for reward.

Life is quite changed by the avalanche and a temperature worthy of a poet-laureate of Greenland. People are not ill-humored, as cold might produce, by freezing, the genial current of the soul; the small boys are in a Mahomedan paradise, as they instinctively think the inhabitants feel grateful to their efforts for making a clear spot somewhere. The police have other fish to fry; they insist on every house-holder sweeping before his door, and so having the foot-way as correct as a Dutch interior; but this contributes greatly to bringing down citizens with a most democratic uniformity, and only that the accidents are serious, one might be excused smiling at the variety of salaams and backward positions human beings can undergo. Old persons once down, rarely rise without a fracture, as their bones are as brittle as glass, and the number of single old persons in Paris, who daily go out to make their marketing and perform their own housekeeping, is very great. The iron doors to sewers, in the side walk are veritable traps in times of frost and mud.

It will cost the municipality at least a quarter of a million of francs to cart off the snow, and employ extra brigades of scavengers to chop it up into kennel water when the thaw comes, and run it into the drains. The Deputies when they arrived at the Chamber, entered a vestiary, where a valet brushed the snow off them: some reporters claimed to be candidates and senators, and were brushed accordingly. But they were punished on reaching the gallery, as the corridor where coats and hats are suspended allowed the snow to drift in very plentifully, and so many a black hat became white. The lad who takes the despatches to the telegraph office, two stories below, the "gallery," to save a tread-mill trotting secured an empty cigar box, tied it to a cord, and coiling it over the banister, let down the slips; he is a promising boy.

We have not all the advantages of St. Petersburg—sledges are rare; a vast number of these however conveyed numerous loving subjects of the Czar to their Church to return thanks for His Majesty's escape. The Greek Church, as peculiar to Russia has this advantage, that it can organize a special service in as many hours as other believers would exact weeks. When over, the congregation generally have in their families a substantial supper, perhaps as a doxology. I have spoken with several Russians, and they entertain the belief that the Nihilists will finish with the Czar in a tragical manner. Already they are killing him by inches, and he feels his life would be even less safe outside, than in Holy Russia. The Czar rarely can obtain, with all his means and appliances, forty winks in twenty-four hours: he eats little, rather likes champagne, which he mixes with new milk—Bismarck prefers stout and isolation—he is as melancholy as Jacques, but without a sprinkle of that personage's philosophy. He is naturally *triste*, and it was owing to the melancholy langour of her character, that the Empress won the Czar. But her health is at its lowest

ebb: chloral and soothing syrups give her no longer relief: the slightest noise brings on a crisis of the nerves and the wheels of her bath chair are even muffled with india-rubber to drown the noise, and the stretcher attendants wear felt shoes.

It appears that Prince Bismarck has still enough of events untold in his public life to justify a *Dane*.—M. Hansen—in composing a work on "behind the scenes." It is a very poor production—very inferior to the volumes written by M. Busch in point of style—and contains nothing new. He does not display even the inventive powers of M. Tissot, in that gentleman's amusing romance, "A voyage in the country of the milliards." M. Hansen has collected the hackneyed current anti-German views, that the Danes—until lately—as well as the French, entertained about the Prince.

St. Barbe is the patron saint of the artillery; St. Maurice is the worthy who presides over the whole army. The artilleryists had, in honor of their anniversary, an extra plate of meat, a pint of wine and a two sous cigar. Is it not strange, that the non-commissioned officers are prohibited from lighting a fire in their rooms in the barracks? This is one of the grievances which these valuable members of a regiment urge against a re-engagement, despite a rather tempting bounty.

The Skating Club is not yet in full organization: few members believed the snow was in earnest, or the frost likely to be continuous; then there is the difficulty to reach the pools in the Bois de Boulogne. When the Press Fête to relieve the musicians shall be finished, the Skating Club will give its ball on behalf of the poor of Paris. The latter are now fully employed piling up the snow: others sell snow-shoes, made of a stave of a wine barrel; not a few deal in cloth stockings, and some again vend charcoal bricks "all hot! all hot!" like tatoes. For a few sous, the purchaser has the case in which to place the useful brick. The cabs of Paris have sometimes foot-warmers, and the vehicle is then advertised as "heated." When the intense cold set in, caddy had two *boules* or pans, the cold one he left inside the vehicle, assuring the traveller it was "warm still," while he kept the hot one for his own seat; he of course, demanded an extra fare for supplying the boiling water.

Five suicides took place in one day in Paris alone; one pretty girl aged 14, the daughter of a baker, secured one of her father's old pistols and shot herself because he would not let her become a national school-mistress, as suited her talents; he wished her to mind his shop. In Corsica a poor baker's wife smelt a strong odour from the oven: on going down and looking in, she saw her husband in process of being cremated alive—the mode of suicide he preferred. A man was condemned to prison for two months for street fighting; he succeeded in obtaining a substitute, for the price of one franc per day to take his place in prison, which was successfully carried out; only the men commenced to blab over their cups! In reference to the number of young persons committing crimes, much must be attributed to evil company before entering prison for the first time; and, when once there, coming out a consummate scoundrel. Then the flood of bad literature obtainable for a few centimes is another source of moral degradation; and as much of this literature is illustrated, the pictures only intensify the filthy letter-press. Talking of bad prints, I am informed that an abominable traffic is being carried on under the name of "International Beauties." The photos of the beauties of European capitals, supply the "heads" of the ladies; these are then joined on to "bodies" in the most indecent attitudes, photographed, and clandestinely sold.

M. Charles Blanc, brother of Louis, and the Ruskin of France in point of criticism, deprecates the want of originality and real art in the models sent in of the statue to commemorate the Defence of Paris in 1870-71. He excepts no competitor, and his remarks have stung Gustave Doré to the quick.

A treatise has appeared on the "Fattening of pigs, poultry, and frogs"—anything to relieve distressed farmers is welcome.

Poor Madame O'Connell, who was once a leader of fashion in this city, and distinguished for her literary and painting talents, is now in a public lunatic asylum: she remains all day huddled up in a corner, covered with rags, and suffering it is said from elephantiasis, which explains her enormous bulk. A pressing appeal is made to raise funds to place her in a private hospital. Her husband is a Trappist; after morally killing his wife, he sought refuge in a convent.

The Abbe Liézt, when he promised to spend the evening with friends, and to play some of his compositions always sent in advance his own piano.

The Municipal Council of Paris, in renewing the lease of the Beaulieu Concerts, formerly the Musard, said they were the only out-door music in the Champs Elysees that a respectable lady could attend. The other establishments that also hold their leases from the City of Paris, intend taking an action for damages. Public bodies, here as elsewhere, "have neither bodies to be kicked, nor souls to be saved."

Game is scarce in the suburbs of Paris; speculators now provide hares for passionate sportsmen to blaze at, as pigeons are furnished for slaughtering.

According to the *Paris Marcia* journal, the first letter-carrier was the dove that brought Noah the olive branch.

"Zulu," is the name given to the bad wine produced this season.

A journal apologizes for interrupting an article on home politics, to draw attention to the duel between de Lesseps and ex-President Grant, respecting the Darien canal.

Three things without mercy—fire, time and a woman's revenge.

Of the total number of French Legislators, 325 are bald, viz: 116 Senators and 209 deputies.

Fortune tellers and somnambulists are now better advertisers, in Paris, than patent medicine vendors.

In honour of the anniversary of the total defeat of the Duc de Broglie and Co., a soft goods shop announces that all sales will be marked 60 per cent below first cost.

An invalid was asked how he could eat such quantities of pork preparations which he disliked so much when in good health: "I simply close my eyes, and imagine I am a Mahomedan." A man boasts of having the courage of his opinions; a neighbor replies, "I think nothing of your courage!"

## JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

### GOVERNMENT NOTIFICATIONS.

#### Notification, No. 4.

It is hereby notified that the foreign mail interchange and system of carrying small packages by the mails, having been instituted between Japan and Hongkong, from January this year, an agreement, of which the enclosed is a copy, has been entered into between the Postmaster General of Japan and the Postmaster General of Hongkong.

(Signed) SANJO SANETOMI,  
Prime Minister.

February 5th, 1880.

#### Notification, No. 5.

It is hereby notified that the paper currency now in circulation, being of such a nature as to be easily torn and destroyed by use, new paper money of three different values, namely:—one yen, five yen, and ten yen, is to be issued in order to be gradually exchanged for that now in circulation.

N. B.—The printing of the new one yen paper currency having now been completed, samples are to be forwarded to every local Government.

SANJO SANETOMI,  
Prime Minister.

February 5th, 1880.

### COURT, POLITICAL AND OFFICIAL.

We learn from the *Mainichi Shimbun* that the contemplated visit of His Majesty the Emperor to Kiushiu and Shikoku, which was originally intended to have taken place next March, has been postponed until May or June, no date having yet been definitely fixed.

Their Imperial Highnesses Prince Arisugawa, Prince Higashi-Fushimi and Prince Kita-Shirakawa; Their Excellencies Inouye, Okuma and Terashima; General Saigo, Admiral Enomoto and several other high officials waited upon His Royal Highness the Duke of Genoa, on board the *Vettor Pisani* on the 27th ult., in order to take formal leave of the distinguished visitor to Japan. His Excellency Admiral Kawamura, the Naval Minister paid a similar visit on the 30th ult. The *Vettor Pisani* sailed on the 1st inst. for Kobe.

The Chief of the Colonization Department, General Kuroda, returned to the capital from Hakodate, on the 30th ultimo.

On the 30th ult. Prince Nabeshima left Tokio to visit Kobe.

Mr. Nomura, Prefect of Kanagawa Ken, went to Tokio on the morning of the 31st ult. in connection with certain business relating to the approaching meeting of Provincial Governors. It is hinted by the *Mainichi Shimbun*, that Mr. Makimura, Governor of Kioto, will, on the closing of the assembly, be transferred to a seat in the *Genro-In*, and that Mr. Kunishige, of Kioto, will be appointed to the government of his district.

During the session of the meeting of Provincial Governors, an officer of the Imperial Household will be in daily attendance, and will convey a report of the proceedings to the Emperor.

Her Majesty the Empress-Mother is reported to have been slightly indisposed of late, but to be now convalescent.

The *Mainichi Shimbun* announces, as a current rumour, that

General Oyama, Prefect of Police, is shortly to be promoted to the grade of *Sangi*.

His Excellency Ito, Minister for the Interior, who has lately returned from Atami, resumed the duties of his office on the 2nd instant. The *Echo du Japon* says that during His Excellency's journey from Atami, one of the escort was shot from a field adjoining the road. It was at first thought that an attempt had been made to assassinate the Minister, but enquiry proved that the gun had been accidentally discharged by a man who was out shooting.

The Hon. J. A. Bingham, the Minister from the United States, accompanied by His Excellency General Saigo, Minister of War, visited the Military College at Ichigaya, the day before yesterday, where they witnessed the riding drill of the cavalry officers, and a review of the cadets.

No representative from the new prefecture of Okinawa, will be in attendance at the forthcoming Local Governors' Assembly, owing to the state of the prefecture.

Governors Nomura, of the prefecture of Ibaraki, and Nagayama, of that of Niigata; and Secretaries Yoshida of Sakai, and Hirayama of Hiroshima, arrived in Tokio on the 1st instant.

We (the *Hochi Shimbun*) hear that His Majesty the Emperor attended the *Daijō Kwan*, at 10 a.m. on Tuesday and received information from the *Daijin* and the *Sangi* respecting the forthcoming Local Governor's Assembly.

Mr. Tanaka, Assistant Minister of Education and suite, left Kobe on the 27th ultimo, for Kiushiu.

Two hundred and eighteen police sergeants and men who took part in quelling the last Satsuma rebellion, have received rewards in money, varying from ten to one hundred yen according to their different services, at the Head Police Station.

His Excellency Inouye, Minister for Foreign Affairs gave a farewell banquet at the Shiba Palace yesterday, in honour of His Excellency Yoshida, Envoy Extraordinary and Minister Plenipotentiary to the Government of Washington, who is shortly leaving for his post.

His Excellency Okuma, the Minister of Finance, is shortly leaving Tokio for Osaka, in order to be present at the opening of the Cotton and Sugar Competitive Exhibition, which is to take place on the 15th instant.

A private meeting of the Local Governors' Assembly was held at 10 a.m., the day before yesterday, and Mr. Matsuda, Governor of Tokio, was appointed the *Kanji*.

We (*Mainichi Shimbun*), have been informed that the Governor of Chiba Ken, has requested to be allowed to increase the police force of that prefecture, by one hundred and fifty men.

Mr. Nomura, the Chief Secretary of the Education Department, who has been inspecting the state of education in the prefectures of Yamaguchi and Hiroshima, returned to Tokio on the 20th ultimo.

As had been already recorded, the Local Governors' Assembly was opened the day before yesterday. Nine Princes of the Blood, all the *Sangi* and all the members of the Assembly, arrived at the debating Hall at about 9.30 a.m., and took their seats about 10.20 a.m. In the meanwhile His Majesty the Emperor arrived there, and opened the Assembly. His Majesty addressing the members said:—

"We have summoned you to this Assembly, and we in person now open it. We wish you to keep our will in your minds and state your opinions upon the matters brought before you." His Majesty then returned to the palace and the members dispersed. The regular meetings of the Assembly will be held from to-day.

His Excellency Sanjo, the Prime Minister, visited the Imperial Treasury in the Finance Department, the day before yesterday.

#### NAVAL AND MILITARY.

Lieutenant-General Takashima, who has been travelling in France and Germany in order to investigate the military systems of those countries, is expected to return to Japan about the end of this month.

Lieutenant Nagamine, of the Japanese Army, who has been residing in France for the purpose of study, lately returned home.

The *Nichi Nichi Shimbun* lately reported that the Military system of Japan is shortly to undergo revision. The above statement has been since contradicted.

The number of marines to be enlisted by the Naval Department during this year, will amount to two hundred and fifty men.

The *Mainichi Shimbun* tells us that Captains Hayashi Kiyoyasu, and Nirei Kagemori, were promoted to the rank of Rear-Admirals, on the 4th instant.

The Japanese man-of-war *Amaki Kan*, is to sail for Corea about the 20th instant.

#### MISCELLANEOUS.

The *Nichi Nichi Shimbun* states that the duties paid at the Yokohama Custom House during the past month, amounted to 175,136 yen, 99 sen, 9 rin.

It is reported in the *Nichi Nichi Shimbun* that nine of the students who have recently succeeded in passing the final examinations at the Engineering College in Tokio, thus completing the educational course of that institution, are to leave for England by the P. & O. Co.'s steamer, sailing on the 14th instant.

The *Nichi Nichi Shimbun* mentions that return tickets are to be issued henceforward on the Yokohama-Shimbashi railway line between the latter terminus and Kanagawa, and Yokohama and Shinnagawa, and *vice versa* in both cases. The double journey then will cost as follows:—Return tickets. Shinbashi to Shinnagawa, 1st class 38 sen, 2nd class 15 sen; Shinbashi to Kanagawa, 1st class 1 yen 28 sen, 2nd class 75 sen; Yokohama to Shinnagawa, 1st class 1 yen 13 sen, 2nd class 75 sen.

A fire took place at Shinsaruya-cho, Asakusa, Tokio, at 9.30 p.m. on the 30th ultimo, and rapidly spread to the three streets, Suwa-cho, Kurofune-cho, and Miyashi-cho, destroying 281 and damaging 26 houses. It was extinguished at midnight.

The Osaka Exhibition is to be opened for a hundred days, commencing on the 1st of next month.

Furukawa, Katauda, and seven other political offenders implicated with them, were sent from Osaka on the 21st ultimo overland to Tokio, under a strong guard of police.

It is reported that many cases have occurred lately in Tokio and its vicinity, of robberies having been perpetrated by armed men.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, 1st February, 1880.

Passengers, parcels, &c. ....	\$ 7,191.32
Merchandise, &c. ....	796.56
Total.....	\$ 7,987.88

Miles open 18.

Corresponding week last year.

Passengers, parcels, &c. ....	\$ 5,867.61
Merchandise, &c. ....	735.26

Total.....\$ 6,602.87

Miles open 18.

##### KOBE AND OOTZU SECTION.

Statement of traffic receipts for the week ending Sunday, 1st February, 1880.

Passengers, parcels, &c. ....	\$ 9,918.92
Merchandise, &c. ....	1,682.40

Total.....\$11,601.32

Miles open 55.

Corresponding week last year.

Passengers, parcels, &c. ....	\$10,552.40
Merchandise, &c. ....	1,027.27

Total.....\$11,579.67

Miles open 47.

#### THE ANNUAL MEETING OF THE YOKOHAMA GENERAL CHAMBER OF COMMERCE.

The Annual General Meeting of the Chamber was held last Monday afternoon in the Hall of the Chamber,

Present: Messrs. Wilkin (in the chair), Rickett, Grüsser, Haselwood, Macpherson, Watson, Dunlop, Hamilton, Van der Pot, Reid, Dodds, Wolff, Merian, Stiebel, Blanc, Fraser, D'Iffanger, Taylor, and Heinemann.

The Chairman mentioned the objects of the meeting, and on his suggestion a similar course to last year was adopted,

viz., the minutes of the last meeting were taken as read and passed.

It was also agreed that the annual report of the committee be taken as read. The report was as follows:—

**REPORT OF THE COMMITTEE OF THE YOKOHAMA GENERAL CHAMBER OF COMMERCE, FOR THE YEAR 1879.**

The most important of the subjects which have occupied the attention of the Chamber during the past year, have been:—

**THE REVISION OF THE TREATIES AND OF THE TARIFF CONVENTION OF 1866.**

In April, the Chamber received from Sir Harry S. Parkes, H. B. M.'s Minister, a communication intimating that some steps had been taken by the Japanese Government in this direction, and inviting the expression of its opinions, and suggestions for modifications.

At a Special General Meeting, held on the 1st May to consider this communication, the General Committee were requested to draw up a Report upon Revision. This was according done, and their Report was presented to a second General Meeting, held on the 8th July. It was adopted with some slight modifications, and then forwarded to H. B. M.'s Minister.

Recently a document has been published which, it is understood, embodies the proposals of the Japanese Government respecting the tariff on imports; but further than this your Committee have no intimation that any progress has been made in the matter.

The standpoints of this Chamber in regard to Revision of the Tariff are, briefly:—that duties on Imports must fall on the consumer, and thus be a tax on the country: that protection to native industries which are only kept going by Government subsidies, would be burdensome to the people of Japan, and may be unfair to foreign trade: and that foreign nations, who have been working for twenty years under existing agreements, and to whom, in fact, Japan directly and indirectly owes so much of her progress, have rights under those agreements which cannot be ignored.

One step which the Chamber then advocated was shortly afterwards taken, although scarcely in the manner suggested. The Committee wrote thus in their Report:—"There would seem to be every reason why the Silver Yen should be recognized as on an equality with the Mexican Dollar, under guarantees for the maintenance of the present standard and of a sufficient supply; and always provided that it is accepted as current in China." Soon after arrangements were made by which the Foreign Banks, beginning with the 19th September, agreed to accept the silver yen on a par with the Mexican Dollar; or rather by these arrangements the latter coin was virtually excluded from circulation. It is somewhat to be regretted that this should have been done before currency had been obtained for the Yen in China, or at least in Hongkong. The result has been that our rates of Exchange, instead of ruling higher than those in Hongkong, have kept below them, and it may be said that in one sense the money held in Yokohama, has been depreciated to the extent of 1 or 2 per cent.

It will be unnecessary to add that the introduction of the Silver Yen has failed to arrest the depreciation of the Paper Currency; and it may be doubted whether it is worth discussing the effects of Tariffs upon the trade and prosperity of the country, in presence of the fact that the country is flooded with practically illimitable issues of inconvertible paper.

**P. & O. POSTAL CONTRACT.**—Under date 1st April, the Chamber received from Sir Harry S. Parkes, a copy of the reply of the General Post Office on this subject, embodying the reasons for the decision to which the Board of Treasury had come. These were that the expense of a British packet service between Hongkong and Yokohama seemed to be unnecessary, in view of the facts that there was a French fortnightly service,—"and that the most important portion of the correspondence between the United Kingdom and Japan is conveyed via San Francisco."

Seeing what little use can be made of this latter route for outward letters, it is to be regretted that the Board of Treasury should have been under such a misapprehension; and it must be matter of surprise that the British Government should be content to leave a trade which is by no means inconsiderable, and in which British interests have so much the largest share, to be sustained through mails carried by other countries.

After receipt of this reply, a Memorial on the subject, promoted by the Chamber, and generally signed by the mercantile community, was addressed to the Directors of the P. & O. Co., with a request that they would lay it before H. B. M.'s Government. Unfortunately, as it appears, the Directors considered that as they were interested parties it would not be becoming in them to forward the Memorial, and that anything of the kind should be sent direct. Thus several months further delay occurred.

A second Memorial, direct to the Board of Treasury, has since been prepared by the Chamber, and circulated for signature amongst the mercantile community. H. B. M.'s Chargé d'Affaires kindly consented to forward it to London.

**RULES AND REGULATIONS ADOPTED AT THE INTERNATIONAL TELEGRAPH CONFERENCE OF LONDON, 1879.**—The arbitrary and inconsiderate nature of some of these has attracted general attention, and the Chamber having first communicated with the Chambers of Hongkong and Shanghai, drew up a Protest, and circulated it in like manner for signature amongst those engaged in business. It has been now forwarded to the Directors of the two Eastern Companies.

**REGULATIONS FOR LANDING AND STORING DANGEROUS CARGO.**—In response to an invitation dated 1st September, from the Board of Foreign Consuls, a Memorandum has been sent in to that body with suggestions for provisional arrangements as to landing and storing Dangerous Cargo, which it is thought might

meet the case until general Harbour Regulations are devised and agreed upon.

During the past year, imports of Kerosene became so much in excess of the storage capacity of the Nakamura godowns, that consignees resorted to buildings in the settlement wherein to warehouse this cargo. This matter occupied the attention of the Chamber, but as the Fire Insurance Agents of the Port took it up, there was no necessity for action on its part. The result of the representations of the Fire Insurance Agents was, that some of the vacant ground on the Umechi was assigned for the temporary use of foreigners wishing to put up godowns for Kerosene:—and that later, additional godowns were erected by the Local Government on the Nakamura site, sufficient in all for the storage of 350,000 to 400,000 cases. As regards these latter godowns, it is, however, to be regretted, that they have been placed in such close proximity to each other that difficulty may arise as to Fire Insurance to a sufficient extent.

**LANDING OF CARGO AT THE HATOBA, &C.**—The Special Committee appointed to consider the question of landing of cargo at the Hatoeba and kindred subjects, were courteously afforded by Mr. Motono Morimichi, Superintendent of Customs, an opportunity of discussing various matters with him, and subsequently of presenting their views in a Memorandum. This, with Mr. Morimichi's reply, will be found in the Appendix. Some good has resulted from this interchange of ideas, although, it may be thought, not much actual progress was made.

**LISTS OF IMPORTS AND EXPORTS.**—The publication, under the auspices of the Chamber of the daily Customs Returns has been discontinued, but Lists of daily Imports and Exports are filed at the Chamber's rooms for reference.

**JAPANESE LAW IN RESPECT TO DEBTORS.**—In connection with the Takashima Coal Mine case, Messrs. Jardine, Matheson & Co. addressed the Chamber, pointing out the unsatisfactory position of the Japanese law in respect to Debtors, as it affected foreigners. This communication was forwarded by the Chamber to the Foreign Representatives.

Occasion was also taken to endeavor to enlist the support of the Tokio Chamber of Commerce in the same cause.

**SILK-REELING.**—Later on, at the commencement of the Silk season, a suggestion was made to the same body in reference to the probability that silk-reelers would over-supply the market with coarse sizes. In both cases the Tokio Chamber cordially responded to the communications.

**SHANGHAI MAIL STEAMERS.**—In October a request was made to the Directors of the Mitsui Bishi S. S. Co., that some arrangements should be made by which the Shanghai mail would arrive before the outgoing steamer. This request has received the usual courteous consideration of those gentlemen, and probably some modification will be arrived at:—although owing to the necessity of consulting the requirements of the steamers, and the convenience of the communities at the other ports, it appears to be not easy to make a change.

**THE TELEGRAM.**—Cost of this during the past year would appear to be somewhat in excess of that of 1878. The Rules and Regulations alluded to above, would from April next greatly increase the price of the message in its present form, at least until some re-arrangement of the method of transmission can be made. Even then, however, the fact would remain that this item draws heavily upon the funds of the Chamber. The actual cost per member is about \$49 per annum:—the augmentation of subscriptions to meet it, is only \$30. It is therefore absolutely necessary that a change should be made in some direction, and this meeting is invited either to decide what steps should be taken, or to appoint a sub-committee with power to decide.

Shall the Telegram be shortened, or shall it be less frequently sent? Shall it be given up altogether, and the annual subscription to the Chamber revert to the original amount of \$50, or shall the subscription be increased so as to fully provide for the cost?

It must be admitted that any such subscription as \$30 per annum is a very small sum to pay for the amount of information transmitted weekly by the message.

A further suggestion has been made that the ordinary subscription be limited to \$50, and that those members who wish for the Telegram should divide the cost among themselves: but it seems very undesirable, that in any association presuming working for the common good, there should be any such division of interests.

**FINANCES.**—The accounts are presented herewith, duly audited. The balance in hand again shews a diminution when compared with that of a year ago.

In accordance with the discretionary power given to your Committee at last Annual Meeting, the price of the Circular was raised on and from 1st July to 12½ cents, and notwithstanding a considerable reduction in the number sold, this measure, although in operation for only half the year, has been successful in maintaining the amount of income from this source.

Some small economies in expenditure, aggregating about \$200 per annum, have been effected:—but as already said, it is imperative that some decision should be come to in respect to the cost of the Telegrams.

**MARKET REPORT.**—The sale of the Market Report has not been adversely affected by the augmentation of price, indeed the number taken shews a slight increase during the last six months.

As regards the records of the Market Report, they shew a large business again in Cotton Yarn at gradually advancing prices: and amongst it, a notable increase in sales of Bombay 20's. In Grey Shirtings the deliveries are seventy per cent in excess of those of 1878, due chiefly to 9 lbs.:—Rather singularly, values have more or less steadily receded. In Woollen Goods there have been general complaints of dulness, but in average and excepting in one or two articles, there is little difference in the business recorded as compared with that of the previous year. The deliveries of Kerosene show that the use of this commodity still extends.

This was seconded by Mr. Haselwood, and carried.

The election of officers was then proceeded with. Mr. D'Iffanger and Mr. Haselwood acting as scrutineers.

Mr. Wilkin mentioned that he had no desire to serve again, either as Chairman or Vice-Chairman, and requested the members not to vote for him in either capacity.

The scrutineers announced the result of the ballot for Chairman to be as follows:—Messrs. Macpherson and Fraser equal, Mr. Wilkin, and then Messrs. Gay and Keswick also equal. The three first named gentlemen declined the position, and neither Mr. Gay nor Mr. Keswick were present. It was therefore necessary to have a fresh ballot which resulted in the election of Mr. Gay as Chairman of the Chamber for the ensuing year. Mr. Keswick was then elected vice-Chairman, and Messrs. Dunlop, Van der Pot, D'Iffanger, Wilkin, Wolff and Dodds, members of committee. There being a tie between Messrs. Stiebel, Walsh and Taylor for the seventh seat on the committee, a second ballot was rendered necessary, which resulted in favor of Mr. Stiebel.

The Chairman then read the notice of a proposed alteration in Rule III. which now read as follows:—"That merchants, bankers and agents for public companies shall be eligible for admission as members." The speaker mentioned that the conditions of the trade of the port had altered and it had been suggested that the rule be amended thus "That merchants, bankers agents for public companies and *others engaged in trade* shall be eligible for admission as members." He thought that the ballot was sufficient protection that no person would be elected a member who should not be; and that if their circular was altered so as to include other articles in which a large trade was now done, an increase might reasonably be expected in the members belonging to the Chamber. He therefore moved that the rule be amended in accordance with the notice given.

Mr. Dunlop asked if Chinese would be admitted under the proposed alteration?

The Chairman replied there was no exception stated. It would be a matter settled entirely by the ballot for admission.

Mr. Fraser wished to know if the alteration of which notice had been given, was the result of any expression of opinion by any particular persons.

The Chairman could not exactly say it was.

Mr. Macpherson stated that there were very large imports now which had grown up comparatively recently and the reports issued by the Chamber really gave no accurate idea of the trade of the place. There were now large transactions in kerosene, curios and in other articles and the persons engaged in those businesses would in many instances join the Chamber if the prices current gave details respecting these things. He thought they should also reduce the annual fee so as to make the Chamber as generally useful as possible. By this means, there would be more life in their meetings, a greater variety of opinions would be expressed, and the Chamber would represent the trade of the port more fully. He had therefore much pleasure in seconding the resolution moved by the Chairman.

On being put to the meeting the resolution was unanimously adopted.

The Chairman then said that he would like to make a few remarks before the meeting separated. At last Annual Meeting he had brought forward the subject of the Landing of Cargo by ships, but the matter remained in the same unsettled state as before, and had already been the origin of a lawsuit. In the local papers might daily be seen advertisements, inviting consignees to send in their Bills of Lading to the Agents of the vessel, and if they wished the vessel to land their cargo, to intimate that such landing would be at their own risk. This amounted to giving up the Bills of Lading without any security as to any damage or loss which might happen between the ship and the shore. He thought this was not a right state of things, and hoped the Chamber might see its way to suggest a method satisfactory to all concerned. On another point he would also like to say a few words. It might be thought that it was not within the province of a written report to discuss the internal affairs of Japan, but at least it would be quite in place that they should ventilate their views upon matters intimately associated with trade. Of these, the continued depreciation in the inconvertible paper currency, was a most important one, and indeed in its importance quite overshadowed the question of Tariffs. Already imported goods were costing the native consumer more than thirty per cent over par; and exports were realizing an equal

value above par. This result was, however, further complicated by what was taking place in the interior in respect to the purchasing value of paper. Hitherto,—and still to a great extent,—to the dweller in the interior, a Yen, paper or coin, had been much the same thing, but now the inevitable law of adaptation was beginning to take effect, and the necessities of life,—food and so forth,—had risen in value, that is they were costing so much more of the currency of the country: just as that currency where it comes into contact with coin is at a discount. The resources of Japan are comparatively limited in extent, and expedients which larger countries may adopt with more or less of impunity, may tell heavily on her. He could not help thinking that this was sometimes lost sight of by those who directed her affairs, and that in adopting measures which they saw in operation in other lands, sufficient account was not taken of the difference in circumstances or adaptation. The Japanese Government seemed to think that the introduction of the Silver Yen would prevent any great depreciation in the paper currency, irrespective of the fact that there was not more than one yen in coin (silver and gold) to every ten yen of inconvertible paper. It would be well if the failure of their hopes in this direction, suggested to them that the stern laws of cause and effect must take their course, and that no empirical schemes can avail to make the country rich and prosperous. The native press is doubtless doing harm in this respect by the crude and fallacious views it puts forth. The progress made by the newspapers in Japan is without doubt astonishing, but the theories of political economy which they at times propound, and which are probably readily accepted by their readers, are wildly absurd; and it is moreover to be regretted that they do not hesitate on occasion to make mendacious statements on matters of fact. Japan has also of late suffered from travelling politicians, who have been supposed to possess influence and power, as well as political wisdom, and who on the strength of such reputation have given much advice, and received much attention at the expense of the country. Another phase of this matter is the extent to which Government support is given to industrial undertakings, by loans (in paper money it is true), or otherwise. One cannot help thinking that this is done without always a full consideration as to whether the industry is at all adapted to the capabilities of the country. Nothing could be better than a wholesome encouragement of production and manufactories; but the crucial question is, do these concerns—or can they—pay when started? Are the silk-filatures, paper mills, yarn mills, glass factories, etc., which are under Government patronage self-supporting, or do they even pay their expenses? or are they kept going for the name of the thing, and to provide berths for Government attachés? If they were not self-supporting they were simply so much loss to the country. In conclusion, he remarked that to sojourners in Japan these subjects could not but be of interest, and discussion of them in a friendly, and no carping spirit, could not but be productive of good.

Mr. Macpherson moved a vote of thanks to Mr. Wilkin for the very able manner in which he had discharged the important duties of Chairman of the Chamber during the past year, alluding more particularly to the trouble Mr. Wilkin had always personally taken to advance the interests of the institution.

Mr. Macpherson's proposition was carried by acclamation.

Mr. Wilkin, in acknowledging the compliment, remarked that he was always glad to be of service in the community, and thoroughly believed in the benefits derivable from a judicious division of labour.

The meeting then terminated.

## THE JAPANESE PRESS.

### TREATY REVISION.

(Translated from the *Nichi Nichi Shinbun*.)

*Continued from last week.*

THE seventh article in the trade regulations attached to the early treaties provided as follows:—

CLASS I.—Goods free of duty.—Gold and silver, coined or uncoined. Furniture and books, not intended for sale. All articles brought for the private use of foreign residents in Japan.

CLASS II.—Goods subject to an *ad valorem* duty of five per cent.—Material necessary for building or repairing ships.

whale-fishing apparatus, salt provisions, bread and flour, live birds and animals, coal, timber for house-building, grain, steam-engines, lead, tin, silk-yarn, cotton and woolen fabrics.

Class III.—Goods chargeable a duty of thirty-five per cent.—Wines and spirits.

Class IV.—All import goods not enumerated in the above classes shall pay a duty of twenty per cent *ad valorem*. All goods exported from Japan, with the exception of gold and silver coin, and copper, shall pay a duty of five per cent.

The above-mentioned tariff was agreed upon with the full consent of the Foreign Plenipotentiaries who had come to this country charged with full power to conclude treaties, and was approved by their respective sovereigns or presidents.

Thus we see that a standard of twenty per cent duty on imports, and five per cent on exports, was fixed when the treaties were first signed. The rate was then considered equitable by the Envoys of the Treaty Powers, and approved as just by their monarchs and Congress. Moreover, when Mr. Harris, then the representative of the United States of America was drafting the form of the conventions, he very clearly expressed the opinion that the scale of dues there laid down would never injure either the export or the import business. Conformably to the same opinion, Lord Elgin (Great Britain), Baron Gros (France), Mr. Donker Curtius (Holland), Count Poutiatine (Russia), agreed to the tariff. Hence we must conclude that twenty per cent is a fair tax for Japan to levy upon imports. In fact, as the officers of the Shōgunate, when the treaties were first negotiated, did not say that their Government desired to derive a large revenue from their Customs, and entirely left the question of the tariff to the decision of the foreign ambassadors, not even hinting whether they considered that the amount proposed was too great or too small, the said twenty per cent basis was simply founded upon the sole proposition of the strangers; or, to be still nearer the point, it was the very amount which they themselves decided upon on behalf of their nationals engaged in commerce.

Such a scale of tariff as that which, to their own satisfaction, was regulated by the Plenipotentiaries of all the Treaty nations, was not so high as to create any disadvantages to the foreign merchants. A clear proof of this may be found in the fact, before cited, that the Representatives framed the schedule themselves. This being the case, how, then, did it happen that an equitable tariff was suddenly reduced and another established upon a basis of five per cent, on the signature of the convention of 1866? The cause was this:—The Tokugawa Government, being unable to comply with some treaty stipulation, consented to the reduction in order to compensate for a loss sustained by foreigners, which would not have occurred if the agreements had been properly carried into effect. For what reason the duties should be reduced to make up for an alleged loss, was not clearly mentioned in the tariff convention; but, according to what we heard at the time, several grounds for the disadvantages complained of were adduced. First; the Japanese Government was unable to open the cities of Yedo and Osaka, and the ports of Hiogo and Niigata, to foreign intercourse, within the period mentioned in the treaties. It had therefore prayed the western Powers to agree to a postponement of five years, during which time foreigners had been unable to gain the profits which would have accrued to them if the four places had been accessible to their trade. Secondly; the native authorities were unable to cause foreign money to circulate at par with Japanese, according to weight and kind—to cause the Mexican dollar to be taken as worth three bu; and they were also powerless to found a great Mint, where the demands of foreigners to have their specie received could be complied with. Hence another cause of loss. Thirdly;—the Government had prevented foreigners from having communion with Daimio and Samurai, thus closing possibilities of remuneration to them. Fourthly; the Japanese Government being unable to restrain the anti-foreign party from committing acts of violence upon the native merchants who had dealings with the strangers, had allowed commerce to fall to ruin. Fifthly; the Government being impotent to prevent swash-bucklers from murdering aliens and firing upon their ships had exposed the lives and properties of visitors to danger, &c., &c. Upon such pretexts as these was the reduction of the tariff demanded. The non-opening of the

ports and the failure to circulate the Mexican dollar, were the principal. The others were also held to have important bearing upon the question; but they related mostly to social and political questions and did not affect commercial transactions. Let us consider more closely this plea for diminution namely, "that the Japanese Government, being unable to comply with treaty stipulations, had thereby deprived foreigners of their dues," and make a few observations upon it. Granting that loss was incurred by foreign merchants through the delay in the opening of the four ports above mentioned, that cause of detriment vanished when the treaty stipulations were at length complied with. That is to say that, from 1861 to 1867 inclusive, or during seven years, the disadvantage indicated might have been experienced; but it disappeared from 1868 when the places agreed upon were thrown open; and from that time there was nothing to prevent the strangers from making gain. Or, once more, they may have been sufferers as regards the circulation of the Mexican dollar from the time of the opening of the ports in 1859 up to the end of 1870; but from the date of the establishment of the Mint at Osaka, in 1871, they could have found no difficulty in getting their money received. After that time, their plea of loss in this respect also became invalid. As for even the other pretexts, which refer, as we have said, to social and political matters, foreigners have never made any complaint since 1868. Such being the state of affairs, we find that any detriment incurred by foreigners owing to the postponement of the opening of cities and ports lasted only for seven years: that arising out of the disadvantage under which the Mexican dollar laboured in circulation was confined within a limit of thirteen years. It is only logical to state that from the opening of the four above mentioned places in 1867, and the foundation of the Mint 1871, our visitors have enjoyed all the rights and interests stipulated for in the existing treaties, without any exception whatever. But we can show that they have not actually sustained any loss or damage at all in their interests by the action of the Japanese Government. And if they have suffered no loss our authorities have no longer any reason for making compensation for any such loss. If the Government has nothing to compensate them for, there is no ground for adhering to the five per cent duty charged at the present time, and which was submitted to as a compensation. Indeed it would only have been reasonable that the duties should have been augmented in 1867 or 1871; but what has been the fact? The second article of the Tariff Convention provides:—"The Tariff attached to this Convention being incorporated from the date of its signature in the Treaties concluded between Japan and the above named four Powers, is subject to revision on the 1st day of July, 1872." Alteration in the tariff has thus been postponed as long as the revision of the treaties has been delayed. To put it otherwise, and Foreigners have derived profits which were not due to them, through paying only five per cent duty during the eight years which have elapsed since 1872. In reality, any loss which they might have sustained in former times were more than counterbalanced by the extra gains accruing from the five per cent tariff between 1866 and 1871. Then they have had an additional eight years enjoyment of the same privilege! Surely then it is clear that the balance of advantage must be on the side of the foreigners. If our readers will refer to the annual returns of exports and imports for the last eight years and estimate the difference between the five per cent duties actually paid by foreigners in that period, and the twenty per cent duty which would have been paid to the revenue during the same period if the first tariff had not been reduced, they will see that Japan has surrendered to other countries an enormous amount of money, and that the statement, which we have above formulated, is perfectly substantiated.

The Japanese Government had thus by the reduction of the custom's duties to five per cent in 1866, given to foreigners an opportunity of reaping profits to which they were not fairly entitled, and by the opening of the two cities and two ports to foreign intercourse in 1868, and the establishment of the Mint in 1871, effectually removed any ground there might possibly have been for the cry that foreigners were deprived of trade facilities promised them. It is therefore unanswerable that at the present time Japan has, by the reduction of the import duties from twenty to

five per cent for nearly fourteen years, amply compensated any losses which foreign traders may have sustained through the non-fulfilment at the appointed time of any of the treaty stipulations. It is also true that, as a matter of fact, foreigners have enjoyed during the whole of that period advantages of which they had no expectation and it is therefore only reasonable and what no Foreign Power should cavil at, that Japan should now abolish the five per cent duties, which were only established with a view of recouping foreigners for losses they had sustained.

It may perhaps be said that, as there was no specific mention in any of the treaties or conventions, that the duties were lowered with the object of making compensation, our argument founded thereon is without force. We will now reply to that objection. In the preamble to the tariff convention signed in June, 1866, it is stated, "And the Japanese Government having given the said Representatives" (of Great Britain, France, the United States and Holland) "during their visit to Osaka in November, 1865, a written engagement to proceed immediately to the revision of the tariff in question on the general basis of a duty of five per cent on the value of all articles imported or exported." It is evident from this that the reduction of the tariff was founded upon the agreement signed in Osaka, which was, of course, only intended as a temporary measure. After such a lapse of time it will be difficult to prove by documentary evidence that the Osaka convention was to be only of limited duration, but it was well recognized by everyone at the time that the Japanese authorities, finding themselves unable to carry the treaties into full effect, reduced the import duties to one-fourth of the original rate in order to fully compensate foreigners for any damages occasioned to them by the failure of the Government to fulfil their engagements. The Osaka convention was based upon the conventions of London and Paris, in which it was agreed to reduce the import duties to five or six per cent in return for a postponement of the opening of the two cities and ports, and also upon the convention of Paris (1864) in which the Japanese ambassadors agreed that the tariff should be reduced, as an indemnity for foreign vessels having been fired upon at Shimonoseki. All these are matters of public notoriety, and, although they do not appear in any official document, are incapable of contradiction. If any further example be necessary of the conventions so common in those days for compensating foreigners in respect of actual or constructive losses, we would refer to the final convention of Shimonoseki. The third article says; "However, the above named Treaty Powers have no desire to enforce the payment of money, their wish being to bring intercourse with Japan into proper harmony and to promote the interests of both parties. If therefore His Majesty the Taicoon shall, instead of paying the indemnity, offer to open Shimonoseki or some other suitable port in the Inland Sea to foreign trade, as compensation for the damages sustained by the Treaty Powers, then the Governments of the Treaty Powers will accept such offer, in lieu of the money indemnity, otherwise the indemnity already fixed shall be paid, if required." What this really amounted to was, "open a port or pay \$3,000,000." The practical position of Japan in the matter has been, that either the treaties had to be carried out, by ports being opened and foreign coin circulated at par with Japanese coin of equal weight and purity, or else a reduction made in the import duties as compensation. How therefore can it be affirmed that the duties were lowered for any other reason, than as a return for non-fulfilment of treaty stipulations?

Up to the present moment we are still burdened with the obligations entered into as compensation for old claims long since discharged, and, if the Japanese Government were now to abolish the five per cent duties, what Foreign Government would venture to interfere with the inherent sovereign right of this Empire to regulate and control its own customs' revenue?

If our opinion was asked; upon what basis the Japanese Government should revise the present import duties, we would at once reply:—"levy thirty-five per cent on wines and spirits, five per cent on goods for private use and twenty per cent on goods imported for sale." This would be in accordance with the tariff attached to the treaties entered into in 1858; the twenty per cent duty being then considered just and equitable by the Envoys of the Treaty Powers and confirmed by their respective Monarchs and

Congress. There can be no valid reason for apprehending injury to the import trade as a result of restoring the tariff to its former rates, and there certainly exists no reasonable excuse for Foreign Governments declining to accept now, a rate of duties with which they were not only fully satisfied, but actually fixed themselves, at the opening of trade with this country. The principal anxiety of the Foreign Powers appears to be, that the import trade will be destroyed by the imposition of prohibitory protective duties, but if those Powers were once assured that the sole desire and intention of Japan are to restore the imports to the twenty per cent basis fixed by the early treaties, as agreed both by the Envoys of Free Trade England and Protectionist America, then this anxiety would be removed and we believe no further opposition made to the accomplishment of our wishes. However, if we are mistaken in our view and, after receiving such assurance, the Foreign Powers still cling to the present ridiculously light import duty of five per cent, and selfishly attempt to continue their policy of self-aggrandizement and interference, utterly ignoring the independent sovereign rights of this Empire and the urgent need in Japan for an increased revenue, then we would say; "It is you foreigners who desire to discontinue friendly intercourse and trade relations with us: you attempt to persevere in your unjust system of greed and interference; therefore, we will now make a resolute stand against you, your meddling we will suffer no longer, and as to the treaties, they have already lapsed, and are as so much waste paper." What is it we have to fear? Why should we longer flatter and fawn upon these people, hanging our heads in their presence and by our timid and cowardly policy actually inducing them to still persist in their arrogant injustice?

As we have repeatedly stated, one of the main objects of the revision of the treaties is the increase of the duties. When our Government has once regained control of the tariff it will be advisable to re-impose the rate fixed by the early treaties; that is on the twenty per cent basis which was in force from the first commencement of trade until about the month of July, 1866. If this is done, no Foreign Power can, as we have already pointed out, reasonably object, no matter what selfish designs they may harbour or how much they may desire to preserve the present tariff, because, as their Representatives formerly agreed to the same duties, it cannot now be pretended that any injury to trade would result from their re-enforcement.

Thus it appears that the most judicious measures for the Japanese Government to adopt, will be to first insist upon a restitution of the independent sovereign right of the Empire to control the tariff, and then promote the interests of trade by establishing a system of import duties on the original twenty per cent basis acted upon for so many years. By following this course, not only will trade be sufficiently encouraged, but the Treasury of Japan receive very welcome and much-needed supplies. It will also be desirable to notify that the tariff, so fixed, will not again be altered, except by special arrangement. In making any such subsequent special agreement it will be particularly necessary to bear in mind, the "favoured nation" clause, which appears not only in the treaty entered into with Great Britain, but also in that made with every other nation. The article reads thus;—"when the Japanese Government shall hereafter grant a special privilege to a Foreign Government or its subjects, the same privilege shall also be granted to the British Government and subjects." This means that Japan has no authority to grant a concession to any Foreign Power or people, without the British, French and every other nation also participating. It therefore follows that we are deprived of the advantage of being able to enter into special arrangements with individual Governments, and as we never heard of any such clause being inserted in treaties made with any other country, it will be specially necessary to guard against any similar provision appearing in the revised treaties. We can then fix the general import duties on the twenty per cent basis and make any particular alterations which the interests of the trade of Japan may prove to be expedient. Thus, for example, if the United States of America should reduce the import duty on Japanese tea to ten per cent, Japan could reciprocate, by reducing to the same amount the duty on American kerosene oil, without any other country inter-

fering; and similarly, Japan might lower the duty on sugar from China to five per cent, on condition that the Government of that Empire made the same reduction on seaweed, awabi, and other marine products exported from Japan to China. We are strongly of opinion that by concessions of this kind our export trade would be very greatly benefited.

There are many persons who insist that the duties should be increased, without considering what the effect would be upon the import and export trade; there are others again who support a system of protection which would ruin the import trade altogether, and a third party exists who advocate special agreements with individual countries without any regard to a fixed basis for the calculation of import duties. We coincide altogether with none of these disputants. Our principal object with regard to the tariff is to shew, that Japan is entitled to exercise the inherent sovereign right of every independent nation to regulate and control its own affairs without let or hindrance. We therefore repeat that our Government should from henceforth reject all outside interference by Foreign Powers in the matter of tariffs, and assume in its own hands the sole control, thus recovering the sovereign rights of the country: that special attention should be paid to formulating such a tariff as would protect the interests of trade and not ruin it: that such tariff should be calculated on the twenty per cent basis of the early treaties: and lastly, that in order to foster the export trade, special arrangements for mutual privileges should be made with individual nations.

We have now concluded our observations on the tariff and shall next proceed to the vital question of extra-territoriality.

The question to be considered is:—Shall extra-territoriality be wholly abolished? This would, we think, be far the best course to adopt, but if it is found impracticable to do away with it at once—Shall measures be taken so as to gradually accomplished the same end? This would be pursuing a middle course. If extra-territoriality cannot be gradually got rid of, then we will still be in the unfortunate position of suffering under the provisions of the present treaties. It is much to be deplored that through the aggressions of foreigners Japan has been compelled to permit even the existing extra-territoriality agreements to be strained in their favour, and for ourselves we certainly blame the Ministers who have submitted to such injustice.

What does the word "extra-territoriality" mean? As we understand it, the original signification is "outside the local judicial limits." Thus all the foreign residents in Japan are subject to the laws of their respective nationalities and not to those of the country, and their residences in Japan are removed, as it were, from the judicial limits of the Empire. The reason why the extra-territoriality stipulations were inserted in the treaties was, that when these compacts were first entered into, the representatives of the Foreign Powers thought that on commencing intercourse with an oriental nation like Japan, where the manners, customs, religion, ideas and political system were so widely different from those of Europe and America, it would be injudicious and a source of great and constant anxiety, to confide the lives, property and liberty of their respective countrymen wholly to the protection of the Japanese legal system from the very commencement, and therefore the best course to adopt would be to keep them under the protection of their own laws for some time to come. In this the Foreign Representatives followed the precedent established by the treaties entered into between the western nations and China. The 6th article of the treaty made by Japan with the United States of America runs thus:—"Americans committing offences against Japanese, shall be tried in American Consular Courts, and when found guilty shall be punished according to American law. Japanese committing offences against Americans, shall be tried by the Japanese authorities and punished according to Japanese law. The Consular Courts shall be open to Japanese creditors, to enable them to recover their just claims against American citizens, and the Japanese Courts shall in like manner be open to American citizens, for the recovery of their just claims against Japanese." The 5th Article of the Treaty entered into with Holland runs as follows:—"Japanese committing offences against the Dutch shall be tried by the Japanese authorities, and

punished according to Japanese law. The Dutch committing offences against Japanese shall be tried in Dutch Consular Courts, and when found guilty shall be punished according to the Dutch law. The Consular Courts shall be open to Japanese creditors, to enable them to recover their just claims against the Dutch, and the Japanese Courts shall in like manner be open to the Dutch for the recovery of their just claims against Japanese." The 14th Article of the Treaty entered into with Russia provides as follows:—"When a dispute arises between the people of one country and that of the other, they shall be tried by the authorities of both countries, and when a Japanese be found guilty he shall be punished by the Japanese Court, and when a Russian be found guilty, he shall be punished by his own Consul, just as has been stipulated in the Shimada convention. Russians, committing offences in any port, when the Russian consul is absent shall be arrested by the Japanese authorities, and shall be sent to a Consul in the nearest port for punishment." The Treaty entered into with Great Britain provides as follows:—"Article V, Japanese subjects, who may be guilty of any criminal act towards British subjects, shall be arrested and punished by the Japanese authorities according to the laws of Japan. British subjects who may commit any crime against Japanese subjects, or the subjects or citizens of any other country, shall be tried and punished by the Consul or other public functionary, authorized thereto, according to the laws of Great Britain. Justice shall be equitably and impartially administered on both sides. Article VI. A British subject having reason to complain of a Japanese, must proceed to the Consulate and state his grievance. The Consul will inquire into the merits of the case, and do his utmost to arrange it amicably. In like manner if a Japanese has to complain of a British subject, the Consul shall no less listen to his complaint, and endeavour to settle it in a friendly manner. If disputes take place of such a nature that the Consul cannot arrange them amicably, then he shall request the assistance of the Japanese authorities, that they may together examine into the merits of the case, and decide it equitably. Article VII. Should any Japanese subject fail to discharge debts incurred to a British subject, or should he fraudulently abscond, the Japanese authorities will do their utmost to bring him to justice, and to enforce recovery of the debts; and should any British subject fraudulently abscond, or fail to discharge debts incurred by him to a Japanese subject, the British authorities will in like manner do their utmost to bring him to justice, to enforce recovery of the debts. Neither the British or Japanese Governments are to be held responsible for the payment of any debts contracted by British or Japanese subjects."

Similar provisions are also contained in the treaties entered into with France, Portugal, Prussia, Switzerland, Belgium, Italy, Denmark, Sweden and Norway, the German Bund, and Austro-Hungary; and although in the treaties with Hawaii and Peru there are no such stipulations, yet the subjects of those countries can claim similar privileges and immunities under the "favoured nation" clause which appears in every one of the foreign compacts. The treaty with China is, however, different; it provides, (Article XI) as follows:—"The people of both countries shall strictly observe the laws, and, whether temporary or permanent residents, are under the jurisdiction of their own Consuls." And again, Article XIII:—"Any offenders who may be arrested, that is, those guilty of riot, robbery, or any unlawful act, or who have secretly gone into the interior or committed arson, murder, or robbery, shall, in any port be tried both by the local functionaries and the Consul; and in the interior by the local functionaries alone and the matter shall at once be reported to the nearest Consul." It thus appears that as between China and Japan the system of a "Mixed Court" has been instituted, but speaking generally it is correct to say that foreigners residing in Japan are, in point of fact, under the exclusive jurisdiction of the laws of their respective countries and not subject to those of this Empire.

It is now a very long time since extra-territoriality was first in force in some parts of the world. We read that when the Turks conquered the Eastern Roman Empire, seizing Constantine and making it their capital city, they entered into treaties of amity and commerce with various European nations. The Turks granted permission to the

subjects of those nations with whom they made treaties to reside at a place called Pera, in the vicinity of Constantinople but separated from it by a river. Here then the foreigners established themselves, just as they now do in Yokohama, Nagasaki and other places in Japan, and from that time to the present it has been the rule that the European residents of Pera are governed by their own laws. The example of Turkey has formed the precedent for extra-territoriality, although it is stated that the custom was known in the ancient days of Greece and Rome. Probably this was the case, but it is quite unnecessary for our present purpose to search the misty records of former ages concerning matters not definitely settled, this task we shall leave to students, the case of Turkey is sufficient for our contention. Authorities on the subject state that, it was not through any pressure brought to bear upon the Turkish Government that the right of extra-territoriality was granted to foreigners residing in their Empire, but it simply arose in consequence of the desire of the Turks to avoid difficulties and complications with Foreign Powers about their nationals, and was a voluntary concession on the part of the Turkish Government. In course of time, however, things changed; the Turkey of our day is not the powerful, aggressive Turkey of the middle ages and now extra-territoriality, instead of being a benefit to the country, is turned into a means of increasing the wealth and authority of European nations in the East. Whenever Western peoples have made treaties of friendship and commerce with Egypt, Persia and other Asiatic countries they have invariably followed the precedent established in Turkey and stipulated for extra-territoriality; they did so also in China and ultimately in our own Empire of Japan.

Thus under the immunities of extra-territoriality, the right of dealing with their nationals is reserved to the Foreign Powers and, by delegation, to their Consuls. Article IV. of the treaty with Great Britain reads thus:—"All questions in regard to rights whether of property or person arising between British subjects in the dominions of His Majesty the Taicoon of Japan shall be subject to the jurisdiction of the British authorities." Articles five, six and seven of the same treaty, which we have already quoted at length, are very similar in effect. Under the provisions of this treaty when a dispute arises between a Japanese subject and a British subject respecting a loan or any other civil claim, which is a matter of every day occurrence among people who have extensive commercial relations with each other, the question is under the control of both Governments; that is, when any civil claim is made by a Japanese against a British subject it is decided by the British Court, and by the Japanese Court when the claim is by a British subject against a Japanese. In criminal cases, however, it is different. Any criminal offences committed by a British subject is tried in the British Courts according to British law and the Japanese authorities or subject who may happen to be prosecutor has to resort to the British tribunal in furtherance of the complaint. This has now been the case for over twenty years, i.e., from the first opening of the ports up to the present, with many evil results as can very easily be demonstrated.

It may be as well for us to state, in order to avoid misconception, that the reason we have quoted so extensively from the English treaty is, that the document is very precisely worded, although as a whole, the treaties are pretty much all alike.

To return to the evil effects of extra-territoriality. How can they be shewn? In the open ports, the laws of every one of the fifteen Treaty Powers are now in force as far as regards their own subjects, and the laws of this Empire are inoperative with respect to foreign residents. In other words, the laws of this Empire cannot be enforced in portions of the national territory, as the Consuls of the Treaty Powers adhere to their own laws and entirely disregard those of Japan, even such as are admitted to be just, equitable and as well-suited to the condition of foreigners as natives. It thus frequently happens that a foreigner committing an offence against Japanese law escapes punishment, in consequence of there being no penalty prescribed by the law of the country to which he belongs for the particular crime of which he may be guilty.

(To be continued.)

#### ARRIVAL OF THE ENGLISH MAIL.

St. Petersburg, 3rd January.—At a grand review and dinner here to-day, the Czar and Czarevitch greeted each other in the most cordial manner. This is regarded as an indication that their late differences are at an end.

The Nihilist propaganda is spreading throughout the Russian army, and stringent preventive measures are being taken.

Constantinople, 3rd January.—A satisfactory interview has taken place between the Sultan and the British Ambassador, and diplomatic relations have been resumed to-day.

Capetown, 6th January.—Mr. Bok, Secretary of the Boer Committee, has been arrested on a charge of treason—bail has been accepted.

Allahabad, 6th January.—Magilla Khan, son of the late Arsalah Hisarak, who was harassing the line of communication between Surkhah and Juggdulluk, has been granted a free pardon by General Roberts, and has sworn on the Koran to hold the road free from thefts and annoyances.

London, 6th January.—A serious riot has taken place at Carraroe in Ireland, in consequence of the ejection of a tenant. The rioters were fired upon and afterwards charged with the bayonet. Several were wounded in the affray.

London, 7th January.—The Irish Government will advance £250,000 from the Church surplus towards relief works.

The Board of Trade Returns of Imports for the past month amount to £35,375,000 showing an increase of £8,750,000 as compared with the same period last year.

The Board of Trade Returns of Exports for the past month amount to £16,500,000 showing an increase of £2,000,000 as compared with the same period last year.

London, 7th January.—The *Times*, in a leading article, hints at the probability of the appointment of Sir Garnet Wolseley as Commander-in-Chief of India on the retirement of Sir Frederick Haines. The *Times* approves of the appointment.

#### QUEER STORIES.

##### A REPORTER À LA MODE.

Miles Oldstock was a worthy gentleman of Lancashire, who had remained a bachelor till he was forty, and then committed the slight error of marrying a fast young lady of eighteen. As he loved his wife, and fancied himself beloved by her, the disproportion between their ages did not strike him during the early part of his wedded life; it only began to worry him as an important fact when the pleasure of living *tête-à-tête* with him got to pall on Mrs. Oldstock, and induced her to seek amusements in which her husband did not care to join.

Miles Oldstock had married in order to get a quiet, comfortable home; and Ethel, his wife, had taken a husband in order to have the liberty to enjoy herself. This is an old story. The husband has had his taste of all the dissipations of life, and thinks that his wife, who has had no experience of them at all, should be content to forego them on his mere representation that they are but vanity. Ethel had not the same reason as her husband for disliking balls, picnics, and private theatricals. He was clumsy at dancing and talking, and had no graceful figure to justify him in posturing at *tableaux vivants*. Ethel, on the contrary, was pretty and vivacious, sprightly of tongue, and agile of foot. She could dance all a night through without tiring, and talk to anybody about anything by the hour. What is more, she had a will of her own, and was not to be dissuaded from any purpose she had in view by such a trumpery thing as an argument. When her husband began to grumble at her going out so frequently to parties, she reminded him that he need not attend these festivities with her unless he pleased; and when, taking the hint, he remained at home with a sulky face, she assured him tartly that he might sulk as long as he pleased, so far as she was concerned. He did sulk with a vengeance, and it made no difference. His wife kept going out night after night, till the soul of Miles Oldstock grew sad, and it repented him of his marriage not a little.

However, he loved his wife, and she loved him after a fashion of her own. She would have been pleasant to him if he had been "nice," by which she meant if he had let her have her own way in all things—if he had petted and fondled her, and sat serenely at home while she went forth on her amusements—she would have been to him as the most, delightful of consorts; but Ethel could not bear opposition, nor sulks, nor annoyances. The attitude which her husband assumed towards her roused her blood, and drove her on to a course of independence, which culminated in her going out, not only to such houses as she pleased, but to the houses of persons whom her husband most heartily disliked, even to those of people with whom he had quarrelled.

Now one evening Ethel mentioned to Miles that she had an invitation to go to a masked ball that was to be held at the house of Lady Northwaite, a woman whom Miles abhorred more than any one of his neighbours because of her flightiness and sarcastic tongue. Angry and frowning, he requested his wife to give up this idea; but she was deaf to his remonstrances; so at length he burst out:

"My patience is exhausted; if you will neither acknowledge my authority nor consult my wishes when affectionately expressed, it is of no use for us to live together. You had best go back to your parents."

"Very well, I'll return to my mother," said Ethel coolly, as she buttoned one of her white gloves. "I'll go to-night if you wish it."

"No, to-morrow will do," answered her husband, with cold

firmness. "Your boxes shall be packed while you are at this ball; and I will send a despatch to your friends announcing your arrival."

Ethel turned pale, for it by no means entered into her programme to be sent back to her parents in disgrace. She appreciated the luxuries and prestige of her married life too highly to part with them, and the idea of being cast out by her husband made her grow chill at the heart. If it had not been for false pride she would have flung herself there and then into her husband's arms and consented to forego her whims for his sake. But Miles had his pride too, and obstinacy made his features look hard.

So Ethel went out to the ball, and she danced there twice with a gay young dragoon, named Dangles, who took her to supper, and plied her with champagne till her brain got lively, and she began to see things *en couleur de rose*. Why should she be domineered over by her husband? Why should she allow him to tyrannise over her when there were so many men—like this Dangles—who proclaimed her a queen of beauty, and professed themselves ready to die for her sake? Then there was Lady Morthwaite, the hostess, who circled round Ethel, asking her to dance with this man and that, telling her that she was the belle of the ball, and goading her to flirt that the evening might pass off agreeably, so that in the end poor Ethel forgot all about her husband's wrongs and her own misdoings, and thought only of this: that she must assert her supremacy at home, and do what she pleased, without caring for the consequences.

But when the ball was over and the guests were going home; when Ethel went into the cloak-room on Dangles's arm, and remembered that she was going to drive back now to a house where her husband would be awaiting her with words of cold reproaches, her heart sank. She made of Dangles her confidant. He listened open-eyed, and his ears seemed to wag with excitement; then he ran off and told Lady Morthwaite. Now her ladyship, who had the most frolicsome temper imaginable, delighted in nothing so much as in putting wife and husband asunder. She laughed on hearing Ethel's account of conjugal troubles, and straightway imagined a little practical joke which it would be good to play on Miles Oldstock. "Why not frighten that foolish Mr. Oldstock into thinking that his wife has eloped, or disappeared? He might come to his senses then."

"How shall we do it?" asked Dangles, who was more ready to join in jokes than swift at conceiving them.

"Oh, we'll see," said Lady Morthwaite, hastening to join Ethel. "I propose that Mrs. Oldstock shall spend the night here and go to-morrow with us to pass a week with some friends of mine at Freeton Abbey, and we won't let her husband know where she is until he promises to behave himself."

Lady Morthwaite's scheme, when revealed to Ethel, was at first scouted; but by-and-by the temptress prevailed. Ethel was afraid to go home, with the prospect of being sent back next day to her parents, who were strait-laced people. So she agreed to sleep at Lady Morthwaite's, and next day, having been supplied with clothes by her facetious hostess, she started to visit "those nice people" at Freeton Abbey. Her husband, who was not even informed by letter of her intended movements, was left to draw the inevitable conclusion that she had bolted from home for good and all.

It so happened that the newspapers had not much to speak of at that moment. A provincial reporter, hearing of Mrs. Oldstock's disappearance through some tattling servants, telegraphed the intelligence to one of the London dailies, the *Knifboard Oracle*, and the editor of this widely-read sheet at once saw his way to printing a diurnal column or two of sensation about the matter. He despatched a correspondent to the scene of the "disappearance" with plenary powers to report on this mystery in the grandest style of high-falutin' and his parting instructions to this emissary were:—"Be spicy; there's nothing like spice."

Mr. Bagman had long dealt in literary spice. His articles were not always truthful or judicious, but they were readable. They abounded in metaphor, anecdote, and salt. They were the effusions of a man who knew the weak side of the public character, and unscrupulously played upon it. Writing for such a paper as the *Knifboard*, Mr. Bagman had never been called upon to address a refined circle of readers. He had merely had to amuse or startle an ignorant mass, who craved for coarse sensations. In the present instance, it was obviously his cue to make out that a shocking mystery lay open for speculation. Without consulting Mr. Oldstock but going straight for his facts to the impurest sources, Mr. Bagman wrote a first article, in which, under a thin veil of compassion for an unfortunate husband, lurked subtle suggestions of improprieties. Mrs. Oldstock had eloped with a dragoon, and had last been seen in his company at a railway station in Liverpool. The police were on the alert; detectives had been sent northwards, and the authorities in New York had been communicated with. All this pleasant trifling filled two columns.

Miles Oldstock was furious at being thus exposed to ignominy, but he was helpless. The Press must have an eye everywhere, said his friends, and the *Knifboard* was but doing its duty in helping to clear up an affair that interested the whole community. Mr. Bagman's second letter served to excite the public still more, while bringing out in bolder relief the mission which the Press is bounden to discharge in these times. The ingenious writer hinted that he had been wrong in his primary suggestions as to an elopement. There was no dragoon in this affair; on the contrary, there was but too much reason to fear that the poor lady had been decoyed into some house of ill-fame, where she was being kept as a hostage till her husband should pay a ransom for her release.

This letter and the first brought a regular flood of correspondence into the columns of the *Knifboard*. Hundreds of letters were received from persons who fancied they had met ladies travelling with dragoons; and then scores of letters were published from individuals who had something to say about houses of ill-fame. This

last delightfully toothsome subject was made the staple dish in the *Knifboard* for the next fortnight, and meanwhile Mr. Bagman continued to shoot in long letters in which his exuberant fancy ran riot among foul ideas, like the snout of a hog in a truffle-bed.

By this time every newspaper reader in the kingdom was wondering what had become of Mrs. Oldstock; and Lady Morthwaite, along with the dragoon Dangles, marvelled most of all. As may be imagined, these two lively persons had parted company with Ethel at the first sound of the storm that was breaking over their heads, and they had advised the misguided wife to go to her husband; but she, poor woman, overcome with terror and remorse, did not dare return to a now ruined home. Selling such jewels as she had about her, she went and took lodgings in a quiet country town; and there lived for a couple of weeks without venturing to communicate with any of her friends. She passed her days in trembling and weeping. The hue and cry raised against her by the *Knifboard* reached her ears as the yelping of a pack of dogs dining into the ears of a hare. At last she fell ill. She could no longer bear to reflect on her own foolishness, nor to think of the prospect that awaited her in life now that, thanks to the *Knifboard*, she was known to the entire kingdom as a wanton jade or a lunatic.

Fever took possession of her, and she became delirious. Then her landlady, ferreting among her pockets, found a card bearing her name, and hastened to communicate the fact to the *Knifboard*. Need it be said how quickly Mr. Bagman arrived on the spot, glorying in having got the earliest intelligence of the *dénouement* to the Oldstock drama, and burning to collect the materials for a fresh series of articles. On reaching Ethel's house, however, Mr. Bagman heard that the unfortunate lady was dying, and he was confronted by her indignant husband, who came down into the parlour to ask him what he wanted.

"This is your work, sir," said Miles Oldstock, with his fists clenched.

"Mine! How?" stammered Mr. Bagman, keeping at a respectful distance.

"It is your work, and having hounded my poor wife out of life you may console yourself by hearing me say that I consider her death a release. How could she ever have held up her head after those shameful articles of yours?"

"I had a public duty to perform," faltered Mr. Bagman, uneasily.

"You had to win pence for your knavish employers, and you've done so. Now get out of my sight, sir," cried Miles Oldstock, with a significant gesture.

Mr. Bagman took the hint, but when he had backed out of the room he met the slatternly, weeping servant-girl in the hall, to whom he said: "My dear, here's half-a-crown for you; you'll get twice as much if you get me a correct account of Mrs. Oldstock's dying moments and of her last interview with her husband."

There was a chinking sound on the floor and a report as of a slap on the face: then Mr. Bagman hurried out of the house holding a cheek in both hands, while the servant cried shrilly behind him: "You idle wagabone, you'll get worse from me next time if you come on such dirty work."

So Mr. Bagman had to draw his account of the dying moments from his own fertile imagination, though of course he gave them as truth.—*Truth*.

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXV.

#### THE BATTLE OF THE OXEN.

The Heike army never rallied. Unconscious to the last that the noise of the terrible night onset had been nothing more than the heating of a million pinions, the troops by degrees so magnified the terrors from which they had fled that when they reached Kiyoto, they carried with them the news of a surprise by overwhelming numbers and of a contest in which the mountain gods had lent supernatural aid to the victors.

This retreat left Yoritomo undisputed master of the northern provinces. Returning leisurely to Kamakura, he busied himself for a time with the cares of government, renewing the seizure and augmenting the fiefs of those that had proved loyal, but visiting with merciless displeasure those that had held aloof from the standard of their fathers. For all this, however, he dared not yet place implicit trust in these fickle barons. On various pleas of political reform or military organization, the most powerful nobles of the eight provinces were detained at Kamakura, where Yoritomo's dream of a rival capital seemed likely to be soon realized, for such a parade of strength and magnificence had never before been witnessed in these remote regions. Temples were founded, palaces built and laws promulgated, while immense masses of troops, assembling under the pennons of their various liege-lords, formed a cordon of four hundred thousands swords about the new metropolis.

If the Taira chief made no fresh attempt to crush this

power which promised presently to become invincible, it was not from lack of foresight or inclination, but simply because reverses in another direction rendered it daily more doubtful whether his position in Kiyoto itself would long remain unassailed. After the unexampled disaster his arms had suffered in the north, allies and feudatories alike mustered with such reluctance that it taxed his utmost resources to detach a hundred thousand men for operations at a distance from the capital. Moreover an enemy, far more formidable on account of his great proximity, had appeared in the central provinces. This was no other than the village chieftain, Kiso Yoshinaka. In obedience to the crafty counsels of his lieutenant, Nei, he had abstained from active revolt until the northward march of the Heike host left him leisure to gain some preliminary success, and before the snow had blocked the mountain passes, his dashing raids and the gallantry of his beautiful wife, Tomoye, who was ever leader in the onset, and last in the retreat, won him such large fame that with an empty exchequer and as yet nothing but promises to reward his supporters, the early spring saw him take the field at the head of forty thousand troops.

To crush this rebellion the Taira chiefs resolved to strain every effort. One signal success might still restore their lost prestige and re-awaken the enthusiasm of their allies, so that from Shinano and Hida they could ultimately extend their operations against Yoritomo himself.

At first it seemed as though fortune had repented of her sometime unkindness. Yoshinaka's inferiority of force constrained him to act on the defensive, and while he manœuvred among the mountains or contented himself with occasional forays, his enemies overran the provinces on the western coast until rumour of their victories began to efface the memory of their reverses. But Yoshinaka's policy was based on sound considerations. He waited until the mischievous effects of too easily obtained success began to be apparent in the abated vigour of the enemy's operations, and then dividing his forces into seven columns, he commenced a sort of never-ending battle, carried on by day and night alike, and exhibiting every diversity of assault and strategem the difficult nature of the country suggested. In these encounters the Taira troops were almost invariably worsted. It was their misfortune to be perpetually found unprepared, and by degrees their morale was so shaken, that their thoughts began to turn upon safety rather than aggression. Drawing together the remnants of their shattered forces, they prepared for a final stand on the plateau above the pass of Kurikara. It was their intention if defeated to retreat westward and regain Kiyoto by routes leading through the districts where they could count on an unmolested passage. But Yoshinaka, better versed in the intricacies of the mountain roads, knew that if he could frustrate this design, the fruits of victory might be nothing less than the complete annihilation of the Taira army, for on the north their retreat was barred by impassable cliffs, while on the south lay the terrible gorge leading to the 'Valley of the Black Steep.' He therefore divided his army into two bodies, sending the larger round to cut off the enemy's retreat, and disposing the other to force their position in front.

Throughout the whole of this struggle the conduct of the Heike knights scarcely exhibits a single redeeming feature. Dismayed by the most trifling mischances, they seem to have placed no reliance either in themselves or their leaders and after Kiyomori's death their operations lost even the unity of design his guiding hand had imparted. The old chieftain expired a few months before the events we are now relating. He succumbed to a malady as fierce as the passions that had excited it, and it is recorded that his attendants could scarcely approach his couch so ardent was the fire of the fever that consumed him. In the moments of restored discernment, when disease recoils at the approach of dissolution, he gave utterance to his last and most solemn behest. For his body he had nothing to desire. The highest honours to which a subject may attain had fallen to his lot. Scion and sire of an Emperor, he had received homage little less than imperial, nor had any expression of his will ever lacked obedience. For his soul too he felt small solicitude. Meamer men might not gauge his acts by the standard of their own petty passions, for as the Gods had framed him, so had they found him. He therefore bade his liegemen neither

waste their time in mourning nor misuse their money in masses, but make Yoritomo's death the undivided aim of their lives. "Be assured," said the expiring man, "that until you have laid on my tomb the head of him whom it was my fatal error to spare, my soul will find no solace in the shades nor my body any rest in the grave."

When the news of the great chief's death was bruited abroad, men said that the last prop had been struck away from the falling house, and never did fulfillment follow faster upon prophesy. Three months later the outposts of the Heike army, looking down from the heights of Kurikara into the thick darkness of a summer night, saw a multitude of lurid flames leap suddenly into life, and move with marvellous rapidity up the rocky steeps. As the circle of fire drew nearer, unchecked by showers of shafts that rained on it from the ridges above, it seemed to the Taira knights that they could distinguish huge faces peering out at them from the haze of light, and hear the deep breathing of lungs no human being had ever owned. At the same time arrows aimed with deadly precision began to pour in from all sides, booming in their flight so that each one sounded like three, and to complete their confusion the defenders of the plateau presently perceived that these missiles were discharged from the rear as well as the front of their position. They were in fact attacked from both sides, and their terror discovered supernatural agency in the fashion of their assailants' approach. Of their whole force not more than five hundred men had patience to buckle on their harness and range themselves in battle array. To these, only restrained from immediate flight by the reputed perils of the Black Valley, a score of knights, conspicuous by their white armour, presented themselves, and bidding them take the southern path, rode ahead, as it seemed, to guide them. The five hundred followed without hesitation, and their comrades, seeing that they did not return, judged the route practicable and rode blindly in their tracks.

But they had been prevented from returning by a very different cause. Well did the gorge merit its title of the 'Black Steep,' for its gentle slope ended suddenly in a precipice twenty fathoms deep. Over this more than seventeen thousand of the Taira soldiers fell, some on horseback, some on foot, and a cycle's rain and rime scarcely carried down from the hill-side loam and leaf sufficient to bury the huge heap of bones that lay bleaching below.

This ended the campaign in the central provinces. Of the hundred thousand men who had marched from Kiyoto in the spring, scarcely a fourth made their way back unscathed in the fall. Neither did their numerical loss measure the full extent of their catastrophe, for though it was soon known that the elfin lights of Kurikara had been nothing more than torches tied to the horns of five hundred oxen, the appearance of the knights in white mail could only be attributed to supernatural influences, so that gods and men alike seemed to have made common cause against the House of Hei.

When therefore it became certain in the following spring that Yoshinaka's troops were actually marching on Kiyoto, the Taira nobles abandoned all idea of holding the capital, and taking with them the young emperor, a boy of eight years, retired hastily to their sea-side stronghold of Fukuhara. They would fain have obliged the ex-emperor also to accompany them, but the old monarch had no love for the men at whose hands he had suffered so many indignities. On the evening preceding the retreat he escaped secretly to the cloisters at Kurama, and remained there till he knew that Yoshinaka's knights had mounted guard on the palace gates.

Thus then in the north and south alike the Genji cause was triumphant, but the stability of its success was imperilled by a grave element of weakness. Its leaders were hereditary foes. With the overthrow of the Taira, Yoritomo's purpose was attained, Yoshinaka's, only commenced; and men knew well that though the battle cry was lulled for the nonce, a new and more desperate struggle was surely impending.

It came about in this wise. Yoritomo, chafing secretly at the victories which had won for his cousin the sobriquet of 'the Morning Sun,' cast about for some method of establishing relations with the court at Kiyoto. Most gladly would he have welcomed any pretext for sending thither a

portion of the splendidly equipped and highly disciplined army he had gradually assembled at Kamakura, but he was too politic to shew himself greedy of conquest for the sake of supremacy alone. Only one feasible plan suggested itself. The taxes of the north-eastern provinces had not been paid into the Imperial Treasury for four years. These he now determined to forward, placing them under the safeguard of Yoshitsune and a thousand of his best knights.

A more perilous mission could not well have been conceived, and it is not difficult to foresee what its results must have been, but fortunately Yoshitsune had not proceeded far on his journey when he was met by an envoy from the ex-emperor. Never even in the times of their most unrestrained lawlessness had the Taira liegemen been guilty of such excesses as were the followers of Yoshinaka. These had served long without reward, and they no sooner found themselves masters of the city than they inaugurated a system of plunder and rapine from which neither resistance nor submission could purchase immunity. Outraged wives and ruined householders carried their complaints in vain to Yoshinaka; his men, he said, deserved some recompense, and those that thought themselves ill-used were welcome to follow the Heike to Fukuhara. At last the ex-emperor himself interfered, but Yoshinaka, so far from punishing or restraining the rioters in obedience to the imperial commands, placed a guard upon the palace and kept its inmates in strict confinement.

Such was the report carried northward by an envoy despatched secretly from the palace, with a commission naming Yoritomo viceroy and authorizing him to take whatever steps he deemed necessary for the restoration of order in the capital.

This was the occasion so ardently desired. A large body of troops were immediately put in motion; thirty thousand under the command of Noriyori, Yoritomo's younger brother, and a somewhat smaller force under that of Yoshitsune. The two divisions set out together, but after a time difficulties of transit obliged them to follow different routes. The corps under Yoshitsune—whose campaigns were always remarkable for the celerity of his movements—soon gained upon their comrades, and arriving first on the banks of the River Uji north of the capital, found themselves face to face with an enemy very different from the faint-hearted soldiers who had fled from a flight of birds or jumped over a precipice to escape a herd of oxen.

The battle that followed is chiefly remarkable as an illustration of Yoshitsune's tactics. The immense forces employed in those days seldom achieved results at all proportionate to their strength. Divided into a number of different corps, each under almost independent commanders, they fought without any thought of unity or mutual support, so that these contests were for the most part nothing more than a series of skirmishes. Yoshitsune thoroughly appreciated this error. Largely as the factors of strategem and surprise influenced the sum of his successes, we never find him neglecting to concentrate his forces when the occasion permitted. Thus at the battle of the Uji his first care was to clear away all the houses and other obstacles that prevented his troops from approaching the river, and not until every company was posted on the bank did he suffer the fight to be commenced.

The enemy had destroyed the bridges and planted a network of stakes and ropes in the bed of the stream, but the northern troops made light of such difficulties. Indeed the true principle of military obstacles—namely, to detain an enemy as long as possible under fire—was little appreciated in those days, and we find that the Genji soldiers were suffered to doff their harness and cut a passage through the impediments in the river almost with impunity. Once within striking distance of their foes the issue was no longer doubtful. Yoshinaka's men fought with stubborn gallantry, but they were driven back by degrees or cut down in their places, with the exception of three hundred knights who, led by Yoshinaka himself and the girl warrior, Tomoye, held their ground so stoutly that at one time it seemed as though they might have stemmed the tide of victory.

Hitherto Yoshitsune had neither drawn sword nor bent bow in the battle. He had confined himself to directing the movements of his men, or providing for the support of those that fought in the van, but now placing himself at the head of a chosen few reserved for even such an emergency

as now presented itself, he rode at full speed against his cousin's body guard. On his right and left were Benkei and Saburo, while behind him charged the brothers Tadanobu and Sugimobu, whom men called the mightiest swordsmen north of Mount Fuji.

The blows dealt in that *mélée* made everything that had preceded seem like child's play. No man stayed to staunch his wounds, neither did any that fell rise again, and when Yoshinaka escaped with but seven knights out of the three hundred, few of his opponents were in a condition to pursue him. Yoshitsune had purposely avoided crossing swords with his cousin. To one whose skill enabled him to keep his blade always disengaged, the choice of an adversary was an easy matter, neither was this forbearance an undue concession to the memory of the past, but for all that he spared no pains to provide for the capture of the fugitives, and that same night Yoshinaka, seeking to baffle his pursuers among the hills at the head of Lake Omi, fell in with the vanguard of Noriyori's column and died a death not unworthy of his brilliant though short career. Tomoye had prayed hard for permission to accompany her husband in that last ride, but he knowing well what the end must be, obliged her to put off her armour and bade her make her way back to their old home, that some prayer might be uttered for his soul's peace who had neither been disloyal to his cause nor unfaithful to his love.\*

At Kiyoto, Yoshitsune was welcomed enthusiastically by Emperor and subject alike. The signal success that had attended his arms and the order that followed his coming made him at once a hero and a benefactor, so that all the pleasures of victory fell to his share without any of its pains. Yet he gathered small satisfaction from either the eulogies of his sovereign or the plaudits of the multitude. He had as yet achieved nothing of his life's purpose, but only wrought the overthrow of one to whom his family already owed a heavy debt of blood. Always at his side too was Saburo, reminding him by his prematurely white hair and shrunken features of the vengeance they had still to accomplish, though indeed no such tokens were needed to recall her fate who had left them so much to mourn. Hiromori had of course fled with the rest of the Heike party to Fukuhara, yet it was some satisfaction to know that he had not fallen in the campaign against Kiso Yoshinaka. Sooner or later the opportunity of meeting him face to face must come, and when it did, he might look for scant mercy at the hands of any of the three men who had carried Iné's body from the farmstead in the fatal valley.

Scarcely a month after Yoshinaka's death news came that stirred the capital again into a fever of excitement and apprehension. The Heike had not been idle since their last discomfiture. Large promises and a still imposing remnant of power had fixed the faith of the wavering and recalled that of the disaffected, so that from the southern provinces huge hosts had gradually been drawn to the red flag, and now intrenched in an almost impregnable position, they threatened at any moment to descend in overwhelming force on the capital.

When therefore the ex-emperor summoning Yoshitsune, bade him recover the Imperial insignia which the Taira chiefs had carried off, and put a final period to this harrowing warfare, not a few prophesied that this mandate would prove the young commander's death-warrant, and none supposed that he would attempt to carry it out without reinforcements.

Three days later the Genji troops marched out of Kiyoto; the main body, fifty thousand strong under Noriyori's command, the reserve of ten thousand men led by Yoshitsune.

Much surprise and many conjectures were caused by this extraordinary disposition, but the knights were beginning to understand that they followed no common leader. For the rest, graver questions than tactical considerations occupied the attention of the troops. Few of them had any certain knowledge of the district into which they were marching, but rumour had made them all more or less acquainted with its impracticability. The castle of Fukuhara, accessible only by a narrow defile across which a triple row of dykes and flanking towers had now been constructed, was a

\* Tomoye was subsequently summoned to Kamakura, where Wada Yoshimori solicited and obtained her hand, and the fruit of their union was the famous hero Asai Saburo. After her second husband's death she shaved her head and became a recluse, dying at the ripe age of ninety-one.

position so strong by nature that a handful of men might have held it against the stoutest army ever put in motion. What then but complete disaster could be looked for by assailants whose number the most favourable estimates only placed at a third of their foes? "We are not marching to assault but to invite assault," said the veteran knights, "for it were easier to bale the ocean with a rice-bucket than force a passage into Fukuohara, and unless the red flag comes out to meet us, our swords are likely to rust in their scabbards before we get within striking distance of our foes."

Yet these things were said rather in regret than apprehension, for the Minamoto men loved the battle as much as their enemies shunned it. Those who had devised stratagems to gain the chance of swimming their horses over a swift river obstructed by entanglements and snares, in the face of ten thousand foes, were not likely on the eve of a campaign to find any discouragement graver than the prospect of inaction. A brave leader, it is said, makes brave followers, but certainly in the army that marched from Kiyoto, amid so many misgivings, there was more use of a restraining than an inciting example.

(To be continued.)

### DOUBLE ACROSTIC.

To all and sundry we would now dispense  
These friendly tokens in their purest sense;  
Time-honoured custom does the practice teach  
That forth the hand of friendship we should reach  
When at this joyful season of the year,  
Ought but loving thoughts should disappear;  
And so we wish you now without alloy,  
Good-will, love, peace, contentment, health and joy.

1.  
You may not believe me, but it is the truth  
This light is simply nothing but a tooth.

2.  
Rank, reputation, dignity, or fame,  
Choose which you like, 'tis surely all the same,  
In buried cities you will find the name,  
What Eve had on her when she wise became.

3.  
This is a word of somewhat varied meaning;  
To vessel's masts it has a special leaning,  
A scraper too that gathers all before it,  
A debauchee, I'm sure you won't ignore it,  
And when our seamen strive their prize to earn  
'Tis thus they send their shot from stem to stern.

4.  
Her lover was a man of fabled strength,  
Who since he could not win his love, at length  
By force removed her, but his lawful spouse  
Her jealous passions did forthwith arouse,  
And never from her dread design relented,  
Until her faithless lord was circumvented.

5.  
Here first John Company, so we're told,  
In early days of India did make bold  
His well known bit of bunting to unfold.

6.  
To thee, in Roman character I write,  
To thee as well I dedicate this light.

7.  
'Tis one or other as the case may be.  
Look in your catechism you will see.

8.  
Saul spared his life, the prophet gave him fits,  
And then he hewed the wretched man to bits.

9.  
Three precious ladies, whose melodious voice  
Was wont to charm the object of their choice,  
So rapt in ecstasy were all who passed  
Their famed abode, they failed to break their fast;  
Ulysses broke the spell, for it appears,  
He passed in safety stopping up his ears.

Correct answers received from Jumbuck, Rink, Zulu, Skate and B. N. Others incorrect.

† At the battle of Uji the Knight Genda had reached the river's bank first and was just about to force his horse into the stream when Takatsuna called out to him that his girths were loose, and while the other stayed to tighten them, rode past him and so won the distinction of leading the assault.

### LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground): schooner, flag E. (white ball on red ground) all commercial vessels, with the vessel's national flag below as seen as it can be made out.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, JANUARY 30TH, 1880.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
 Light continuous line—max. & min. thermometers.  
 Dotted line—represents velocity of wind  
 .....percentage of humidity  
 Max. velocity of wind 30 miles per hour on Thursday, 8 p.m.  
 The barometer is reduced to the freezing point and to the level of the sea.  
 The highest reading of the barometer was 30.466 inches at 10 p.m., on Thursday and the lowest was 29.715 inches at 7 a.m., on Tuesday. The range of the barometer has been considerable during the week, and it will be noticed that the high wind of Wednesday night and Thursday, was accompanied by a steadily rising barometer. Monday and Tuesday were characterized by unusually high maximum temperatures, and on Tuesday there was an extraordinary range of temperature amounting to 30°.

## SHIPPING INTELLIGENCE.

## INWARDS.

Feb. 2, Japanese steamer *Sumida Maru*, Hubenet, 896, from Hongkong via Kobe, Mails and General, to M. B. Co.  
 Feb. 1, Japanese steamer *Chitose Maru*, Pyne, 313, from Kobe, Mails and General, to M. B. Co.  
 Feb. 4, British steamer *Sunda*, Seaton, 1,029, from Hongkong, Mails and General, to P. & O. Co.  
 Feb. 4, Japanese steamer *Suminoye Maru*, Frahm, 852, from Kobe, Mails and General, to M. B. Co.  
 Feb. 5, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, from Shanghai and way ports, Mails and General, to M. B. Co.  
 Feb. 5, British steam-yacht *Lancashire Witch*, Edlelsen, 211, from Kobe.  
 Feb. 6, Japanese steamer *Toyoshima Maru*, Hubbard, 946, from Kobe, Mails and General, to M. B. Co.

## PASSENGERS.

Per Japanese steamer *Sumida Maru* from Hongkong via Kobe:—Messrs. H. W. Lea, Ochiai and Koide in cabin; 2 Europeans and 65 Japanese in steerage.  
 Per Japanese steamer *Chitose Maru* from Kobe:—Mr. Cook and 120 Japanese.

Per British steamer *Sunda* from Hongkong:—Mr. and Mrs. Rose, Mrs. Friend: and 1 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru* from Shanghai and way ports:—Rev. C. F. Warren, Mrs. Warren and 3 children, Rev. Quimby and Mrs. Quimby, Miss Nishizima, Dr. Laurensen, Messrs. Bayfield, Scott, Kasui, Watanabe, Ishii, Nakamura, Tanji, Sakamonye, Kubo, and Ishimura in cabin, and 1 European, 2 Chinese and 137 Japanese in steerage. For San Francisco:—C. Lucder, Esq., H. L. G. M. Minister to Columbia.

Per Japanese steamer *Suminoye Maru* from Kobe:—Mr. G. Paw-nicker and 90 Japanese.

## OUTWARDS.

Feb. 1, British steamer *Glengyle*, Quartley, 1,263, for London via Kobe, General, despatched by Jardine, Matheson & Co.

Feb. 1, Italian corvette *Vettor Pisani*, H.R.H. Duke of Genoa, 1,800, 12 guns for Kobe.

Feb. 3, Japanese steamer *Shurio Maru*, Thompson, 524, for Kobe, Mails and General, despatched by M. B. Co.

Feb. 4, British steamer *Killarney*, O'Neil, 1,060, for Kobe, General, despatched by Hudson & Co.

Feb. 4, Japanese steamer *Genkai Maru*, Conner, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Feb. 5, H. B. M.'s *Swinger*, Lieut.-Commander Tudor, 430 tons, 451 H.P., 4-guns, for Kobe.

Feb. 5, Japanese steamer *Tsuruga Maru*, Steadman, 661, for Kobe, Mails and General, M. B. Co.

Feb. 7, Japanese steamer *Wakanoura Maru*, Christensen, 1,343, for Hakodate, Mails and General, despatched by M. B. Co.

Feb. 7, Japanese steamer *Chitose Maru*, Pyne, 295, for Kobe, Mails and General, despatched by M. B. Co.

Feb. 7, Japanese barque *Kanagaica Maru*, Eckstrand, 606, for Nagasaki, despatched by M. B. Co.

Feb. 7, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Per Japanese steamer *Genkai Maru* for Shanghai and ports:—Mr. and Mrs. J. Robertson, Miss N. Lawrence, Messrs. Higashi, T. Walsh, W. Tallers, Yoshida, Iwata, Wadda, Arima, Sassao, Miyeda, F. C. Spooner, D. Reynolds, Ota, W. Sagel, Fujeda, Yamakawa, and Takayagi.

Per Japanese steamer *Sumida Maru* for Hongkong via Kobe:—Mr. and Mrs. McDonald, Messrs. G. W. Thomson, Kawase, Koyama, E. H. House, W. H. Taylor and Machida.

## CARGOES.

Per Japanese steamer *Sumida Maru* from Hongkong via Kobe:—Treasure ... .. Yen 10,000.00

Per British steamer *Sunda* from Hongkong:—Transshipment ... .. 448 pkgs.  
 Local ... .. 3,666 "

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Treasure ... .. \$ 30,726.00

Per Japanese steamer *Hiroshima Maru* from Shanghai & ports:—Treasure ... .. \$126,904.81

## REPORTS.

The Japanese steamer *Sumida Maru* reports: Left Hongkong at 4 a.m., 24th January, arrived at Kobe at 6 p.m., 31st January, arrived at Yokohama at 4 a.m. on the 2nd instant. Experienced from Hongkong to Kobe very strong N.E. monsoon, from Kobe to Yokohama light E. winds fine weather.

The Japanese steamer *Chitose Maru* reports: Left Kobe at 8 p.m. 30th instant. Experienced variable winds with fine weather first part; afterwards thick rainy weather. Arrived at 4 p.m. 1st Feb.

The British steam-yacht *Lancashire Witch* reports: Left Kobe at 4 p.m., 3rd instant. Experienced moderate N.W. winds to Rock Island; thence to port strong N. wind with fine weather throughout.

The Japanese steamer *Toyoshima Maru* reports:—Left Kobe 4th inst. at 9 p.m. Experienced fresh N.N.E. winds with overcast sky throughout. Arrived at Yokohama at 9.15 a.m. 6th inst. Passage 36 hours.

Newchwang Peas ... "	\$2.20 to \$2.25

**KEROSENE.**—During the past week this market has been almost at a standstill; we hear of the sale of 6,000 cases only, at \$1.65.

## EXPORTS.

**SILK.**—At the beginning of the week under review the renewed activity in our silk market, of which there had been signs for some days previously, was fully confirmed; many parcels for which buyers and sellers had been in treaty were finally settled, and prices which about a fortnight ago had become a little weak and unsettled, hardened and fully regained anything they had lost.

During the past two or three days, however, buyers have been less inclined to operate and the market has become somewhat quieter again.

Sales since the 1st inst. about 370 shipping bales; Stocks in Yokohama about 4,700 Japanese bales.

Total export to date 14,401 bales against 14,934 bales at the corresponding period last season.

## THIRTEENTH SEMI-ANNUAL REPORT

OF THE

Court of Directors to the Proprietors,

For the Half-year ending 31st December, 1879.

THE HALF-YEARLY MEETING of the Proprietors was held at the Head Office, on 18th January, 1880, at which the Directors had the honour to submit the annexed General Statement and Balance Sheet of the affairs of the Bank, as at 31st December last.

The net profit of the Head Office and Branches amounts to Yen 198,793.668 (deducting remuneration of the officers, their travelling expenses, and all other payments, inclusive of interest). Adding to this sum the unappropriated balance of last Half-year, namely, Yen 36,772.855, and Yen 80,000 set aside as a special reserve for bad and doubtful debts, the total comes to Yen 315,566.523. From this sum Yen 36,371.575 will be taken to extinguish the bad debt of Onogumi; Yen 50,000 will be set aside as a special reserve for bad and doubtful debts; and Yen 24,200 will be given to the officers as a bonus; and the remainder is Yen 204,994.948, from which Yen 50,000 will be added to the Reserve Fund, Yen 120,000 will be divided amongst 15,000 shares, being Yen 8 per share, which is at the rate of 16 per cent, per annum, and the balance, Yen 34,994.948, will be carried forward to next half-year.

The debt incurred by Onogumi has been written off, and amounted to Yen 36,371.575, taken from the Special Reserve of Yen 80,000, which has been supplemented by the addition of the sum of Yen 50,000, an amount which, the Directors are of opinion, will amply suffice to meet any further contingencies that may arise.

SHIBUSAWA YEICHI,  
Chairman.

### General Statement and Balance Sheet of the First National Bank of Japan, for the Half-year ended 31st Dec., 1879.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W.** & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

### W. & A. Gilbey's Head Establishments:—

**England.**—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

**Ireland.**—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

**Scotland.**—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

**France.**—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

**Excise Bonded Stores.**—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bonny Street, Camden Town, London.

**Distillery.**—James Street, Camden Town, London.

**Printing Department.**—Poland Street, Oxford Street, London.

## CHÔDAIU ROCK BEACON.

MEKARI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby gives notice that a Beacon has been erected on the sunken Rock called Chôdaiu, situated about 3½ cables to the north-westward of the northern point of Hososima, Province of Bingo.

According to the British Admiralty Chart No. 132, it is in North Latitude 34 degrees 22 minutes 19 seconds, and is 133 degrees 8 minutes 11 seconds East of Greenwich.

The following bearings are taken from the Rock:—

Centre of Kusirajima ..... N. 26° 15' E.  
North-eastern point of Hososima... S. 72° 10' E.  
North point of Kosaki Sima..... S. 78° 45' W.

Bearings true.

The Beacon is built of granite, conical in shape, and is surmounted by a hemisphere which stands 17 feet above high-water spring tides.

It is painted with red and black horizontal bands.

YAMADA AKIYOSHI.

Minister of Public Works.

## MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcers of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1878. tf.

## SILK.

**R**ESUMING our researches into the present condition of this great export staple we come into the subsidiary paths of Silk Waste<sup>1</sup> and Silkworms'-eggs.

By the Chamber of Commerce statistics we find that the export of Waste Silk and Cocoons has enormously increased of late and that at present the quantity of these combined articles, purchased and shipped from this port exceeds even that of Raw Silk itself. The figures (in piculs) for the past six months, and for corresponding portions of 1876 and 1878 added for purpose of comparison, stand as under.

	1879.	1876.	1878.
Waste .....	10,838	3,618	1,767
Cocoons .....	3,858	3,768	3,402

The Cocoons mentioned are of course those known in the trade as "Pierced";—those which are unfitted for reeling by the puncture of the moth in its exit from the dormant state. We notice here the great and rapid increase, especially in the kinds denominated Waste. Below we give the figures for whole years with the estimated value.

	1879.	1876.	1878.
Waste.....piculs	17,084	6,539	3,789
valued at \$1,407,754		\$566,893	\$435,729
Cocoons .....	4,737	3,789	3,784
valued at \$446,021		\$497,901	292,459

From this table we see that, while the particular class known as Pierced Cocoons has remained comparatively

1. It is well known that Silk is properly of two distinct kinds:—1st, that which is known to commerce as "Raw Silk," being reeled or wound off the cocoon in one continuous thread, which subsequently passes through the various processes of throwing, drying and weaving into Silk goods. 2nd, that which is commonly called "Silk Waste," prepared from the punctured misshapen or inferior cocoons. This is not reeled into a continuous thread, but comes to market in pieces of greater or less length, which must be carded and spun like wool before the product can be used for weaving purposes. We reviewed the former class in our issue of the 17th of January, and now offer a few remarks upon the second kind.

stationary during the last six years, the other sorts (classified generally as Waste) have increased in a wonderful ratio, the average value during 1879 shewing but a very small reduction on the famine rates of 1876. The total of both kinds last year reached the large sum of \$1,853,775.

The term "Waste" is perhaps somewhat ambiguous, and calculated to lead to misconception of the nature of this important article. It is not exactly *refuse*, as the word would seem to imply; but a substance prepared from those cocoons which, through "piercing" or imperfections in shape or texture, are not suited for reeling into thread in the ordinary way, while they are capable of being drawn out into short strands (like cotton or wool) and must be cleaned, carded, and spun like those staples before they can be employed in the loom. Doubtless the profitable use of this inferior product of the Silkworm's cocoon has been known in China and the East generally for centuries past; and we are confident that, in addition to the padding of clothes, etc., they had found out how to spin yarn from the short fibres, upon their primitive spinning-wheels. In fact we have positive evidence of the use of "Mesenito"—a yarn made from Mawatta—by the Japanese in the weaving of goods. They even tried to reel silk from pierced cocoons; but this kind of thread had so many knots and proved so unworkable that the "Tedor" gradually fell into disuse. On the other hand, during the last century we find the inhabitants of the South of Europe spinning their "Gum Waste" into yarn, although it was not till the present century had opened, and the wool-stapling industry became firmly rooted in Yorkshire, that the silk spinning mills of Brighouse and Leeds rose side by side with the great woollen factories in the same county.

The improvements in machinery for the preparation and spinning of silk-waste in Europe have made great strides of late, and whereas a few years ago one never heard of anything-but "Spun silk" hosiery, handkerchiefs or some other little article of similar make, the whole world now rings with the "Schappe" velvets of Crefeld, the "spun" ribbons of Basle and the laces of Nottingham, while the king of silk-spinners—Lister of Manningham—has even produced machine-twist of excellent quality from the unlikely material. No doubt the recent bad silk crops in Europe have stimulated the faculties of inventors in this direction. The dictates of fashion, calling for mixed fabrics, have also opened a wide door for the introduction of *nouveautés*, which the ingenuity of the present day has not failed to take advantage of; and the material is largely used in the production of sprigs, brocades, damassés and flowered goods generally. Indeed, sometimes appearing as "Organzine," at other times filling in as "Tram," the use of silk yarn is now well nigh universal.

Let us turn to the market for the supply of the raw material, and compare the facilities of twenty-five years ago with those of to-day. Then the European spinner had simply the choice of Canton Gum Waste, China Curlies, Bengal Chassum, Persian Balls, or Italian Knubs and Gum,

with what little Engine-waste he could obtain from throwsters of China raw silk at home. This last indeed was often so lightly valued by the owner of the throwing-mill that the operatives were allowed to use it for cleaning machinery. Now we find that Japan alone furnishes at least four well-known kinds and in such quantities as those mentioned above. Possibly a slight description of each may be of interest.

1.—Degaramai (Pierced Cocoons.) These, as before explained, are the cocoons spoiled for reeling by the passage of the insect from the chrysalis to the moth. In the magnaneries those cocoons only which are intended for breeding are allowed to be spoiled in this way; those intended for reeling are baked, the germ of life is thus destroyed, and the reeling proceeds at the leisure of the operator, without any fear of the cocoon being rendered useless.

2.—Kibiso (Knubs or Curlies,) prepared from the inferior outside layers of the cocoon which are taken off before the true reeling commences. Mixed in with this also is the "Kuzu-ito," or Winder's Waste, made by the reelers in searching for the regular thread either to commence the reeling or repair a breakage at the bassine.

3.—Noshi-ito. This name seems to have been formerly confined to a kind of wild produce which was run into a continuous coarse uneven thread known to Europeans as "Doppioni." It is now commonly used to designate the better classes of "Kibiso," of which it contains the longer strands; and the winder's waste of the modern "filatures" is also generally included in this grade.

4.—Mawatta, for many years known in China by the name of "Floss" silk and familiar to the merchants of Europe as "Caps." To this day every "Book" of China or Canton raw silk going to Europe has two of these caps for the protection of the gums or ends of the book, and for many years these coverings have been sold by tender at stated intervals by the Dock Companies in London. This is the best and finest of all classes of Japan Waste, and forms a special article of production in some districts, the most celebrated being made in Kokunimura, a village of Iwashiro. It is used by the Japanese as wadding for dresses, counterpanes, etc.; and is prepared from the "Kuzumai" (thin or distorted cocoons) Tamamai (doubles) or even Degaramai (pierced.) The mode of preparation is somewhat curious. The cocoons are boiled in a lye or solution of silkworm *feces*, calcined and mixed with water. When sufficiently boiled they are cleansed by rinsing in pure water, and stretched over a "Watta-dai" into the characteristic sheets or "caps" as they appear on our market.

Touching the prices of these various kinds, we append a table of quotations of some of the principal sorts, showing that in spite of the large quantities coming forward the values have steadily increased. The quotations are taken at the 1st January of each year.

It will thus be seen that Japan Waste, equally with Japan Silk, is fast becoming first favorite in the race. Indeed it need not be pointed out that one controls the other to some extent, and that the better the growth and culture of the worm the greater will be the improvement in the Silk produced, whether "Raw" or "Waste."

Before concluding let us turn for a moment to Silk-worms' eggs, and see how matters stand there. The statistics for the last *semestre* run as under:—

	1879.	1878.	1873.
Export in cards.....	818,849	1,025,000	1,400,000
Value in dollars.....	488,000	1,040,000	8,400,000

These figures shew a marked contrast to the former tables, and while silk produce of both kinds furnishes gratifying results the export of these "germs" of prosperity fall off lamentably both in quantity and value. Thus, while in 1878 the average price of a "carton" was about \$2½, the value in the past year has been only 60 cents. It is much to be regretted that the Japanese still persevere in the suicidal policy of giving away the "initial" germ of their prosperous commerce in silk. We have endeavoured to show that there are large and increasing markets for the produce of Japan in this direction, and that the opposite course of growing the seed here would bring a large profit to the country. Let us suppose that for next season the export of seed should stop, and that the \$488,000 should be lost to the country. That would indeed be a dire mishap, but *en reranche* the year's silk crop would fetch an average of \$200 per picul more. Let us put the export at 20,000 piculs (a figure easily attainable under such circumstances.) The increment would be some four million dollars; or, deducting the value of cards sacrificed, \$3,500,000. Is the very paternal Government blind to this state of things? Can it not see that the true mission of Japan for many years to come must be the supplying of raw material for use in the factories of the West, and that this path alone will lead to prosperity? There are some things such as growing tea, silk, rice, which are eminently suited to the genius of the people, as well as to the climate, of this land. These are the branches of trade which should be encouraged, and not the chimerical endeavours to manufacture shirting and cloth which can be done much cheaper and better for them in Manchester or Connecticut. Why strive too soon after the development of enterprises requiring great capital and machinery (which the natives of this country cannot hope to possess until they have gradually amassed the means by patient industry and frugal toil), and which may too surely end in the nation over-reaching itself; thus leading to ruin and disaster financially, with perchance revolution politically. It may be retorted that under the existing treaties the Government, however much inclined to protection, cannot prohibit the export of Silk-worms' eggs. Granted; but are the Japanese people themselves so unpatriotic, are they so incapable of being touched by an argument addressed to the pocket, that they will continue to throw away four millions to obtain half a million dollars? Further, is there not a good prospect of increasing the four into forty millions in years to come by careful painstaking work? What is to hinder the constant growth of the out-turn of Japan Silk in the future, if once the hampering restrictions and foolish export of seed are done away with? Is the Japanese trader so blind to his own interests that he cannot see these things when put before him in the proper light? We think not.

## THE ELECTRIC LIGHT.

NO subject has attracted more attention of late years in Europe and America, than the persistent and to some extent successful attempts which have been made to adapt electricity to illuminating purposes in such a simple and economical manner as to supply the wants of the masses. As far as Japan is concerned we believe we are correct in stating that the only occasion on which public exhibition of the light was attempted, resulted in a most conspicuous failure; and as the generality of our readers may not have followed closely the progress that has been made of late years towards introducing electricity as a substitute for other illuminating agents, it may perhaps be interesting to refer briefly to the improvements which have recently been effected, and at the same time examine to what extent they seem likely to lead to the solution of difficulties hitherto insuperable.

The electric light, although known for many years previously, was first brought into general notice at the London Exhibition of 1862, when its intense brightness and power of illumination were repeatedly demonstrated. Owing, however, to a fitfulness and uncertainty, which had not then been successfully overcome in even the slightest degree, and to the great expense involved as compared with other methods of lighting, it was universally admitted that very much indeed remained to be accomplished, before electricity could hope to compete successfully in the new field which appeared to be opening to increase its sphere of usefulness. The years went on, and, with the exception of occasional notices in the records of learned societies, nothing shewed that scientific and patient workers were steadily engaged in endeavours to solve the great problems remitted to their labours by the advocates of lighting by electricity. During all this time, the idea of so utilizing the subtle fluid was looked upon by most people, more especially the shareholders in gas companies (to whom the wish was indeed the father of the thought) as a mere idle dream; the crack-brained fancy of wild enthusiasts, or a means adopted by shrewd pretenders to extract money from the pockets of the unwary. In this fool's paradise the "vested interests" rested supremely happy and unconscious of coming evil until the year 1878, when they were rudely awaked by the announcement that the celebrated Russian electrician—an engineer officer—Colonel Jablockhoff, had invented, and patented in Paris, a method of utilizing the electric light, theretofore so unmanageable, which would revolutionize the whole system of public and domestic illumination. Jablockhoff's invention was a great step in advance. It had indeed long been known that carbon was practically the best material to employ for the purposes of the electric light, but the great difficulty was the necessity of continually renewing the carbon as it burnt away. This, Jablockhoff obviated in great measure by the invention of some most delicate and ingenious machinery, used in connection with what is known as "the Jablockhoff candle;"—carbon pencils insulated by kaolin. As may be imagined when such vast interests were at stake, the announcement of Colonel Jablockhoff's discoveries created an immense sensation among the public and the shareholders in the numerous gas companies which exist all over Europe, and, in fact, the whole world. In Paris the matter was enthusiastically received. The French had not forgotten, apparently, that the English were the originators of gas lighting: France would introduce the new light and claim the gratitude of posterity. A company was accordingly formed, the required capital eagerly subscribed, and preparations commenced with a view of bringing the great discovery into practical

operation. After the lapse of some time it was announced that the Avenue de L'Opéra would be illuminated by means of the electric light, and in point of fact this was accomplished. Then the success or otherwise of the attempt was subjected to thorough investigation. The advocates of the system claimed that it was cheaper, cleaner, and better in every way than gas. There was no smell. Neither carbonic acid nor ammonia was produced in using it: nothing in fact that in gas is sometimes found so offensive. The adherents of gas, on the other hand, scouted the claims of the electric light. The intense brightness and deficiency of actinism would inevitably produce irritation of the eyes: a steam engine was a necessary adjunct to the new competitor for public patronage, and few people would care to exchange the harmless gas meter for the dangerous boiler of a steam engine. Then the boasted economy was all a myth: what did it consist in? and they triumphantly pointed to the result of the investigations made at the instance of the authorities of the parish of Chelsea, who, although desirous of adopting the electric light in one of their principal streets, found that they could not consistently do so as, during the first year, an extra expenditure of more than £3,000 over that necessary to defray the gas bill would be required, while every subsequent year there would be a smaller but still considerably increased outlay. Further improvements continued to be made during all this time, and the public grew familiar, at any rate with the names, of the Lontin, Weston, Siemens, Gramme, Serrin, Brush, and other descriptions of electric lamps. Numerous efforts to utilize these discoveries were made; and, when the result of all the investigations and experiments came to be analysed, it was generally admitted that, for the purpose of out-door illumination and large enclosed spaces, (theatres, factories, &c.), in both cases under favourable circumstances, the new light had an assured future, but that nothing then discovered warranted the conclusion that it would supersede gas as an illuminating agent for domestic purposes and use generally; because gas was cheaper, more easily managed, always under control, and required no skilled labour to attend to it when in use. The insuperable objections to the electric light at the time we speak of were, that no means had been discovered of dividing the electric current or of regulating the light—it was either total darkness or intense brightness wanting in actinism. During the period which elapsed while investigations were being conducted, shareholders in gas companies were exceedingly uneasy; and it was with a sense of relief that they hailed the verdict, which we have quoted, respecting the future of the two methods of illumination. The real difficulties that existed in connection with the general employment of the electric light, and the extreme improbability of their being successfully surmounted, were apparent to the meanest capacity when the great "boom" came sounding across the Atlantic, "Edison has solved the great problem. The electric light will shortly be in general use." Then, although Mr. Edison was known principally from his connection with several scientific toys such as the telephone, phonograph, &c., an era of panic set in, which, as subsequently discovered, was sedulously fostered by speculators. Shares in gas companies fell in value at an alarming rate, and the decline was estimated to represent in Great Britain alone no less than the enormous sum of over thirty-five millions sterling.

Let us now see what Mr. Edison has done to fulfil an announcement, fraught with such serious consequences, and for which he must, in all fairness, be held primarily responsible. The difficulties standing in the way of the employment of electricity for domestic and general lighting

purposes have already been alluded to, and it was Mr. Edison's self-imposed task to overcome them. Has he done so? A brief review of what has transpired since this gentleman's success was positively proclaimed, may assist us in coming to a correct conclusion on the subject.

About twelve months ago the New York *Herald* contained a long and very enthusiastic account of Mr. Edison's discovery. It was detailed at great length, and with much minuteness, all that the reporter witnessed on the occasion of his visit to the great genius who had revolutionized the illuminating agencies of the universe. The "modest inventor" was described as intent on his labours when the representative of the *Herald* presented himself. "In a corner of the spacious workshop were what looked like two large cylinders, but were in fact the generators of electricity; an ordinary looking lamp was on a plain table." After some casual conversation, the interviewer asked to be allowed to witness the wonderful lamp. "Here 'she' is," said Mr. Edison, and as he spoke he touched a small button, and immediately the workshop was suffused with a beautiful, soft, light, rendering the whole place as bright as day; a light as obedient to the button "as gas is to the tap. Viewed from after experience the utter absurdity of the whole description is laughable, but public interest, which had begun to flag, was aroused anew; and it was again announced that the problem was solved, one slight and altogether unimportant matter of detail being alone requisite to being the discovery into completely practical operation. Time went on, and notices appeared at intervals, inspired probably by Mr. Edison or his assistants, in the public journals recording progress. The following is one of the latest, and was published just before the *dénouement*, which apparently opened the eyes of some of Mr. Edison's admirers as to the actual value of his so-called discoveries:—

"An elaborately descriptive and illustrated article in the New York *Herald* gives the very gratifying intelligence that at last Mr. Edison has completed his electric lamp and will give a practical illustration of it on New Year's eve at Menlo Park. The final result is simplicity itself. Mr. Edison takes a scrap of paper, submits it to a heat of 600 Fahrenheit, so that all the volatile substance is removed, leaving nothing but the pure carbon. This he bends into a horse-shoe shape, and exhausts the globe around it. How this result was at last attained reads more like a tale of fiction than of fact, and is as exciting as anything in the annals of great inventions or discoveries. The very simplicity of the means to be used is the most marvellous of all. After exploring the continent for a sufficient supply of platinum, and exhausting all known methods of treating that metal, it is at last abandoned, and a simple cotton thread suggests and proves the solution. Accompanying this discovery, and as a necessary complement to it, is Mr. Edison's invention for measuring the amount of electricity consumed. It is a wonder of mechanical nicety and ingenuity. It is now in the near future when electricity will supersede oil and gas for illuminating purposes."

About the same time there was supplied to the *Scientific American*, usually an admirably conducted and most reliable journal, a very sanguine account of Mr. Edison's proceedings, avowedly dictated either by himself or some of his collaborators. This communication was distinguished by some most extraordinary misstatements. For example, the assertion that "Mr. Edison has so improved the Sprengel pump that he is able to obtain with it, in twenty-five minutes, a vacuum which physicists have previously taken forty-five hours to produce," will probably excite the amusement, if it does not arouse the indignation, of Messrs. Mawson and Swan, of Newcastle, England, who

have for some years past manufactured and sold Sprengel pumps capable of producing high vacua in fifteen minutes. Then again there is really nothing very novel in the idea of electric illumination by means of incandescent carbons in vacuo, since, as far back as 1845, Mr. Edward A. King obtained a patent for the process in England.

At length the exhibition at Menlo Park came off, and the result certainly does not encourage any expectation of a speedy realization of Mr. Edison's hopes. Fifty lamps, we learn, of a total capacity of five to seven hundred candles, were "operated" by power derived from an eighty horse-power engine (more than a horse and a half to each lamp) transmitted to an electric generating apparatus by the double five-inch belts, which drove ten and twelve-inch pulleys at the rate of six hundred revolutions per minute! Not a bad beginning this for a cheap, safe and manageable light! It was pointed out by some Yankee Didymus, who should have been sacrificed on the spot for his scepticism, that the generating apparatus might possibly employ, under such conditions, more than half the power of the engine, or an amount of power which, if applied to the Lontin, Siemens, Gramme, or other forms of apparatus, would yield from one hundred down to fifty times more illuminating power than Edison's boasted machinery, according to the mode of application. Mr. Edison, however, disposed of this gentleman entirely to his, (Mr. Edison's) satisfaction. He asserted that his peculiar carbons were indestructible, and that he could therefore afford to expend the excess of power! But in opposition to this assertion it has long been known that the duration of the life of carbon in vacuo is inversely proportional to the intensity of the electric current employed in rendering it incandescent. Mr. Edison is of course perfectly well aware of this, and accordingly, notwithstanding the boasted indestructibility of his carbons, he evidently exercised the utmost care to preserve them in a condition of comparatively low incandescence. The following description of the apparatus employed at the Menlo Park exhibition is taken from a New York journal:—"His" (Mr. Edison's) "lamps are each connected with two wires leading respectively from opposite poles of his generating apparatus. These two wires may be considered as the side-pieces of a ladder, and the lamps as a series of rungs affording parallel paths for the flow of the current from one wire to the other. If a considerable number of these paths should be obliterated, as, for example, by the removal of some of the lamps, the current would all be forced to pass through the remaining paths, and would at once overheat the carbons in the remaining lamps, and with a greater or less rapidity destroy them. To guard against this, during Mr. Edison's exhibitions, one of his assistants, with the aid of a Thompson galvanometer, carefully observes the indications of resistance in the circuit which are manifested whenever a lamp is removed, and immediately shuts off a portion of the current from the circuit, taking constant care that the quantity of the current supplied to the circuit shall be just that, and no more, which can safely be permitted to flow through the number of lamps which are in operation." It is plain that the gentleman who performed this function, although probably not a prominent object at Menlo Park, was one of Mr. Edison's most important factors in obtaining a result which at present cannot be justly estimated to be anything more than the repetition, upon a somewhat enlarged scale and at great cost, of an old laboratory experiment. In short, the exhibition at Menlo Park has, comparatively speaking, proved just as great a failure as did the ludicrous attempt made here on the occasion of the entertainment to General Grant. Every one of Mr. Edison's vati-

cinations in the matter of electric lights has been falsified by results, his lamps have cracked, his indestructible carbons have crumbled away. Even the very lamp itself—the wondrous “she” of the *Herald* interviewer—has been claimed by another, as we are informed by a telegram from Europe to New York, that “Count Dumoncel who is recognised here (Paris) as the highest authority on electric science, writes to the *Temps* saying that the new lamp is not *new*; and he warns the public against pompous announcements from the New World.” The result of the Menlo Park fiasco fully bore out the provision of Count Dumoncel; and, if further evidence were necessary to prove the complete, utter, and disastrous failure of Mr. Edison up to the present, it is supplied by the announcement made on the 16th of January last, that “he has given up manufacturing the lamps, and that matters at his workshop are at a standstill in consequence of the breaking of fifty of his carbon horse-shoes from some cause he is unable to discover.” We must however, in justice, add that “Mr. Edison and his assistants are not downhearted. They hope to overcome the newly arisen difficulties in time, and to introduce the lamp into practical use in New York city before next winter.” Nearly two years have elapsed since it was grandiloquently announced:—“Edison has solved the problem”; and now the practical test has been postponed for another twelve months. We confess that we do not place much faith either in Mr. Edison’s solutions of difficulties or in his discoveries. There is no denying the fact that the electric light has not advanced one step forward as a means of supplanting gas as an illuminating agent in private houses, for domestic purposes, and for the lighting of ordinary streets. The two illuminants stand in precisely the same relative positions as they occupied before the Edison “boom” was wafted over the ocean, striking terror into the ranks of shareholders in gas companies. For large spaces, where steam or other power is available and expense no deterrent, the electric light has incontestible advantages; but for all other purposes, and where a cheap, safe, manageable and always available light is required, gas still maintains, and seems likely to preserve, its old preëminence.

**R**EAD in the light of subsequent events, the following extract from an article entitled “The political and social development of Japan, during the last ten years, is instructive. The paper was published in a recent number of *Nord und Süd*, a leading German magazine. The writer, who takes the *nom de plume* of *Asiaticus*, was once, it is well-known, a distinguished member of the German Legation in Tokio. The article from which the excerpt is taken was sent home as a report to the German Government, which, in accordance with its usual custom, presented it to the editor of a friendly journal. It is hardly necessary to say that it was written before the *Hesperia* affair. The whole essay would well repay perusal; it deals with the advances in almost every department of government, which this country has made since the restoration, and is, on the whole, very amical to Japan. From the sentence respecting newspapers, the writer would seem to have the same opinions on this subject as the American Government has expressed, and the British Government is said to hold.

Free, unrestricted intercourse with foreign countries has become the condition of its (Japan’s) further development. But in all directions extra-territoriality prevents the realization of its wishes. This makes it impossible to admit foreigners into the interior, which would be for their own interests as well as for those of Japan: to use their capital for the improvement of mines and land; or even to work in the mines or on the soil. This restrictive action of extra-territoriality on economical development is peculiarly

distasteful to the Japanese. It must deeply wound their national susceptibilities to see States, which are in no higher or in even a much lower stage of advancement, such as the republics of Central and South America, and the negro republic of Hayti, in possession of complete judicial control in their own territories . . . . Under no circumstances, however, can extra-territorial privileges result in the Japanese Government being prevented from compelling obedience on the part of foreigners to their Quarantine and Shooting regulations, or that they must tolerate, from foreign newspapers in Japan, slanderous and abusive criticisms on the condition and manners of the country, and the actions of high, and even the highest, personages in the land.

**I**N the *Japan Weekly Mail* of the 15th of last February, we published the Finance Minister’s statement of the actual income and expenditure of the Government for the fiscal year between July, 1875, and June, 1876. To-day we commence the publication of a still more important document, namely, the national debtor and creditor accounts for the preceding portion of the present reign, being for seven and a half years between the commencement of 1868 and the 30th of June, 1875. We take this present instalment from the *Tokio Times* of this morning, and propose to continue the translation of the several numbers as it appears in that journal.

**A**FTER collating the opinions and statements of several of the most influential French journals on the question of the imbroglio with the Annamite Government, and the project, said to be entertained by France, of an annexation of other provinces to Cochin China, the *Indépendant de Saigon* sums up the case. It finds that, certainly, the question of annexation is the order of the day; but thinks it improbable that any military operations will be undertaken immediately. It is apparent, the writer maintains, that the most simple method of defence which could be adopted by the Annamite rulers would be to stir up revolts and risings in the French dependencies, which means that the colony could not be deprived of the troops stationed there. Thus reinforcements would be necessary to undertake the conquest; and the troops which are stated to be en route in the *Themis* from Europe, added to those which arrived in a former transport, and supplemented by the normal strength of the garrisons, would be insufficient to hold, though perhaps enough to take, Tonquin. It is added that, in order to operate effectively in the rivers of that country, strong vessels of light draft are required. Such craft are not available; and it is useless to depend upon the Cochin China gunboats, for which the water will, in a few weeks only, be far too shallow. The writer believes that, for the present, proceedings will be confined to negotiations, preliminary to more vigorous action at a favourable time of the year, namely, at the season of high waters, if in the mean time France has not obtained, without striking a blow, the satisfaction which she has the right to demand.

**W**E reprint, in another part of our issue to-day, from the columns of the *Japan Herald*, the Customs tariff proposed by the Japanese Government. This publication should remove all doubts as to the intentions of Japan in this respect; and although modifications, more or less important, may be introduced during the negotiations, it is probable that there will be none likely to affect, materially, the policy whereon the scheme is framed.

**T**HE Times correspondent at Shanghai, writing on the 31st of October, comments on the approaching opening of another port—Gusan—in Corea, to trade with Japan.

He attaches no importance to the commerce which has already existed between the two countries through the depôt at Fusan-Po; but thinks that the new port may attract the attention of other foreign countries in addition to this empire. He says that some people think "the concession may have a political interest much greater than its commercial one. That may well be, for, as far as we know with our limited sources of information, Corea produces few articles except ginseng for export to Japan. Such mineral resources as she may have are quite undeveloped and the gross amount of the foreign trade at Fusan-Po has hardly amounted in any year since 1876 to half a million of dollars. A Japanese settlement is to be set apart at the new port, a custom-house established, and a limit of 25 miles from the port assigned within which the Japanese residents at Gensan may wander freely. The opening of Corea by Japan has not as yet had sufficient results to arouse the interests of European nations in one of the few remaining *terre incognite* of our globe; but the proximity of the new port to the capital may draw to it that attention which the petty trafficking between Fusan-Po and Japan can hardly be expected to excite. At present the Coreans do not smoke opium. They supply themselves from Newchwang by the way of the Korean gate with foreign cotton goods and Chinese comestibles, and there is little prospect of a large market for these important commodities being found through the ports opened to the Japanese. The event I have noted is interesting only as a step in the career of young Japan."

**P**RA PREECHA has been beheaded; but the sentence of whipping before decapitation, which was part of the judgment pronounced against him, was remitted by order of the King of Siam. His case is still the subject of some comment in the foreign newspaper published in Bangkok, and by correspondents of the *Straits Times* in that port. One resident who claims to have resided for many years in the Asiatic kingdom, says of its monarch that he "is a deservedly popular sovereign, beloved by all his own subjects, and, with the exception of one house, honored by all the Europeans here. Outside his own country he won the esteem and goodwill of both Europeans and natives by his intelligence, frankness, and general courtesy." With reference to the unhappy alliance of the disgraced and beheaded noble, it is asserted that the chosen bride being the daughter of a powerful Englishman—powerful from his official position and the known opposer of His Majesty—it was not likely that the royal approbation would have been accorded to the union; and old custom, imperious in most eastern lands, rendered such approval a matter of necessity. "Indeed Pra Preecha himself said, when questioned by a European as to why he ran the risk of giving offence by marrying without asking His Majesty according to custom, that he did not ask because he knew consent would be refused, and that as he was determined to marry he dared not ask. Why he should be so determined to marry who already had many wives, was proved by after events." It is positively asserted, by the writer from whom we quote, that it was much more than mere discourtesy in Pra Preecha leaving Bang-pa-in without seeing the King. It was there before he married that written complaints were laid before his master some sixty in number, from the people of his governorship at Pachim. After receiving these the accused was sent for by the king, "but he had the audacity not to answer the royal summons, and left Bang-pa-in. No doubt he was eager to accomplish the marriage, to ensure the protection of the English Consul before he again appeared before His Majesty." The correspondent affirms that the Governor's rule was a very

oppressive one, and that "great joy was manifested by the people at his execution: that the authorities put the body into a sack intending to bury it; but that the people took it by force, using many indignities to it, and finally hung it up on a tree. It was thus exposed for three days, when it was taken down and buried. For miles down the river, the people came out to salaam and prostrate themselves before the steamer in acknowledgment of the good service done them. It is premature to say anything about Pra Preecha's father and mother. The Government has been robbed, and that family had considerable wealth from unknown sources, as evidenced by the palatial residences recently erected by them. They are awaiting their trials, and have the best wishes of all that they may be able to clear themselves. In the meantime, according to the custom, they are degraded and put down from being members of the Privy Council. How could it be otherwise under the circumstances?" It is tolerably clear that things were not exactly of the aspect in which they were represented when the dénouement took place; and that the British Government acted with customary prudence when it abstained from interference in what, after all, was a merely domestic matter pertaining to the jurisdiction of Siam. We observe that Mr. W. G. Palgrave, a tried Consular officer, and a writer whose vivid and accurate descriptions of several eastern countries have obtained a wide reputation, has been appointed Consul-General in that kingdom.

**O**UR third article on the Military Power of China is unavoidably held over until next week.

#### REVENUES AND EXPENDITURES.

I, Okuma Shigenobu, respectfully present herewith my report upon the actual revenues and expenditures for the eight fiscal years, beginning with the 1st year of Meiji (1868) and ending with the 6th month of the 8th year of Meiji (June, 1875).

Considering the limited numbers of years which have elapsed since the restoration, we have made considerable progress; and old inherent abuses have already been expunged. Among other changes, our system of national finance has undergone great development; and the rules on which it is in future to be conducted have been all but completed. But the presentation of a statement of the accounts of the actual revenues and expenditures during these eight fiscal years have been delayed until now. I, who fill the office of O Kura Kio, cannot evade the responsibility of this procrastination; but, may it please Your Excellency, I desire to give an explanation of the inevitable circumstances which have caused it.

In the early days of the restoration we were very eager to correct the errors committed in the latter period of the shogunate, and thoroughly to reform our financial policy. A civil war had broken out in the north-eastern provinces at the time of the restoration, and all affairs were in great confusion. Owing to these events, we could not occupy ourselves in preparing minute accounts of the revenues and expenditures. Afterward, in the 8th month of the 4th year of Meiji (September, 1871), a great financial reformation was inaugurated. By this reform our financial operations became something like an established business transaction, but a proper method of book-keeping was not yet perfected; and the old established system of records called *Kanjio Cho* (account books), *Meisai Cho* (minute books), etc., was retained. The report also was only what is called *Kokuwa*

*Jio* (a kind of financial statement of general facts, not necessarily giving the amounts of money received or disbursed). Moreover the creations, abolitions, separations and amalgamations of Kuwan, Sho, Fu and Ken were of constant occurrence. The growth of home and foreign business, the development of the army and navy, the reformation of the judicial department, and the initiation of various works of public utility, such as railroads, telegraphs, etc., followed each other in quick succession. Especially in the governments of the different localities numerous improvements were made; and in fact it is next to an impossibility for men to remember all the changes. The countless alterations were all, more or less, connected with financial affairs. The plan on which the accounts were kept was too concise, and it is therefore now almost impracticable for us to ascertain the exact state of the finances at that period. However, after exerting the utmost efforts of which I am capable, at last to-day I have the honor to present this document to Your Excellency. I most sincerely hope that its accuracy may satisfy you. In addition to the report, I offer to Your Excellency an appendix showing the order observed in rendering these actual accounts, the rules of our financial operations, and the creations, abolitions, separations, and unions of Kuwan, Sho, Fu and Ken. I respectfully express the hope that it may be of service to Your Excellency, and aid you to comprehend the difficulties involved in preparing the statement.

OKUMA SHIGENOBU,  
O Kura Kio,  
(Minister of Finance.)

To His EXCELLENCY SANJO SAN'EYOSHI,

*Daijo Dai Jin.*

Tokio, Meiji 12th year, 12th month, 27th day,  
(December 27th, 1879).

#### INTRODUCTORY REMARKS TO THE REPORTS OF THE ACTUAL ACCOUNTS.

These actual accounts begin with the 27th day of the 12th month of the 8d year of Keio (January 21st, 1868), when an imperial treasury was established at Saikio, and end with the 30th of the 6th month of the 8th year of Meiji (June 30th, 1875). Indeed during these terms seven and a half years have elapsed; but we have counted ninety-three months. (The year being twelve months, seven and a half years would be ninety months; in the first and fourth periods there was an intercalary month; and including the 12th month of the 8d year of Keio, we obtain ninety-three months.) The method of drafting the estimates during those years was not anything like that which has ruled since the 8th year of Meiji. Since then we have developed a scheme for the management of our financial operations; but before that year our fiscal laws were in an embryonic stage, and the records were in a very confused condition. When one term had not ended, the next term had already begun. Thus, during those eight fiscal years, there was no definite end for any term. It was just like the links, overlapping each other, which form a chain. These years might, therefore, be treated as one term; but, in accordance with the method then adopted, we divide them into eight periods, in order to afford greater facility to the reader.

During the time referred to two changes took place in regard to the division of the fiscal year. This accounts for the different number of months in the different terms, the third, sixth and seventh of which were of the ordinary length. The fifth was a long one, and consisted of fourteen months. (The 11th month of the 5th year of Meiji, viz., December, 1872, is not reckoned, because only two days of that month were included in the term). The first and fourth periods were also long. They consisted of thirteen months. (The reason why they were so long, is that there was an intercalary month in each of them, according to the

lunar almanac then used. The 12th month of the first term was not reckoned in, because only four days of that month were included in the term). The shortest terms were the eighth, which consisted of six, and the second, of nine, months.

Although we make the 30th of the sixth month of the 8th year of Meiji (June 30th, 1875) the termination of these actual statements, yet as a matter of fact it is impossible to close the accounts with that very day. There were some amounts received and disbursed after that time, the real settling extending to the 30th of the 6th month of the 11th year of Meiji (June 30th, 1878). As to the receipts and disbursements after the 7th month of the 8th year of Meiji (July, 1875), we have compiled an account specially for that term. The one and the other must, therefore, not be confounded.

If we collate the revenues and expenditures of these eight terms into actual accounts, we ought to adjust the incomes and disbursements accurately term by term; but for three or four years after the restoration, the method of book-keeping was too concise, and Cho (governmental offices) were created and abolished, amalgamated and separated in rapid succession. In consequence of these facts the accounts do not connect explicitly. It would be in vain, to-day, to endeavor to ascertain the exact condition of the income and outlay of each fiscal term during those years. Accordingly, adopting the best available plan, we have rendered these accounts chronologically from the original account-books, after examining them carefully. We have, therefore, been obliged, for instance, to include certain taxes which had belonged to A term, and paid in B or C term, in the accounts of B or C. In regard to the expenditures there have been similar occurrences. This will explain the fact that certain taxes or expenditures are large in one term and small in another.

Thus we have compiled these actual accounts from the original books of revenues and expenditures. Yet there are many accounts which might be regarded as extraordinary;—such outlay, for instance, as that for the Kuwangio (encouragement of business) in the home department; mint expenses; the cost of paper-money manufactured in the finance department; the grants for mining, railroads, telegraphs, light-houses, and public industrial domains in the department of public works. These items cannot be regarded in the same light as the ordinary expenditures for the various departments themselves. With reference to these expenditures, we first examined the special accounts in regard to them, and then compared them with the original accounts which are kept in the several departments. Pursuing this method we made out the statements. Among the items of receipts there are some such sums as surpluses refunded when found to remain after the necessary expenses had been paid, and others returned on discovery being made that they had been erroneously expended. Again, among the expenditures there are amounts which were reimbursed after being mistakenly received. As for these items, we referred to the original sums which had been recorded as received and disbursed before, examined them one by one, and endeavored neither to deal with any of them twice nor to omit anything, we thus striving to arrive at an accurate statement.

There are three important facts which claim our careful attention: First, the extension of the financial control of the government. Before the abolition of the Han (a kind of clan system) the limit was narrow, but it has subsequently extended. We will cite an example from the number of koku (the unit of rice measurement, being a little more than 5 bushels). Before the seventh month of the 4th year of Meiji, when the abolition of the Han was declared, the number of koku which came under the direct control of the national treasury was 8,906,000 in round numbers. After that event it increased to 32,805,000 in round numbers. Secondly, the old method of the management of local finances. Before the 4th year of Meiji it was the rule that the Fu and Ken, which were under the direct control of the government, collected taxes in money and kind, and forwarded the receipts to the exchequer after deducting the sum sufficient for their own expenditures. Therefore, in these actual accounts the sums which belong to the period before the 4th year of Meiji are that actually paid into the treasury, and that paid out specially for the expenditures of Fu and Ken. The sums which were kept in Fu and Ken and spent directly for local purposes are not accounted for in the national revenues and expenditures. Thirdly, the fluctuation in the price of

rice. In rendering these actual accounts we have, of course, to express in terms of money all the rice which was received and given out, but the price of rice fluctuated annually; so in the year when the average price of rice was high, the portion of the income which was received in rice and the portion of the disbursements which was given out in rice were necessarily high; and when rates were low the reverse was the case.

Now we will state briefly the method of transforming rice accounts into money equivalents, in order to explain what has been said in the preceding paragraph. It is a well known fact that the price of rice fluctuates from year to year. Even in the course of the same year the rate varies according to different localities and changing seasons. In the infancy of our financial book-keeping, the clerks only entered the quantity received and expended; and when both quantities balanced they were satisfied, and the fluctuation of price was left out of the question. So then, if we want to know the exact rate of the variations in the value of rice we are utterly at a loss, and it is impossible for us to know the exact difference in different localities. We therefore, doing the best we can, have adopted as a standard the average of the selling price of rice in the store-houses situated in Asakusa, Tokio, which we have also, as far as possible, compared for purposes of correction with the rates obtaining in other places. Adopting this plan we have calculated the prices for each term, obtaining the following results:—

First term .....	Price of rice per koku.....	Yen 5.421
Second term .....	" " " " " " .....	" 7.476
Third term .....	" " " " " " .....	" 7.488
Fourth term .....	" " " " " " .....	" 4.682
Fifth term.....	" " " " " " .....	" 3.172
Sixth term.....	" " " " " " .....	" 3.861
Seventh term.....	" " " " " " .....	" 5.917
Eight term .....	" " " " " " .....	" 5.896

Such statements as these cannot be made to coincide exactly with the average of the price of the quantities actually received and expended; yet as we fixed the same price on each side of the accounts there cannot be any difference left between the two. That portion of rice which was sold in different localities does not come under these valuations. It was accounted for in the statement of local business at the actual selling price.

There occurred also in the actual transactions purchases of rice and Mexican dollars and sales of the same. These accounts cancel each other, yet prices differed much at different places and times, and this produced a considerable discrepancy. This is inevitable in such financial operations. If we were to mention in every fiscal term the loss thus incurred and gain thus obtained, we should see a large item in the budget; but virtually these accounts cancel each other. So in rendering these actual accounts we have omitted these items from the beginning until the eighth term, when we brought the balance into the statement. For the same reasons the receipt of ingots and old coins for remittance is not mentioned as receipt until the fourth term, from which time, however, we insert the balance, which proves favorable to the government account, and figures among the items of revenue.

In the third year of Meiji a fund was established and should have been used for the recall of the paper money previously issued. Since that time this fund has been treated under the name of *Jinbibu* (special reserve). Having accumulated, it has grown into a considerable sum. In fact it is only a nominal distinction between sundry receipts and disbursements of the national treasury. If we consider these from the standpoint of general finance there is no distinction. And if we were to insist upon making a minute analysis of them, our statement would become more complicated than would be convenient in regard to the general features of finance. Therefore in these actual accounts we cancel receipts and expenditures into each other, and only give the result of the operation.

During these eight terms among the receipts in each were a great number of entries of what is called *Yenno*. Among disbursements were many cases of what is known as *Tsukin*. We will briefly state the actual circumstances attendant upon them. Most of the *yenno* were caused by delay in payments to the government. Many of the *tsukin* were not actually delay of paying what was due from the government, but were mostly renderings of actual accounts of sums

which had been previously disbursed for temporary expediency. These confusions arose out of the facts that, during the early days of the restoration everything was in a state of infancy, and before we had had a chance to settle our affairs we were met with that great reconstruction, namely, the abolition of the *Han* and establishment of *Ken*; and creations and abolitions, separations and unions of *Kuwan*, *Sho*, *Fu* and *Ken* were numerous and constant. Owing to these changes, the rules of rendering accounts were amended in many respects, and the affairs of different *Kuwan* and *Cho* became considerably intermingled; and each differed from the other in regard to the length of the fiscal term.

We will now proceed to explain the outline of the analysis of items in these actual accounts. Among revenues and expenditures there are ordinary and extraordinary. These are the two great divisions. The ordinary revenues are subdivided into seven sections, and extend from the first to the seventh in the accompanying table. (See bk. 1, ch. 1, pt. 1.) The extraordinary revenues are subdivided into five sections, and extend from the eighth to the twelfth. In like manner the ordinary expenditures are subdivided into nine sections, and extend from the first to the ninth. The extraordinary expenditures are subdivided into seven sections, and extend from the tenth to the sixteenth. If we had given an analysis of each section of revenue and expenditure, we should arrive at a great many items. In compiling these actual accounts we collected similar items under one head and made of them one section.

In the twelve preceding paragraphs we have briefly stated the manner and order adopted in rendering the actual accounts for the eight fiscal years considered, and we will here shortly state how this report is arranged and what it contains. It consists of two books and an appendix. In the first book we shall see an agglomeration of the revenues and expenditures for these eight fiscal years, similar items arranged under one head, and important financial affairs stated. In the second book we shall find explanations of every section of the actual accounts for each of the eight fiscal years, and a comparison of actual accounts with each other for the last three terms, namely, the sixth, seventh and eighth, and explanations thereof. The appendix details the successive reforms in the management of finance, and creations, abolitions, separations and unions of *Kuwan* and *Cho*.

The contents of the first book are:—

I.—Statistics of the actual accounts of revenues during the eight fiscal terms.

II.—Statistics of the actual accounts of expenditures during the eight fiscal terms.

III.—Important events in relation to the national finance.

The contents of the second book are:—

I.—The actual accounts of the revenues and expenditures for the first term, extending from the 12th month of the 8d year of Keio (January, 1868) to the 1st month of the 2d year of Meiji (February 11th, 1869).

II.—The actual accounts of the revenues and expenditures for the second term, extending from the 1st month of the 2d year of Meiji (February 11th, 1869) to the 10th month of the same year (November 4th, 1869).

III.—The actual accounts of the revenues and expenditures for the third term, extending from the 10th month of the 2d year of Meiji (November 4th, 1869) to the 10th month of the 8d year of Meiji (October 25th, 1870).

IV.—The actual accounts of the revenues and expenditures for the fourth term, extending from the 10th month of the 8d year of Meiji (October 25th, 1870) to the 10th month of the 4th year of Meiji (November 12th, 1871).

V.—The actual accounts of the revenues and expenditures for the fifth term, extending from the 10th month of the 4th year of Meiji (November 12th, 1871) to the 1st month of the 6th year of Meiji (January, 1873).

VI.—The actual accounts of the revenues and expenditures for the sixth term, extending from the 1st month of the 6th year of Meiji (January, 1873) to the 1st month of the 7th year of Meiji (January, 1874).

VII.—The actual accounts of the revenues and expenditures for the seventh term, extending from the 1st month of the 7th year of Meiji (January, 1874) to the 1st month of the 8th year of Meiji (January, 1875).

VIII.—The actual accounts of the revenues and expenditures for the eighth term, extending from the 1st month of

the 8th year of Meiji (January, 1875) to the 6th month of the same year (June, 1875).

IX.—Comparison of the actual accounts of the last three terms, being between the 1st month of the 6th year of Meiji (January, 1873) and the 6th month of the 8th year of Meiji (June, 1875).

The contents of the appendix are:—

I.—The order observed in dressing these actual accounts.

II.—Rules for receipts and disbursements in financial management.

III.—Creations, abolitions, separations and unions of Kawan, Sho, Fu and Ken.

### BOOK I.

[This refers to statistics of the actual revenues and expenditures for the eight fiscal periods, and important facts in connection with the national finance.]

### CHAPTER I.

#### STATISTICS OF THE ACTUAL RECEIPTS FOR THE EIGHT FISCAL YEARS.

#### PART I.

The grand total of the government revenues collected during the period between the 1st year of Meiji (1868) and the 6th month of the 8th year of Meiji (June, 1875), amounts to Yen 406,350,853.516, of which the sum of Yen 282,870,871.982 comprises ordinary, and the sum of Yen 123,479,981.584 extraordinary, receipts. Subjoined is a table showing the totals of the revenues collected from various sources during these eight fiscal terms.

TABLE No. 1.

STATISTICAL TABLE OF THE ACTUAL ACCOUNTS OF THE REVENUES FOR THE EIGHT FISCAL TERMS, EXTENDING FROM THE 1ST YEAR OF MEIJI TO THE 6TH MONTH OF THE 8TH YEAR OF MEIJI.

Section I. Land tax ..... Yen. 282,711,465.416

Section II. Customs, etc. .... 8,497,665.084

Section III. Tax on hereditary and other pensions 2,949,839.147

Tax on official incomes ..... 123,844.360

Mining tax ..... 44,492.287

Dues from foreigners 786,767.484

Tax on saké, etc. .... 3,971,148.830

Stamps on legal documents ..... 1,006,497.051

Postage stamps ..... 894,888.841

Tax on silk-worms, egg cards and raw silk ..... 1,034,892.209

Stamps on silk .... 98,075.712

Ship licenses ..... 228,938.719

Anchorage dues .... 151,313.752

Tax on male and female servants, carriages, etc., horses, kago and pleasure boats .. 142,187.660

Tax on vehicles .... 96,578.207

Shooting licenses .. 90,242.132

Horse and cattle dealers' licenses ..... 141,058.521

Tax on shibori abura 147,666.550

Miscellaneous taxes, such as unjio or miyaga, etc. .... 4,354,102.211

Tribute from Riu Kiu Han ..... 127,236.513

Koku Yeki Kin ..... 841,360.481

17,215,520.717

Section IV.

Receipts from mines 1,379,250.893

Receipts from railways ..... 1,554,817.469

Receipts from telegraphs ..... 250,563.230

Receipts from iron factories, dock-yards and other manufactories .... 1,217,278.674

Receipts from mint .. 2,374,192.643

6,776,102.899

Section V.

Repayment of ordinary loans, advances for relief, etc. .... 2,551,952.366

<sup>1</sup> See Part IV.

#### Section VI.

Sales of wild horses in government domains and sundry produce ..... 265,487.932

Sales of land, wood, stone, etc. .... 2,536,003.938

Sales of houses and warehouses ..... 518,815.392

Sales of ships ..... 406,302.665

Sales of mines and government works 820,200.000

Sales of articles not needed by government ..... 2,019,376.326

Various fees on governmental advances ..... 290,031.000

6,286,320.253

#### Section VII.

Quantity of rice received over the legal measure or weight ..... 1,011,047.206

Profit on coining gold and silver ..... 2,863,102.004

Levy on Han for war fund ..... 2,794,357.129

Levy for building a palace for the Empress dowager .... 133,254.229

Interest on temporary loans ..... 736,516.684

Fines, confiscations and receipts from the work done in convict prisons .. 808,311.409

Miscellaneous receipts ..... 885,356.586

8,731,945.247

Yen.

Total of ordinary revenues ..... 282,870,871.982

#### Section VIII.

Issue of paper money by Daijo Kawan .. 48,000,000.000

Issue of paper money by Minbusho .... 7,500,000.000

Issue of paper money by Finance and Colonization Departments ..... 9,300,000.000

Issue of new paper money ..... 8,525,444.100

73,325,444.100

#### Section IX.

Temporary, domestic and foreign loans .. 5,643,983.568

Old foreign loan .... 4,782,400.000

New foreign loan .... 10,833,600.000

21,259,982.568

#### Section X.

Repayment of loans for encouragement of industries .... 11,283,424.719

Repayment of loans advanced in proportion to the amount of rice production ..... 4,195,053.462

Interest on loans due to the government and profit from Ten-sho-shi .... 945,273.985

Repayment of advances for brick buildings in Tokio Fu ..... 109,937.802

16,533,689.968

#### Section XI.

Fund for redemption of paper money issued by the Han .. 3,455,048.914

Funds left by Baku-fu and Han ..... 2,162,674.243

Reserves of Han .... 1,533,809.277

Repayment of, and interest on advances made by Baku-fu and Han 1,481,202.168

Ku Han Guwni Koku Sai Tsui Cho ..... 448,830.912

9,071,565.514

#### Section XII.

Donations from daimios and other individuals ..... 1,280,147.955

Fines on Han ..... 504,232.750

Hikioi<sup>2</sup> and recovery

<sup>1</sup> See Part XI of this chapter.  
<sup>2</sup> See Part XII of this chapter.

of lost money....	274,930.072
Receipts from gov- ernment steamers	444,740.817
Indemnity received received from the Chinese govern- ment.....	785,247.790
	3,289,299.384
Total of special receipts.....	123,479,981.534
Grand total of receipts.....	406,350,853.516

Before proceeding to give a statement in outline of each section of the above table, it will be necessary to make some explanations in regard to certain items in some of the sections.

The tax on saké, etc., mentioned in the 5th item of Section III, being imposed according to the revised rule, was collected since the 5th year of Meiji (1875), and the dues levied prior to that year were not included, having been collected under the name of *unjio* or *miyoya* (dues for distillation), and accounted for under that head. Item 8 refers to the tax on silk worms' egg cards and raw silk; item 9, to the stamp tax on silk. An impost on silk had been collected before the rule was revised. The stamp tax on the article was raised after the revision, or since the 6th year of Meiji (1878). Item 12 refers to the tax on male and female servants, carriages, etc., horses, kago and pleasure boats. The tax on vehicles in item 13, was collected from the 1st month of the 8th year of Meiji (January, 1875) on an amended basis. By this reform the tax on male and female servants, carriages etc., kago and pleasure boats was abolished. The interest on the temporary loans due to the government described in item 5 of the Section VII, was paid on funds advanced to banks, etc., to help the circulation of money; and the interest on Chitau-roku and other bonds purchased by the government at the request of their holders, is also included in this item. The principal from which the above two items accrue, is considered permanently as one sum; so that receipts in, and disbursements from, it are not specially accounted for here.

The old foreign loan mentioned in item 2, and the new foreign loan in item 8 of Section IX, are not exactly in accordance with the nominal value of the bonds, inasmuch as the issue price of the old was 98, and that of the new 92½; one pound sterling being considered equivalent to Yen 4.88 in both cases.

[TO BE CONTINUED.]

#### REUTER'S TELEGRAMS.

LONDON, February 11th, 1880.

The previously alleged discovery of Russian correspondence at Cabul has been officially confirmed.

The New York *Herald* is subscribing to the Irish Relief Fund.

(From the *Straits Times*.)

London, 19th January.—It is expected that Her Majesty will open Parliament in person.

The first Lord of the Admiralty has disavowed any intention on the part of the Government to annex Afghanistan.

The *Invalide Russe* asserts that the measures which are being taken in Poland are of a purely pacific nature.

The affray at Kalisch is officially denied.

London, 20th January.—The Council of the Russian Empire is discussing the advisability of introducing Municipalities.

London, 22nd January.—The Turkomans have defeated the Russians at Chikilar.

The Home-rule Members have resolved to assume an independent attitude in Parliament, and have passed a vote of sympathy with the Irish peasantry.

London, 23rd January.—In the Federal Council, Prince Bismarck has introduced a bill to increase the German army by 60,000 men. He urges that the strength of the neighbouring states justifies and necessitates this proceeding.

The report of the Russian defeat is not yet confirmed.

London, 24th January.—Sir William Robinson, the late Governor of the Straits Settlements, has been appointed Governor of Western Australia.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 14TH, 1880.

JAPANESE ERA 2540, MEIJI 13TH YEAR, 2ND MONTH, 14TH DAY, DO-YO-DI.

#### NOTES OF THE WEEK.

##### DIED.

On the 12th of February, at his residence, 68, Bluff, Capt. G. T. M. CURVIS, R.N., aged 53.

The O. & O. steamer *Belgie* arrived from San Francisco on Sunday last, and was followed by the M.M. steamer *Tanis* on Thursday morning. The *Volga* left for Hongkong with the home mails on Monday at 9 a.m., and the P. & O. steamer *Sunda*, for same destination, to-day at noon. The mail for San Francisco, per P. M. steamer *City of Tokio*, will close at 11.30 p.m. on Monday.

The French ironclad man-of-war *Thémis*, flying the Flag of Admiral Duperré, in command of the squadron of the Republic in the waters of the Eastern Pacific, has arrived at Singapore. The official landing of the Admiral took place on the 25th of January.

The esteem in which Mr. Marcus Flowers, Her Majesty's Consul in Hiogo, is held by his fellow residents has been practically shown on the occasion of his departure for Europe. On Saturday last he met, by invitation, a number of the most influential members of the foreign community, who presented him with an address expressing all sorts of good will. The document was accompanied by a valuable testimonial.

It seems more probable than ever that the young Teuton Prince who was so lately the guest of the Japanese sovereign and nation in the capital of this empire, will soon stand in the direct order of succession to the throne of the Kaisers. His elder brother is a delicate lad; and, even if he lives, it may be deemed advisable, in pursuance of the policy of modern and consolidated Germany, to make his brother presumptive head of the family. We read in home papers that the eldest son of the Crown Prince, and grandson of the Queen of England, Prince Wilhelm, has met with an accident. While skating he fell and severely injured his foot, which a year ago was hurt in a similar manner at Bonn. "It is said that the health of the Prince is not very strong, and that it is intended to give Prince Heinrich, his younger brother, a political education in case of his being called upon to succeed to the throne."

Although the gates of the profession of medicine in Europe have been occasionally, though reluctantly, opened to the passage of women, the stony paths of the Law Courts are not yet to be trodden by the feet of "sweet girl graduates with golden hair." The Council of the Incorporated Law Society has replied, to the application of a lady candidate for solicitorial examination, that the members "do not feel themselves at liberty to accept the notice of any woman." A request of another young lady to be admitted to the preliminary examination at one of the Inns of Court has met with a direct and emphatic refusal.

Punch recently suggested that the editors of the Yokohama newspapers should go out and perform the laudable work of mutual extermination. The difficulty is only to find perfect unanimity on the part of the persons who would be principally concerned, and probably chiefly interested in the transaction. Our French *confrères* even, while perfectly, willing to destroy each other, have not agreed how to do it; though one would opine that a couple of bottles of that abominable which plays a part in the pending suit for defamation, consumed with becom-

ing rapidly, might prove as satisfactorily lethal as duelling pistols. In the not very distant French colony of Saigon there has been a disagreement between the rival conductors of two local journals. It differs from the *Courrier-Echo* episode principally in the fact that one *réducteur*, meeting the other in a *Café*, assaulted him. In other respects it is not dissimilar to the quarrel which now awakens a languid interest in the French community of this locality. One man professed a desire to fight: the other declined; and now the matter is to be decided by a tribunal in Saigon.

On the evening of Thursday, the 12th instant, notwithstanding the inclemency of the weather, a very fair audience assembled at the hall of the Tokio Christian Association, to listen to a lecture on Micronesia and the Micronesians by Rev. L. H. Gulick, M.D., of Yokohama. The lecturer began by saying that Micronesia is a name applied to the groups of small islands, situated in that part of the Pacific Ocean, lying north of the equator and west of the one hundred and eightieth meridian, and embracing several groups, of which the most important are the Ladrões, Caroline, Marshall and Gilbert. These islands, as regards their geology, are of two kinds, basaltic and coral. The manner in which the coral islands were formed on the sides and summits of submerged islands, was very clearly described, with the assistance of diagrams. Several varieties of coral were exhibited, some of which, were very beautiful. The natives of these islands differ, in many respects, from those of the islands lying south of the equator, who are really negroes; and also from those living in Polynesia, which lies to the east of Micronesia. Their appearance and customs, and many words in their languages seem to indicate that they may be remotely connected with the inhabitants of Japan, and the comparative study of the Japanese language and the languages spoken on these islands would be a very interesting one. The inhabitants of the various groups do not use the same language; but on islands lying only two or three hundred miles apart, languages are used so different, that the inhabitants of other islands cannot understand them. The dress of the people is chiefly cocoa-nut oil; but on special occasions, an apology for clothing is worn, which is, however, more for ornament than use. Two or three dress suits of the natives were exhibited, which were quite unique in style. The food of the people consists of fish, rats, bread-fruit, yams, bananas, etc. The people living on the island, where Dr. Gulick resided for many years, were never cannibals. Notwithstanding the very low mental and moral condition of these islanders, when they were first visited by missionaries, yet it has been conclusively shown that they were not in so low a state, that the Gospel of Christ could not raise them to a condition of Christian civilization. Of this fact their numerous churches and schools, and the consistent lives of thousands of the Christian natives of these islands, at the present day, are indisputable proofs.—[Communicated.]

The annual meeting of the Yokohama Fire Brigade was held on Monday afternoon, at the Yokohama United Club, when the following report was presented to the members:—

#### ANNUAL REPORT OF THE YOKOHAMA FIRE BRIGADE, 1879.

Your Committee have now the pleasure to place before you the Annual Report, together with the Accounts of the Hon. Treasurer, which it is hoped will meet with approval.

The subscriptions for 1879 exceed those of 1878 by \$125, amounting in all to \$2,665. This increase is due to extra contributions from insurance offices, the amount contributed by private firms being exactly the same as in 1878. The Chinese Guild, we regret to say, has again failed to subscribe.

The period under review has but little of interest to notice with regard to the working of the Brigade, the demand for whose services has again, we are glad to say, been limited. The number of fires at which the engines have attended amount in all to seven,—four in the Settlement and three in the Native Town,—and of these the only two of consequence were, one on 11th May, totally destroying the stores on No. 55, occupied by Messrs. Hohnholz & Co. and Messrs. Wagen Frères, and the other on 23rd July, entirely consuming the Central Hotel and two adjoining buildings. The remaining fires were of small extent.

The Committee are glad to be able to report all the engines in good working order, with an ample supply of new delivery hose. The suction hose of the American and small hand engines will, however, shortly have to be renewed.

The Committee take this opportunity of thanking the other Fire Brigades, and the officers and men of the various men-of-war in port, for the assistance they so willingly render on all occasions of fire.

It is with regret they have to mention an accident which happened to Mr. Gabaretta, engineer of the steam fire engine "Relief," who, while placing the engine in position, unfortunately fell, the wheel passing over and badly crushing his left foot; he is still unable to walk, but can attend to his duties.

The present members of the Committee—Messrs. Fraser, Allen, Playfair, Dunlop, and Glenzie, now beg respectfully to tender their resignations, with the hope that their action during the past year may have met with the approval of the subscribers.

#### LIST OF FIRES, 1879.

Jan. 12.—Fire in Native Town, Homura.  
May 9.—do. do. Benten dori.  
" 11.—Stores on Lot 55, entirely destroyed.  
July 23.—Central Hotel and two stores entirely destroyed.  
Oct. 17.—Livery stables, Lot 162, entirely destroyed.  
Nov. 3.—Fire in Native Town, Honcho dori.  
" 9.—Coal sheds, Lot 172, sheds destroyed, coal damaged.

R. & O. E.

ALFRED W. GLENNIE,  
Hon. Sec. and Treasurer,  
Y. F. B.

Yokohama, 31st December, 1879.

The following gentlemen were elected as the Committee for the ensuing year:—Messrs. Allen, Dodds, Dunlop, J. A. Fraser, and Shand.

The ringing of the bells, and consequent alarm of fire on the night of the 11th instant, was caused by three native houses on the Bluff, near the German hospital being burned down.

The 2540th anniversary of the accession of Jimmu Tenno, (the founder of the present dynasty) to the throne of Japan occurred on the 11th instant, and was observed as a Government holiday and by the native newspaper offices. At noon, salutes were fired and the men-of-war were dressed with flags during the day.

The second Annual meeting of the Tokio Christian Association was held in the Hall, 12, Sanchoime, Ginza, on Friday, the 6th instant, at 8 p.m. In the absence of a President, Mr. J. A. Ewing was called to the chair. The reports of the secretary, treasurer and librarian were then read in order, and after some discussion approved of. The following office-bearers were proposed and unanimously elected: Mr. F. F. Jewett to the post of President; Mr. J. M. Dixon to that of Secretary; Mr. W. M. Angus (re-elected), Treasurer; and Mr. C. J. Cooper, Librarian; Messrs. C. J. Tarring, T. W. Hellyer and J. A. Ewing, members of the managing committee. Several notices of proposed amendments in the existing rules were laid on the table for discussion at a future meeting. A vote of thanks to retiring office-bearers and to the chairman having been passed, the meeting closed with the doxology.

The last mail from San Francisco brought tidings of the death of Joshua Norton, generally known there as "Emperor" Norton. No resident, and scarcely any visitor to San Francisco, but has heard of him, and no doubt many here in Yokohama have

seen the harmless old man as he paraded California or Montgomery streets, waddling along with an enormous twisted cane, decorated with an ancient sword-knot. The *Call*, of 10th January, thus notices his decease:—

"The sudden death of Emperor Norton was the subject of general discourse throughout the city yesterday. Perhaps there is not a resident, young or old, who was not aware of his untimely end, and deplored his loss with more or less feeling. His well-known form, clothed in a dingy dress-parade military uniform, decked with gaudy epaulettes, brass buttons, silk sash, and beaver hat with bunch of rooster's and occasionally peacock's feathers, will be missed from its familiar haunts about town and the principal places of amusement. He was treated by all with consideration, in view of his harmless and inoffensive life, and as one of those eccentric characters to be found in every metropolis. The emperor was especially happy when the recipient of a lady's smile. He fancied many of San Francisco's belles deeply in love with him, and on all occasions exhausted his skill and invention in making himself agreeable. He was the recipient of numerous tender missives on pink paper, all of which he answered promptly, even to the detriment, if necessary, of diplomatic matters. Queen Victoria was his most exalted correspondent, and perhaps the most ambitious, for, according to the telegrams discovered upon his body at the time of his death, she had proposed marriage with him as the best means of welding the bonds of friendship between the United States and England."

The old man's full official title as far as we recollect was "Emperor of California and First President of Mexico." He was chosen by acclamation as chief mourner at the funeral of the celebrated dogs "Bummer" and "Lazarus," in the early days. Many stories are related of him, and his name was a household word all over the Pacific Coast. At a fancy dress ball given in San Francisco, the prize for the best sustained character was awarded to the personation of "Emperor Norton," and at the unmasking in the judge's room, the prize-taker was discovered to be no less a personage than the Emperor himself. The old fellow enjoyed many privileges. He had the *entree* to all the theatres, and used to patronize the best restaurants, where his appetite was a well recognized fact. We have seen him enter Sorbier's for a ten o'clock breakfast and, after polishing off enough for two ordinary men, quietly pocket the morning paper and walk out, sometimes perhaps giving the waiter "two bits," but never paying for his meal. He used to ride free on the horse cars; but on one occasion nearly came to grief. A new conductor asked the old man for his fare; "charge it to the State" said the Emperor majestically in reply. The "new hand" did not, however, view the matter in this light, and the imperial person was only saved from summary ejection by an old resident coming forward and paying for his liege lord. The *Call* speaking of his history says:—

"His early life is shrouded in uncertainty. He has said of himself that he was an illegitimate son of Louis Napoleon. At other times he has claimed the parentage of William IV., of England. It is related that an English visitor who saw Norton in this city asked who he was. Being informed of his title and the story that he was a son of William IV., the gentleman exclaimed, after a few moments' reflection: 'Yes, yes; I thought I had seen that face before. Why, he's so much like His Majesty that forty years ago he would have been taken for the King. Just such a figure; just his walk, and just about as shabby; just as I have seen him come to the theatre in London to draw Mrs. Jordan's salary before he became King.' Mrs. Jordan was William'smorganatic wife."

The "Emperor" regularly levied tribute on the leading commercial establishments of California street, and his taxes (as he termed them) were invariably promptly liquidated. The *Call* says, (speaking of the appearance of the body after death) "a glance at the profile revealed a remarkable likeness to that of Louis Napoleon. There was the same lofty forehead, aquiline nose, heavy moustache and short imperial;" the knowledge of this resemblance probably suggested to the deceased his assumption of the imperial dignity. With Emperor Norton has passed away another of the old links connecting San Francisco with the fall of '49 and the spring of '60 but even in that city of rapid changes, it will be long ere the memory of the deceased Emperor will entirely pass away.

The s.s. *Loudoun Castle* arrived in New York on the 24th December, and the s.s. *Egean* on the 31st.

The *Susan Gilman* sailed from New York for this port on the 26th December; cargo, 88 pkgs. glass-ware, 221 boxes clocks, 400 do. extracts, 37,794 cases kerosene, 50 cases whisky,

200 boxes perfumery, 1,175 cases slates, 150 kegs nails and 1 pkg. furniture. The *Alice Buck* is now the only vessel on the berth in New York for Japan, but there are two advertised for Hongkong.

The following vessels have sailed from New York to Anjer for orders:—December 29th, *Fiery Cross*, 49,500 cases kerosene; 29th, *Elcano*, 38,500 cases kerosene; 31st, *Edward May*, 29,626 cases kerosene.

It is our melancholy duty to record the demise of a valued and respected member of our community, Captain G. T. M. Purvis. The deceased gentleman served in Her Majesty's Navy for a considerable time, and saw much service on the coast of Africa, where his active efforts to suppress the hateful traffic in slaves then carried on in that region, met with the warm approval of the Admiralty. Retiring from the service with the rank of post captain, at a comparatively early age, Captain Purvis subsequently led a life of much usefulness in this community, where for a considerable period he filled the office of Harbour-Master, his genial manners rendering him a universal favourite among all classes. His fatal illness (inflammation of the lungs) was of brief duration, and he expired on the evening of the 11th of February at the early age of 53. The funeral took place this afternoon at four o'clock.

The hearing of the actions brought by Mr. Harmand, Editor, and Mr. E. Antoine, Manager, of the *Courrier du Japon*, against Mr. C. Levy, Editor of the *Echo du Japon*, and the cross-action brought by Mr. Levy against Mr. Harmand, have occupied the French Consular Court for two days during this week. H. Pierret, Esq., Consul, presiding, and Messrs. Devese and Vinay being the assessors. The alleged defamation of Mr. Antoine, consisted in the publication of two letters in the *Echo du Japon*, which the plaintiff and his witnesses gave evidence to prove referred to him. The defendant denied that such was the case, and suggested by his defence that it was the plaintiff himself who was in fault in assuming that he was aimed at by the writers of the letters he complained of. The evidence disclosed that plaintiff had demanded the names of the authors of the letters in question; and compliance with his request being refused he challenged the defendant to a duel, which was also declined. After hearing the evidence on both sides the Court reserved judgment.

The report of the Ladies' Benevolent Association of Yokohama, for the past year, shows that really good work is being done in the community, in an unobtrusive and truly charitable manner. With the comparatively small sum of \$505.35 to operate upon, this association has succeeded in alleviating a great deal of suffering of a description which ordinary charitable institutions can never hope to reach; and yet, not only is the association unincumbered with liability, but a balance of some \$60.00 has been carried forward to the current year. The report discloses that the church school, which is one of the chief cares of the association, is in a flourishing condition, and that substantial assistance has been given to the Temperance Hall, the Hospital, and several distressed persons and families. Surely the Temperance Hall can be supported without trenching on the funds of this association? If not, it says little for the gentlemen of Yokohama. We also notice a relatively large sum, amounting to over one-eighth of the subscriptions raised among the ladies during the year, devoted towards paying the passage home, of an Italian subject who was insane. Why should a local charitable institution be burthened with such an outlay? It almost looks as if the Italian Government were quite willing to transfer their obligations to anyone who would adopt them; the money ought certainly to be refunded. We wish the association, as it deserves, a successful future.

The *Warehouseman and Draper's Trade Journal* of the 6th of December, writing on furs says:—

"The demand for furs generally is brisk, and fair prices for regular goods. Seals are very scarce, and prices extremely high—from sixty to seventy per cent in advance of values two years since."

Last January we gave a list of the exports of petroleum to places east of the Cape of Good Hope from the United States for the year 1878. To-day we give a memorandum of the

shipments for 1879. Messrs. Vernon H. Brown & Co., of this city, who compiled the list for 1878, also compiled that for last year. These gentlemen have been most careful in making up this statement and it is owing to their care and diligence that so valuable a list is given so early to the public. This list it will be perceived is as full in details as that of last year—giving the number of cases shipped to each port and also the date and quantity of each separate shipment. The list shows that a most gratifying increase has been made in this trade during the year 1879. And what is even more gratifying especially at this time, the number of American bottoms employed was largely in excess of the foreign. This was also the case during the year '78, but unless there is a decided change for the better in our merchant marine, it may not continue so. But it is pleasant to contemplate even one trade in which the American flag is predominant and we will not therefore mar that feeling. In 1878 there were shipped for the East from the United States 3,743,120 cases petroleum, while in 1879 5,378,794 cases were forwarded, showing an increase during the last year of 1,633,674 cases. There was an increase in the amounts shipped to Bombay, Calcutta, Madras, Anjer, Java, Padang, Singapore, Rangoon, &c, but there was a decrease in the amount shipped to China and Japan. The number of vessels cleared during 1878 was 135, while in 1879 the number was 167. There was no shipment cleared by steam in 1878, but there were two shipments by steam in 1879, one to Japan and the other to China. This list of Messrs. Vernon H. Brown & Co. warrants the inference that our petroleum trade with the East is a prosperous and growing one. It is to be hoped that if the Messrs. Brown issue a statement next January, it will show a large increase in the trade during 1880, more particularly to China and Japan.—*N. Y. Commercial Bulletin.*

We learn from the *Philadelphia Weekly Press*, that General Grant "has ordered his Ethan Allen cult, now on the farm of General Beale, near Washington, to be sent by the next steamer as a present to the Mikado of Japan." When an occupant of the White House, General Grant's trotting horses were the envy and admiration of the American capital, and there can be little doubt that if his gift to His Majesty the Emperor arrives safely, its performances will cause no small sensation in Tokio.

#### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

#### GOVERNMENT NOTIFICATION.

##### NOTIFICATION No. 6.

It is hereby notified that in conformity with the recent Notification No. 5, ten of the newly printed one yen notes are to be forwarded as samples to the different local governments, and, after being exhibited for inspection for six months, to be returned to the Finance Department.

SANJO SANETOMI,  
Prime Minister.

February 5th, 1880.

#### COURT, POLITICAL AND OFFICIAL.

Two or three chief officials of the Home Department are about to visit Kinsai and Shikoku.

His Excellency Inouye, Minister for Foreign Affairs is about to entertain Mr. Dickenson, an American gentleman who recently arrived here. Messrs. Shibasawa, and Fukuchi and several other prominent gentlemen will be of the party.

His Excellency Okuma, Minister of Finance, who was to have left for Osaka on the 13th instant, has been detained in the capital, and will not leave until Thursday next.

His Excellency Yoshida Kiyonori, Envoy Extraordinary and Minister Plenipotentiary to the Court of Washington, accompanied by First Class Secretary, Mr. Yegi, and two student secretaries, will leave for his post about the middle of next month.

Their Majesties the Emperor and the two Empresses entertained the Princes of the Blood, the *Daijin*, and the *Sangi*, on the 11th instant, in commemoration of the 2,540th anniversary of the accession of Jimmu Tenno to the Imperial throne of Japan.

The revenue of the Home Department is to be decreased by the sum of 30,000 *yen*, and the amount is to be added to the income of the Police Department.

The Statistical Bureau of the Home Department is about to prepare a report on the population of the whole empire, for the year 1879.

On the 11th instant, Yoshiwara, the Superintendent of the Revenue Bureau, proceeded on his annual official tour to the cities of Osaka and Kioto, and the prefectures of Wakayama, Sakai, Shiga, Hiogo, Okayama, and Kagoshima.

His Excellency Tokudaiji, the Minister of the Imperial Household Department, entertained the Princes of the Blood, the *Daijin*, and the *Sangi*, and some of the *Chokunin* officials, altogether about thirty in number, at the Shiba palace the other day.

Miyamoto, Chief Secretary of Foreign Affairs, left for Osaka on the 11th instant.

#### NAVAL AND MILITARY.

Extensive barracks are about to be erected at Goriokaku, Hakodate, at an estimated cost of one hundred and fifty thousand *yen*.

It is proposed to construct a battery in Ishikawa Ken, and fire a time gun daily at noon.

Sub-Lieutenant Muraki and two others officers, have been ordered to proceed to France for the purpose of studying military tactics.

The Japanese Naval Hospital, in Yokosuka, will be opened about the commencement of next month.

The training ship *Tsukuba Kan*, with about thirty additional naval cadets on board, will proceed on a voyage to the North coast of America, at the end of March next. She is expected to return to Japan *via* San Francisco and the Sandwich Islands.

The *Choya Shimbu* says that a Western Admiralty Office, probably in the provinces of Bingo, is shortly to be established, and that Rear Admiral Hayashi, is to be appointed its administrator.

The *First Kaisei Maru*, built at the Kawasaki Dockyard by order of the Navy Department, was launched the day before yesterday.

#### MISCELLANEOUS.

A violent storm raged on Lake Biwa, on the 29th ultimo. One junk was wrecked and a steamer escaped a similar fate with great difficulty.

Mr. Kawase, Chief Superintendent of the Board of Trade, left for Osaka on the 7th instant, in the *Sumida Maru*, to be present at the opening of the Cotton and Sugar Exhibition at Osaka on the 15th instant. During Mr. Kawase's absence Mr. Suzuki will act for him. The medals, prizes, &c., given at the Exhibition, will be distributed by His Excellency Ito, the Home Minister, and Mr. Matsukata, Chief Superintendent of the Agricultural Bureau.

Shinmachi, Takasaki, in the province of Joshu, was the scene of a serious conflagration at about 9 p.m. on the 5th instant. More than one hundred houses and eight telegraph poles were completely destroyed.

A Postal line is to be opened shortly between Japan and the port of Gensan, in Kan-kin-dai, Corea. It is proposed to despatch a steamer once a month after the month of May next, between the two countries.

The *Mainichi Shimbu* contains the following report:—"the number of ships arriving in Yokohama during the past month is 82 Japanese ships with 2,555 passengers, 295,862 packages of cargo, and 4,582 tons of coal: 20 foreign owned ships, with 6 Japanese, 51 European, and 770 Chinese passengers. The ships that cleared from the harbour were 79 Japanese, and 21 foreign vessels."

The eleven students who a short time since successfully passed their examinations at the Imperial Engineering College, left Yokohama for Europe for the purpose of completing their studies, on the 9th instant.

A certain Osaka paper states that the inhabitants of Kinsai are in a state of excitement and have demanded the establishment of a National Assembly. The officers commanding the garrisons at Hiroshima and Kumamoto have been ordered to take precautionary measures to prevent a rising.

A Porcelain Exhibition is to be opened in Berlin on the 15th of March next year. Japan has been asked to forward exhibits.

Miles open 18.

### THE PROPOSED IMPORT TARIFF.

The Japanese Government has issued to the Foreign Ministers, for transmission to their respective Governments, the following Import Tariff:—

#### REMARKS ON TARIFF.

The catty mentioned in the Tariff is the Japanese weight. It is equal to 21½ ounces or 1½ lb. English avoirdupois weight; and to 604.7283 grammes, French weight. The picul is equal to one hundred catties, and the momme is 160th part of a catty.

The yard, foot, and inch mentioned in the Tariff are the English Imperial measures of length. The yard is equal to 3.01608 shaku of the Japanese Kaneshaku, or to 2.41286 shaku of Kujirashaku; and 914.634 millimetres, French measure. The foot is one-third of a yard; and the inch is one-twelfth of a foot.

The gallon, quart and pint are the English Imperial measures of capacity for liquids. The gallon is equal to 277.274 cubic inches and to 2.50363 Japanese, or to 4.54545 litres, French. The quart is the fourth part of a gallon, and the pint, the half of a quart.

Articles contained in the Tariff are classified under sixteen groups, viz:—

- I. Drugs, machines and chemicals.
- II. Dyes and colors.
- III. Metals.
- IV. Skins, horns, hoofs and ivory.
- V. Oil and wax.
- VI. Textile fabrics.
- VII. Stationery.
- VIII. Wines and liquors.
- IX. Sugar.
- X. Tobacco.
- XI. Beverages and provisions.
- XII. Clothing and apparel.
- XIII. Miscellaneous.
- XIV. Articles, free of duty.
- XV. do. the importation of which is prohibited.
- XVI. do. the importation of which is restricted.

#### IMPORT TARIFF.

##### GROUP I.—DRUGS, MEDICINES AND CHEMICALS.

No.	Article.	Per	Yen.	Sen.	Rin.
1.	Acid, sulphuric .....	catty	0	0	4
2.	Alum .....	picul	0	13	0

<b>GROUP XIV.—ARTICLES OF DUTY.</b>					
303.	Almanacs.				
304.	Anchors and chain-cables. Those old and only fit to be remanufactured, shall be dutiable according to No. 42.				
305.	Animals, all kinds.				
306.	Atlases, maps, and charts.				
307.	Barometers.				
308.	Betel nuts.				
309.	Bone of animals, unmanufactured.				
310.	Books, printed.				
311.	Bricks and tiles.				
312.	Bullion, gold and silver.				
313.	Carriages, railway or tramway, and locomotive engines.				
314.	Carts and drays for conveyance of goods.				
315.	Chalk, unmanufactured.				
316.	Coal, coke, and charcoal.				
317.	Coins.				
318.	Cork bark.				
319.	Cotton waste.				
320.	Diamond, glaziers.				
321.	Drugs, medicines, and chemicals, not specifically provided for, from No. 1 to 11 inclusive.				
322.	Eggs.				
323.	Emery sands.				
324.	Enamel.				
325.	Esparto or Spanish grass and other, or pulp of, for manufacturing paper.				
326.	Feathers, unmanufactured.				
327.	Fire engines.				
328.	Fishing guts (known as "tegusu" in Japan)				
329.	Flints.				
330.	Fruits, green.				
331.	Globes, geographical.				
332.	Globes, all kinds, not otherwise provided for.				
333.	Grindstones and whetstones.				
334.	Guanos.				
335.	Gunny bags, new or old.				
336.	Gunny cloth.				
337.	Gypsum and soap stone.				
338.	Hay.				
339.	Hemlock and oak bark for tanning purposes.				
340.	Hops.				
341.	Hydrometers.				
342.	Ice.				
343.	India rubber, or gutta percha, raw or in sheet.				
344.	Instruments, philosophical, astronomical chemical, mathematical, surveying, drawing, surgical and anatomical.				
345.	Kentledges.				
346.	Lime.				
347.	Madder root.				
348.	Malt.				
349.	Mangrove bark.				
350.	Marine of field compass.				
351.	Mercury or quicksilver.				
352.	Microscopes.				
353.	Mineral water.				
354.	Models of invention and other improvements in the arts.				
355.	Oakum.				
356.	Oilcake.				
357.	Ores of all metals.				
358.	Packing mats (known as "Ampera" in Japan.)				
359.	Parliament.				
360.	Pitch, tar, and coal tar.				
361.	Plants, trees, and shrubs of all kinds for cultivation or propagation.				
362.	Platina, unmanufactured.				
363.	Plumbago or black lead, unmanufactured.				
364.	Pumps, all kinds, not otherwise provided for.				
365.	Putty and putty powder.				
366.	Rags, all kinds, for manufacturing paper.				
367.	Rail-road iron bars, chairs, and spikes.				
368.	Rosin.				
369.	Salt in bulk, sack or barrel.				
370.	Salted meat, such as beef and pork in cask.				
371.	Saltpetre.				
372.	Samples or musters of merchandize, imported in reasonable quantities, and subject to the approval of the Customs Authorities.				
373.	Sea biscuits in cask.				
374.	Seeds, agriculture, garden, flower, not otherwise provided for.				
375.	Sign boards, show cards, illustrated show bills.				
376.	Smalt.				
377.	Solder, soft or hard, all kinds.				
378.	Sponges.				
379.	Stick-lac.				
380.	Stones, all kinds, unmanufactured.				
381.	Tallow.				
382.	Tea lead.				
383.	Telegraphic wire.				
384.	Telescopes and spy-glasses.				
385.	Thermometers.				
386.	Timber, lumber, boards, and planks, undressed.				
387.	Travellers' baggage.				
388.	Turmeric.				
389.	Types.				
390.	Vegetables, green, for food.				
391.	Vessels and boats.				
392.	Whale bone and fins, unmanufactured.				
<b>GROUP XV.—ARTICLES THE IMPORTATION OF WHICH IS PROHIBITED.</b>					
393.	Adulterated drugs and medicines.				
394.	False coin of any kind.				
395.	Indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs, or any other indecent or obscene articles.				
396.	Kerosene, petroleum or any other mineral oil which flashes at a heat of less than 110 degrees.				
<b>GROUP XVI.—ARTICLES THE IMPORTATION OF WHICH IS RESTRICTED.</b>					
397.	Cattle, sheep, or any other animals, and hides, skins, horns, hoofs or any other part of any cattle or other animals, the importation of which may, from time to time, be prohibited by Imperial proclamation, when exported from the place where any contagious or infectious disease prevails; but the same is prohibited when infected.				
398.	Opium is prohibited to be imported except by the Japanese government for medical purposes.				
399.	The importation of arms, gunpowder, and all munitions of war, may, from time to time, be prohibited by Imperial proclamation.				
<b>ARRIVAL OF THE AMERICAN MAIL.</b>					
<b>TELEGRAMS.</b>					
Moscow, January 9th.—The <i>Gazette</i> announces that the police have discovered the depot of revolutionary proclamations.					
Berlin, January 9th.—In the Lower House of the Prussian Diet, the Minister of Finance, in asking a vote for the relief of sufferers by the famine in Upper Silesia, announced that the Government also contemplated the construction of two branch railway lines in Silesia, which would require a grant of twelve and a half million marks. He said 106,000 persons at present needed relief, and that provision for these had been made up to the end of the month. The Government, he said, hoped to effect lasting improvements by extensive drainage works and the promotion of local industries.					
Emperor William, in replying to the New-Year's congratulations of the municipality of Berlin, writes that he avails himself of this opportunity to give a decided expression of a hope that, with the blessing of the Almighty, his efforts may succeed in securing peace for Germany.					
London, January 9th.—The authorities of the French Cable Company say, as soon as the cable to make the connection between Brest and England is laid, their cable, which is in perfect working order, will be opened for traffic, certainly not later, they think, than the first week in February.					
Paris, January 9th.— <i>La France</i> announces that Count de St. Villar has consented to retain his post as Ambassador at Berlin, provisionally, and that probably he will remain permanently.					
Madrid, January 9th.—The Spanish Society for the Abolition of Slavery has addressed a petition to Congress					

for immediate and simultaneous liberation of slaves in all Spanish possessions.

Three sections of the minority in the Chamber of Deputies persist in abstention.

Gonzales, the would-be regicide, has written to King Alfonso, asking to be pardoned.

London, January 10th.—Advices from Quittah, December 9th say: 'The Lieutenant-Governor of the Gold Coast has secured from the King and headmen of Agbosomes the cession of their seaboard, extending two miles inland. The adjoining territories of Afflowhoa, Porto Seguro and Bogidali, as well as Aghivri, Grand Popo and Little Popo, are expected shortly to come under British control in the same manner. It is understood the action of the Government is partly due to the fact that some American traders on the coast have entered into an agreement with the King of Agbosomes, and have leased a portion of his territory, and loaded large cargoes of spirits, which have been brought into English territory without paying duty.'

London, January 10th.—John Humphreys Parry, the eminent sergeant-at-law, and one of the leaders of the home circuit, is dead, aged sixty-five years. His disease was congestion of the lungs. The death of Mrs. Parry, from grief at the loss of her husband, is also announced.

London, January 10th.—A Paris correspondent, discussing the probability of the appointment of Chailionel Lacour, Republican Senator from the Department of Buches de Ecluse, as Ambassador at Berlin, to succeed Count de Villiers, says: "Nobody will suppose that the presence of a Radical Ambassador at Berlin would be calculated to benefit France. The majority think it the duty of the new Cabinet to give proof of the prudence of patriotism by keeping at Berlin an Ambassador who least compromises."

Paris, January 10th.—General Farre, the new Minister of War, has displaced all seats in his department of those who held office previous to his accession.

Brussels, January 10th.—The *Nord*, commenting on the dispute between Russia and Serbia over the railway question and the rumor of Russia's engagement to protect the latter says: "If the Treaty of Berlin imposes on Serbia the obligation of granting concessions to Austria, then the menacing language of the Vienna and Pesth journals is useless. If an obligation does not exist, they are impolitic, and the consent of Serbia is unlikely to be obtained by such means. But, in any case, the dispute cannot affect the relations between Russia and Austria, united as they are by a perfect understanding for the loyal execution of the Treaty of Berlin."

Berlin, January 10th.—At Krupp's establishment, at Essen, prices in general are about fifty to sixty per cent higher than three months ago, and it is most likely Krupp will have to engage several hundred additional workmen. The present force is engaged up to the end of 1880, and many orders have been refused. Russia and Chili particularly figure in orders for war material.

Madrid, January 10th.—The Cortes reassembled to-day. The Chamber of Deputies appointed delegates to congratulate King Alfonso on his escape from assassination on the 30th ult. The Constitutionists and Centralists were absent from the Chamber, but they will join in the congratulatory deputation.

An official dispatch says a Cuban leader, with sixteen officers and sixty-five men, have surrendered at the village of El Cobre.

Halifax, January 10th.—H. M. S. *Bacchante* arrived at Barbadoes on Christmas Day with the sons of the Prince of Wales—Albert Victor and George—on board. The Princes landed and proceeded to the Governor's house. Admiral Sir E. A. Inglefield hoisted his flag on the *Bellerophon* at Bermuda, December 27th, on his promotion to be Admiral of the Fleet. The flag was duly honored with a general salute.

Valparaiso, January 10th.—The Bolivian troops at Tacna revolted against President Dazza, and chose Jamaicho for their leader.

Ottawa, January 10th.—The Montreal petition to the Queen, in favour of the oppressed Irish tenants, was handed to the Governor-General to-day for transmission to England. The Governor-General expressed sympathy with the suffering tenantry, and suggested that the Irish be encouraged to come to Canada.

A combination of stockholders in the banks is proposed

to protect themselves from negligence and frauds of bank officers.

Paris, January 10th.—The *République Française*, Gambetta's organ discussing the condition of Russia, says: "without troubling to see if all is well at home, Russia has cast herself upon a path of conquests and chimeras. She has the wrong road. Instead of following the Utopian dream of striking Turkey, at the risk of obtaining but a menagre share of the spoils, how much wiser it would have been to have entered upon transformation at home. Her best policy now is, resolutely to take in hand those reforms, which a vast majority demand and expect. We must always reckon with Russia, but so long as she remains in her present unhealthy state she will be feeble, and play an unimportant part in the destinies of Europe. When a house is on fire there is a decided originality in running out of doors and setting fire to the houses of others. Reasonable people at such times endeavour to extinguish their own conflagrations."

Paris, January 10th.—A serious strike is in progress among miners in the Basin of the Loire. Some disturbances occurred.

London, January 10th.—The *Economist* says gas properties after numerous variations, have recovered some of the ground recently lost.

New York, January 10th.—Cable dispatches say that McCarthy has resigned his representation in Parliament for Mallow, because he is resolved to have no connection with Parnell's policy, and also because he is disgusted with the bickerings and jealousies of Home Rulers in Parliament.

A number of unemployed laborers at Cork yesterday plundered meat and bread shops.

Process-serving was violently resisted in Killanure, County Galway, the parish priest leading in the resistance and causing the chapel bell to be rung to give warning of the approach of the servers.

Three American citizens, arriving in England, have been suspected of being Fenians in disguise, and have been subjected to many police indignities and absurd press criticisms.

London, January 10th.—The most intense excitement was occasioned to-day by a sensational scene in the Halton Garden Italian Church. While the priest was celebrating mass, a man in the audience fired a pistol at him. The church was crowded, and the noise caused a semi-panic. The altar was struck by the bullet, and subsequently the flames started out from the side of the altar, and the church was damaged £1,000. The man was arrested after a hard fight by the police, and when taken into custody, had a long stiletto in his hand, with which he attempted to stab those who seized him.

New York, January 10th.—A London dispatch says: There is a rumor about town to the effect that the Government is in possession of startling and alarming news from India, which it is endeavoring to keep secret until a Cabinet Council can be held to consider it. Mohamized Jan is believed to have been reinforced by several thousands of Shore Ali's regulars, from whom the cannon now mounted at Ghuzni were probably obtained. He has assumed political as well as military authority, and is collecting revenues in the name of Mowa Khan, whom he pretends to regard as the rightful and reigning Ameor, though temporarily kept out of his capital by forcible occupation by the British. He has sent emissaries to Turkistan, commissioned to stir the people up to engage in immediate warfare upon the British, as the common enemy; and the probabilities are said to be that on account of his high reputation as a soldier and commander in the wars with Turkistan, he will have no inconsiderable success in raising men to join him in Ghuzni, or to begin hostilities on a home basis. It is not believed that General Roberts will hazard an advance on Ghuzni before Spring. The difficult nature of the road between the Capital and fortress will of itself preclude this during the Winter, rendering an advance almost or quite as perilous from Cabul as from Candahar, from which point the contemplated expedition is for the present abandoned, although the distance is only about one-third as great. The rumor that Abdul Karura is raising a force in Kohistan for Mohammed, is regarded as well authenticated. The fact that when Ghuzni is understood to be a most important centre

of the military operations of the insurgents and is the strongest fortress in the country, as no efforts are proposed toward its capture, is held here to be significant of the existing situation of British Afghanistan.

Vienna, January 10th.—Austria has received a circular from Montenegro protesting against the non-fulfilment of the stipulation for the surrender of Gusinje; accusing the Porte of inciting the Albanians to resistance; claiming indemnity from Turkey for being forced to keep a large number of troops under arms, and urging the Powers to take energetic action on behalf of Montenegro.

London, January 10th.—A Vienna correspondent confirms the report that a conflict has taken place near Gusinje, in which the Montenegrins defeated the Albanians, but places the strength of the force engaged at 5,000 for the former, and 7,000 for the latter. The Albanians were commanded by the chief of the Albanian league. The fight lasted five hours.

St. Petersburg, January 10th.—Lieutenant-General Skobloff, Inspector General of Cavalry, father of General Skobloff, who distinguished himself in the Turkish war, is dead.

A newspaper called *The Word* has been suppressed for publishing objectionable political articles.

London January 12th.—At Cabul, Mahomed Jan, having surrounded Ghuzni with a strong force, killed the Governor, Abdul Kadir, and looted the city. He is now endeavoring to raise tribes to attack the British. The priest Moosli Alam has severed his connection with Mahomed Jan in consequence of the behavior of the insurgents in looting Cabul.

Lahore, January 12th.—A Persian correspondent writes that the Herat and Balkh regiments of the Afghans are preparing to march to Ghuzni to join Mahomed Jan.

Rome, January 12th.—The Pope has summoned all the German Bishops to Rome to confer on the affairs of their respective dioceses.

Havana, January 12th.—Among the passengers by the Spanish mail steamer is De España, Spanish Minister Plenipotentiary to China. The object of the voyage of the latter is apparently in relation to Chinese emigration to Cuba.

Berlin, January 12th.—Russia has been questioned relative to the concentration of troops in Poland, and has replied that as there is no longer any danger of collision with Turkey, regiments hitherto stationed in the Crimea and Bessarabia are merely withdrawn to Poland as a more convenient district.

Vienna, January 12th.—The *Presse* is of opinion that a collision between Russia and England is inevitable. The *Presse* says that General Skobloff recently declared at a banquet that Russia is on the eve of her national war.

London, January 12th.—Correspondents of the Press Association report the distress in Ireland as increasing. Five hundred inhabitants of Skulebog District, County Limerick are on the brink of starvation. They proceeded to-day in a body to Croom and obtained four cart-loads of bread, by an urgent representation of their extremity.

The streets of Cork are patrolled by mounted police, and the Magistrates of that city have passed resolutions, urging greater activity in the suppression of demonstrations partaking of the nature of bread riots, and asking for the appointment of additional policemen.

At a meeting at Birkenhead yesterday, the Mayor presiding, it was resolved to raise subscriptions for the Duchess of Marlborough fund.

Davitt, Daly, Killen and Brennan to-day received notices commanding them to appear before the Court of Queen's Bench, Dublin, on the 16th instant.

London, January 12th.—The largest cotton mill at Bradford, Sutcliffe & Sons, owners, has been burned. Loss estimated at about £70,000. One workman was killed.

Madrid, January 12th.—The Abolition Society has placarded the city with the petition recently addressed to the Cortes for the immediate and complete abolition of slavery in all Spanish possessions. It is signed by many Republican and some Liberal West Indian Deputies.

London, January 13th.—The Tichborne case cannot be pressed until after the middle of February, most of the Judges being on circuit until that time.

Gladstone has gone to Cologne, in consequence of the

serious illness of his sister, who has long resided abroad, and who, it is understood, is a Roman Catholic.

There is reason to believe that upon the opening of Parliament the attitude of Lord Derby in relation to the Liberal Party will assume the character of cordial association, especially in regard to the great question which the coming elections is to decide—the question of confidence in the foreign policy of the Government. Lord Derby has left no doubt in the minds of responsible leaders of the Liberal Party of his friendly accord and sympathy with their opposition to the policy of the Government.

Madrid, January 13th.—Some of the members of the minority in the Chamber of Deputies consider the explanation of Premier Canovas del Castillo, in the Senate, that he did not intend to insult the minority, as satisfactory, but other members still regard the explanation as insufficient to justify members of the minority in resuming their seats in the Chamber.

The Minister of Foreign Affairs has informed Congress that negotiations for a treaty of commerce with the United States are proceeding with fair rapidity.

Paris, January 13th.—Gambetta, Republican, has been re-elected President of the Chamber of Deputies, by 259 out of 308 votes recorded. There were 40 blanks.

A decree making changes in seventeen prefectures, fifty sub-prefectures and sixty-four prefecture councillorships was gazetted to-day.

Pesth, January 13th.—The Public Prosecutor has issued a summons for Baron Maytheni, who will be tried for participation in a duel which resulted fatally to his opponent, Herr Verhoosy, on the 11th instant.

London, January 13th.—A Berlin correspondent hears upon what he considers good authority, that the King of Denmark has informed Emperor William, that the Duke of Cumberland will not accept the latest Prussian proposals concerning the Hanoverian question.

St. Thomas, January 13th.—News has just arrived here of terrible floods on the Island of St. Kitt's, by which 200 lives have been lost. Property to the extent of \$200,000 has been destroyed.

Madrid, January 14th.—The Minister of Foreign Affairs has been authorized by the Cabinet to submit a bill to the Cortes for a modification of import duties on sugar and molasses from Cuba and Porto Rico, and for the suppression of duties on sugar-cane from those Islands.

Paris, January 14th.—The *Temps* says: Advice from Madrid state that Premier Canovas del Castillo is still endeavouring to induce Opposition members of the Cortes to resume their seats. It is rumored that if he fails he will take one of three courses—propose a law declaring the seats of absentees vacant, dissolve the Cortes, or resign. If he adopts the latter course, Señor Sagasta will form a new Cabinet. General Martinez Campos promised to support Señor Sagasta, if the King calls the Liberals to power.

Berlin, January 14th.—The *Provincial Correspondenz* denies the assertion of the *Aurora*, organ of the Vatican, that endeavours to establish a compromise between Prussia and the Vatican rests solely with Bismarck, and says: "Such imputations arise from ignorance, or, possibly, from wilful misconception. The Ecclesiastical laws belong to the Prussian internal policy, the responsibility for which Bismarck shares with his colleagues."

London, January 14th.—There are indications that the distress in County Kerry, Ireland, will amount to a famine.

Paris, January 14th.—The Senate to-day re-elected Martel President, and Count Rampson and Polletier and Calman, Vice-Presidents.

Havana, January 14th.—A grand official banquet will be given in honor of General Grant, and a brilliant reception tendered him at the palace by high public functionaries and distinguished members of society of this city.

Madrid, January 16th.—The counsel employed to defend Gonzales, who lately attempted the life of King Alfonso, has demanded an examination of his client's mental condition.

Dublin, January 16th.—The writs served on Davitt, Daly, Killen and Brennan, indicted for sedition, being returnable to-day, they attended at the Crown Office and were informed that they still have four days before surrendering. The proceedings connected with their surrender will be formal and private. Many formalities, probably

occupying a week, must be observed before the trials can be commenced.

Madrid, January 16th. — A land-slip destroyed the village of Alcala del Jucar, province of Albacete. Several persons were killed and fifty families made homeless.

Paris, January 16th. — The Ministerial statement was read in the Chambers to-day. It is to the effect that the change in the Cabinet does not indicate an abandonment of the prudent policy which is most suitable to the internal affairs of France, but that it indicates that France may henceforth advance with decision in the path of necessary reforms and successive improvements. The Government will apply itself to the realization of these reforms without precipitation or vacillation, and it relies upon the energetic support of the Chambers. It says that events have raised a certain number of questions which cannot be left in suspense without injuring the interests of the country. For each one of these the Government intends to bring forward a solution. This declaration was much cheered by the Left. The statement further announced that the Government would ask the Senate to vote the bills relative to public instruction, already adopted by the Chamber of Deputies, and which should be completed by a law upon primary instruction, drafted in conformity with the wishes of the country. It would be the duty of the Government to make good selections of heads of administrative staffs and to bring firm and vigilant action to bear daily upon all lower officials. The statement then continues: "We shall adhere to the bill of our predecessors relative to the right of public meeting, and we will introduce a Press bill, based upon the broadest views of freedom, but not proclaiming impunity, because we regard it as unwise to expose the Republic to attacks and outrages which no Government ever tolerated." It then mentions a vast programme of public works, the settlement of the Customs system, and the completion of Army organization, as tasks the accomplishment of which will worthily crown the labors of the present Legislature.

The statement concluded: "As for ourselves, as faithful exponents of your decisions, we shall apply the laws with such moderation, impartiality and liberal spirit as will procure for the nation the indispensable blessings of peace and tranquility. We shall be firm but conciliatory, because we desire not to exclude but reclaim. [Cheers from the Left and ironical laughter from the Right.] We desire to found a Republic into which all good Frenchmen may eventually enter. You will aid us in this noble task, so that when your legislative period terminates, you will have the right to say (and the voice of the people will repeat after you) that time has been well spent, and you will have deserved well of your country."

The statement was well received, especially in the Chamber of Deputies. It makes no reference to foreign policy.

#### ARRIVAL OF THE FRENCH MAIL.

The *Tanais* came into port this morning, (12th) but the European mail has as usual been anticipated by the American. The following from the *Straits Times* respecting the position of affairs in Afghanistan is fuller than the telegrams already published and is calculated to allay any uneasiness:—

The reports received from South Afghanistan intimate that the Herati Regiments were induced by Ayub Khan to commence the attack on the Kabuli Regiments, and that Ayub joined the latter during the fight. The Herati Regiments are said to be making ready to attack Herat, where the Kabulis are for the time being shut up.

The Turkomans are said to be making demonstrations against Herat Sirdar, and Mir Afzul has evacuated Furrak. News has been received from General Roberts up to the 4th instant, General Gough's Brigade has occupied Bala Hissar where the troops will soon be provided with very fair quarters. Sir Michael Kennedy and his party have got as far as Latabund. General Hugh Gough accompanies him, and will take steps to render the communications secure. In Kabul the city people have returned. The charitable dispensary has been re-established, and the city has never been so quiet or so full, nor have the supplies been so plentiful. Nearly all the Kohistani Chiefs have come in, and those from Logar are expected in a few days. The failure of the late rising has strengthened our position at Kabul, and tended greatly to restore tranquillity in the country. Sir Frederick Roberts has taken the opportunity to offer an amnesty to those who took part in the recent fighting against us, excepting only the two or three leaders. The 12th B. C. have moved to Jellalabad from Butkhak, and the 14th Bengal Lancers gar-

rison Gundamuck and Butkhak. A Convoy of the sick and wounded was to leave on the 5th en route to India. Colonel Macgregor is going with them to consult with General Bright about the disposition of the troops between Jumrood and Latabund. A telegraph line will very shortly be re-opened as far as Latabund. Telegrams received in Kabul from India, are dated 1st January. The regular dak to Kabul has been reestablished. Pneumonia is on the increase, otherwise the troops continue healthy. General Bright reports that an accident happened on the 5th to a party returning from a reconnaissance towards the Lughman Valley. Five men of the Carabineers, being drowned while fording the Kabul river near the Derchuta Gorge. The ford is the ordinary one constantly used, and natives were also crossing on foot at the time. The report of a rising among the Mohmands is unfounded.

#### THE JAPANESE PRESS.

##### TREATY REVISION.

(Translated from the *Nichi Nichi Shimbun*.)

(Continued from the "Japan Weekly Mail" of 7th Feb.)

IT is a general rule that every country exercises jurisdiction within its own territory, and all residents, whether permanent or temporary, are obliged to yield obedience to the local laws. Here in Japan it is altogether different, and, as we have already stated, there is the anomaly of no less than fifteen different codes of laws in full force in the small foreign settlements where the foreign population may amount in the aggregate to some few thousands. If it is asserted that this state of matters is right and proper, then there is nothing under Heaven that should be objected to! We wish our readers to distinctly understand how foreign offenders are dealt with in Japan. British subjects are punished under British law, French under French law, and Americans, Germans, Italians, Russians, Austrians, &c., all under the different laws of their respective nationalities, none of them being subject to Japanese law. Now let us state a supposititious case to show how this system might work in actual practice. Suppose that five sailors, subjects of as many different countries, meet in a wine-shop belonging to a Japanese. They drink together, become intoxicated, and ultimately fight. The proprietor attempts to quell the disturbance when the five men turn upon him in a body, beating and kicking him to death. The Japanese police hear of the occurrence, arrest the offenders and hand them over to their Consuls. The five sailors belong, as we have said, to different nationalities; A is British and commenced the disturbance; B, French; C, American; D, Russian; and E, Dutch. Now although none of them can properly be called the principal criminal, yet there can be no doubt that he who first struck the dead man should be considered the actual cause of the man's death. Let us suppose that A struck the first blow. Under the 176th article of the Revised Criminal Code of Japan, which provides "If here be a case where people, in quarrelling, wound or cause death, without intending to do so, the principal offender shall be sentenced to penal servitude for life, and if the principal offender took no part in the fight, then he who did so is to be sentenced to penal servitude for life, and the principal to penal servitude for ten years, and the rest of the parties concerned to penal servitude for ninety days." In the case we have mentioned under our law, A, the principal, would be sentenced to penal servitude for life, and B, C, D and E, to ninety days penal servitude. In consequence, however, of extra-territoriality being in force, each of the prisoners would be tried by his own country's laws, each different from the other. It might then happen that A under British law would be sentenced to three years imprisonment; B, under French law to one hundred days confinement and a fine of one hundred francs; C, under American law to eighty days penal servitude; D, under Russian to penal servitude for one year and E, under Dutch law, to thirty days penal servitude. These anomalies would arise simply because the laws of different countries were enforced in respect of the same offence, there being no uniformity between them. Again, take the case of the editors of a Japanese, an English, a French and an American journal. With a precisely similar object in view they have all written strongly against the policy of the Government. The legal authorities, considering the articles calculated to overthrow the Government and revolutionize the country,

determine to proceed against the native journalist under the 13th article of the Press laws which renders him liable, on conviction, to imprisonment for not less than one, and not more than three, years. An example having been made of the native, it is then desired to prosecute the foreign editors. To do this complaints must be made before the different Consuls, some of whom might refuse to entertain the matter at all, while others would probably inflict a fine of a few dollars or two or three days imprisonment. The only remedy the Japanese officials would have in such a case is appeal to the higher Foreign officials abroad, the absolute impracticability of which must be apparent to everyone. Nothing is so pernicious as a system that permits of persons guilty of the same offence and in the same degree receiving different sentences, and we cannot imagine anything more likely to lead to disputes than fifteen different laws in force in the same locality. Such is unfortunately the case here in Japan; and our laws, which should be equally obligatory both on natives and foreigners, are usually inoperative as regards the latter.

Some persons who have noticed proclamations issued by the Foreign Representatives to their nationals stating, "I have approved such and such a law passed by the Japanese Government, and you are hereby ordered to observe it," as frequently happens after arrangement between our Government and the Foreign Representatives, have arrived at the conclusion that the law referred to is binding on foreigners without any further difficulty. This is a mistake and is due in great measure to the formalities indulged in by the Foreign Representatives. We desire everyone who may adopt any such erroneous idea to consider if the Foreign Representatives have any authority to pass such laws themselves; and also to bear in mind that the foreign Courts administer justice according to their own laws, which alone are treated as binding upon their countrymen. Among the Representatives accredited to Japan, the British Minister is the only one who is authorised to make regulations binding upon his nationals. This he does under the special powers granted to him by the Order in Council for China and Japan which states in effect that, "the British Minister is hereby authorised to make temporary laws to meet pressing occasions and apply them immediately to British subjects residing in the place to which he is accredited, which law shall be in force pending approval or otherwise by the British Government." Thus it is that a law made by the British Minister is just as effectual for the time being, and has just as much weight in the British Consular Courts, as if it had been made by the Parliament in England; and it also accounts for the British Minister promulgating regulations upon particular subjects instead of simply expressing approval of existing Japanese regulations to a similar effect. The other Foreign Ministers are differently situated; they have not been clothed with any legislative power; and any proclamation issued by them has not the slightest influence or authority in their law Courts. Thus when the Japanese Government made the Quarantine regulations last summer, the American Minister issued a proclamation, addressed to American citizens, saying "You are hereby ordered to observe the Japanese Quarantine regulations;" but this proclamation was in reality a mere idle form, and if any American citizen had been brought before the American Consul charged with a breach of the Quarantine regulations, the Consul would have been obliged to discharge him, as he would have committed no offence against American law. If it happened that there existed any American law similar in its provisions to the Japanese Quarantine regulations, and the offender was punished in accordance therewith, any such punishment could not be said to follow a breach of Japanese law or of the Minister's proclamation. In fact these proclamations relating to our laws have not the slightest influence in enforcing them in Consular Courts, and are only empty ceremonies, expressions of good will perhaps, but nothing more. As matters stand at present, Japanese law is inoperative among the foreign residents in the settlements which form portions of the territory of the Empire of Japan.

The ill effects of the system are not confined to criminal cases alone, but extend also to civil proceedings.

When the defendant in a civil action is a Japanese and the plaintiff a foreigner, if the plaintiff is dissatisfied with the judgment of the Court of first instance, he can appeal to a higher Court, and from that Court again to the Supreme

Court; but on the other hand, when the relations of the parties are reversed, and the defendant is a foreigner and the plaintiff a Japanese, the plaintiff practically must rest content with the first decision given. No doubt Courts of Appeal exist in foreign countries, but what benefit are they to Japanese suitors? Take the case of a Japanese suing a British subject in Yokohama. If he is dissatisfied with the local decision where must he appeal for satisfaction? He has to travel a long distance abroad, to the British Supreme Court in Shanghai. As far as Great Britain is concerned matters are not so bad, but the same cannot be said of other countries. If a Japanese subject has an appeal against the decision of the local Court of any other nation, he is compelled to go either to Europe or America to prosecute it, travelling over either the Pacific or Indian Oceans and the Mediterranean Sea. Thus it happens that in civil cases against foreigners, Japanese are practically deprived of the right of appeal, which is another instance, out of many that could be mentioned, of the privileges enjoyed by foreigners which are denied to Japanese.

We have only shewn some of the results of extra-territoriality as it affects Japanese. If we were to go thoroughly into all the evils and anomalies of the system, we should have to point out the disadvantages resulting to foreigners themselves both as regards their persons and properties. Sometimes they are, in common with our countrymen, forced to submit to injustice because the other person belongs to some nationality whose law affords no remedy. We see the same offence punished with a different degree of severity in different Courts. Again, persons having equal claims have not the same rights. We remember one very remarkable case, which might well have happened in a country where there was no law at all. A sum of money was lent and the creditor subsequently broke into the debtor's godown and wanted to forcibly take away sufficient goods to cover the loan! If we were to detail all the extraordinary and indeed lawless acts that have taken place, we should exhaust the patience of our readers, to whom many of the discreditable circumstances are probably already well known. It is sufficient to say that, owing to the extra-territoriality provisions in the treaties, the laws of Japan are nugatory in a portion of the Empire; that no less than fifteen foreign codes are in force at one and the same time in the foreign settlements, and that both Japanese and foreigners suffer numberless inconveniences under the present anomalous system. It is therefore very easy to see that extra-territoriality is productive of great and unnecessary evils to both Japanese and foreigners.

It is presumably by virtue of the extra-territoriality provisions in the treaties that, at present, all civil and criminal cases are adjudicated upon in the different Consular Courts. In attentively reading the treaties, we fail to find any authority for such a course of procedure. Let us examine the treaties and endeavour to ascertain if any such power as the Consuls both claim and exercise is really conferred. The British treaty is the most precise as we have stated already, therefore we will refer to it, merely remarking that all the other treaties are to similar effect. The only articles of this treaty which refer to the point we are now discussing, are those from the 4th to the 5th. The 4th article provides that, "all questions regarding civil and criminal cases, arising between British subjects in Japan, shall be subject to the British authorities." The 5th article that "British subjects who may commit any crime against Japanese subjects or the subjects or citizens of any other country shall be tried and punished according to British law." The 6th article that, "if a Japanese or British subject makes a complaint at the Consulate, the Consul will inquire into the merits of the case and do his utmost to arrange it amicably." And the 7th article that, "should any British subject fail to discharge debts incurred by him to a Japanese subject, the British authorities will do their utmost to bring him to justice and to enforce the recovery of debts." It thus appears that the privileges of extra-territoriality enjoyed by Great Britain are four in number, viz.—1st, the right of adjudicating between British subjects under article four of the treaty; 2ndly the right of punishing British subjects committing crimes against Japanese or others, under article five; 3rdly the right of arranging complaints amicably under article six; and 4thly, the right to bring a British

subject to justice and enforce payment of liabilities, under article seven. It may appear at first sight as if the whole judicial jurisdiction both civil and criminal was vested in the Consuls, and the 6th article is constantly quoted in support of this contention. This view is, however, erroneous, and can only be held by persons who have not given the subject due consideration. A careful reader cannot be misled by the article in question which states merely that the Consul will endeavour to arrange all disputes amicably, acting in fact in an *executive* capacity. The 7th article expressly mentions the *judicial* power to enforce payment of debts; how then can it be asserted that the 6th article confers a power to adjudicate in civil and criminal cases? If such is the case what is the object of article seven? At the commencement of our foreign intercourse, the Consuls were granted the power to enforce payment of debts, and it is quite clear that their authority, except as between their own nationals, extends no further in civil matters. The 6th article evidently refers only to a mere executive proceeding. The phrases, "to arrange it amicably," and "to settle it in a friendly manner," are conclusive on this head.

From what we have pointed out it seems very evident that the intention of both parties, at the time the treaties were entered into was, in civil matters to entrust the amicable arrangement of disputes and the enforcement of liabilities to the Consuls, but that jurisdiction was not given them in other civil cases. If, as we contend, this is the actual state of affairs, then it follows that all causes of action relating to marriage, property, the fulfilment of contracts, purchase and sale, the hiring or discharge of servants, in fact, all civil proceedings except those relating to the mere recovery of debts, should be tried before the Japanese tribunals. It would also follow that all civil cases arising between a Japanese and a British subject, or the latter and the subject of any other nation, should also be tried before the Japanese tribunals and be decided by Japanese laws. Although it is certain that foreigners are, in civil cases arising between subjects of different countries, subject to our laws, yet as a matter of fact, the Consuls have now been for over twenty years delivering judgments without any authority and exercising a jurisdiction to which they are not entitled. All this mischief has been occasioned through the carelessness of the Shōgunate officials in not claiming their strict rights under the treaties; but at the same time it was a very discreditable procedure on the part of the Foreign Powers to usurp an authority for which they had no warrant. However, as we have already explained, towards the close of the Shōgunate, foreigners managed everything to suit their own ends, and the only object our Government consulted was to procure a temporary peace. Therefore we will not further blame the Shōgunate; but how is that the able ministers who have been in office since the Restoration, now over ten years, and who have been ostensibly striving to procure the restitution of the sovereign rights of Japan and place this country in its proper position among nations, have done nothing to remedy the evils occasioned by the slipshod construction of the treaties which has obtained up to the present? How is it that the Consular Courts still exercise their illegal jurisdiction and that foreign litigants of different nationalities, and Japanese, are not compelled to resort to the tribunals of this country for a settlement of their disputes in civil actions? Why are not foreign residents compelled to abide by our laws as far as relates to their personal rights, property, and commercial dealings? Is it not like beginning at the wrong end to attempt the abolition of the extra-territoriality clauses in the treaties, and yet pass over the illegal seizure of our judicial rights? When we reflect on these matters we cannot absolve the functionaries of the present Government from all blame, but it may be that they are practically powerless in the matter.

According to the existing treaties, foreigners are theoretically bound to observe Japanese law in civil matters, in the way we have already demonstrated. We contend that they are equally subject to our laws in criminal cases. This we shall also prove from a strict construction of the treaties. The 5th article of the British Treaty provides that, "British subjects who may commit any crime against Japanese subjects, or the subjects or citizens of any other country, shall be tried and punished by the Consul, or other public functionary authorized thereto, according to the laws of

Great Britain." It is plain, therefore, that British subjects offending against Japanese cannot escape from punishment. Now offences are divided into two classes; against the community and against the individual. For example, in our criminal code, crimes affecting marriage, robbery, murder, fighting, libel, fraud, rape, &c., relate more particularly to wrongs upon individuals; while the laws relating to execution, arson, gambling, arrest, the administration of justice, &c., &c., concern the whole community, and a breach of any of them is an offence against the entire people. Now, from the wording of the article just quoted, it appears that the Plenipotentiaries who entered into the treaty were willing that British subjects committing any offence against an *individual* Japanese should be punished according to British law; but if against the general community, then he should be punished under the law of Japan. It would therefore follow from a strict construction of the clauses in the treaty conferring the privilege of extra-territoriality that, if a British subject is guilty of what may be termed personal offences, such as robbery, murder, or rape, he will be tried, in conformity with article five, by British law. On the other hand, if a British subject commits any breach of the laws affecting the community, such as the Quarantine, Harbour, or Shooting regulations, or the local police acts, he would not be within the purview of the immunities conferred by extra-territoriality and therefore liable to trial and punishment by the laws of the land in the same way as if he was in any other country. Persons blinded by prejudice may assert that the article covers all kinds of offences of every description. If so, then how is the explanatory sentence "against Japanese subjects, or the subjects or citizens of any other country" to be accounted for? It is perfectly certain that the experienced diplomatists who drew up these important clauses in the treaties, made use of no unnecessary expressions, and that every word has, and was intended to have, a definite meaning. Not only is there this pregnant sentence in the treaty with Great Britain, but similar words are used in the treaties concluded with all other countries. Thus the 6th article in the treaty entered into with the United States of America says:—"Americans committing offences against Japanese"; the 5th article of the treaty with Holland:—"Nederlanders overtredingen begaande tegen Japaners" (Dutch subjects committing offences against the Japanese); the 14th article of the treaty with Russia:—"Alle geschillen tusschen Russen en Japaners" (all questions of dispute arising between the Russians and the Japanese, etc.), and the 6th article of the treaty with France, "Les sujets Français qui se rendraient coupables de quelque crime contre les Japonais ou contre des individus appartenant à d'autres nations" (French subjects committing any offence against Japanese subjects, or the subjects or citizens of any other country). The treaties with Portugal, Switzerland, Germany and every other country contain a similar provision. Thus then, the judicial powers claimed and exercised by the Consular Courts, under the extra-territoriality clause, are confined solely to a right to punish their nationals according to their own laws, for any offence committed against an individual. How is it, when the rights of Japan are so clear, that all criminal offences of whatever nature, and all civil cases, have been tried by the Consuls for over twenty years? Have our functionaries ever discussed the matter with the Foreign Powers at all; or have they assumed that because the Consuls claimed and exercised these powers, the treaties really entitled them to do so? Have our functionaries ever carefully examined the treaties with a view of ascertaining their exact position? Why have not rigorous protests been made against the Consuls acting in contravention of the treaties and arrogating an authority they are not entitled to in civil cases? If our functionaries will ask themselves these questions, they will be forced to acknowledge, at any rate to themselves, that they have neglected to fulfil the duties entrusted to them.

The object of the Foreign Powers in procuring the privileges of extra-territoriality was, in the first place, to secure to their Consuls the right of deciding any disputes between their own subjects, and, secondly, of trying and punishing any of their subjects who committed any offence against a Japanese subject or the subject or citizen of any other country; thirdly to confer upon the Consuls

an executive power to bring about an amicable settlement of complaints brought by or against their nationals against or by Japanese, and of settling matters with the assistance of the Japanese authorities when unable to do so themselves; and, fourthly, the right to decide complaints brought against their nationals in matters of debt. Therefore all other matters are within the cognizance of the Japanese tribunals, on the principle that the specific mention of one thing is the exclusion of others. The 6th article of the treaty with Great Britain is very hazy, and it is difficult to make out whether it is meant by "amicable arrangement" that a decision is contemplated or not; but at any rate in consequence of the uncertainty of the article in question, we most strenuously object to its being construed in such a manner as would entail the handing over to the Consular Courts of complete jurisdiction in every civil and criminal case in which a foreigner is defendant or accused. Some people, looking only on the purely practical side may remark: "Is there any offence which a foreigner can commit which would not be covered by the words 'any offence against Japanese subjects or the subjects or citizens of any other country'?" Can there be any civil case against a foreigner by a Japanese except for a debt? As the right of deciding these matters has been surrendered to the Consuls, the judicial functions both in civil and criminal actions are practically in the hands of foreigners, in all cases in which they are concerned." This is not so. As we have already pointed out there are many civil actions besides those for debt, and many crimes which are offences against the community and not an individual member of it. Why should we relinquish any of our independent sovereign rights voluntarily? Surely we have been cozened and coerced into sufficient concessions already.

More than twenty years have now elapsed since the opening of foreign trade, and during the whole of that period the Consuls have exercised a complete civil and criminal jurisdiction over their nationals, regardless of the laws of Japan. No objection has, as yet, been made to their doing so and it has therefore formed a precedent which has been followed by other nations, besides those five with whom treaties were made in the first instance. These original treaties have been adopted as models ever since—the foreign power making a fresh treaty leaving out what they considered unnecessary and inserting what they considered would be more desirable,—while the Japanese Government have invariably accepted without comment any treaty submitted to them. Thus we are completely encompassed as in a net; anything not contained in any one of the treaties and provided by another is claimed under the "favoured nation" clause, so that any particular benefits derivable under the latter treaties, are also enjoyed by the Powers who first entered into diplomatic relations with this Empire. In the same way the civil and criminal jurisdiction over foreigners, which as we have shewn was, in the first instance, granted to the Japanese Government, has been appropriated; and this too notwithstanding the incontrovertible fact that the Japan of to-day is as unlike the Japan of 1858 as if it formed part of another world. No doubt the treaties *practically* in force in 1880 are the same as those entered into in 1858, but is our country not entitled to a greater degree of consideration? The situation is altogether changed. During the twenty-two years which have elapsed since 1858, Japan has made rapid strides in the paths of civilization. Our commerce has greatly increased, and the internal administration of the country has been put on an entirely different footing; and yet in the face of all this admitted progress our independent sovereign rights are seized and retained in exactly the same manner as when the country was first opened to foreign intercourse. When a nation advances in prosperity, then its influence should increase in proportion, and there is no rule which entails an advance in civilization and prosperity being accompanied by a limitation of power brought by foreign interference.

We should not be inclined to condemn the treaties so much if the foreign functionaries confined themselves to adjudicating simply in cases either civil or criminal brought against their own nationals by Japanese subjects or the subjects or citizens of any other country, but as matters are and have been going on, foreigners have stretched the provision of the treaties to accommodate their own views and purposes, and it is impossible even to conjecture where the evil will cease. We will here make our meaning more plain. When the

Japanese Government is desirous of passing any law which shall affect foreigners, it is unable to do so without first obtaining the sanction of the Foreign Representatives. For example: the Quarantine, Shooting, Pilotage, Trade and Harbour regulations, although coming within the category of enactments affecting the whole community, could not have been enforced as against foreigners unless the Representatives of the Treaty Powers had first sanctioned them. The Japanese Government has therefore in all cases of the kind to obtain the sanction of the Foreign Ministers which is, in effect, handing over to them legislative functions. It is our sincere conviction that nothing so preposterous was ever contemplated when the treaties were first entered into. Be that as it may we have stated the actual existing facts and would very much like to know how a continuance of the present system can be consonant with the idea of Japan being an independent Empire. There was nothing in the treaties about handing over to foreigners legislative functions and whenever the treaties come to be put in proper shape, even although extra-territoriality cannot be abolished altogether, some definite steps will have to be taken to prevent the Foreign Representatives from interfering in the legislative authority of the country.

It can therefore be seen that the extra-territoriality clauses are responsible for many evils. The legislative functions of the nation are tampered with and our judicial rights seized upon under a strained construction of their provisions. It is therefore evident that now, when the treaties are about to be revised, our functionaries, and more especially the Foreign Minister, should take care not to pass over unnoticed these extra-territorial provisions which exercise so important and indeed fatal influence on the independent right of the Empire. Our Ministers should not rest content with a revision of the tariff, a mere question of political economy; and, if it be objected that the time has not yet arrived to discuss these extra-territoriality privileges, then we can only say that the subject will never be ripe for settlement.

Let us, for the sake of argument, see if it be practicable to adopt what we have termed the best course, and abolish extra-territoriality altogether. This would be extremely difficult; in fact it is altogether beyond our hopes to expect foreigners to submit to all the laws and procedures of Japan (thus abolishing extra-territoriality) until our civil and criminal codes have been considerably improved and brought to such a state of perfection that Foreign Powers will no longer fear to trust the lives and properties of their subjects to their protection. Under the circumstances we do not expect extra-territoriality to be entirely abolished at present.

Now, theoretically speaking, the views of those writers who urge upon our functionaries the immediate and complete abolition of extra-territoriality are very good, but if they will only consider the vast difference which exists at present between the laws of Japan and Foreign countries they cannot help arriving at the same conclusion as ourselves. Now, when we wish to come to a decision on any practical subject, we try and ascertain how the matter can best be carried out, and then shape our views accordingly. We therefore consider that as extra-territoriality cannot be abolished altogether at present it will be better as a matter of expediency, although very distasteful, to rest content with a gradual removal of the burden; in other words adopt the "middle course" we have alluded to in a former part of this article.

(To be continued.)

## THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXVI.

#### THE VALLEY OF ICHI.

The castle of Fuku-hara was built in the days when the shadow of the Taira power brooded over Japan from sea to sea. No prescience of coming perils had influenced the selection of its site. That the strong should wax so weak as to permit, and the weak so strong as to attempt the fortress' investment, were contingencies its founder could never have contemplated. But as the stronghold of the Heike and above all as the castle of Kiyomori, it was necessary that it should possess every attribute of impregnability

nature might confer or art provide. And most thoroughly did it satisfy this condition. Southward it was washed by a sea on which two thousand war-galleys floated under the red flag, while the three remaining sides of its enceinte were protected by a dense forest, a chain of precipitous mountains, and the three impassible ravines known as the valleys of Ichi, Ni and San.

The garrison therefore—mustering for the rest more than double the number of their assailants—had only to wait leisurely behind the network of fosses, parapets and palisades that occupied every available space; to wait for a foe disordered and enfeebled, if not indeed already checked, by the grievous obstacles nature had placed in his path. By some precipitate rashness alone could the beleaguered men expose themselves to discomfiture, and from errors of such a nature the Heike knights were tolerably certain to be free.

This was the estimate of their prospects formed by the Genji soldiers as they marched out of Kiyoto. They had a perfectly clear conception of the difficulties to be overcome, but not the most meagre idea how to overcome them. Their chiefs no doubt had framed some plan of campaign, but whatever it might be they kept it carefully concealed, and meanwhile it began to be apparent that the route of the army was trending more and more inland, or in other words, further and further from the enemy's position. The head of Noriyori's column had already indeed debouched upon the main road leading to the province beyond that in which Fuku-hara lay, while the reserve under Yoshitsune had turned so far northwards that it seemed to have abandoned all intention of taking part in the assault.

All this excited much marvel but no murmurs, for the men reposed implicit confidence in their leaders. A stratagem is not the less likely to be successful because it is difficult to comprehend, and for the rest a delay of two or three days was of no consequence, since the enemy could not but be aware of the intended assault.

When, however, having attained a point westward of the castle, and actually reconnoitred the valley of Ichi, orders to counter-march were suddenly issued, the bewilderment of the troops almost engendered discontent. These apparently purposeless manœuvres were a method of campaigning very different from the dashing advance against Yoshinaka's entrenchments, and certainly the nature of the opposition likely to be encountered at Fuku-hara scarcely justified such a change of tactics.

In no very patient mood therefore, the main body of the army encamped that night, after a long day's march, at a place called Koya, beyond the forest that formed the eastern defence of the castle. There it was given out that a halt would be made until the reserve came up, when a definite scheme of assault was to be determined, and with this announcement the knights were fain to be content for the moment. A few trifling skirmishes had taken place and it was therefore certain that the enemy had knowledge of the attacking columns' movements, but when this was explained to the phlegmatic Noriyori, he merely shrugged his shoulders and remarked sententiously that the Minamoto army had not, he fancied, taken the field with the intention of playing at hide and seek.

To what then were these erratic movements attributable, if they had not been suggested by a desire to mislead the enemy? And the reserve, a paltry force under any circumstances, but completely insignificant from the moment its operations were unmasked, of what possible good could its detached action be productive? Among the conclaves of petty strategists assembled that night round the rice cauldrons in the camp at Koya, a listener would surely have overheard few expressions of satisfaction or confidence.

Yet, at that very moment, the reserve corps was almost within bow shot of the most westerly Taira outpost on the plateau of the Three Herb Mountain. Thus if the reader has been able to follow the manœuvres of the Minamoto army, he will see that while the fifty thousand men under Noriyori's command were performing a circular march in rear of the castle—a march which at one time menaced the most distant face of the enceinte—Yoshitsune, bearing off at first to the north, had suddenly retraced his steps and by extraordinary celerity of movement, so timed his advance that his columns approached the valley of Ichi twelve hours after their comrades had reconnoitred the

defences in that direction, and apparently abandoned the assault as impracticable. The consequence of all this was that though the Taira chiefs were thoroughly conversant with the proceedings and position of Noriyori's force, they knew absolutely nothing of the reserve, and were content to believe it at its sitting post in rear of the main army.

Until late in the afternoon the seven thousand men forming the Heike picquet on the Three Herb Mountain had stood to their arms and kept a sharp look-out in momentary expectation of an attack, but when their scouts came in to report that the enemy's rear-guard had repassed the defiles, and that his columns were already some six miles distant on their return march, these not over vigilant knights unbuckled their harness and made up their minds that their duty for the day had been amply performed.

The moon was in her first quarter, so that when Yoshitsune's men crept silently up to the plateau at midnight, they had much ado to escape the perils of the precipitous mountain paths. Yoshitsune, himself supported by Benkei, Saburo and half a score of chosen knights led the column. Anticipating the difficulties of the ascent and the consequent disorder into which the assailants would be thrown, orders had been issued that as each man reached the plateau, he should lie down and observe the strictest silence until the signal for a general onset was given, and this injunction was obeyed the more readily in that the moment's rest it afforded, proved almost necessary after the toils of the long climb. Thus when Benkei's stentorian war-cry burst forth in the stillness of midnight, a thousand voices simultaneously caught up the refrain, and the Taira men startled from their sleep, fancied themselves surrounded by innumerable hosts, for the noise of the battle-shout itself was as nothing compared with the deafening din of the echoes that rolled in from all sides.

Scarcely two hundred heads fell to the swords of the assailants, but more than four times that number of dead bodies were found on the plateau in the morning. The truth was that only the leaders of the assault came into actual collision with their foes, for these, never waiting to hear the war-cry repeated, would have achieved an almost scathless flight, had not their confusion prevented them from distinguishing between enemy and ally. In their panic they struck each other down with a skill that might have served to repulse their assailants had it been properly directed, and when they came to count their losses, it was not difficult to persuade themselves that they had made a stout resistance.

Beyond the confidence it inspired, however, this victory was barren of results to the Genji men. It certainly left them free to proceed with the attack of the castle, but it removed none of the obstacles that made the position so formidable. The picquet had after all fulfilled its intention since it had given notice of the enemy's advance, and for the moment it seemed to Yoshitsune's followers that the forcing of an outpost was likely to represent the whole outcome of their marching and manœuvring.

The ten thousand rested that night in the camp the Heike had vacated. They needed repose sadly and their chiefs left them undisturbed until the following day at noon. Then Yoshitsune summoning Benkei, bade him choose thirty of the best mounted and stoutest knights in the force. To these he entrusted the further selection of three thousand others, who were to be under his own immediate command, while the remaining seven thousand were directed to advance to the assault of the castle by the most westerly defile of the valley of Ichi.

Nobody supposed for a moment that this assault would be successful. Its point of delivery was perhaps the strongest part of the position, but Yoshitsune's confidence in his men did not permit him to suggest the possibility of failure. For the rest his own share in the undertaking would be even more hopeless since he proposed to force a passage by the celebrated Defile of the Haw-finsches' Pass.

When the Genji troops left Kiyoto it was reasonably anticipated that the difficulties of their undertaking would have been largely increased by its unseasonableness. The rigours of winter were never more severely felt among the mountains about Fuku-hara than in the early part of March, when bitter winds and dense frost fogs marked the struggle between the outgoing and the incoming seasons. In the result however this supposed embarrassment proved a benefit, for though the feet of unfrequent wayfarers had no

strength to preserve the tracks along which Yoshitsune's men toiled from the dense growths of underwood that hid the pine stems and from the endless mesh of creepers that interlaced their branches in the summer months, these impediments scarcely existed in the winter, or were at most represented by a thick carpet of fallen leaves and sprays, that often indeed hid ice-bound water courses and treacherous pitfalls, but in return deadened the footfalls of the advancing soldiers.

Thus little by little they won their way across ravines and through thickets, knowing only that by keeping their faces steadily eastward they must sooner or later come within reach of the enemy, if indeed there were any possibility of attaining his position at all by this route. Although their progress was seldom uniform for any length of time, they could tell that since sunset they had been gradually ascending, for now the booming of the distant sea and the voice of the cataracts seemed to come up from an infinite distance below. It was at this point that the value of Yoshitsune's forethought in selecting thirty of the best mounted knights to lead the column became evident, for the feeble starlight failed altogether to pierce the dense canopy of pine and cedar boughs, so that the riders were fain to trust themselves entirely to the sagacity of their horses.

Foremost of all the train rode Saburo. This position had not been assigned to him by election but conceded as a necessity, for Yoshitsune saw that nothing less would have satisfied the man's fiery impatience. In truth there had come upon the broken-hearted soldier a change that might well have been deemed prophetic. From the moment of setting forth upon this expedition all his air of dull apathy had disappeared, not indeed to be replaced by the sturdy cheerfulness that had preceded it, but by a fierce energy altogether strange to his character. Every obstacle that barred his progress stirred him to a passion well nigh delirious and he sometimes pushed forward with so little semblance of caution that Yoshitsune was on the point of obliging him to resign his post of pioneer. But it soon became apparent that from the source of this impetuosity sprang also a purpose so steadfast that the hope of its accomplishment made Saburo the most circumspect of all the three thousand. He avoided dangers as if by instinct, and selected the most practicable paths with unerring facility, and there was scarcely a man in the whole column to whom their guides unswerving resolution did not impart a feeling of confidence.

But never yet was man or beast gifted with the ability to discover an unlearned passage through the Valley of Ichi. When the solitude of the dense woods ceased to be disturbed even by the shriek of the jay or the whirr of the startled pheasant, and when the rustle of pine sprays or the clash of sapless maple branches, sounding now overhead, now apparently underfoot, began to be the only indications of impending cliffs or precipice-like declivities, the stoutest men in the little army found themselves instinctively tightening their reins and peering anxiously around, before they plunged into the darkness that had engulfed their leaders.

Yoshitsune did not remain long insensible to this hesitation, however slight were the indications of its growth. He recalled Saburo, who was still pressing forward with unabated vigour, and sent him with Benkei in search of a guide.

The two men received this order as though its execution were a matter of the greatest simplicity, though neither plan of proceeding nor prospect of success suggested itself to them at the moment. To go back by the way they had come was out of the question; first because of the distance, and secondly because such a course would have seemed to accuse their leader's want of forethought. Of this they had no need to remind one another, but both struck at once into the forest and began to scramble down the mountain, judging that if any human being inhabited such a region his house must be sought for in some sheltered recess of the valley.

"If there be such an one, he will be a hunter," said Benkei, answering his own thoughts rather than addressing his companion; "but I have more doubt than faith in the matter myself."

"There is such an one Benkei, and being a hunter, as you say, he will be better qualified to guide us than any other."

This was spoken with such an air of assurance that Benkei paused involuntarily, fancying for a moment the object of their expedition had already been attained. But a glance at the beetling cliffs by which they were surrounded and the impenetrable gloom into which they were descending, soon undeceived him. "By my faith, I have never had sufficient reason to mistrust you, Saburo," he muttered as he set his huge limbs in motion again, "but either you have more knowledge of these regions than we wot, or else you are guided by a light other eyes may not discern."

"Benkei," replied the other with the slow, set utterance of one that describes what he actually sees at the same time that he ponders on it, "I have two lights to guide me: one in the immediate future; the other, in the past. This has been always with me; that, to my great joy I discern to-night at length."

Saburo had grasped his companion's arm, as he spoke, and Benkei finding an ancient doubt of the other's sanity unpleasantly revived, and being moreover somewhat puzzled for a reply, the two strode silently on in that fashion. Benkei was indeed beginning to ask himself whether this vague ramble was a justifiable method of executing the commission with which they had been entrusted, and being one with whom thought and deed were well nigh synchronous, he was just about to obey his idea, when Saburo called his attention to a light that glimmered in the darkness at the bottom of the valley.

The giant glaivesman was about as far beyond the reach of superstition as any man of his time, but for all that the appearance of this light seemed so immediately consequent upon his comrade's strange statement that, despite his reason, he could not help associating it for a moment with Iue's spirit, or Hiromori's wraith. Saburo however hurried him along too vigorously for such reflections, and they presently found themselves before a cottage built in part of roughly hewn timbers, suggestive rather of stability than comfort, in part of boulders brought within reach by the strength of the earthquake and the avalanche. The inmates were two: one a white-haired man, bowed by age to a moiety of his once lofty stature; the other a massively proportioned youth, with just such a free elastic air as Benkei could recall in Saburo before Iue's death. A log fire blazed on an ample hearth in one corner, and the light of its flames showed the walls lined with deer skin's and other trophies that left no doubt of the owners' occupation.

At the sound of approaching footsteps the old man started to his feet and when the fire-light flashed on the visitors' mail, his son grasped a glaive that even Benkei might not have been ashamed to wield. Saburo noting this attitude changed his intended command into a courteous request, to which the inmates of the hut listened not ungraciously but with the greatest astonishment.

"Where have you left your couraides, my masters?" enquired the old man, without immediately replying to the others' appeal. "It may be that they need a guide to retire rather than to advance."

"In truth it were difficult to answer your question," said Benkei, "seeing that landmarks are not easily learned in such darkness as these vallies of yours beget; but if I do judge falsely, we have descended some five or six furlongs due west of the place where the van of the column halted."

"And you say that it is your purpose to cross the Hawfinches' Pass before daylight?"

"Such is in truth the object that we propose to accomplish with your aid."

"Then you can have no need of our services, my masters, for the guide that has led you so far must have no small knowledge of these mountains."

"There you err, old man," Saburo interposed. "It chanced that I was the pioneer of the march, but beyond its evil report I have not the very scantiest acquaintance with the valley of Ichi."

The two hunters exchanged glances of undisguised astonishment. "If it be indeed as you say, Sir," resumed the elder, "it is not impossible that you may achieve your end by a repetition of the miracle that has carried you in safety so far. Right glad were I myself to be your guide, for it cannot be that your exploit will be easily forgotten, but I fear me these crippled limbs would ill serve your impatience. My son here, Washi-no-O, is stout of sinew and not less versed in the perplexities of the paths than

his father. He is at your disposal, neither need you fear that he will betray you, for his heart is in your cause already, and to follow your pennons for a twelve month would be a greater gain in his eyes than the most prosperous end a hunter's life could bring."

"Come along then, my lad," cried Benkei cheerily as he aided Washi-no-O to buckle on a few pieces of clumsy armour the young man produced with so small pride. "Your career as a soldier shall commence with a service that will carry you far on the road to promotion, and by my faith these thews of yours can scarcely fail to do the rest."

Washi-no-O made no attempt to conceal the delight this announcement caused him. Bidding his father a hasty farewell, he led the way at once up the mountain side, and the rapidity with which they rejoined their comrades showed Benkei and Saburo what an efficient guide they had secured.

They found Yoshitsune waiting patiently where they had left him. By his orders the soldiers had dismounted and loosened their saddle girths, so that their horses might gather strength for the toils they were presently to undergo. None had anticipated so speedy or so fortunate an issue to Benkei and Saburo's mission, and their reappearance with such a likely looking guide was therefore regarded as an infallible omen of good fortune in the issue. This confidence was, however, a little damped by Washi-no-O's assurance that the path was utterly impracticable for horses, and that even men on foot might not hope to traverse it safely unless they were more than commonly skilled in mountain climbing. "As to that," cried Yoshitsune, "knights that have campaigned among the gorges of Mount Fuji are not likely to be baffled by your southern passes. But answer me this Washi-no-O; you that make your livelihood by hunting: are there no deer beyond this terrible ravine you speak of?"

"That there are, my Lord," was the hunter's ready response. "One may find more spoors in the fall of the year among the bamboo grass of the glades above the castle than at any other spot around."

"Mark you that, Sirs!" Yoshitsune exclaimed, as he placed his foot in the stirrup. "Deer have four feet as well as horses, and neither the colour of their hair nor the furniture of their heads can help them overmuch in their travels. Lead on Washi-no-O. We have waited too long here already."

The hunter did not wait for a second bidding. He had his own misgivings no doubt as to the feasibility of the undertaking, but they found no further expression, and inspired by Yoshitsune's intrepidity, he led the way over hill and hollow at a pace that satisfied even Saburo's impatience.

It was indeed an almost impracticable route. Sometimes the knights were fain to bend over the withers of their horses, sometimes to cling to their cruppers, and often they could hear the stones dislodged by their progress plunging into depths that prophesied mangled limbs and crushed armour plates for an unwary footstep. Yet the difficulties they encountered at first seemed completely insignificant when compared with the perils of the renowned 'Haw-fishes' pass. Here the summit of the mountain narrowed to a ridge scarcely wide enough to afford firm footing, and so steeply scarped that even the bamboo grass hardly found space to plant a few scanty patches. The soil too consisted for the most part of round pebbles and loose sand, this yielding to the feet that stumbled over those, and if anything had been wanting to complete the danger, it was furnished by the remains of fallen trees that had perished for lack of nurture, their jagged roots alone remaining to mark the places of their overthrow. It was perhaps well that neither moon nor star shone upon the hill-tops as the Genji men crept heedfully along in each others tracks, for the darkness served them better by concealing their peril than the daylight could have done in helping them to avoid it.

As they approached the ledge Washi-no-O explained to Yoshitsune what was before them, but the latter seemed to pay little heed to the intelligence, only desiring Benkei to pass an order down the column that none should halt or pause under any circumstances before permission was given to do so. If only their leader achieved the passage in safety, there was a reasonable hope that the other horses would follow steadily in his tracks, provided that no sudden check

caused those in rear to swerve or crowd forward. Of all things the most to be dreaded was any unsteadiness on the part of Yoshitsune's own horse, for this would inevitably throw the whole column into confusion, and probably cause the death of every soldier on the ledge. But Minasagi's black had won his rider's confidence before now, and as he stepped upon the causeway, Yoshitsune loosed the reins and made no attempt to guide him save a few words of caution, to which the brave animal replied by a low whinny. To him the whole extent of the peril was visible, but one might almost have fancied that he understood how much depended on his steadiness for though he held on at the same unvarying pace, his rider could feel that every one of his sinews was braced to the utmost, and that each spot on which he placed his foot was carefully chosen.

Nevertheless as the frosty vapour rolled up from the abysses on either side, and the noise of the cataract deadened by the distance, sounded almost under his feet, Yoshitsune shuddered at the thought that in another moment a hundred brave men's deaths might be laid to his charge. He did not indeed accuse himself of either rashness or error. This attempt was in a manner necessary, and it was certainly best that he alone should appreciate its peril, but for all that he could not forget that he had led his men without their knowledge into a position from which it might presently be impossible to rescue them, and that in refusing to be dissuaded by one who was competent to judge he had taken upon himself the whole responsibility of the result.

These reflections were beginning to grow unspeakably painful when the black horse suddenly raised his head and stepped forward with a freedom of gait that told Yoshitsune the point of danger was passed. His own risk had for the moment ceased, but for those that followed there was still a source of peril which if not anticipated might have been fatal. A greater or less perception of their danger had necessarily produced difference in the speed of the horses' advance along the causeway, but a common impulse impelled all to hasten forward so soon as they reached the opposite side. If this inclination were not checked it would inevitably communicate itself to those in rear with a result not difficult to apprehend.

When therefore his guide's cry of congratulation assured Yoshitsune that firm footing was obtained, he turned aside, and standing at the head of the causeway, cautioned his followers by voice and gestures not to accelerate their pace. In this effort he was ably seconded by Benkei and Saburo who alone shared their master's confidence, but despite their united care the three thousand had not cleared the causeway before the horses of those in rear, seeing themselves gradually distanced, broke into a trot, and so advanced through the darkness along this ledge where a strong-headed man could scarcely have trusted himself to walk freely.

It was an awful moment for the onlookers. Yoshitsune heard Benkei, who stood at his side, mutter hoarse prayers to Hachiman as the ring of mail grew louder and louder, or hasty thanksgivings as soldier after soldier passed the chasm. Already the rearmost man of the column was in sight and but five more remained on the causeway when the long anticipated horror arrived. It was nothing more than the briefest possible struggle, one or two smothered exclamations and then the night fog rolled silently into the space where the five figures had loomed a moment before.

Washi-no-O stepped cautiously back along the causeway, but returned almost immediately with a blanched face. "My Lord," he whispered to Yoshitsune, "our retreat is cut off. The crest of the ledge for a distance of some half dozen paces has slipped down the precipice with your soldiers."

"The Gods rest their souls and forgive the author of their death," said Yoshitsune sadly. "As for our retreat, Washi-no-O; know that Genji soldiers do not concern themselves about such matters. Our bourn is the castle of Fukuhara and on this side of its gates we shall never turn back."

"But, my Lord, to reach it by this route you will have to descend a path where more than one man on foot may not possibly pass at a time, and you do not surely propose to offer the Heike knights so easy a victory?"

Yoshitsune smiled good humouredly at the other's misgivings. "I doubt not that you will one day be worthy of all confidence, Washi-no-O," he replied, "but to-night I will

ask you to guide us without question. How far must we still travel to reach the descent you speak of?"

"Little more than a mile, my lord; and from this point the way is easily traversed."

"And is there not haply some vale or forest a little on the castle's hither side where we may lie concealed until the dawning?"

"There is in truth such a place, my Lord, for at the base of the hill overlooking the castle we must cross a ravine spacious enough to hold twice your following."

Yoshitsune clapped his hands joyfully at this intelligence. "Lead on then, Washi-no-O," he cried. "Hachiman\* himself has brought us here, and whatever may still be before us, the Taira men will, I wot, have more reason than we to remember the passage of the valley of Ichi."

About an hour after midnight the column halted in the ravine of Ieo. The mists had now cleared off and the starlight showed a rocky nook among the hills, with beetling cliffs and deep caves where the men lay down to rest, or discovered recesses in which they were able to kindle fires without fear of discovery. The place fully justified Washi-no-O's description. It was so admirably suited for an ambushade that the enemy's neglect to occupy it seemed in itself a sufficient proof of his position's inaccessibility from that direction.

When the first ray of morning shone through the pine-tops, Yoshitsune crept up the mountain and peered down into the enceinte of the castle. The Heike troops were already astir, and considerable bodies of them could be seen hastening eastward across the valley with an object that did not remain long in doubt, for almost immediately afterwards hill and hollow echoed with the din of ten thousand voices shouting the war-cries of the Gen and Hei. Noriyori's men had commenced the attack on their side, only anticipating by a few moments a similar assault delivered on the western front by the seven thousand men that constituted the main body of the reserve. The two movements were perfectly timed, and the defenders of the castle directed their whole force to repel them, never for a moment anticipating any danger elsewhere.

This was exactly what Yoshitsune had desired. So far the execution of his scheme was perfect, but one portion still remained to be achieved and upon its accomplishment depended the success or failure of the whole campaign.

For it was out of the question to expect that the position could be carried by either of the assaults then in progress. They had both been anticipated by the enemy, and the assailants had consequently no advantage whatever to compensate for their numerical inferiority or help them to surmount the terrible obstacles with which nature had environed the castle. Unless therefore some demoralizing blow could be struck by the three thousand in the vale of Ieo, not alone would the expedition prove abortive, but the road to the capital would be thrown open to the Taira army.

Even though Yoshitsune, instead of exceeding had not attained the standard of fearless heroism to which every knight and noble in those days aspired, it is easy to believe that his resolution would not have been different from what it was under the circumstances. This was the first time he had come in contact with his hereditary foes. Kiso Yoshinaka's defeat had brought him in appearance renown and reward; in reality, bitterness and regret. His was not a nature that measured actions by their issues alone. He could not forget that by his cousin's bravery and skill the red pennon had been trailed in the dust of the capital, nor yet that the debt of blood Yoshinaka's fate left undischarged, had been bequeathed to him by the foul deed of his vanquisher's brother. In nothing therefore had he shared Yoritomo's feeling of hostility to the 'Morning Sun,' and when the command of the southern expedition was entrusted to him, a high sense of fraternal duty and the inexorable necessity of crushing everything that might help the Heike cause, had scarcely sufficed to make the task unendurable. If then failure were now in store for him, this his first great essay had better also be his final one. The descent from the mountain crest to the castle might indeed be impossible, but at any rate it should be essayed, and when he came back to where his knights awaited him, those that saw his face read there a design nothing short of death could interrupt.

(To be continued.)

## DOUBLE ACROSTIC.

When these come round  
Then work is found  
For men of all vocations,  
The ladies too  
A little do  
Read, write their occupations.

1.  
To cure you, physic, he'll prepare.

2.  
Of varied hues, this flower fair.

3.  
A tooth whose cutting makes this rare.

4.  
Of these, your "household gods" take care.

SAYONARA.

ANSWER TO DOUBLE ACROSTIC, OF FEB. 7TH, BY "FUJITAMA."

Correct answer received from Q. and V.d.P.

## LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship; flag B. (red); barque, flag C. (red ball on white ground); brig, flag D. (white ball on blue ground); schooner, flag F. (white ball on red ground) all commercial code, with the vessel's national flag below as soon as it can be made out.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 6TH, 1880.  
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
-----represents velocity of wind  
.....percentage of humidity  
Max. velocity of wind 20 miles per hour on Tuesday, 11 a.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer for the week was 30.489 inches on Friday, at 7 a.m., and the lowest was 29.840 inches on Thursday, at 2 p.m. The barometer has been falling steadily during the week, while the temperature has been rising. There has been some rain on every day of the week—the total amount being 1.839 inches.

Feb. 7, British Sloop *Pegasus*, Commander Hon. H.N.S. Hood, 1,124, 900 H. P. 6-guns, from Nagasaki.  
Feb. 8, British steamer *Belgia*, Meyer, 2,627, from San Francisco. Mails and General, to O. & O. Co.  
Feb. 9, Russian chartered schooner *Otomar*, Jansen, 55, from East Coast of Yezo, Ballast, to Jean de Bore.

Feb. 14. British steamer *Sumin*, Seaton, 1,029, for Hongkong, Mails and General, despatched by P. & O. Co.  
Feb. 14. British steam-yacht *Lancashire Witch*, Edlefsen, 211, for San Francisco.

Per French steamer *Volga* for Hongkong:—Messrs. A. Conil, agent M. M., Bougoin, Dybowski, Godet, Ishihashi, Kurimoto, Obara, Shida, Tatsuno, Takayama, Minami, Arakawa, Kondo, Takamine, Miyoshi and A. P. Ferretti in cabin.

Per Japanese steamer *Irohima Maru*, for Shanghai and ports:—Messrs. Kiwasaki, Hume, J. Bush, Ichimura, J. Wolfe, Koga, Lino, J. Sa, Takagimi, A. Platt, Nakahara, Takagi, Shimamura, Tamaya, J. H. Longford, J. Grigor, Nakai, Nakagawa, Yoshiwara, Kawakubo, Takaye, Kashiwagi, Sakurai, Okasaki, Miyamoto and Nungarayo.

Per British steamer *Sunda* for Hongkong: Revd. Mr. Warren and 2 boys, Mr. Loveday, Mr. O'Malley, Mr. and Mrs. Pau Chee Yen and 5 children, Madame Gautier and 7 children, and one Chinese in cabin; 1 European and 5 Chinese in steerage.

Per French steamer <i>Volga</i> , for Hongkong:—	
Silk for France...	494 Bales.
" " " " " " " "	57 "
Total, ...	551 Bales.

The British steamer *Belgie* reports: Left San Francisco at 1.40 p.m. on the 17th January. Encountered moderate and fair weather to the 180th meridian, thence to port moderate gale with high sea, and contrary winds. 5th inst., at 7 a.m. Latitude 32.29 North, Longitude 135° E., passed a Japanese sampan full of water and covered with barnacles. Arrived Yokohama at 3.06 p.m. on the 8th instant. Voyage, 21 days, 7 hours and 58 mins.

The Russian chartered schooner *Otonic* reports: From Yezo to Kingman Island, strong N. W. gale. Throughout the rest of passage fresh northerly wind with rain.

The Japanese steamer *Tokio Maru*, reports: Experienced very strong N.E. winds and rainy weather from Kobe to port.

The Japanese steamer *Shari Maru*, reports: Left Kobe at 7.30 p.m. Experienced strong Easterly winds, with thick rainy weather. Passed American ship *Sooloo*, 24 miles outside Kobe.

The British steamer *Benary* reports: Left Hongkong on the 3rd instant, and experienced strong northerly gales and rough weather during the passage.

The British barque *Lord of the Isles*, reports: Left Takao on the 19th January, experienced strong Easterly winds and heavy sea to the Eastward of Formosa off the Loochoo's, moderate weather near the Coast of Japan strong N.E. and Easterly winds with heavy squalls of hail and rain to port.

The Japanese steamer *Takachiho Maru*, reports: Left Hakodate at 6 a.m. on the 9th, arrived on the 12th at 7 a.m., experienced strong E. winds and rainy weather throughout the passage.

The British barque *Ching Too* reports: Experienced very heavy weather throughout the entire passage; 28 days to port.

The Japanese steamer *Chitose Maru* reports: Left Kobe at 6 p.m. on the 10th inst. Experienced moderate N. E. winds, with rainy weather. Arrived at 5 p.m.

## COMMERCIAL INTELLIGENCE.

**IMPORTS.**—A large speculative business in *Yarn*, natives and foreigners operating largely. Prices show a marked advance in sympathy with news from Manchester and close firm as below. *Shirtings*, nothing doing, although nominally higher. *Cotton Sateens* fair business. *Velvets* and *Lawns* dull. *Woolen Satines* and *Blankets* current; other *Woolleus* neglected.

**COTTON YARNS:—**

Nos. 16 to 24 Common to Medium ... per picul	\$30.00 to 35.00
" " Good to Best ... "	\$36.00 to 37.50
Bombay, No. 20 Do. ... "	\$31.00 to 33.00
Nos. 28 to 32 Common to Medium ... "	\$37.50 to 38.50
" " Good to Best ... "	\$39.00 to 42.50
" 36 to 48 ... "	\$39.00 to 41.00

**COTTON PIECE GOODS:—**

Gray Shirtings:—7 lb. per piece 28½ yds. 30 in.	\$1.62½ to 1.82½
" " 8½ lb. " 38½ " 39 in.	\$1.82½ to 2.27½
" " 9 lb. " 38½ " 45 in.	\$2.15 to 2.60
T. Cloths:—7 lb. " 24 yds. 32 in.	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in.	\$2.40 to 2.60
Indigo Shirtings:— " 13 " 44 in.	\$1.80 to 1.82½
Prints:—Assorted... " 24 " 30 in.	\$1.25 to 2.60
Cotton Italians & Sateens Black 32 in.	\$0.11½ to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.35 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.50 to 1.67½
Do. 3 lb. " 24 " 30 in.	\$1.75 to 1.90

**COTTON PIECE GOODS:—Continued.**

Velvets:—Black ... 35 " 22 in. per piece	\$8.75 to 9.75
Victoria Lawns:— " 12 " 42/3 in. "	\$0.75 to 0.79
Taffelclases:— " 12 " 43 in. "	\$1.75 to 1.80

**WOOLLENS:—**

Plain Orleans ... 40-42 yds. 32 in.	5.25 to 6.25
Figured Orleans ... 28-30 yds. 31 in.	3.75 to 5.25
Lastings ... 29-30 yds. 31 in.	10.00 to 11.00
Italian Cloth ... 30 yds. 32 in.	0.22 to 0.32
Camlet Corda ... 29-30 yds. 22 in.	4.00 to 5.25
Mousselines de Laines:—Crape 24 yds. 30 in.	0.17 to 0.17½
do. Itajime 24 yds. 30 in.	0.23 to 0.29
do. Yuzen 24 yds. 30 in.	0.35 to 0.45
Cloths, all wool plain or fancy... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.40 to 0.50
Presidents ... 54 in. to 56 in.	0.55 to 0.60
Union ... 54 in. to 56 in.	0.32½ to 0.60
Blankets, green 6 to 8 lbs ... per lb.	0.85 to 0.41

**SUGAR.**—A small business only. 500 bags have changed hands at \$4.45. The *Lord of the Isles* and *Ching-too* have arrived with cargoes from Takao. Stocks are estimated at 17,000 bags.

**KEROSENE.**—The market is very quiet. A few small sales have been made at quotations.

Sugar:—Takao in bag ... per picul...	\$5.60 to \$5.20
" " in basket ... "	\$5.20 to \$5.00
Taiwanfoo in bag ... "	\$5.20
do. in basket ... "	\$5.00
Ching-pak and Ke-pak ... "	\$8.00 to \$9.00
China No. 4-5 Kongfun & Kook-fah... per picul...	\$6.25 to \$8.00
Daitong ... "	\$4.00 to \$4.40
Japan Rice ... "	\$2.60 to \$3.00
Kerosene Oil ... "	\$1.60 to \$1.65
Newchwang Pess ... "	\$2.20 to \$2.25

**EXPORTS.**

**SILK.**—Since the 7th inst., the market has been exceedingly active indeed, and a very large business has been done in all classes of silk, the principal feature of the week being, however, some very large purchases of *Kakedas* made, it is believed, for the American market.

Sales of no less than 730 shipping bales are reported, of which about 500 bales are *Kakedas*.

Prices have remained very firm indeed, and there is a decided upward tendency.

Stock about 2,700 shipping bales. Total export to date 14,952 bales against 15,592 bales last season at corresponding period.

## THIRTEENTH SEMI-ANNUAL REPORT

OF THE

Court of Directors to the Proprietors,

For the Half-year ending 31st December, 1879.

THE HALF-YEARLY MEETING of the Proprietors was held at the Head Office, on 18th January, 1880, at which the Directors had the honour to submit the annexed General Statement and Balance Sheet of the affairs of the Bank, as at 31st December last.

The net profit of the Head Office and Branches amounts to Yen 198,793.668 (deducting remuneration of the officers, their travelling expenses, and all other payments, inclusive of interest). Adding to this sum the unappropriated balance of last Half-year, namely, Yen 36,772.855, and Yen 80,000 set aside as a special reserve for bad and doubtful debts, the total comes to Yen 315,566.523. From this sum Yen 36,371.575 will be taken to extinguish the bad debt of Onogumi; Yen 50,000 will be set aside as a special reserve for bad and doubtful debts; and Yen 24,200 will be given to the officers as a bonus; and the remainder is Yen 204,994.948, from which Yen 50,000 will be added to the Reserve Fund, Yen 120,000 will be divided amongst 15,000 shares, being Yen 8 per share, which is at the rate of 16 per cent. per annum, and the balance, Yen 34,994.948, will be carried forward to next half-year.

The debt incurred by Onogumi has been written off, and amounted to Yen 36,371.575, taken from the Special Reserve of Yen 80,000, which has been supplemented by the addition of the sum of Yen 50,000, an amount which, the Directors are of opinion, will amply suffice to meet any further contingencies that may arise.

SHIBUSAWA YEICHI,  
Chairman.

## W. & A. GILBEY'S WINES AND SPIRITS.

**W.** & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's *seal* and *label* guaranteeing *quality* and  
*measure*, and the *strength* also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bouny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mrs. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock!"

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1873.

## THE TRADE OF NAGASAKI.

NAGASAKI has not failed to participate in the general prosperity of last year's trade, and we are glad to see from a comparative table "giving the value of the trade of Nagasaki from 1874 to 1879, inclusive," compiled by Messrs. Holme, Ringer & Co., that the past year has been an eminently satisfactory one to the foreign merchants of Kiushiu. The total value of their import and export trade (exclusive of treasure) amounted to \$3,732,230. And it must be gratifying to the Japanese financiers and Chambers of Commerce to know that in Nagasaki the balance of trade is always in favor of the country. The figures for last year were: exports \$2,009,797 and imports \$1,722,433.

In glancing through the items composing the former, we notice a slight diminution in the quantity of tea exported, from that in the two former years, and a very considerable reduction when compared with the export of 1875 and 1876. In the two last named years the tea export exceeded 18,000 piculs; in 1877 it fell to 9,940; in 1878 to 9,279; and in 1879 to 8,957. Inferior tea (Ban-cha), on the other hand, was dealt in to a larger extent in 1879 than in the preceding year. Tobacco has always formed one of the principal exports from Nagasaki, and although its value aggregates no very high figures, its bulk and the labour necessary to prepare it for shipment make this produce of considerable importance to the port. We regret to see that this trade has sadly diminished during the past few years, and that against 15,000 piculs in 1874; 12,500 in 1875 and 16,000 in 1877, the export in 1878 fell to 5,532 piculs, and last year only amounted to 4,000 piculs. Unless it be possible to increase the cultivation of this plant a serious loss will be felt in Kiushiu, not only by the foreign merchants but by the native growers and the numerous hands employed in its manipulation. The suggestion has often been made

before, but we must again repeat it, that the Japanese Government should make a careful inquiry into the cause of the diminished tobacco-growth in Kiushiu, and ascertain whether by the introduction of foreign seed, or efficient manure, the industry cannot be restored to its former prosperity. Vegetable-wax, as an article of trade, has gone through many vicissitudes since Nagasaki was first opened to foreigners. In the old days many a ship carried a whole cargo of this valuable produce to Java, Holland or London; but as the home manufacture of wax candles, tapers or vestas became changed by the cheaper use of paraffine and other substitutes, so the demand for Japan wax has fallen off. In 1874 it had already decreased to an annual export of only 8,500 piculs; in 1877 only half that quantity was shipped; in 1878 but 2,000 piculs; and last year only 1,700. Camphor shows a considerable increase in its export from Nagasaki during the past six years. From 1,400 piculs in 1874, 2,900 piculs in 1875, 4,800 in 1876, 2,280 in 1877, 3,850 in 1878, the returns for last year give a trade of 5,268 piculs valued at \$90,484. This produce finds its way to Nagasaki principally from the province of Satsuma, whilst that prepared in Tosa finds its outlet in Kobe.

Coals, the well known principal export from Kiushiu, figure in last year's returns to the extent of 197,000 tons, against 199,989 tons in the previous year, and show that so long as this valuable production can be found in the neighbourhood of Nagasaki, no fear need exist of the trade of the port collapsing. A noticeable feature, however, is the diminished value of this commodity which, according to the document now before us, stood at an average of \$3.90 for the past year, against \$4.80 in 1878, and \$4.50 in 1877. This fall in value must not, we think, be looked upon otherwise than a benefit to the trade of the port. It is the natural result of an increased production, and increased production from any mine means a large decrease in the first cost of the coal. And the further great advantage of an increased production and the lower value of the product, is the fact that Japanese fuel must thereby supersede the imports from distant markets which now compete with it in China. It will indeed be strange if, in the long run, Nagasaki coal does not drive Australian supplies from the Shanghai and even the Hongkong market.

Among the enumerated exports we notice that mineral ores (consisting principally of antimony from Amakusa) figure to the extent of 788 piculs, valued at \$1,749, but that this trade exhibits a falling off during the past six years. Antimony is an article of considerable demand in Europe and, since the establishment of type foundries in Japan, it is also in much request here, so that every inducement must exist to encourage the mining of the ore. Here, however, the drawback attending all mining operations in Japan comes forcibly before us. The Japanese mine proprietors have not the capital, and the

capitalists have not the enterprise, to work the treasures which lay at their feet. Awabi shells (called ear shells) were exported from Nagasaki to the extent of 3,481 piculs during the past year, being a very large increase on the previous year's trade, and this, we understand, is owing to the additional supplies now reaching that market from the island of Quelpart. Even larger annual shipments of these shells are, however, made from our own port, and the total Japanese trade in these articles to Europe is now one of considerable importance: their value at home varies with the fashions for buttons and toilette ornaments.

The principal imports into Nagasaki during the past year consisted of cottons and cotton mixtures to the value of half a million dollars; raw sugar \$917,186; kerosene oil \$185,891; peas and beancake \$145,487; metals \$91,054 and under the comprehensive heading of "unenumerated goods" we find the total of \$186,620. It is noticeable that cotton yarn is only imported into Nagasaki at an average of 422 bales per annum—less than one per cent of our own annual import; and it must remain a matter of surprise that the inhabitants of Kinshiu should make such small use of the staple commodity required by their fellow-countrymen in Nippon. But as regards kerosene oil it is more satisfactory to see that the general tastes of Japan have also extended to the southern island, and that the import of this article during the past year reached nearly 117,000 cases, against 107,000 in the previous year, 24,000 in 1877 and 4,000 in 1874. Doubtless this trade will still further increase the future returns of Nagasaki, as, compared to the population, it yet bears no proper proportion to the annual quantity consumed in the northern ports. The want of roads and cheap internal communication is still the most serious drawback to the commercial prosperity of Kiushiu, and continues to check the trade of Nagasaki both in its imports and exports. This want especially affects the bulky and low-cost produce which forms the principal traffic, and prevents easy access to the interior of imports which ought to be dealt in more largely. But, in spite of these natural disadvantages which the Government have not yet attempted to remove, we must congratulate the foreign merchants of Nagasaki upon the past year showing a decided improvement in the trade of their picturesque port.

#### THE MILITARY POWER OF CHINA.\*

##### III.

WITH effective officers and several years' drill it is possible that a tolerably powerful force could be derived from the troops stationed in the various sea-board provinces; but such officers can only be obtained from abroad. No dependence can be placed on the natives for this purpose. There are none of them that deserve the name of officers; and one is almost forced into the belief that the national character of the Chinese lacks completely the qualities necessary for such a position. In personal courage they stand far behind the men,—although the quality is not largely developed in these latter,—and they deem that their proper position, as soon as an engagement commences, is in the rear. Military rank in this peculiar country does not require those mental and moral qualities which are expected in every civilized land; but rather follows on deeds of prowess, which fall within the region of athletics—such as raising heavy weights from the ground, brandishing enormous swords, drawing colossal bows; and also skill in riding, throwing spears and shooting arrows. All candidates must undergo three

examinations in these accomplishments, and are frequently rejected for incompetence.

If the same requirements were made in the case of military officers as in that of those entering the civil service, better results might be expected than are obtained now. The poorest student in China knows that, through the competitive examinations, if he passes them, he has not merely the possibility, but the certainty, of high employment. On the other hand, those who prefer military service are chiefly those who have neither the heart nor the capacity to devote themselves to earnest study. The army, it is true, is open to every inhabitant of China, but the number of candidates is small, and out of all comparison with those for the civil service, because the latter offers far greater advantages than the former. Hence it is not surprising that few able men are to be found among the officers—probably not a single one who thinks it worth his while to take the trouble of acquiring a sound knowledge of tactics and strategy, or of engineering and fortification. The ignorance of the class relegates its members to much the same position as that occupied by the soldiers whom they are supposed to command. Law and discipline have no value to them; and hence it arises that they have no other way of spending their leisure—which is about twenty-three hours a day—than opium-smoking, which alone would render them incompetent for even unimportant duties. It must be admitted, however, that the Chinese government has made some efforts, by the foundation of military schools, in which more than athletics is taught, to raise the position of their officers. It will hardly ever occur now, as it did formerly, that some favourite officer of the land-army, merely on account of his physical appearance and bodily strength, should be intrusted with the command of a vessel of war, although he may not know the difference between the stem and stern. Still there has yet been no thought of radical reforms, and, even if such were introduced at present, a number of years must pass away before their effects could eradicate the present deeply-rooted evils.

After the description here given of the officers, it will be hardly necessary to say that the tactics are of a most primitive kind. They are confined almost entirely to attack in front; or to protection against such attack by making the utmost use of the formation of the ground. Manœuvres in marching are regarded as cowardly. An exercise of the infantry of the imperial guard in Peking is a ludicrous sight. One thousand or twelve hundred men, all armed with matchlocks, are assembled in an open space before the walls of the town. The higher officers are comfortably seated on benches, under pavilions, in front of the line of battle. The troops first form into a crowded mass or column, and, on a given signal, move to the right and left, in order to form a long front. The movement goes on without order, or without even step amongst them. Laughing, chatting, firing their matchlocks in the air, the soldiers run in twos, threes and fours into line, where, naturally, the firing is blindly continued. The musicians, with gongs, drums and other instruments, take up their position in the rear, and maintain a deafening noise; while a crowd of standard-bearers wave their three-cornered banners, with a horizontal movement, along the surface of the ground. The few signals which are necessary are given either by means of the music or the flags. The review is then at an end, and the troops return in knots to the town. Those battalions which are armed with wooden weapons are better exercised, so also are the artillery; but, on the other hand, the cavalry, which is badly armed and uses ponies, are of no use except for the courier service.

\* See *Japan Weekly Mail*, January 24th, and 31st.

In organisation, discipline, arms, and education, the troops of the coast provinces, as already mentioned, are in a much higher position than those at Peking. In this respect Li-Hung-chang, as well as the Viceroy of Nanking, Shen-Pao-shen, have done much to abolish old irregularities: yet even these forces would be compelled to give way before one-tenth their number of European soldiery, or even of other troops commanded by European officers. They are, at the most, capable of fighting behind permanent or temporary fortifications; and, knowing this, Li has made it his special business to build new forts and repair or reconstruct old ones, in order to cover the approaches to Peking. What value has an army which can only fight behind earthworks?

The arming of the celebrated Taku forts has recently been much improved; the sixty old guns of mixed calibre have been removed, and replaced by forty-three others, chiefly 115 and 250 pounders. It is doubtful however whether the Chinese artillerymen know how to use these weapons. The forts could be rendered almost impregnable from the sea, and their capture from the land side could be made most hazardous, by artificial inundations; but all this requires corresponding defence, which cannot yet be expected from the Chinese troops,—even from those of them who have been exercised in defensive manœuvres. Some of the forts also possess no bomb-proof magazines for ammunition, and no storehouses for the necessary provisions. The detached forts about Tientsin, which command the surrounding country are, however, complete, and could not be taken by a *coup-de-main*; on the contrary they would have to be attacked with heavy siege guns.

The introduction of modern weapons, especially of breech-loaders, progresses but slowly. They were first purchased from foreign merchants, who, without paying much attention to the original model, were in the habit of charging such disgracefully high prices, that the arms were regarded by the Chinese as too precious to be put into the hands of soldiers, and were accordingly stored up in the arsenals. To a certain extent this precaution was justifiable, as the low, dark, dirty mud-huts in which the Chinese soldiers are often placed, would soon rust and destroy any gun. Chinese arsenals, however, are somewhat like the bowls of the Danaïdes; however much war material is put into them they are always rather empty. The iron and steel of the arms change themselves rapidly by a very simple—not chemical, but mercantile—process into silver taels, which enter the pockets of the higher military officials. Since 1875 the Chinese have manufactured in some of their own arsenals Spencer and Remington rifles, as well as the necessary ammunition. In Tientsin, as well as in Shanghai, Nanking and Canton, there are arsenals erected and controlled by foreigners, where arms are manufactured which are gradually finding their way into the hands of troops in the interior. When foreign assistance is withdrawn, and the Chinese attempt to work for themselves, the most ludicrous results take place. Thus, the Superintendent of the small-arms factory at Canton evolved the cunning project of increasing the calibre of the Remington rifles by one inch, and their length to six feet. When the uselessness of such a change was pointed out to him, he exclaimed:—"I know that quite well, but I wish, in this way, to give to the arm a more fear-inspiring appearance."

The uniform and armour of the soldiers vary according to the different provinces. As a rule the privates wear a blue woollen jacket and wide trowsers. There is no attempt at comfort or neatness. The punishments are strict, but arbitrary. At the proposal of the provincial Governors, officers of every rank, from the general down-

ward, are cashiered without trial or investigation. The chief causes of dismissal are arbitrary conduct, embezzlements, indolence, carelessness, or incapacity. As rewards for deserving officers there are money presents, promotions, leave to ride within that part of Peking which is reserved for the Court, and presentation to the Emperor. For extraordinary acts of heroism permission to wear the yellow jacket may be accorded.

One of the chief obstacles in the way of activity even in the best Chinese army corps, is the absence of a transport service. The general rule is that each man shall carry his own miserable food. When that is consumed, requisitions come into use. In long marches and military operations, it is true, there is a so-called commissariat, but it is incapable of meeting the most modest requirements. In the north, beyond the great wall, camels are employed as beasts of burden. Each group of five or six camels, tied together with ropes, and marching in Indian file, requires one man as driver. On an average each animal bears four hundred catties, or five hundred and thirty-three pounds, and travels at the rate of two miles and a half per hour. Thus five camels, which carry two thousand six hundred and sixty-five pounds, form a procession of about ninety feet in length. An idea can be gathered, from this, what length would be required by even a small column organised by Chinese. Frequently when the ground is slippery, the animals fall on top of each other, and are raised again only with great difficulty. In extremes of temperature, also, such as great cold or heat, high winds, &c., hundreds of them die. In the thickly populated provinces, carts drawn by mules and young oxen are used for transport; but rapid progress is out of the question in consequence of the bad roads, weak or broken bridges, and frequently intervening canals, and rivers. Junks, which afford the means of transport on the water are also very slow.

The medical service is in still worse plight; in fact there is next to none. Experience has shown that even the best European soldiers lose heart when they doubt whether their wounds will be properly dressed, or their attacks of illness carefully attended to. The Chinese soldier, it is true, dies more easily and stoically than the European; life offers him too little enjoyment that he should care much about it. Nevertheless, the knowledge that, if he sinks down by the wayside overcome with the toils of the march, or if he is wounded in battle, he will be left to his fate, without help or care, must materially reduce whatever little warlike ardour he may at first have possessed.

It is said that in Peking earnest consultations are going on, with the object of making the whole Chinese army a single organization, to be placed under the supreme Central Government, and to abolish the present system by which the Governor of each province possesses his own army corps. But the movements of the reformers who desire this change, are narrowly watched at the capital, where it is believed that such a measure would be followed by the deposition of the young Emperor and the Empresses Regent, and the elevation to the dragon throne of some adventurer who had gained the support of the newly organized army. The mandarins in the provinces, also, are adverse to a measure which would reduce their power; and they are supported in this opposition by the officers of their own armies; while the banner-men are too few in number to equalise the balance between the Central Government and the conservatives. Hence, this reasonable reform, which would put the army of China in a position to demand respect, is probably very remote; and, even if it were accomplished, it is to be feared that bigotry

at Peking would prevent the foreign examples shown in some of the coast provinces being successfully followed.

Connected with this subject is the present condition of the Chinese navy.† It consists of three different groups of ships, which, however, cannot be called squadrons, nor denominated by any expression involving organization. Here, also, we find the objectless plan pursued of placing each group under the control of the governor of the neighbouring provinces. Further, all the ships within each group lack that interdependence on each other which is usual in the fleet. The first group, the Canton navy, until recently numbered twelve vessels. Three of these are built on the Chinese model, and are little more than screw steam-junks; two are old English gunboats, which were sold when no longer of use. The remainder are steam men-of-war purchased in England, and commanded by French or English officers. The ships of the Fuhkien fleet were all built in the arsenal of Foochow under the superintendence of Monsieur Giquel. This gentleman, as will be remembered, while Commissioner of Customs at Ningpo during the Taiping rebellion, organised a Franco-Chinese contingent, and succeeded in recovering the province from the insurgents. Soon afterwards he left the Customs service, and was appointed superintendent of the arsenal which the Chinese then intended to erect at Foochow. A number of ships, hulls as well as machinery, were built under his direction; and, although they were expensive, are good vessels. Among them are:—a corvette with twelve guns, six gunboats and eight transports. The crews are chiefly drawn from the hardy islanders of the Chusan archipelago, and are well instructed in the use of artillery. There are two classes of captains:—one composed of former pilots, the other of men educated in the nautical school attached to the arsenal. There they received not only a theoretical education, but also a practical one on board the corvette commanded by Captain Tracy, formerly of the English navy. What the officers chiefly lack is a knowledge of naval tactics, as they have never had experience in the manoeuvres of a fleet at sea. The engineers on these vessels are efficient on account of their education in the works at the arsenal under Europeans. The pilot captains are of no use except to take the vessels from point to point along the coast, and their services are valueless when a hundred miles out at sea. The vessels built at the arsenal at Shanghai, and belonging to the Kiangsu group, are eleven in number;—two frigates, and nine gunboats and transports. Fir was imported from Oregon and Vancouver's Island for their construction; and they are in every way inferior to the vessels of Fuhkien. The machines are said to be good; and the ships are armed partly with breech-loading Krupp guns, and partly with cannon made in the Shanghai arsenal. One serious want on board all these vessels is that of a physician or surgeon; and we can easily imagine the frightful state which would prevail on the craft after a severe engagement.

On the whole we may conclude that China possesses a certain number of vessels of war, fairly built, armed and manned, and partly well commanded; but nevertheless the Empire has no navy in the European sense of the term. Indeed, as a *résumé* of all that has gone before, we can say that the Middle Kingdom has neither a land nor sea force that can be compared with those of any western country. There is as yet no question of a military regeneration in China. Here and there a weak commencement has been

made; and it would cost, to-day, but little more effort than in 1860, for a foreign General with a comparatively small army, to advance to the walls of the capital and dictate terms of peace to the Son of Heaven. Should Germany require an ally in a war against Russia, she must look elsewhere. China will be of no use in such capacity.

#### A BUILDING ACT FOR TOKIO.

THE constant devastating fires which, during the winter months sweep over the capital will, no doubt, be the cause of serious consideration on the part of the proper authorities. Statistics have been collected tending to shew that a great proportion of those conflagrations in Tokio is the work of incendiarism, and indeed the comparative scarcity of such accidents in other large towns of the country seems to give additional proof to this assertion, and to suggest increased vigilance and severity towards offenders. Taking, however, into consideration the extremely fragile and inflammable nature of the ordinary dwellings and certain risky habits of life indulged in during the cold season, it is incontestable that frequent fires must continue to occur from mere accident and carelessness alone. Other wooden cities of far more solid construction, and with safer means of heating and warming, have often similar losses to deplore. The fate of Chicago is no solitary instance of such calamities.

The Japanese Government in its large public erections, and many of the nobles and ministers in their private mansions, are adopting a more solid style of construction in accordance with European examples; but such a mode of building is far too costly for the generality of the people. Such a style is moreover unsuited to their habits and wants. Some years back an example was set to the populace, by way of an impulse to the enterprising, in the erection by Government of street dwellings of brick in the High street and adjoining streets. There are however, we believe, no instances in which any of the more wealthy merchants have availed themselves of this incentive, although other attempts quite as costly have been made to devise fireproof constructions more suited to their requirements. These brick buildings, if we may judge by their central situation, the low rents charged for them, and the number remaining uninhabited, do not meet the public needs. But however suitable and satisfactory these dwellings might be, the Government could neither be expected to supply them on a large scale at the public cost, nor could it impose upon the poorer middle class their obligatory erection at private outlay, often beyond the householder's means. An increase in trade and in habits of providence among the people may change this state of things; but what we now have to concern ourselves with is some immediate means for suppressing obvious danger in a practical manner. Not only is money necessary in erecting city buildings of brick or stone, but a certain amount of feeling of security in expending it. In a city where it is proverbial that three years without a vast fire is a vein of good fortune, the citizen's idea of a house is anything but that of a safe investment for a large part of his savings. In Europe a man will look upon the purchase of a dwelling as secure property for his lifetime and a provision for his children after him; but in Japan a man at present regards such a transaction as a speculation for the term of a few years. The success of minor precautionary measures rendering less frequent the destruction of property would thus bear fruit by inciting larger expenditure and more solid construction in buildings.

Taking all these matters into consideration we are of

† This portion of the article was, in the German newspaper from which we quote, of course written before the arrival of the celebrated alphabetical gunboats. The information given is of none the less value.

opinion that, though a thoroughly efficient Building Act could not at once be instituted, yet certain rules and prohibitions might be made obligatory, by means of which the spread of fires might be much lessened. There are two ordinary ways in which fire can attack a building. One is the proximity of other buildings in flame, and the other internal causes, from accident or will on the part of the inmates or otherwise. It would at present be impossible to prevent all chance of danger to individual houses from internal causes. The interior construction of wooden and paper slides and straw mats is essential to the comfort and habits of the common people. It would be impracticable, moreover, to attempt to prohibit the use of inflammable oils and portable fire boxes. There are certain cases, however, in which obvious risks from the inside might be diminished by prohibition. It is quite common, for example, to see light wooden sheds of narrow dimensions in a long street of adjoining houses, used for the purpose of a smithy with large open furnaces sending up showers of sparks to a low ceiling of thin wooden shingle. An edict interdicting all open fires of such a nature in street buildings, unless a certain clear area of isolated space intervene between them and other houses, could not fail to eliminate one serious danger. Such workshops should, in addition, be of prescribed height and width, with mud or plastered walls and ceilings, or proper chimneys. A careful examination would reveal other kindred matters of consequence which could be, in a similar way, met without being too hard upon the poor.

It is well known that the rigour of the London Metropolitan Building Act is often moderated for buildings in isolated suburban situations. A matter which, however, must not be lost sight of in Japan, is the enormous distance to which the high winds carry the dry, light wood, of which the city dwellings are composed. In the late great fire in Tokio, burning flying timbers carried the fire across the river and even attacked the shipping. It is extremely doubtful whether any structures, however separated from surroundings, should be allowed to have roofs covered with wood; but however this may be, the Building Act should apply most rigorously to street and adjacent buildings.

In such situations roofs should be, compulsorily, of tiles, slates, or metal; the projecting rafters from the wall to the eaves being plastered over. Without interfering with the ordinary street shop front, or the back and yard of the house which custom requires, houses might still have the usual wooden openings and light slides; but the side walls towards the adjoining buildings should be of brick, projecting well out to the front and back, and carried a few feet above, and parallel to, the slope of the roof. In such a way each house would be screened from its neighbour by a fire-proof wall having sufficient projection to the front to prevent flames from the wooden portions of contiguous buildings creeping round and attacking the inflammable portions. In case of buildings actually touching each other, these screen walls would become common or party walls; and all doors or openings in them would be either entirely disallowed, or, in any case, only doors or windows of very small area compared to the wall surface should be permitted in these partitions. All light and air required would be admitted through the *shojis* of the front and back. Certain technical rules would naturally be enforced relating to the thickness of the walls according to their height, and according as they are separate or party walls. It does not appear that, with the ordinary low dwellings commonly erected, the proposed brick walls would add very materially to the cost of each structure; and such screens would greatly tend to prevent the rapid and extensive spread of fire. At the

same time the provision would certainly not interfere with the convenience of the occupants.

The application of such regulations as we here suggest, would at first apply only to all new buildings erected from the terms of enforcement, and to all old buildings undergoing extensive repairs. It might be necessary for the Government to render slight pecuniary assistance to the poorer classes compelled to comply with the provisions of the Act.

Our Tokio Building Act should, moreover, comprehend other cases of dangerous structures often leading to serious accidents and loss of life; such as the strength and distance of supports to high loggias and balconies. At the times of festivals and street spectacles calamity frequently occurs from the overcrowding of such constructions. Last year, during the displays at Riyōgoku bashi, there were several instances of serious accidents arising from such causes. The inspectors appointed would have among their duties to examine structures generally, and specially previous to crowded gatherings and street spectacles.

We would suggest then to the authorities that they should inaugurate in the capital an initial and experimental Building Act, commencing on a small scale with prohibitions and instructions such as we have indicated, and appointing qualified inspectors to see the provisions efficiently carried out.

**A**MONG the subjects which will doubtless receive attention during the forthcoming treaty revision, is that of tonnage dues on vessels entering Japanese ports or harbours. Clause VI. of the Trade Regulations attached to Lord Elgin's Treaty provides that no tonnage dues shall be levied, but admits of certain ordinary Customs' fees. It is obvious that the expenses of keeping in order, not only the open ports, but also those not yet opened to foreign trade, will necessitate some fees or charges of this nature, and therefore it may be worth while to see what is the custom in other countries. The tonnage dues of the United States are, as might have been expected from the general commercial policy of America, of a most discriminating kind. It is provided by an Act of Congress that:—

- 1.—United States vessels, the officers of which are American citizens, trading to foreign ports, pay a duty of thirty cents per ton of their registered tonnage.
- 2.—United States vessels, the officers of which are not American citizens, pay eighty cents per ton.
- 3.—Foreign vessels built, or partly built, in the United States, and trading to American ports, pay sixty cents per ton.
- 4.—Foreign vessels trading from foreign ports which American vessels are not ordinarily permitted to enter or trade with, pay two dollars and eighty cents per ton.
- 5.—When countervailing duties in certain foreign ports are abolished as against American vessels, ships trading from these ports to ports in the United States pay eighty cents per ton.
- 6.—All other vessels pay eighty cents per ton. Coasting vessels, or those trading to the Dominion of Canada, pay no tonnage dues. The amounts above given are only levied once a year.

In the treaties between China and foreign powers, tonnage dues on vessels entering Chinese ports are fixed at four *mace* per ton, for vessels of more than one hundred and fifty tons burden, and one *mace* per ton if under that size. Certificates of the payment of these dues last four months in the case of coasting vessels. In the various treaties between Great Britain and almost all the other countries in the globe, provision is made that the harbour and tonnage dues on

British vessels entering foreign ports shall be the same as those for national vessels; and in Great Britain itself the same principle prevails. In many cases, however, doubtless with the object of protecting the coasting trade and local passenger traffic, this rule is confined to vessels of over one hundred and twenty tons burden.

JAPAN, after all, has no very impossible task before her in the accomplishment of the design which the directors of her finance have set themselves. Much greater efforts have been, and are being, made elsewhere than any proposed to be undertaken in the Far East. America affords the most noteworthy example of what is possible in liquidation of national liabilities. To this fact the *Economist* draws attention. It shows that the rapidity with which the amount and the burden of the national debt has been reduced is the most noteworthy feature in United States finance. The maximum of indebtedness was reached on August 31st, 1865, when it amounted to 569,181,500*l*. At the end of November, 1879, according to the Treasury report, the total debt was 408,208,900*l*, so that within fourteen years there has been a reduction of no less than 165,972,600*l*. During the same period, or between March 31st, 1865, and the same date this year, the debt of Great Britain has declined from 816,852,974*l* to 778,078,840*l*, a reduction of 38,774,000*l*, or less than one-third of the amount which has been paid off by the United States. Nor is it only by a reduction of the principal of the debt that the Americans have benefited. The conversion into 4½ and 4 per Cents of the old 6 and 5 per Cent bonds has greatly diminished the interest payments. In August, 1865, the yearly interest was 30,195,000*l*, whereas when Secretary Sherman's recent refunding operations were concluded the normal debt charge was reduced to about 17,000,000*l*. And the work of conversion is still to be actively prosecuted. About 53,000,000*l* 6 per Cents mature on June 30th, 1880, and 101,600,000*l* outstanding 5 per Cents become redeemable on the 1st of May, 1881. These also it is intended to refund, and the only question seems to be whether the conversion should be into 4 per Cents, or whether an attempt should be made to reduce the rate of interest to 3½ per cent. The leading commercial London journal states:—"This is a chapter of financial history of which the United States may well be proud."

WE have much pleasure in congratulating Mr. J. J. Ensle, of H. M. Consular service in this port, upon a promotion which is well-merited and satisfactory in the prospects which it brings of future advancement. The gentleman in question has accepted an offer, conveyed to him by telegram from the Foreign Office, of the post of Registrar to the British Court, and Crown Prosecutor, in this port. Mr. R. Bishop, who has heretofore fulfilled the duties of Registrar remains in the establishment as Chief Clerk. A deserving subordinate officer, Mr. George Hodges, now second constable in the Consulate is promoted by transfer to the Judicial Department, where he is appointed Usher.

THE British public are evidently beginning to better appreciate the difficulties and expenses into which they are so frequently led in defence of the Colonies. On the subject of the South African war, now happily concluded, the *Times*, writing on the 19th of December, says:—

"The South African Blue-book just published contains a despatch from the Secretary of State for the Colonies to Sir Bartle Frere which may be recognised as the starting-point of a new policy. Sir Michael Hicks-Beach unfolds no recon-  
ciliate ideas; he simply instructs the Governor of the Cape Colony to let his Ministers understand what is the prevailing

opinion in this country concerning our relations with South Africa. That opinion has been repeatedly and emphatically expressed in these columns. We have never concealed the truth, which is that the English people have become thoroughly discontented with their position in regard to this dependency. A generation ago the Kaffir wars cost us large sums of money and priceless lives. There was afterwards for a while a lull in the storm, but Basuta wars and Kaffrarian wars have again disquieted the settlements between the great desert and the sea, and almost the whole expense and risk of these troubles has fallen upon the mother country. The time has come when the South African colonies, like other communities of the same class, must be taught to stand alone, and to rely only upon the Imperial Government for defence against external dangers. Sir Michael Hicks-Beach, in a despatch addressed on June 12th to the Governor of the Cape Colony, reminds him that the whole of the British possessions in South Africa combined are inferior in area, population, and revenues to other colonies enjoying a concentrated and well-ordered administration. There is no reason, apart from local and sectional jealousies, why the South African Colonies should remain disunited, and there are the gravest reasons of public policy for advising, and even insisting, that these divisions should come to an end. The alarming events of the past two years have rendered it impossible to proceed by gradual advances from point to point. We cannot challenge the perils of another Zulu war, and the sooner the colonists at the Cape and in Natal come to appreciate the effect of this resolution the better. If the European communities established in South Africa should have to encounter the dangers of another war like that which we have lately waged against Cetewayo, they must do so on their own account; and it is well that they should be warned in due time to do so with united forces."

The plain meaning of this is that the colonists must in future expect to carry on their warlike proceedings entirely at their own expense. If this is once distinctly understood, it is very probable that the British tax-payer will hear no more of troubles in Africa, as it is a strange circumstance that these colonial disturbances are limited to dependencies in which the Home Government undertakes the protection of the inhabitants, frequently incurring vast local expenditure in doing so. An exactly similar state of things to those so long existing in South Africa, at one time obtained in New Zealand. British soldiers and treasure were lavished in the attempt to dispose of the native difficulty, but in vain; and it was openly stated that the failure was attributable to the advantages derived by the colonists from imperial expenditure: in fact a Maori war was profitable to the settlers. The hint was acted upon by the home authorities, and, as soon as a favourable opportunity presented itself, every soldier was withdrawn from the islands. The result was remarkable. The elation of the Maoris at the removal of the regular troops caused another outbreak, which was speedily crushed by the unaided efforts of the colonial forces, and there has never since been a recurrence of the former scenes of turmoil and bloodshed. The adoption of a similar policy in South Africa will probably be attended with equally beneficial results.

REUTER'S subscribers in this neighbourhood have ample and frequent reason to complain of the neglect with which they are treated. The latest direct telegram received was dated the 11th, and received on the 18th, instant. It confirmed the intelligence previously received to the effect that Russian correspondence had been discovered at Cabul, and the extraordinary and of world-wide-interest announcement that the *New York Herald* was subscribing to the Irish relief fund. Nine days have now elapsed without further information on any subject, even as to the amount forwarded by the munificence of an American journal to assuage Hibernian suffering. One would have imagined that the latest attempt upon the life of the much hunted Czar of Russia, and the hideous carnage which accompanied it, might have afforded a pretext for a few words of notice to the Baron's

constituents in this part of the world. But, no. They and the general public are dependent for the news upon an official intimation, which was allowed to be made public.

**P**ROFESSOR *Nordenskjöld's* discovery of a practicable North-eastern passage between the Atlantic and Pacific Oceans, having already been instrumental in developing to a certain extent, trade between the *embouchure*, of the Lena River and some of the ports of Europe, is likely to fulfil the explorers' hopes of traffic between North Siberia and Far Eastern Asia. A Swedish merchant captain, Johannsen, of considerable fame in the realm of Arctic investigation, and at present in the employ of the Russian Government, has arrived in Japan to take charge of the steamer *Nordenskjöld*, the vessel which, despatched to the relief of the *Vega*, was wrecked at Nemuro, Yesso, on the voyage hence to hyperborean regions, shortly before the latter ship's safe arrival in Yokohama. Captain Johannsen's mission is to free the *Nordenskjöld*, a task thought likely to be one of trifling difficulty when the ice which at present surrounds her shall have broken up, and to bring her to Yokohama, where she will be repaired and refitted. Then an attempt will be made to gain, by way of Behring's Straits, the mouth of the Lena, and thence to bring to Yokohama a cargo of merchandise. Should, however, the return voyage be, through any circumstances, deemed inexpedient, the expedition will make for the Baltic. Captain Johannsen, at the head of a crew, will leave in a few days for Nemuro. He expects to return to Yokohama on board the *Nordenskjöld* in a few weeks, and to start on his ultimate errand before the spring is far advanced.

**A** few statistics of the French colony of Saigon cannot fail to be interesting at the present time, when the extension of French territory in eastern Asia seems as inevitable as it is desirable. The Government of the colony is publishing a series of works intended to make known the resources of the country to its inhabitants and foreigners. From the first volume, entitled "The condition of French Cochinchina during the year 1878," the following information is gleaned. Imports during the twelve months were valued at \$12,899,896, being an increase of nearly one and a half million dollars over 1877. Exports attained a total of \$13,581,165, an increment of more than two million dollars above the preceding year. Upward of four million dollars were imported; and only two million six hundred thousand left the country, which was thus enriched by an actual excess of exports over imports of \$2,372,251. Of merchant vessels 330, with a tonnage of 324,000 entered the port of Saigon: 162 were English, 74 German, and 71 French. Trade between Hongkong and Saigon employed 358 vessels: between the latter place and Singapore 123: to and from Marseilles 54 (nearly all steamers); and between the colonial ports and Tonquin 19. The population of the colony was 1,592,202. The revenue reached a total of fr. 407,191 more, and the disbursements fr. 150,919 less, than in 1877. The rate of mortality, which attained alarming proportions in the early days of the conquest among the troops and the civil servants of the state, has fallen to an average little higher than that obtaining in the army in France. In the Antilles, Senegal, and many other places, the death-rate is much higher than it is in the French possession of Cochinchina. The local forces consisted, at the close of 1878, of 209 officers: 3,730 non-commissioned officers and rank and file (Europeans); 48 officers and 3,740 men in the native militia.

**S**OME interesting trade statistics may also be collated from the annual report of the Saigon Chamber of

Commerce. The total export of rice in 1879 from the French port (exclusive of paddy and *brisures*) was 5,864,909 piculs, being an increase of two and a quarter million piculs over 1878, and of a little short of two million piculs over 1876, the latter year having previously been the one most highly favoured in the rice trade. During 1879 exports also increased in the items of hides and horns, ground rice, lard, silk, paddy, and pepper. Other articles, especially Cambodian produce showed a notable diminution. Cardamoms, hair, shells, ivory, and stick-lac had almost entirely disappeared from the market. Oils were exported by fifty per cent less than in the previous year, and seven-eighths less than in 1877. The difference between the money imported and that sent away was again greatly in favour of the colony, being \$3,317,074. All things considered, Cochinchina was, in 1878 and 1879, in possession of considerable and progressive prosperity. This condition, a local critic asserts, was attained in spite of the deplorable tendency of the rulers to sacrifice everything else to the military element, and the carelessness of the home Government in regard to a fine dependency, which no more occupied attention in Paris than if it had never existed or belonged to some other power. It is remarked that on all sides colonization encountered difficulties which a defective organization rendered almost insurmountable; and, nevertheless, so great was the vitality of the colony that it made remarkable progress in prosperity. Considerable improvements have been introduced into the various branches of the administration, and it is confidently expected that, under the present equitable and moderate rule, Cochinchina will receive a new impulse, and become, as it ought to be, the finest colony of France.

#### REVENUES AND EXPENDITURES.

(Continued from Saturday, 17th instant.)

##### PART II.—THE LAND TAX MENTIONED IN SECTION I.

The principal revenue of the government is derived from this source, and though a full explanation is not herein given as to the changes in the mode of its collection, yet it is necessary to mention briefly the causes of the increase and decrease in the amount of the tax collected since the restoration.

The total receipts from this source for the seven and a half years between the 1st year of Meiji and the 7th month of the 8th year of Meiji amount to Yen 232,711,465.416. We shall briefly explain below the process of gathering the same into the national treasury. It has been the rule that one-half of the tax received in one term shall belong to the term immediately preceding. Thus, the receipts of the eighth period were all actually derived from the seventh, up to which term, inclusive, only the returns of the land tax are here dealt with.

The receipts from the land tax for each of the eight fiscal terms are as follows:—

	Yen.
1st term .....	2,009,018.780
2nd term .....	8,855,968.945
3rd term .....	8,218,969.008
4th term .....	11,840,988.587
5th term .....	20,051,917.087
6th term .....	60,604,242.381
7th term .....	59,412,428.874
8th term .....	67,717,946.854

Total..... 232,711,465.416

From this it will be clearly seen that the land tax has continued to increase, and that the smallness of the receipts for the 1st and 2d terms was partly due to the failure of the payment of the tax in the provinces through the civil war; and partly to the fact that, in accordance with the financial system of those days, all the expenses of Fu and Ken having first been deducted from the amount of the taxes collected therein, only the sum remaining was sent to the national treasury, as we have seen in the introductory remarks.

In the 3d and 4th terms the receipt of the land tax has increased and amounts to eight, and eleven, million yen,

in round numbers. The advance noticeable in the third term was owing to the fact that, although on account of the defective harvest of the second year of Meiji the land tax was in part remitted, yet on the other hand, some of the Han being rebellious to the imperial cause, had part of their territories confiscated and converted into Ken, which are under the direct control of the imperial government. Again, during this term the average price of rice per koku was high. The increase in the receipts from the land tax for the fourth term—some millions of yen—over those of the third term, was due to the good harvest of the 8d year of Meiji (1870). Payment of the tax was not remitted as it was in the third term. The advance was also attributable to the circumstance that the affairs of the local governments having been gradually put in order, matters which were previously in confusion had begun to improve. Moreover, in the 7th month of the 8d year of Meiji, the Morioka Han was abolished and a Ken substituted for it. In the fifth term, receipts from the land tax amounted to a sum of more than twenty million yen, but even this was of small amount when compared with the total amount of the land tax collected in all parts of the country after the abolition of the Han, which event occurred in the 7th month of the 4th year of Meiji (June 1871). Afterward many changes occurred in the local administrations. Many offices were created, some abolished, some united, and others separated. A great confusion thus took place in the provincial bureaux. This caused delays in the payment of the land tax, so that the receipts from that source in the term mentioned were only about twenty million yen. The income from the land tax in the sixth term amounted to more than sixty million yen, an increase of more than 302 per cent from the previous term. The reason of this improvement was that by this period the local administrations had come into working order, and a more satisfactory condition of affairs had been established. The arrears of previous terms had also been received into the national treasury, in addition to the collections for the actual term. That the returns from the land tax in the seventh period amounted to a sum of more than fifty-nine million yen is thus explained. The average price of rice was high, and a large portion of the dues belonging to the sixth and preceding terms, payment of which had been deferred,\* was also received in this period. In the eighth term receipts from the same source amounted to more than sixty-seven million yen, which is a larger contribution from the same source than any received in previous terms. The cause of the increment shall now be explained. The space of time which the eighth term occupied was intercalary between the old and the new fiscal year, the latter being established by decree in the 10th month of the 7th year of Meiji (October, 1874). The arrears of the land tax for the 7th year of Meiji and those the payment of which was in arrears before or since the abolition of Han until the term of closing the accounts, were paid in during the period. The final adjustment did not take place until the 30th day of the 6th month of the 11th year of Meiji (June 30th 1878). Some receipts and expenditures belonging to periods previous to the sixth month of the eighth year have been taken cumulatively in the accounts for the eighth term, so that they should not appear in the financial accounts since the eighth fiscal year.

We have thus briefly stated the facts in regard to the accounts of the land tax, but it must be remembered that the money mentioned for each term is not the whole amount of the tax belonging thereto, but a portion may pertain to the preceding or even earlier terms. Moreover, as regards the period before the fourth term, it was found hard to decide how much was the amount of the land tax collected in each term, because some of the Fu and Ken did not pay into the national treasury the whole amount of the taxes which they had collected, but only the balance which remained after they had applied what sums they needed for local purposes. It remained, under these circumstances, to find out by investigation of the financial records how much the amount of the land tax in one term actually was; but, in consequence of the price of rice varying in different parts of the country, a great discrepancy was evident in the calculation, and it was next to impossible to arrive at exact accounts for each term. Consequently,

\*Yenko is a temporary exemption from land tax. It can be put into operation whenever a harvest prove defective.

adopting what appeared to us the only available course, we took the average of the taxes collected for some years prior to the abolition of the Han, and again the average amount for some years subsequent to that measure. (We omitted Hokkaido and Riu Kiu from our calculations.) We thus arrived at a rough estimate of the land tax received before and after the abolition of the Han. The sum of money deducted by Fu and Ken for their own expenditures from the amount of the land tax collected thereby was as follows:

1st year of Meiji.....	4,419,015.660
2nd " " " .....	4,461,010.955
8rd " " " .....	8,224,412.671

Total ..... 12,104,439.286

If we add to this the sum of Yen 12,104,000, in round numbers, the amount of the land tax received into the national treasury during the first three terms,—the deduction of Yen 1,092,000, in round numbers, which belonged to the land tax for the 8d year of Keio (1867) being made from the amount,—we obtain a sum of Yen 24,595,000 in round numbers. If now we add to this sum the amount of the land tax which belonged to the 8d year of Meiji and preceding periods, but was actually paid in after the 4th year, we have Yen 88,383,000 in round numbers, as shown in the following table, together with the yearly average for each of the three periods.

Amount received into the national treasury from the 1st term to the 8d term inclusive, except the part pertaining to the 8d year of Keio.....	Yen. 12,490,984.906
Amount received into the national treasury since the 4th term .....	8,788,486.688
Amount deducted by Fu and Ken.....	12,104,489.286
Total .....	88,883,910.180

The average amount of three years..... 11,127,970.060

Hence the amount of Yen 11,127,000 in round numbers; namely, the yearly average for three years, may be considered the annual sum derived from the land tax in Fu and Ken before the abolition of Han, and the average amount of the land tax in Fu and Ken since the abolition of the Han, will be given below.

If we subtract the sum of Yen 8,788,000, in round numbers, actually received into the national treasury after the 4th term, yet properly belonging to the 8d and previous terms, from the total amount of the land tax received into the national treasury from the 4th term to the 8th term inclusive, and add to the difference the sum of Yen 819,000,\* in round numbers, deducted by Fu and Ken from the land tax of the 4th year of Meiji for their own expenses, the result will be Yen 211,158,000, in round numbers; and the average of the land tax for the four years from the 4th to the 7th inclusive of Meiji, is as follows:—

[The amount of the land tax received into the treasury in the eighth term was not and could not be the sum due for that period. It was actually derived from the seventh term, the land revenues for the eighth not being here accounted for.]

Amount of the land tax received into the national treasury from the 4th to the 8th term, inclusive.....	Yen. 210,389,082.045
Amount of land tax deducted by Fu and Ken .....	819,418.860
	211,158,445.905

Average yearly amount for the four years 52,789,611.476

This sum of Yen 52,789,000 in round numbers, being the annual average for four years, is to be taken as the amount of land tax collected in Fu and Ken in each fiscal year since the abolition of the Han. If we deduct the sum of Yen 547,574, which is the tax on title deeds of town lands (formerly exempt), from the present amount of the land tax, namely, Yen 40,873,935 (according to the estimates for the 11th fiscal year) we find a decrease, as compared with the above average, of Yen 12,963,260.

\* This was the sum expended in Fu and Ken, according to the old financial system, although proclamation had been made in the 4th month of the 4th year of Meiji to pay direct to the national exchequer the whole amount of the land tax from the 4th year of Meiji inclusive.

This is an actual diminution of more than 24½ per cent, or nearly one-fourth of the whole.

Furthermore, there were many abolitions of miscellaneous taxes imposed according to the *Kusataka* (assessment on the production of rice in different districts, not on a general plan, but according to the special exigencies of certain neighborhoods). The tax was charged for the expenses of *Temma Shiku* (posting stations), fees for the management of government rice stores, and for the hire of *Roku shaku* (those whose business it was to carry the *kago* of dignitaries; and coolies for government service, paid in rice or money).

#### PART III.—CUSTOMS DUES.

Customs dues include the taxes on exports and imports in each open port, and fees of various kinds received by the customs bureau. During the seven and a half years under review, namely, from the 1st to the 7th month of the eighth year of Meiji, the grand total of the customs receipts of all kinds was Yen 8,497,665.084. The receipts for each term were as follows:—

	Yen.
First term.....	720,866.986
Second term.....	502,817.470
Third term.....	648,453.498
Fourth term.....	1,071,080.566
Fifth term.....	1,381,560.265
Sixth term.....	1,685,974.865
Seventh term.....	1,498,257.552
Eighth term.....	1,088,108.926

Total..... 8,497,665.084

These figures constitute self-evident proof of the gradual increase of our foreign trade. The excess of the receipts in the first term over those of the second and third terms is ascribable to the high price of the chief articles of export, namely, raw silk and silk-worms' egg cards, and the large exportation of these articles. In the second term the income was small, smaller in fact than that of any other term. The reason for this is that in that year there was a reform in regard to the duration of the fiscal year, the 9th month being made the termination of the period. This term was, therefore, short, lasting only nine lunar months, namely, from the 1st month of the 2d year of Meiji (February 11th, 1869) to the 10th month of the same year (November 4th, 1869). After the third term, customs receipts continued to increase, but in the 6th term they were larger than in the seventh. This was caused by a similar circumstance to that which affected the excess in the first term, to wit, the increased demand for raw silk and silk-worms' egg cards. The export of these articles increased, and their price rose, and importation was stimulated by the briskness in the outward trade. The eighth fiscal term of Meiji was a short one, consisting of only six months; but its receipts exceeded one million yen. This was not caused by an increase of exports and imports from a general addition to foreign trade, but was due to the fact that the sum of Yen 224,850.461, which properly belonged to the sixth and seventh fiscal terms, was brought over to the accounts of this period. There is another circumstance which requires to be explained, and this is the discrepancy between the figures above given and those recorded in the statistics of exports and imports for the whole seven and a half years. Now, if we compare the former with the latter, the first shows a deficiency of Yen 1,545,640.374. This discrepancy is accounted for by the fact that the calculation of the latter accounts was based on the conventional valuation of silver, which took three hundred and eleven *ichibu gin* as equal to one hundred Mexican dollars; one hundred of which coins were considered the equivalent of one hundred and one yen of our currency; but in preparing this statement, we have had to adopt a different standard, which is thus described. From the 1st year of Meiji (1868) to the 7th year of Meiji (1874) four hundred *ichibu gin* were considered equal to one hundred yen. From the 7th year of Meiji (1874), according to notification No. 933, issued in the 9th month of that year, the relation between the old and new coins was established on the new basis of three hundred and twenty and eight-tenths *ichibu* being equivalent to one hundred yen of the new silver coinage. It is obvious that the difference between the conventional and the national standards of value must have caused a considerable depreciation in the real worth of the customs revenues. On the other hand, by

the transformation of old into new coins an advantage was gained. The increase in the second term of the seventh section was mainly due to this cause. The latter standard having been used throughout all other branches of the revenues and expenditures, we could not adopt a different basis in these accounts for the customs duties alone.

#### PART IV.—MISCELLANEOUS TAXES.

These taxes are such as are generally levied by special enactments, and comprise also some accessory receipts. For the seven and a half years, the total revenues from those resources were Yen 17,215,520.717. The receipts of the eight fiscal terms were as follows:—

	Yen.
First term.....	427,429.060
Second term.....	540,534.659
Third term.....	456,542.692
Fourth term.....	489,419.588
Fifth term.....	461,625.515
Sixth term.....	2,724,476.864
Seventh term.....	4,892,583.015
Eighth term.....	7,772,909.815

Total..... 17,215,520.717

These figures show that the miscellaneous taxes fluctuated between Yen 420,000 and Yen 540,000 in five terms. In the sixth term they took a sudden development. In that period they amounted to some Yen 2,720,000; in the seventh term about Yen 4,890,000; and in the eighth term about Yen 7,770,000.

During the first and second terms, miscellaneous taxes were derived from three sources, viz., *Unjio* and *Miyoga*, dues from foreigners, and *Kokuyeki Kin*. The excess of the receipts of the second over those of the first term, by Yen 118,000 in round numbers, is due to the fact that *Unjio* and *Miyoga* from saké and spirits, which properly belonged to the first term, were actually received in the second. In the third term, by the notification issued in the 9th month of the 2d year of Meiji (October, 1869), the taxes on raw silk which had been levied under the names of *Unjio* and *Miyoga* were reformed, and a new tax was established on silkworms' egg cards, which had previously been exempted from duty. By the establishment of this new tax, about Yen 95,000 was obtained; but in this term miscellaneous taxes were less than those received in the preceding term. This was owing to the defective harvest in the north-eastern provinces. In the 11th month of the 2d year of Meiji it was decided to diminish by two-thirds throughout the country the amount of rice devoted to distillation. This reform caused a delay in payments.

In the fourth and fifth terms miscellaneous taxes were still small. This effect was produced by the comparatively small yield of the tax on saké and spirits. It is true that in the 9th month of the 3d year of Meiji (October 1870), distillation was again allowed to the full legal amount; but in the 7th month of the 4th year of Meiji (August 1871), the tax was altered. Previously, a duty of ten yen under the name of *Miyoga* was levied on each hundred koku of rice reserved for distillation. Then, this method was abolished and the tax was fixed at five per cent on the amount sold. According to this method it is plain that the tax which probably belonged to this term was actually paid in the next. In the fifth term receipts from the sale of postage stamps began to be realized (the imperial post office was first established in the 3d month of the 4th year of Meiji). The taxes on boats and *shikori-abura* (oil for lighting), which had been levied in accordance with different local customs under the names of *Unjio* and *Miyoga*, were reformed,—the former, by notification of the 8th month of the 4th year of Meiji, and the latter, by notification of the 9th month of the same year. In the term now under review these taxes began to be levied under the new regulations. By the amendment, receipts from these taxes were increased; and several duties on silk-worms' egg cards, which had belonged to the preceding term, were received in this. These items amounted to a considerable sum. On the other hand, the dues received from foreigners in the foreign concessions were greatly diminished. This latter is the reason why the increase of the receipts of this term over those of the preceding was only about Yen 22,000.

The increase of the receipts from miscellaneous taxes in the sixth term was, actually, 585.7 per cent over the average for the preceding five terms. This in-

crease was due to the establishment of several new taxes. For instance, by notification of the 2d month of the 6th year of Meiji (February, 1873), a stamp-tax was established. By notification of the 1st month taxes for servants, carriages, pleasure boats and shooting licenses were regulated. In the term now being considered the gross yield from all these sources was Yen 346,000 in round numbers. Furthermore, there were some duties the collection of which had not been uniform, because of the different local customs. The method of collecting all these taxes was also altered. Thus, fees for cattle dealer's licenses were reformed by a notification in the 11th month of the 5th year of Meiji; anchorage dues, by notification of the 1st month of the 6th year; and stamp-tax on silk, at the same time. By these reforms the taxes in question were unified. The charge for stamps on silk was intended to produce beneficial effects, in dispensing with the old tax. Again, by making the use of stamps compulsory it prevented fraud. The yield of this tax under the reformed method of collection was about Yen 108,000 in this term; and a considerable increase from various taxes was also observable. The following table shows the items in which an augmentation was appreciable.

	Yen.
Tax on saké, etc.....	increase about 944,000
Tax on silkworms' egg cards.....	" " 222,000
Dues from foreigners.....	" " 108,000
Postage stamps .....	" " 70,000
Ship licenses .....	" " 75,000
Shibori-abura .....	" " 71,000
Miscellaneous taxes under the headings of <i>Unjio</i> and <i>Miyoga</i> .....	" " 284,000
<i>Koku-yeki-kin</i> .....	" " 42,000
Tribute from Riu Kiu Han.....	" " 48,000

Miscellaneous taxes in the seventh term show an increase of Yen 1,668,000 in round numbers, over the preceding term. This is an increment of a little more than sixty-one per cent. The main causes of this advance are the increase of the tax on saké and spirits, miscellaneous taxes called *Unjio* and *Miyoga*, and the imposition of a tax on official incomes, which latter produced a little less than Yen 60,000. The increase of receipts from saké and spirits in this and preceding terms was ascribable to the perfection of a reform in the collection of that tax; namely, the abolition of a levy on the quantity of rice destined to distillation, and the substitution of a duty on the amount sold. The large growth of miscellaneous taxes in this term are accounted for thus:—The taxes which, having been reformed, as we have stated above, had still been received under the old names, were classed with these miscellaneous taxes. The subjoined are important items showing an increase over corresponding ones in the previous term:—

	Yen.
Tax on saké, etc.....	increase about 722,000
Miscellaneous receipts.....	" " 781,000
Postage stamps .....	" " 99,000
Ship licenses .....	" " 42,000
Anchorage dues .....	" " 58,000
Taxes on servants, carriages and pleasure boats.....	" " 50,000
Shooting licenses.....	" " 88,000

The following are the most important taxes which showed a diminution compared with corresponding ones in the preceding term:—

	Yen.
Dues from foreigners .....	decrease about 60,000
Stamp tax.....	" " 27,000
Silkworms' egg cards .....	" " 90,000

Miscellaneous taxes in the eighth term were more than those of the preceding term by about Yen 8,880,000. This is an augmentation of nearly 77 per cent. It must be borne in mind that this term consisted of only six months, namely, from the 1st month of the 8th year of Meiji (January, 1875) to the seventh month of the same year, yet the receipts were very large. This was partly due to the fact that arrears which had been accumulating for several years were paid in this term, as was mentioned in the introductory remarks, and partly to the collection of the tax on pensions belonging to the preceding term. This produced about Yen 2,040,000. Also, the mining tax began to be collected, according to the law of the seventh month of the 6th year of Meiji (July, 1878), and yielded Yen 44,000 in round numbers. The tax on carriages was reformed, and

was levied from the 1st month of the eighth year of Meiji (January, 1875) on the reformed basis, producing about Yen 96,000. Beside those already enumerated, some other taxes showed an increase in this term. Those below are the most important.

	Yen.
Postage stamps .....	increase about 411,000
Stamp tax.....	" " 108,000
Miscellaneous receipts.....	" " 246,000
<i>Koku Yeki Kin</i> .....	" " 160,000

Other taxes displayed a diminution compared with similar ones of the preceding term.

The subjoined are the most important:—

	Yen.
Tax on saké, etc.....	decrease about 878,000
Ship licenses .....	" " 118,000
Cattle dealers' licenses.....	" " 64,000
Tax on <i>Shibori abura</i> .....	" " 59,000
Dues from foreigners.....	" " 81,000

Explanations as to the causes of the increase and diminution of the miscellaneous taxes above mentioned will be given in the second portion of this report, where we shall find the actual accounts for each fiscal term. We have above merely stated in outline the results of the establishments of new, and reformation in the old, taxes.

It is also desirable to say something about the abolition of some duties. In the first place we will refer to the miscellaneous taxes called *Unjio* and *Miyoga*. During the time when the feudal system prevailed, the assessment and mode of collecting these taxes varied according to different places. Practice was simply regulated by local custom without any fixed principle to serve as guide. In some places imposts were collected on commodities; in others, on actual business transactions. Or, otherwise, there were indirect taxes on consumption in one place, and fees for licenses to sell in another. The names and kinds of the levies were so numerous that we have reckoned up more than two thousand. One can readily see how complicated they must have been. Moreover, they weighed too heavily on some commodities or businesses, and were too light upon others. Indeed, such a system as they involved could no longer be maintained, and, accordingly, they were entirely abolished in the 2d month of the 8th year of Meiji (February, 1875). In the second place we must refer to the tax called *Kokuyeki-kin*. This was levied on the inhabitants of the territories directly controlled by the Baku-fu, and on those of the small Han, and was devoted to the conservancy of the banks of rivers. It was very inequitable, and was, therefore, entirely abolished in the 2d month of the 8th year of Meiji. Thirdly, we will allude to the tax on *Shibori-abura* (oil for lighting). Formerly, this tax, also, was unfairly levied. So in the 9th month of the 4th year of Meiji (October, 1871), it was reformed and rendered equitable. Later still, and in order to encourage production of the oil, it was abolished. This occurred in the 2d month of the 8th year of Meiji (February, 1875). In the fourth place, as regards the taxes on servants, carriages and pleasure boats, they had been established in the 1st month of the 6th year of Meiji (January, 1873), but their returns proved meager, and their collection was a very complicated matter. They were accordingly abolished in the 2d month of the 8th year of Meiji, the tax on pleasure boats being incorporated with the measure which provides for ship-licenses; and the tax on vehicles, which, as a separate contribution, is still in force, was provided.

#### PART V.—INCOME DERIVED FROM GOVERNMENT INDUSTRIES.

The income which we treat in this part is derived from several kinds of industries established by the government. The total receipts during six and a half years (from the 2d year of Meiji to the 7th month of the 8th year) amount to Yen 6,776,102.899, and the receipts of each fiscal term are as follows:

	Yen.
Second term.....	83,528.574
Third term .....	87,848.978
Fourth term.....	118,927.801
Fifth term.....	148,964.857
Sixth term .....	2,002,518.817
Seventh term .....	1,987,884.900
Eighth term.....	2,451,489.477
Total.....	6,776,102.899

The receipts of the 2d and 8d terms were derived from the Yokosuka and Yokohama iron works only. In the 4th term the receipts from the Yokosuka dock (formerly Yokosuka iron works) increased; while more than Yen 80,000 from the Nagasaki factory and some returns from the Telegraphs were also collected. The receipts for the 5th term were a little more than those of the preceding term. This increase was caused by the fact that the mining tax began to be collected, amounting to something over Yen 88,000. The 6th term shows a large and sudden increase; the sum of more than Yen 1,096,000 from the mint (including receipts which belonged to the 4th and 5th terms), and more than Yen 544,000 from the railway between Tokio and Yokohama (being the total receipts since its opening in the 5th month of the 5th year of Meiji), were received in this term by the national treasury. Further the income from mines was increased by more than Yen 115,000; and from telegraphs by Yen 101,000. In the 7th term the receipts decreased somewhat. In the eighth term the receipts from the resources under consideration exceeded the average of the sixth and seventh terms by about Yen 456,000. Considering the short duration of the term, this is a considerable increase. It was due to the fact that the payments which should have been made in the previous terms, but had been delayed, were made in this term.

There are one or two things in regard to the income in question which need some explanation. Though the receipts from mines commenced to be reckoned only from the 5th term yet, as a matter of fact, such mines as Sado, Ikuno and Kozaka had already been worked since the 8d term; and the reason why these receipts were not realized before the 5th term, was that during those periods the government was engaged in establishing the mint and was busy recoinng old coins, and there was no time to spare for refining ore. Accordingly payment of duties was delayed. As to other government industries, details will hereafter be specially given. Receipts and expenditures in regard to the several items will, also, be detailed.

#### PART VI.—REPAYMENT OF ORDINARY LOANS DUE TO GOVERNMENT.

The repayment of ordinary loans which we shall consider in this part, is more fully mentioned in the 2d item of section VIII—Expenditures (see part I ch. 1). The total repayment of this loan during seven and a half years, from the 1st year of Meiji to the 7th month of the 8th year of Meiji, amounted to Yen 2,551,952.866; and the amounts collected in each year were as follows:

	Yen.
First term.....	124,521.771
Second term.....	55,697.845
Third term .....	120,229.205
Fourth term.....	866,919.171
Fifth term.....	602,097.184
Sixth term.....	679,885.056
Seventh term.....	259,987.171
Eighth term .....	842,665.468

Total ..... 2,551,952.866

There is scarcely anything requiring an explanation in regard to the repayment under consideration. However, it may be important to state that the reason why this part was separately inserted is simply to make the statement clearer than it would otherwise be. There are other kinds of loans—such as to Koku Daka wari, Tsusho shi, and other companies—loans made to encourage trade and industries. These advances are extraordinary in their character. We believe that ordinary and extraordinary advances should be carefully distinguished, especially in financial statements. This is why we are induced to consider this part of the subject separately.

[TO BE CONTINUED.]

#### REUTER'S TELEGRAMS.

FROM THE "HONGKONG DAILY PRESS."

LONDON, 4th February.

A conflict has taken place between the Police and Nihilists in St. Petersburg.

A Proclamation issued by the latter declares a death struggle against the Government.

Heavy reinforcements are being sent to Kandahar, and it is believed that a march upon Herat is contemplated. Mr. Parnell has made a speech in the United States House of Representatives (?) upon the land question.

(From the *Straits Times*.)

London, 26th January.—The immediate occupation of Tongking by the French is affirmed.

London, 28th January.—The interchange of notes upon the subject of the Mollah affair between Mr. Layard and the Porte is still going on.

Mr. Lowell has been appointed United States Minister to London.

London, 29th January.—The semi-official *Agence Russe* declares the report that Russian troops are concentrating in Poland to be unfounded.

The Austro-Hungarian Minister of Foreign Affairs has made a reassuring speech on the subject.

London, 30th January.—It is intimated that the German Government will not resume the silver sales.

#### NOTES OF THE WEEK.

On the morning of Wednesday last the P. and O. steamer *Malacca* arrived from Hongkong, with the English mail of January 6th. The P. M. steamer *City of Tokio* arrived from the same port on the 15th, and was despatched for San Francisco on Tuesday afternoon.

The *Castello* left Singapore for Hongkong on February 9th.

The *Lydia* from Hamburg for China and Japan, put into Plymouth for repairs, on the 24th of December.

Thefts are common enough both in Tokio and Yokohama, but our readers will learn with regret that a robbery has taken place at the Yamaashita museum, in Tokio, and a number of ancient swords, banners, &c., extremely valuable from historic associations, have been stolen.

A general meeting of the shareholders in the Tokio Marine Insurance Company was held on the 13th instant. The report submitted disclosed an exceedingly prosperous condition of affairs, not a single vessel issued by the company having sustained damage during the period covered by the statement. Mr. Date was appointed managing director for the current year.

At the date of the departure of the last English mail, the successor to Monsieur de Geofroy, late French Minister to Japan, had not yet been appointed. Monsieur Garnier, formerly French Consul at Bangkok, has been transferred to the Consulate in Shanghai.

Intelligence was received in Tokio in the early part of the week that Asama-yama, a mountain in the prefecture of Shinano, was sending forth volumes of dense smoke and giving every indication of approaching active eruption. The news attracted considerable attention, and Dr. Martin has left the capital to inspect and report upon the phenomena.

The municipal authorities of Osaka have adopted a wise precautionary course which may with advantage be followed in the other cities and towns throughout the empire. Although cholera has disappeared, for the present, there can be little doubt that the germs of the disease still lurk in many localities. The Osaka officials have given strict orders that a thorough cleansing of their city is to be effected and every precaution

taken against a recurrence of the epidemic when warm weather again sets in.

Her Majesty the Queen, has been graciously pleased to intimate, through Lieutenant-General Ponsonby, her approval and acceptance, with thanks, of a copy of Mr. Streeter's new work on "Precious Stones and Gems."—*Morning Post*.

The Concert given last Saturday evening by some of our musical amateurs, with the assistance of Madame Claus, must have been a great success financially; a large and fashionable audience being present.

The entertainment opened with some fragments of Mendelssohn's Pianoforte trio in D minor Op. 49; the performance suffering much from the omission of the glorious opening *Allegro*, and the frequent absence of the Cello part, that instrument being sometimes quite inaudible. The *Scherzo* and *Finale* were also taken too slowly, and thus much of the Mendelssohnian charm was lost. After a Russian cavatina for a tenor voice came a show piece for the Violin by the French composer Alard, followed by one of the gems of the evening:—Schubert's "Aufenthalt" from the Schwanengesang of that immortal King of song. The programme next called for a Polonaise by Chopin; but some other piece was substituted with which we were not acquainted. A cavatina from Gonod's *Faust* brought the first part to a close. After a short interval came "Papa" Haydn's ever-welcome Quinten-quartet, with its wonderful canon in the last movement. The parts in this were not quite evenly balanced, and the general effect was sadly marred by the entry of part of the audience during the earlier movements. A song for Soprano with Violino obbligato (much appreciated) was followed by a *pièce de Concert* for piano alone, and No. 10 was replaced by a charming ballad of Kirchner's:—"Sie sagen es wäre die liebe." This was rapturously encored, when Schubert's song "Die Post" was given, and the evening came to an end with a Chorus for male voices by Kreuzer.

We were delighted to have the pleasure of hearing Madame Claus once again, her pure intonation and finished *cantabile* being especially noticeable in the Fantasia by Alard and in the accompaniment to Braga's song. As to the other numbers it would be unseemly to criticise too closely the work of Amateurs, all of them well known, and whom we have had the pleasure of hearing before either in the room of the Christian Association in Tokio or at the hospitable réunions of the Club Germania. We cannot, however, refrain from saying that the Piano solo in the second part was played by our *première pianiste* with inimitable brilliancy; also that the songs by Schubert and Kirchner were sung by a lady vocalist with grand artistic feeling. Every word and tone could be distinctly heard, and the audience was roused to enthusiasm befitting the occasion.

During the stay of the P. M. steamer *City of Tokio* in Yokohama harbour, between her arrival from Hongkong on the 19th of November and her departure for San Francisco on the 22nd of the same month, a remarkable spring of fresh water was discovered under the ship as she lay moored at her buoy, when tailing in a line with Honmoko point. The first intimation of such a thing occurred on opening the valve of the sea-cocks directly under the ship. The water was being conducted by a hose to the engine-room, on a level with the sea, when the Chinamen there commenced to wash their clothes in it. On being remonstrated with by one of the officers, they replied that the water was not salt but fresh, and the second engineer tasted it and found that such was the case. The matter was reported to the chief engineer, Mr. S. W. Hawzhurst, and we are enabled through his courtesy to give publicity to the discovery. This gentleman informs us that he has observed the presence of the spring two or three times, but only when the ship was in the position we have described. His impression is that it must proceed from a volcanic source, and be of some considerable volume and force, as otherwise it would scarcely reach the surface from a depth of some seven fathoms. The water was used on board for various purposes, and some of it was exhibited by Mr. Hawzhurst to the passengers, who pronounced it fresh. It was slightly impregnated with sulphur, but no trace of salt was noticeable; and it would be far preferable to much of the brackish water derived from the settlement. The position of the ship when tailing in the direction we mention, would make the water appear to come to the surface about

two hundred feet from the buoy, and with these indications we hardly think there would be much difficulty in finding it at any time. That such springs exist in other places, notably on the coast of Florida, is a well known fact, and there they are availed of to supply ships, &c., with perfectly fresh water, and are of inestimable value for that purpose. Certainly this discovery might be utilized here, at any rate for supplying steamer's boilers and for general ship's use. The matter is worth the attention of the authorities, and no doubt if the fountain were found to be in constant action there would be no difficulty in making it profitable as well as useful. Similar springs are known to exist off the coast of Idzu no Ōshima (Vries Island) and in any volcanic country can hardly be considered phenomenal. During the last passage of the *City of Tokio* to Hongkong, several sources were traversed; and a remarkable rise in the temperature of the water was observable in the neighbourhood of the isle, where the sea also showed quite an agitated surface. Mr. Hawzhurst reports that he did not notice the spring during the late stay of the steamer in the harbour, as he had not given the matter any careful consideration or opened the valves when the ship was in a similar position to that which she occupied when the spring was first discovered.

Some idea may be formed of the magnitude of the Indian tea trade from the fact that during the year 1879 no less than 38,126,447 lbs. were exported to Great Britain, as against 33,458,011 lbs. exported in 1878. In addition, a very large business is done with Central Asia.

The Hongkong *Daily Press*, says: "We are informed that, through the representations of Mr. J. Pitman, on behalf of the China Merchants' Steam Navigation Company, to the Lords of the Admiralty, they have decided not to make any claim for salvage, for the services rendered by H.M.S. *Swinger* in towing off the Company's steamer *Yekia*, when she went ashore some time since at Chefoo. The sum paid over as deposit has accordingly been returned by Mr. Gardner, British Consul at Chefoo. In acknowledgment of Mr. Pitman's services, Mr. Tong King Sing has, on behalf the C. M. S. N. Company, forwarded him a cheque, which the recipient will devote to the purchase of a cup to be suitably engraved as a memento and token of friendship on the part of the Company."

The adjourned meeting of the jockey club was held on Saturday, the 14th instant, at the Gaiety Theatre, at 3 p.m., and was attended by Messrs. H. Allen, Junr., J. C. Haswell, N. P. Kingdon, Cope, Mitchell, Jaffray, Peacock, Waggon and others.

Mr. Cope, having been voted to the chair, stated that the object of the meeting was to pass the accounts of last year, and to take into consideration the future of the Jockey Club. It was evident that the present Club could not continue to pay expenses, but as there were reported other schemes under consideration for the promotion of racing, it would be as well to temporarily adjourn this meeting in order to ascertain whether any new Club was to be formed, and, if so, whether it would take over any properties that might belong to the Y. J. C. at a valuation, or otherwise.

Mr. Allen then read the accounts for last year, which on the proposition of Mr. Haswell, seconded by Mr. Mitchell, were approved and accepted.

Mr. Jaffray then proposed and Mr. Peacock seconded "that this meeting stand adjourned to the call of the Hon. Secretary."

After some discussion Mr. Kingdon proposed as an amendment "that the books, accounts, and vouchers of the Y. J. C. be placed in the hands of Mr. J. J. Keewick, Clerk of the Course, with the view of ascertaining to whom the various properties belong."

This amendment did not meet with a seconder, or with the approval of the members present, it being the general opinion that the present Hon. Secretary and Treasurer, Mr. H. Allen, had done everything possible for the interests of the Jockey Club, and that all accounts appertaining thereto should be left in his hands.

Mr. Jaffray's proposition was then put to the meeting and carried.

Mr. Allen stated that it was his intention to call a final meeting before the end of the current month.

The meeting then adjourned.

From the Hongkong *Daily Press* we learn that the following is a translation of a Chinese petition just presented to the local Government praying that the Japanese silver yen may be made legally current in this colony :—

"We, the undersigned Chinese bankers, merchants, and traders resident in Hongkong, having lived in this colony for years and knowing the circumstances, and also being largely interested in its commercial development humbly, beg to petition His Excellency the Governor, praying that His Excellency will be pleased to use his influence to make the Japanese silver yen legally current in Hongkong.

"It is now established beyond doubt that the Japanese silver yen is a coin of at least equal purity and weight with the Mexican dollar.

"It is coined at a Mint which ranks amongst the first in the world, and under the auspices of a responsible Government, whose interests are bound up in the maintenance of its purity and weight.

"The Osaka Mint is within five days' journey from Hongkong, and there is direct and regular steam communication between the two places, and it is, moreover, the only establishment of its kind available for the Far East.

"The legalisation of the Japanese silver yen in Hongkong would give great facilities, in various ways, for the conduct of business transactions between this Colony and Japan, which are now rapidly on the increase. It would also be of the greatest service in Hongkong itself, and if the silver yen be allowed to be legalised, commercial transactions will increase day by day.

"For the above reasons, we respectfully beg to urge that the granting of this petition, while it certainly would injure no interests whatever, would, on the other hand, contribute in a most important degree to the commercial interests and convenience of Hongkong, and the development of its trade."

The petition, read told, bears the chops of over two hundred Chinese hong.

An entertainment, as previously announced, was given at the Temperance Hall on the 19th instant, under the auspices of the Royal Naval Branch of the National Temperance League, recently established at this port. There was a good attendance, mainly composed of seamen from the ships in harbour, and, in addition, some fourteen or fifteen lady residents graced the occasion by their presence, a few of them contributing to the evening's amusement. Pianoforte solos, songs, recitations and temperance addresses constituted the programme. The gem of the evening in the vocal line was a song by a young lady, with piano accompaniment, which was rendered with much sweetness. The reverend gentlemen who delivered the addresses dwelt with much emphasis on the evils of intemperance, introducing several interesting anecdotes by way of illustration. Brief pointed addresses like those delivered, which do not allow the attention to flag, are, we consider, best suited to such occasions.

The following judgments have been delivered in the French Consular Court in the several cases in which our French confrères are interested :—

#### ANTOINE vs. LEVY.

The French Consular Court at Yokohama having heard the case and deliberated in conformity with the law, now delivers the following judgment in open Court.

Considering that it has been proved by documentary evidence and the pleadings that C. Levy, the editor and proprietor of the newspaper, the *Echo du Japon*, published in the issue of his paper of the 27th of January ultimo, a letter signed "Hanneton" containing a passage beginning, "Don't you know a nice old man" and ending "who has now taken to journalism" which contains three insinuations, of which the first and the third appear to have contemplated the lowering in public estimation of the person meant by the writer.

Considering that the Court has no doubt that the individual aimed at by the author of the letter, although not actually named, was the plaintiff Antoine, who is employed on the staff of the *Courier du Japon*, and that this is also the opinion of the majority of the readers of the said letter.

Considering that the proposal made by the defendant Levy, to state in his paper that he had no intention of alluding to the plaintiff Antoine, would not have the effect of removing the impression made upon the minds of the readers of the letter in question.

Considering that the Court is not called upon to ascertain whether the plaintiff has been slandered in a private or official

capacity, that point not having been raised by either plaintiff or defendant, the Court is justified in assuming that the plaintiff has sued as a private individual.

Considering that the libel and slander of private persons is punishable under the 18th article of the law of the 17th of May, 1819 which says "Slander of individuals in their private capacity is punishable by imprisonment for not less than five days and not more than one year, with or without a fine of not less than twenty-five and not more than two thousand francs; or by either of those modes of punishment according to circumstances."

As regards the damages claimed by the plaintiff :—

Considering that the injury he has sustained by the libel has not been accompanied by pecuniary damage and that the moral reparation to which he is entitled will make good any such injury, provided the same means are made use of as were employed to give offence. Therefore :—

The Court condemns Levy to pay a fine of fifty francs and forbids Levy from selling or circulating in any manner copies of the *Echo du Japon* of the 27th of January or the mail summary of the same journal published on the 7th of February. It is also ordered that the judgment of the Court be inserted in full, in one of the two next issues of the *Echo du Japon* and in its next mail summary. In default of the defendant complying with the judgment of the Court the plaintiff may apply to have the decision enforced. The Court orders the defendant to pay the costs of the proceedings.

#### HARMAND vs. LEVY; AND LEVY vs. HARMAND.

Both of these actions were dismissed, the plaintiff in each case having to pay costs.

If seniority be allowed due weight in the selection, Vice-Admiral Randolph will be the Commander-in-chief in China at the vacancy which will soon occur. The Vice-Admiral has a high reputation as a smart commanding officer; and is, moreover, known to be a diligent student of that much neglected subject, naval tactics.—"Atlas" in the *World*.

We publish in another column a translation of an address issued by Mr. Masuda, the manager of the Mitsui Bussan Kaisha, to those Japanese merchants who are desirous of obtaining information on the subject of trade with other countries. Mr. Masuda may well be looked upon as a type of progressive Japan. In 1860, when a samurai of the Tokugawa clan, then the great power in the country, he was attached, as student interpreter, to the American Legation, during the time of Mr. Townsend Harris. Mr. Masuda was subsequently a member of the embassy from the Shōgun's Government that visited France, and after his return received a commission in a cavalry regiment and was connected with the French Military Mission from 1866 to 1867. Upon the restoration all the Tokugawa samurai had to seek fresh employment, and Mr. Masuda was no exception to the general rule. He commenced business in Yokohama as a merchant in 1870, and continued there until 1872, when he was appointed Commissioner of the Mint, an office which he resigned in 1873. He then managed the Senshin Kuwaisha with great success until 1876, when he accepted the onerous position of chief manager of the Mitsui Bussan Kuwaisha, which he has completely reorganized and conducts with great skill and ability. This great trading company, in addition to its agencies all over Japan, has established branches in London, Paris, New York, &c., &c. and is the first Japanese mercantile house which has embarked in direct foreign trade. If success be at all attainable we have little doubt that under the guidance of Mr. Masuda the Mitsui Bussan Kuwaisha has before it a career of great prosperity.

Another daring but happily unsuccessful effort to assassinate the Emperor of Russia occurred, according to a telegram received here on Thursday, on Tuesday the 17th instant. On this occasion, the threat to blow up the Winter Palace was attempted, with, however, only partial success, as the Czar and all the members of the imperial family escaped injury, although many of the soldiers on guard were killed or wounded. The audacity displayed by the conspirators in the endeavour to accomplish their foul designs and the inveterate hate shown by them towards a monarch who has done so much to ameliorate

the condition of a vast multitude of his subjects, will certainly alienate every right-thinking person from any sympathy with the cause represented by the would-be murderers of innocent people. From the particulars to hand it appears that the explosion took place at the time the Emperor was about to take dinner, and, although the dining room escaped, the guard room which is evidently quite close to it was destroyed, six soldiers being killed and forty-five wounded. The men-of-war in harbour flew the Russian flag yesterday at the main, in honour of the Emperor's escape, and the Russian Minister, Rear-Admiral Baron Stackleberg, and other Russian officials, attended a thanksgiving service at the Russian Church in Tokio.

#### ASIATIC SOCIETY OF JAPAN.

##### TOKIYO MEETING.

A General Meeting of the Asiatic Society was held at the Shōheikuwan, Seidō, Tokiyō, on Tuesday, February 10th., Dr. Divers, President, in the chair. The recording secretary for Tokiyō announced the election of Capt. E. Wilson Haswell as an ordinary member, and Mr. J. B. Coughtrie of Hongkong as a non-resident member. The corresponding secretary read a letter from the late president, the Rev. Dr. Syle, referring to some interviews he had had with the authorities in America on the subject of tidal observations on the Japanese coasts. The Librarian reported the receipt of twenty-two numbers of the Proceedings of the Royal Society of London, and of various other periodicals, pamphlets, and books. Votes of thanks to the donors were passed.

Professor Atkinson then communicated a "Note of Analyses of Japanese Clays," after which,

Mr. Wm. Bramsen read a paper "On Japanese Chronology and Calendars." By consent of the council and the author it had been decided not to publish this paper in the transactions of the Society, as Mr. Bramsen desired to publish it himself, as part of another work, which would appear before the next number of the Transactions could be issued.

The paper began by describing the four modes of counting the years, viz., by the reigns of the monarchs; by year-periods (*Nen-gō*); by the Sexagenary Cycle, and by a continuous era beginning with Jimmu Tenno. The origin of all details concerning the two first named systems were given, and the author pointed out the drawback, that without reference to hand-books, one could not form an exact idea of the true place in history of events thus recorded. The Sexagenary Cycle was fully explained by diagrams, and its importance as a means of calculating the exact time of early events, was demonstrated.

After this, the author proceeded to describe the sub-division of the civil year. He explained the characteristics of the lunar calendars, as introduced from China, and the necessity of their containing months of twenty-nine or thirty days, the latter being more frequent than the former. The rules followed in fixing the length of the months were shown, and applied to a series of sixty-two months. In trying to adapt such lunar months to the solar year, so as to make the seasons occur with some degree of regularity in the same months of the civil year, we met with the difficulty that twelve lunations were about eleven days shorter than the solar year, while thirteen lunations would considerably exceed it. It thus became necessary to make the ordinary civil year twelve months (moons), and then occasionally to insert an intercalary month in order to bring the New Year's day back to its original place in the solar year. To understand how this was done, it was necessary to consider the solar year, and to explain the division of the sun's circuit into twelve parts, the dividing radii being the twelve *Setau*; these divisions being again divided into halves by the *Chū-setau*, making altogether twenty-four fixed periods in the solar year. It was thereafter shown, how by imagining the moon travelling round this same circuit, a lunation would, as a rule, comprise one *Setau* and one *Chū-setau*, although in exceptional cases, owing to the lunation being shorter than one-twelfth of the solar year, the lunation would only cover one of the twenty-four divisions, either a *Setau* or a *Chū-setau*; and it was demonstrated by diagrams, that by making it a rule, that when a moon did not pass through a *Chū-setau*, the month became intercalary, the lunar months and the solar year were brought to agree so far, that the new year's days of the civil years would always fall within certain limits, not exceeding about twenty-one days.

Mr. Bramsen therefore applied this rule to the sixty-two months of which the length, as above mentioned, had been calculated, and thereafter divided these months into groups of twelve, not counting the intercalaries; the result being a five-yearly calendar, as it would be according to the old Chinese system. In this calendar two short months could not follow one another, nor could more than two long ones be found together.

The modifications which the later systems of calendars have undergone, were thereafter explained, particularly the one that

had the effect of bringing three short months and sometimes four long ones together.

After this a list was given of all the different calendars that have been in use in Japan, the time of their origin in China, and of their introduction into Japan.

The author then proceeded to shew how the Sexagenary Cycle was applied to months and days, in the same way as to years. The intercalary months do not get any separate *E-to* (name by the cycle); consequently one cycle of sixty will be completed in the course of five years; the result being that the same *E-to* recurs in the same months with some kind of regularity. Mr. Bramsen here showed a Perpetual Table for calculating the *E-to* of any month, when the year from Jimmu Tenno, or the corresponding year by the Christian era, is known.

The last part of the paper was devoted to the division of time prior to the introduction of Chinese Calendars. In considering this question, it was impossible to decide, with certainty, how the Japanese counted their years in remote days. Through a lengthened argumentation and detailed calculations, in which the reputed long lives of the first emperors entered, the author came to the conclusion, that it was likely the Japanese originally counted their years from equinox to equinox, thereby making two years of what we now call one, and that after the death of Nintoku Tenno, the Chinese year, of double the length, was adopted. This, if correct, would make Jimmu Tenno's true place in history about 130 B.C., instead of 660 B.C. as generally surmised. To sustain this theory it became necessary to demonstrate, that the early historical work called the "Nihon-gi,"—in which the day of the cycle, the month and day of the very earliest events are given with scrupulous minuteness—is a pure fabrication. It was absurd to say that they could have counted by the cycle about nine centuries before the Chinese characters became known in the country, or that they could have calendars seven hundred years before Christ, when it was a fact, that the first Chinese calendar was introduced about seven hundred years after Christ; and the author showed, how even the dates given by the "Nihon-gi" for many years after calendars were really in use in Japan, are not in conformity with the systems ruling at the time, and therefore evidently compiled afterwards. Mr. Bramsen also showed how easy it was to copy from the records of Chinese calendars any number of years that was desired, and put them before the first genuine Japanese calendar, thereby making the Japanese history extend back, *ad libitum*. He did not hesitate to stamp the "Nihon-gi" and the calendars that were compiled simultaneously therewith, as one of the greatest literary frauds ever perpetrated.

The author thereafter demonstrated, how the circumstance, that the new-year's day assigned, in the "Nihon-gi," as the one on which Jimmu Tenno's reign commenced, can be proved to have been a day on which it was a new-moon,—a fact which has puzzled many writers on Japanese matters,—is of no significance whatever, being in reality but a necessary consequence of the whole scheme of fictitious chronology.

After passing a few remarks on a certain Chinese tradition, which by some writers has been associated with the invasion of Jimmu Tenno, but which on examination proves to have no connection whatever therewith, Mr. Bramsen brought to an end the paper, of which the above is but a brief résumé.

After a few remarks by the President, Mr. Satow gave some reasons for dissenting from the theory propounded by Mr. Bramsen that the extraordinary longevity ascribed to some of the early Mikados was owing to the Japanese having, previous to the introduction of the Chinese calendar, counted one year as two.

In reply to Mr. Satow's remarks, Mr. Bramsen said, that the ages on which he had calculated were those given in the "Domo Hitazoku," a book which he thought Mr. Satow had himself recommended as a good authority. As to Mr. Satow's statement, that the long lives of the emperors might be looked upon as a mere exaggeration, of no practical significance, Mr. Bramsen thought this did not help us out of the difficulty; for the reigns of several emperors were in themselves longer than any man could live; and the length of the reigns could not possibly be exaggerated without moving Jimmu Tenno further back in history, than his true place. If, as Mr. Satow stated, the sexagenary cycle was not used in China until the second century before Christ, this would only bear the speaker out in his statement, that the whole chronology contained in the "Nihon-gi," where the cycle is applied seven centuries before Christ, is a fiction; for nobody would possibly say that the Chinese got their knowledge of the cycle from the Japanese.

After some further observations by Mr. Satow, the president, and the author of the paper, the meeting was adjourned, the usual votes of thanks having been passed.

#### PARIS LETTER.

DECEMBER 20TH, 1880.

Alexandre Dumas, according to his habit, ever puffs any new production from his pen, some time before it appears before the public: he objects to no amount of incense: it pays. He is

rather late in the field with his work on Divorce; M. Naquet, an Israelite, has a monopoly of the honors of the agitation, certain to be crowned with success. In his paradoxes with the question of adultery, as revealed on the stage, Dumas has never conquered a following: people laughed or frowned as they viewed his thesis amusing or shocking, but no one for a moment ever accepted him as serious. It is no secret that he has been disappointed in not being canonized as a moralist; as a set off, he created a little noise, not a small reward for a Frenchman, and netted not a little cash, which is never a cause for complaining. In his present volume of 400 pages, he dips deeply into theology, quoting Philip against Philip as regards the relations of the Church and Divorce—which is tantamount to forcing an open door. The rest of the work is a string of commonplaces, where the effort to be sensational is evident, to make a *coup*, but for practical purposes far behind the business simplicity and brevity of a Naquet lecture. The volume leaves you under the impression that the writer aims less to gain his cause, than to secure himself a share of celebrity. Dumas has not been inaptly described as a *brocanteur* of literature. It appears he has two secretaries, his wife and unmarried daughter; it is the mother who copies such pages as would make a barrack of troopers blush. It does not detract from his patriotism to have bought the model Alsatian cottage shown at the exhibition of 1878, which he has erected in his garden to contain curiosities.

Nothing can exceed the gush of the Spaniards towards France, for organizing a fête to assist the unfortunate Murcians, and compelling sojourners to contribute to the relief fund, which ought to be respectable despite the enormous expense. There was a memorial journal brought out called "Paris Murcia;" a kind of album, with autographs and contributions from celebrities. The old Louis XIV saw, that the Pyrenees no longer exist, has been worked up in several forms: the Khedive sincerely pities the unfortunate *inondés*: Hugo of course is Olympian: for him the best arm against an overflowing river is an "augmentation of humanity;" the misfortune of Murcia has its rebound on Paris; the latter is "the capital of the world, and a grief of the universe is a grief for Paris." "The sigh that rends thy constant heart, shall break thy Edwin's too." One Spanish gentleman, a descendant of a Sergeant Hoff, states, "I have ever boasted to be the son of a father who shot thirty Frenchmen in the guerilla war; for the future I shall never allude to this prowess." That's the kind of Recording Angel the world wants, who will blot out accusations.

The material part of the fête was held at the Hippodrome, where every kind of Iberian high jinks was practised. The immense building was crowded, for there was in addition a lottery fund of some millions. Besides, Andalusia contributed some of her prettiest, where all are pretty, of Señoras. About 12,000 persons were present, being one-sixth more than the building could contain, but the crush helped to keep up the officially guaranteed temperature. The Hippodrome is, in point of distance, considered as a colonial possession; to reach it, first catch your cab, presumed to be warm inside, while the driver freezes on the box; a two-horse vehicle is a necessity, as the second animal helps, not to so much to pull the cab, as the other horse; the drive is like the passage of the Israelites through the Red Sea, only instead of walls of water on each side, they are of snow. On entering, the stewards directed you to five vestiaries at once, situated at the opposite cardinal points, so that the round of excursions was equal to a walking match. The arena had been converted into a card-board model of the town of Murcia in its happier days, and was worthy the talent of such architects and builders as Hoffmann or Perrault; all was gaiety, flags, illuminations, lakes, flirtations. After a musical overture, an ugly rush towards the doors was observed; people expected to hear the cry of fire, the crash of an avalanche, or an incursion of polar bears; it was worse; it was a simultaneous execution of a Hungarian march on fifteen pianos by thirty pair of hands. The ex-queen of Spain, who is renowned for her piety—she received in her day the "golden rose," the Vatican Prix Montyon, from Pio Nino—was on the conclusion of the thumping scene observed to make something like the sign of the cross beneath her veil. Next came the défilé, in brilliant costumes, of real Spanish soldiers and gendarmes, with their postscript of three ribbon bedecked mules. The most Spanish scene, however, was French—the dancing by the Opera ballet—and it was exquisite. The ladies' out of sympathy, patronized black veils and large hair-combs: one actress looked lovely in a long white veil as she sold lemonade for one franc a glass out of a pitcher. The legislative omnibus box was occupied by the embassy from Morocco; their costume whiter than our snow, which at present is all black from smuts and dust. The comtesse de Paris, an infant by birth, was with her uncle the duc de Nemours: She wore a pretty iron grey—the new color *premier de chemin de fer*—with red and yellow roses in the corsage. The Stewards were originally distinguished by a red and yellow flower in the button hole, but as there was a tree in the garden of Murcia, covered with the same flowers, every gentleman plucked one, and thus became *de facto* a steward, realizing, "Figurez vous, Figurez vous, Figurez vous." The Faucy Fair was brilliant; Sarah Bernhardt looked a trifle stouter in a white

satin robe, as she sold castanets and fans; Mme. Judic was somnambulist—the first time she was caught napping in her life: who told your fortune, or did not, for fr. 10, and assured a member of the Cabinet, he would remain minister till—superseded. Mlle. Legrand sold *camélias*, oh fi! Mlle. Granier, white lilac, and Mme. Theo the new doll called *Nana*—after Zola's latest foul heroine, but warranted not to say a word that would make a nun blush, or a boarding school mistress depart in hysterics.

The cold continues to make itself at home; some editors state we have a North pole and others a South pole temperature, but what disgusts is, that Paris should be selected by the clerk of the weather to be afflicted with a temperature fit only for Esquimo. Milton relates that, after the Fall, an angel was told off to give the earth a kick, and so destroy its character of eternal spring; has another kick been given to plunge us into perpetual cold? The clergy will pray for rain or fine weather, but the Thirty-Nine Articles make no provision for a supplication for elevated temperature. A Brahmin prayer-mill is offered for sale at the Hotel Druot; if there be a suffering Hindu in Paris, let him set it going to blood heat request, and he will merit a niche in the Pantheon from *la patrie reconnaissante*. The city is gay though citizens have blue noses and blow incessantly the tips of their fingers; if ordinary work is checked, more time is left to send round the hat, to relieve the thousand who exist as if the 24 degrees below freezing point were a Palais Royal joke. The soup kitchens are working day and night; temporary shelter is provided for the homeless, and one feels more and more at ease after these duties have been discharged. The best aid to digestion is the pleasure derived from having alleviated misery, irrespective of politics or religion.

There is not much to be obtained in the markets; vegetables are like fish—blocks of ice; milk might be sold by the pound and carried home in the market basket; game, though sport is prohibited during the snow, never was more plentiful, and it seems that poachers have become poulterers, as strange peasants hawk about the luxuries in hand-baskets. But the staple topic of conversation is not so much food, as combustibles; it seems that in a Paris house, all built of iron and stone, the more coal, coke, or wood you pile on the grate, the colder becomes the room; the doors and windows appear to have been constructed to play the part of Æolian harps. Where gas-pipes are frozen, houses that depend on gas for heat and light, are miserable sights: a goblet of oil does duty on the landing, or a candle in a bottle, while the servant purchases the coke by the kilogramme, and that soon will be as dear as a fancy loaf.

The ministry is doomed to death, but fated not to die till after the holidays, why add another chord to our melancholy? The plenary amnesty has been laid by a vote, and is as dead as a door nail; the Chamber of Deputies is occupied with a bill to reform the judicial Bench, much more required than muzzling Jesuit professors: the republican commission will not vote a very liberal press-law, knowing too well the consequences, while the Municipality calls upon the Government to prevent the endowed religions from draining the city of half a million of francs per year, and an inquiry is to be instituted as to the alleged cruelties inflicted on the Communists in New Caledonia.

It is a hard time for wedding parties, as they can no longer go to the Bois de Boulogne to breakfast and promenade—but then mothers-in-law escape thus many wilfully prepared slides: a bridal party in a closed up carriage looks about as cheerful as a funeral, and compelling the guests to remain all day huddled together over a feast of good things, is akin to Dantean horror. It is too cold for crime—and to this cause Byron attributes the virtuous character of northern nations. We have had a few clever swindles, the usual number of bolting cashiers, and the average of applications from married people for judicial separation. At Mendon a young servant girl committed suicide by throwing herself on the rails; about a dozen trains picked up and carried the body hither and thither during the night.

A joint stock company of manufacturers of artistic furniture, is being formed to lease all the green rooms of the theatres and convert them into halls for the exhibition of their wares.

The prospect is not bright for hatters: at Bernic has been established a society, whose members bind themselves never to salute, by taking off their hats, even where a lady is in the case: this will save brims; a branch of the society is being opened here. It is in the name of one of the three immortal principles—equality, that the society claims to act. It is a ridiculous custom in France to see a gentleman in the street, of a cold day, keep his hat in his hand, while talking to a lady, and the latter is much to blame for tolerating the absurdity. The military salute will replace the lifting of the hat. Old French ladies abhor the English custom of "shaking hands;" the strict card is to extend the hand to be kissed—queen like.

An industry that experiences the effects of the season is the collection of the ends of cigars; quite a number of old men haunt the precincts of cafés and theatres to pick up the rejected morsels, and which by a careful cutting and mixing, constitute the need for the very poor. It is on a par with the old crusts gathered in the house refuse; they, are roasted, ground, and form the base of cheap gingerbread or the dusting for knuckles of ham and galantines.

Jules Simon is celebrated for his unctuous character: he has always on his writing table a bouquet of flowers: when the water becomes frozen in the vase, he has only, it is said, to smile into it, to induce a thaw.

Père Loyson, like many celebrated orators, has a falling nother lip: being asked to explain, he said, it must be owing to auditors hanging on the lip of the speaker.

Between two gentlemen: "There, Sir, is my card, and I shall be at home all day to-morrow." "So shall I, monsieur."

In the Central Markets there is an enormous barometer like a public clock dial: many of the country people set their watches by it.

Small debts, like little children, cry loudest.

Lady; "I do not care whether my husband be brown or blond, provided he has an eye-glass."

### JAPANESE NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as make them readable and intelligible.]

#### GOVERNMENT NOTIFICATION.

Notification, No. 3.

It is hereby notified that branch telegraph offices having been erected at Toyama, Daishoji, and Takebu in the prefecture of Iahikawa, they will be opened for business upon the 1st of March next.

YAMADA AKIYOSHI,  
Minister for Public Works.

February 14th, 1880.

#### COURT, POLITICAL AND OFFICIAL.

Changes are said to be likely to take place in the Department of Justice, during next month.

Mr. Justice Yoshino, who has been on a visit to Yesso, returned to Tokio on Thursday last.

His Majesty the Emperor has presented the sum of five hundred yen to the funds of the foundling hospital.

A school for the study of the Russian language is to be established in the Colonisation Department, at Hokkaido.

Mr. Dickenson, an American gentleman, accompanied by His Excellency Okuma, Minister of Finance, has visited the Paper Manufactory at Oji. We have also inspected the Tokio *Fucho*, where he was interviewed by the Governor anent the wooden pipes (Wyckoff's) manufactured by the San Francisco Aqueduct Company.

In consequence of changes to take place in the judicial courts at different places, the number of officers is to be increased, and the Department of Justice in consequence is about to apply for an increase of its budget by the sum of 1,200,000 yen.

The new code for the administration of justice having passed the Senate House, it will shortly be put in force.

The cranes lately presented to the Japanese Government by Governor Hennessy, have been placed in the Museum situated inside the Yamashita gate.

Inouye, the Chief Superintendent of the Imperial Railways, returned to Osaka, on the 18th instant.

The members of the Local Governors' Assembly, after the session has closed, will be permitted to visit the gardens belonging to the Akasaka palace. The members will afterwards be presented to His Majesty the Emperor.

Mr. Yegawa Kumpei, the Under Secretary of Foreign Affairs, was appointed Consul at Shanghai on the 16th instant, and will proceed to his post at an early date.

Mr. Nagaoka, the Superintendent of the Kobe Customs, returned to his post by the *Tokio Maru*, on the 18th instant. Mr. Kawano, the head of the Hakodate Custom House, will leave for his post about the 23rd or 24th instant.

His Excellency General Yamada, is going to visit the districts of Kiushiu and the central provinces, for the purpose of inspecting the timber and stone to be employed in the construction of the new Imperial Palace.

Mr. A. Marks (a British subject), was appointed Japanese Consul for the city of Melbourne on the 18th of December last. The Foreign Department is about to forward two national flags and the consular commission, by the mail leaving on the 22nd instant.

Mr. Hanabusa, Japanese Chargé d'Affaires in Corea will leave for his post in March or April next.

A notification has been issued to the effect that His Majesty the Emperor, leaving the Imperial palace at 9.30 a.m., will attend the Local Governors' Assembly on the 23rd inst.

Judge Yoshimo, accompanied by Mr. Ota, an officer of the Judicial Department, who has been on a tour of inspection throughout Yesso and the Kurile islands, has returned to the capital the *Takachiho-maru*.

Mr. Ono, the under Secretary of the Finance Department, has also returned from Osaka.

#### NAVAL AND MILITARY.

It is reported that a number of students are to be sent from the staff office to Corea, as soon as General Yamagata, the head of that department, returns from Atami.

The Japanese man-of-war, the *Kaimon Kan*, which has been in course of construction at the Yokosuka dock-yard, will probably be launched towards the end of next month.

His Majesty the Emperor has handed to the naval and military authorities the sum of 3,000 yen, to be expended in prizes to be competed for at the next Tokio rifle match.

Last Saturday's issue of the *Mainichi Shimbun* states that superior officers in the army, are at present undergoing a course of study in the Chinese language.

We learn from the *Mainichi Shimbun* that the construction of fortifications on the point of Futatsu, (which is a continuation of Saratoga point) on the coast opposite Yokohama, is shortly to be commenced. The works, it is expected, will take three years to complete.

The number of militia in Yesso is to be increased this year, and many of the *shi-oku*, of the old Aidsu and Sendai clans, are about to be enlisted in the ranks.

In March next, naval officers are to be despatched to the different provinces for the purpose of enlisting men for the marines.

The *Mainichi Shimbun* states that the Naval Department will shortly finish a complete chart of the coast of Corea.

The construction of a new man-of-war, to be called the *Tenriu Kan*, has been commenced in the Yokosuka dock-yard.

The following additions are to be made to the Imperial Guard out of the Tokio Garrison:—122 infantry, 30 cavalry, 14 artillery, 7 drivers and 9 sappers.

The *Hiei Kan* arrived at Shinagawa, on the 17th instant, and is to be stationed there for a time.

The troops of the Hiroshima Garrison, are to march through the provinces of Unahiu, Sekishiu, and Choshu, for the purpose of practising military manoeuvres.

The manufacture of rifles in the capital is being carried on as fast as possible, and the Tokio Arsenal now turns out eighty stand daily. This not being considered sufficient to meet requirements, a number of rifles, after the pattern lately invented by Major Murata, have been ordered from America.

#### INDUSTRIES, TRADE AND FINANCE.

The Woollen Manufactory established at Senji, in order to provide a supply of the raw material, has imported several hundred sheep from Australia and America, but from some cause unknown, breeding has not been attended with success. In consequence of this it has been determined to make no further attempts to rear sheep, and the wool, in future, will be imported direct from Australia and America.

The *Mainichi Shimbun* writes:—"It is highly regretted by our economists that large quantities of shirtings are imported into our country. Certain authorities have at length taken up the matter and despatched officials to the provinces of Mikawa, Owari, Ise, Kawachi, Aki, Hitachi and Shimosa, &c., for the purpose of establishing spinning factories in those provinces."

The leading native merchants of Yokohama sent an application, on the 17th instant, to the *Kencho* authorities, for permission to establish a Chamber of Commerce.

The *Choya Shimbun* notes that certain bankers in Osaka are about to establish a Specie Bank in that city, with a capital of 3,000,000 yen.

The ceremonial opening of the Cotton and Sugar Competitive Exhibition took place in Osaka, on the 15th inst. Mr. Kawase, the chief Superintendent of the Board of Trade, represented the Minister of Finance, and Mr. Tanaka, the Chief Secretary of Finance represented the Chief Superintendent of the Board of Agriculture, the Secretaries of the Home and the Finance

Departments, and the Kioto and Osaka *Fu* were present: also a number of private gentlemen amongst whom were Messrs. Godai Tomotau, Nakano Goichi, and others:—altogether about two hundred and twenty persons.

#### MISCELLANEOUS.

The *Nichi Nichi Shimbun* is in receipt of the following telegram, dated 6.15 p.m., 15th inst., from its correspondent in Osaka:—"Four or five hundred prisoners have broken prison in our city, and set it on fire. Troops have been despatched, and some persons have been wounded. Further particulars will be reported, &c."

The same paper also adds, a telegram received at the Central Telegraph Department, runs as follows:—"A fire took place in the prison yard of the Osaka *Fucho*, after 11 a.m., on the 15th inst., which destroyed one building. There were two or three of the prison guards and prisoners wounded; the fire was extinguished about 12.30 p.m."

The *Nichi Nichi Shimbun* contains a rumour "that the Yokohama Racecourse is to be removed to somewhere near Goten-yama, Takanawa, Tokio." (?)

His Royal Highness the Duke of Genoa will visit Otsu, near Kioto, about the 17th or the 18th instant, and from thence will proceed to Ishiyama, Mi-i, and Karasaki.

Mr. Shibusawa, the President of the First National Bank, had entertained Mr. Kennedy, Chargé d'Affaires for Great Britain and Judge Reunis of the British Court for Japan, at his country seat at Aji. Messrs. Masuda, Fukuchi, Yokoyama, and Okura were also of the party.

It is said that cholera has again made its appearance at Shimonoseki, in the province of Choshiu; and the Osaka *Fucho* authorities have despatched officials to enquire into the details of the outbreak.

The native papers lately reported that several cases of cholera had occurred at Shimonoseki, in the province of Choshiu. They now state that official inquiries have since proved that no such disease had made its appearance at the port indicated.

#### IMPERIAL GOVERNMENT RAILWAYS.

##### TOKIO AND YOKOHAMA SECTION.

Statement of traffic receipts for the week ending Sunday, February 15th, 1880.

Passengers, parcels, &c. ....	\$ 6,707.67
Merchandise, &c. ....	\$ 894.17

Total.....\$ 7,601.84

Miles open 18.

Corresponding week last year.

Passengers, parcels, &c. ....	\$ 9,750.70
Merchandise, &c. ....	\$ 1,468.65

Total.....\$11,219.35

Miles open 47.

#### ARRIVAL OF THE ENGLISH MAIL.

(From the *Indian Papers*.)

Kabul, January 5th.—During the past ten days not a single shot has been fired. Everything has settled down into its former state of tranquillity.

General Baker went out and destroyed the towers of Mir Butcha's village, together with his vineyards, without opposition. The strength of these forts was enormous; they gave much trouble when General Sale destroyed them in 1840. On returning, General Baker brought in with him many sirdars and headmen as hostages.

The insurgents, I hear, talk very big, saying that when their guns arrive they will pay us another visit. There are about

fifty-six guns altogether in various places in Afghanistan. The insurgents hope to get up sixteen guns, and return early in March, when everybody expects further fighting. The city and Kizzilbash quarter they completely looted. The damage done to the shops and bazaar is simply beyond conception. The people naturally are very indignant, both with them and us also, for not defending them. However we had enough to do to look after ourselves.

The Sherpur communications with India are again firmly established, a regiment being stationed at almost every stage to Gandamak. The enemy during the investment intercepted nearly all the private special daks. Of the nine letters sent to the Lattabund Brigade only two arrived.

Some men have died of pneumonia, owing to the heavy night work. Snow has almost entirely disappeared, but another downpour is expected in a few days.

Several men have been hanged; one, they say, being the man who cut down Mr. Jenkyns C. S.

The Bala Hissar is now occupied by General Charles Gough's Brigade.

The 14th Bengal Lancers and 12th Bengal Cavalry are going to Jallalabad for the winter, being short of fodder.

All the wives of Sirdars who were well disposed to the British and fell into the insurgents' hands were stripped naked, but not further dishonoured.

The late events, and the fact of our having to remain solely on the defensive has, I fancy, considerably changed the political aspect of affairs.

All villages within one thousand five hundred yards of Sherpur are now rapidly being destroyed.

The casualties of the enemy in the ten days fighting amounted to about two thousand five hundred killed and wounded. Had it not been for a deficiency of ammunition on our part they would have suffered more.

Kabul, January 9th.—There is a report of the gathering of Kohistanis at Charikar.

Most of the Maliks are at Kabul, and Logaris are daily expected.

Faiz Mahomed Khan of Logar, and Padshah Khan of Ghilzai, have arrived in the city.

Sirdar Nur Mahomed has gone to Maidan and has made arrangements for the security of the road.

Some excitement continues amongst the eastern Ghilzais.

General Roberts has held a durbar in the tantonments, attended by many of the Kohistan Maliks and influential men from Logar, Padshah Khan of Tazia, and other Ghilzais, with several Hazaras, and all the Sirdars and principal men of Kabul, including Kazzilbashar. Sir Frederick assured the assembled Maliks of the good will and friendly intentions of the British Government toward the people of Afghanistan, and their desire to respect lives, property, and religion, and not to molest any one who will live at peace with them. He pointed out how unsuccessful the late rising had been, and the generosity and forbearance shown by Government in not punishing them more severely. He expressed his satisfaction that the more intelligent and well-informed of the people of Afghanistan had taken no part in the recent disturbances, and thanked by name the various Sirdars who had remained in Sherpur and taken no part in the rising, and presented *khillats* to the Kohistanis who had remained with him. At their own request he appointed Sirdar Shahbaz Khan Governor of Kohistan, and he invited them to select some of their number to remain with him as a medium of communication. He then dismissed them to their homes.

Calcutta, January 11th.—General Roberts telegraphs from Kabul on January 10th, that the durbar which was held yesterday for the Kohistanis went off well. All who had come in, under the terms of the recent amnesty proclamation and were present, seemed reassured; others will doubtless now follow their example.

The gathering of Mohmunds at Palosi across the Kabul river continues. Their object is uncertain.

Throughout the Kaudahar province all is quiet.

Mir Afzul fled from Furrak to Persia. The local chiefs have plundered the Furrak fort, carrying off the ammunition.

Dr. Porter, Principal Medical Officer, died the previous day of pneumonia.

Large convoys of ammunition, treasure, warm clothing, and commissariat stores are now en route from Gandamak to Kabul. Reports received from Pezwan state that all missing mail bags have been found. Letters now come regularly.

Jallalabad, January 13th.—Owing to information received that armed men were once more crossing the river, fifty men of the 1-12th Foot were again sent to strengthen the post at Ali Boghan. Yesterday evening a party of three hundred men under Mogul Khan, crossed the river in rafts at Sungisarai to the village of Girdikas and attacked the Ali Boghan post at midnight. After an hour's fight they were driven off. One man of ours was wounded. A force consisting of 200 men each of the 1-12th Foot and 28th Punjab Infantry, 25 men of the 45th Sikhs, and a squadron of the 3rd Bengal Cavalry, under the command of Colonel Walker, of the 1-12th Foot, started to-day to intercept Mogul Khan's party. News has just been

received that the enemy recrossed the river and fired a few shots at Colonel Walker's force as they rounded the hill near Girdikah.

General Doran reports that two thousand five hundred Mohmunda crossed the river, and as there were only four hundred and fifty men and two guns available to be sent against them from Lundi Kotal, he applied to Peshawar for reinforcements to enable him to make up a strength of one thousand, when he will attack.

Colonel Macgregor and Colonel Lowe, of the 13th Bengal Lancers, who have been appointed directors of transport 1st Division, started for Kabul this morning.

A new post is about to be established between Jallalabad and Gandamak, doing away with the Rosabad fort, Major Batty dividing the journey into two marches instead of three.

Certain influential merchants of Kabul are said to have been called upon to produce six lakhs of rupees as a loan to the British Government. Syndjan Dadaahere is named among those who declined the proffered investment of 3 per cent., whereupon a hint of coercive measures was conveyed to them. Whether the money was then forthcoming has not transpired.

The son of Shere Ali Khan, chief of the Hazaras, tendered his submission to the British authorities at Kabul.

Rome, January 13th.—General Garibaldi's marriage with Signora Raimondi has been declared invalid by judgment of the Court of Appeal.

General Bright from Jellalabad reports that Moghul Khan of Goshita sent about 250 men from Kamah across the Kabul river to the right bank, at a spot about midway on the road from Ali Loghan to Girdikah, on the 11th and 12th. Their advanced parties occupied a ruined tower about two miles from Ali Boghan, thus cutting off the river road. The post near Ali Bogham was strengthened, and a force of infantry and cavalry were ordered out from Jellalabad on the 13th to cut them off before they could recross. The force found that our men there had been attacked the previous night, and had driven off the Mohmunds without any loss. The infantry and cavalry moved down by the river road, but the Mohmunds had recrossed into Kamah, as the force reached a spur about a mile from the spot where rafts had been constructed to re-cross the river. Moghul Khan's men assembled with several standards about 1,200 yards from the bank in the plain. Some forty or fifty men rushed down to near the bank, and opened fire as our men moved to Girdikah, but were driven off by a few shots, and the force returned to Ali Boghan through a circuitous road without any casualties. General Bright was informed by signals that a large force of Mohmunds had advanced to the river bank and were crossing the stream between Ali Boghan and Jellalabad. The cavalry and guns were ordered to proceed immediately to the most suitable place for dispersing them. The guns opened fire on the Mohmunds collected on the islands between the two streams. The Mohmunds fled on the first shell bursting, and were driven away completely, losing many. They collected in Khanjar Khel. General Doran's column left Lundikotal at 4 a.m. to attack the Mohmunds. News from Dakka up to 2 p.m., states that the enemy was driven off the west side of Garhills between Dakka and Kam Dakka, retiring upon Kam Dakka, and if the Lundikotal column has reached Kam Dakka the enemy ought soon to be surrounded and destroyed. The Shelmars had engaged to hold the Shelmars Ghakka against the Mohmunds.

Calcutta, January 16th.—The first passenger train is reported to have reached Sibi on the night of the 14th. General Roberts has issued a proclamation announcing the abolition of the Military Governorship and the appointment of Wali Mahomed to administer the Kabul district, including the city, on our behalf. The Military Commission has ceased to sit. Further reports have been received of the alleged collection of Kohistanis at Charokar, and that disbanded sepoy are being drawn to Ghasni by promise of pay and food. The hostile Mohmunds who had crossed the Kabul river near Dakka to the number of nearly 5,000 were attacked and defeated, and driven across the river by the troops under Colonel Boisragon from Dakka. Our loss is one Jemadar of the N. I. killed and seven sepoy wounded. The Lundi Kotal column arrived too late to cut off the retreating enemy.

From Kandahar, 15th.—Everything is quiet in Kandahar, Kelat-i-Ghilzai, and the neighbourhood. Previous reports are confirmed of Ayub's position at Herat, and of the bitter animosity between the Kabul and Herati troops and people. Festivities are being held at Jolabad on the completion of the Ruk-Sibi section of the railway. Sir Richard Temple has telegraphed his congratulations. The first division of the convoy started to Kabul this morning. Colonel Macgregor and Colonel Lowe of the 13th Bengal Lancers, have been appointed Directors of transport.

Bombay, January 16th.—Surmises point to the possibility of Sir Richard Temple either proceeding to Calcutta to relieve the Viceroy or to Westminster to consult on Afghan affairs. The Hon'ble Sir Ashley Eden will come to Bombay. Sir R. Temple at present expects to proceed to Kandahar.

Bombay, January, 17th.—The 7th Fusiliers and the 9th and 10th Bombay Native Infantry, have been ordered to hold themselves in readiness to proceed to Southern Afghanistan.

London, January 20th.—Mr. Stanhope, the Under-Secretary for India, in a speech at Hackney, said that the financial position of India had improved and that he regarded the budget without apprehension. He believed that the surplus revenue for the current year would cover the Afghan war expenses, and the charges in connection with the frontier railway. *The Times* supports Mr. Stanhope's views. It is reported that Russia has offered to withdraw her troops from the German frontier at the desire of the Austrian and German Governments.

London, January 21st.—The *Standard* publishes a telegram from St. Petersburg, expressing an opinion as to the possibility of the British occupying Herat in order to prevent a Russian advance on Merv.

The defeat of the Russians by the Turkomans at Tchitkisar is partially confirmed.

The Home Rule members of Parliament have resolved to prevent the work of the House of Commons unless attention is given to the condition of Ireland.

The Band and Kirwee Booty case comes on again on the 28th of January. Obituary: M. Jules Favre.

Constantinople, January 21st.—The *El Jascab*, in a leading article, advises the selection of a Prince from the family of the Grand Sheriff of Mecca as the Ameer of Afghanistan, who would be respected as a descendant of the Prophet by the people, and would serve British interests better than anyone else.

London, January 22nd.—A colliery explosion took place yesterday at Leyce, near Stafford, in which from seventy to ninety lives were lost.

The Home rule members have voted a motion of sympathy with the Irish peasantry, proposed by the O'Donoghue, and have resolved to adopt an independent attitude in Parliament.

M. Vambery suggests that the British Government should annex Kandahar and revise the Treaty of Gandamak.

The *Standard* publishes a telegram from Berlin, stating that the Russian Government is augmenting its garrisons in Central Asia, and that the division of Cossack cavalry at Orenburg is to proceed to Tashkend.

London, January 22nd.—The defeat of the Russians by the Turkomans at Tchitkisar is not confirmed, and originated in the transfer of the Russian base of operations from Tchitkisar to Kransnovosk.

Madrid, January 22nd.—The Cortes have voted for the abolition of slavery in Cuba.

Berlin, January, 22nd.—A Bill has been introduced by Prince Bismarck in the German Federal Council, for increasing the German army by eleven infantry regiments, two artillery regiments, and one pioneer regiment, besides thirty-one batteries of artillery, thus making a total increase of 60,000 men on a war footing and 26,000 on a peace footing. The Bill states that the measure is justified by the strength of the neighbouring states.

London, January, 23rd.—The *Times* urges that it is the duty of the Indian Government to declare its intention as regards the future of Afghanistan. It is reported that General Skobelloff will succeed General Gergukasow in Central Asia.

## THE JAPANESE PRESS.

### TREATY REVISION.

(Translated from the *Nichi Nichi Shimbun*.)

(Continued from the "*Japan Weekly Mail*" of the 14th Feb.)

IT is unquestionable that there are great difficulties in the path of obtaining even the gradual abolition of extra-territoriality, but those difficulties are trifling in comparison with the obstacles to be successfully encountered in doing away with the infliction at once: any attempt to do so will as surely prove barren of result as an endeavour to catch fish in trees. There can, however, be little fear that Foreign Powers will pass over unnoticed the vast alterations which have taken place in this country, and cling with obstinacy to the old treaties, if only our functionaries will rest content with tentative measures, so that in course of time the evils of extra-territoriality will be got rid of altogether.

There are several methods of accomplishing the desired end; but, if we were to disclose them at present, our doing so might prove a source of embarrassment to the Japanese authorities and therefore we consider it more judicious to preserve silence, being fully convinced that our Ministers will do all that the necessities of the situation may demand.

It appears to us very probable that the first concessions towards the abolition of extra-territoriality, might easily be obtained at the present time; but, if the reasonable requirements of the Japanese authorities are contemptuously thrust aside by the Treaty Powers, then we most decidedly advocate this Empire standing upon its unquestionable rights under the treaties and resolutely assuming the civil and criminal jurisdiction which, as we have already demonstrated, still remained

rested in Japan after the treaties of 1858 were entered into. The antagonism which would inevitably follow the adoption of such a vigorous and resolute policy is doubtless unpleasant to contemplate and to be deplored, but almost anything is preferable to further enduring the illegal seizure of the independent sovereign rights of this, our country.

At the risk of unnecessary repetition we will again state what we consider to be the exact position. We believe that Japan is entitled at the present moment under the existing treaties, to exercise complete and unquestioned jurisdiction over all disputes arising between the subjects or citizens of one nationality and the subjects or citizens of another nationality; and also over all offences against the government or community, by whomsoever committed. The Consuls have their executive power to arrange disputes amicably (article 6) with the assistance, if necessary, of the Japanese authorities; but, if an amicable settlement cannot be arrived at, then the only properly authorised legal tribunal to decide the question at issue, is a Japanese Court of Law. Of course our contention does not apply to actions for debt, when the defendant is a foreigner; all such cases come within the purview of article 7 of the treaty with Great Britain.

The jurisdiction we have pointed out, which is as a matter of fact, only an almost infinitesimal portion of the inherent sovereign rights of every independent nation, was allowed to remain with Japan by the Plenipotentiaries who negotiated the first treaties in 1858. Although since illegally arrogated to themselves and exercised by the Consuls; yet, if it be once admitted that the affairs of this world are governed according to equity and reason, then there can be little doubt that the Foreign Powers will consider the vastly improved condition of Japan, and restore in 1880, the authority they were willing this country should exercise in 1858 when just emerging from a lengthened seclusion from the other nations of the earth.

We have no desire, however, to see hostile or harsh steps taken, if by any reasonable means they can be avoided, and as we have already stated, much prefer the adoption of the "middle course."

The laws and system of Government of Japan are, even yet, certainly not as perfect as those of nations occupying the front rank in civilization; but there is no comparison between the state of this country at the present time, and what it was in 1858. The great progress made by Japan is undeniable and has attracted the wonder and, we may truly say, the admiration of all unprejudiced people. Is it then under the circumstances too much to expect that, as this country continues to progress, the immunities of extra-territoriality will be gradually abandoned and the independent sovereign rights of the Empire recovered? If the Treaty Powers refuse to adopt this very reasonable view of the situation they will be acting in direct opposition to the great principles of peace and friendship mentioned in the treaties. This we feel convinced the Powers will never attempt, nor can we harbour the thought that they will refuse to comply with any moderate demands respecting extra-territoriality, when the revised treaties come to be discussed.

However, when the negotiations are entered into for a rearrangement of the treaties, if it should be found that misfortune follows upon misfortune, and nothing can be done amicably with a view of getting rid of extra-territoriality, while at the same time no resolute and independent course is adopted; on who's shoulders will the onus lie that the Empire of Japan is then oppressed? The Japanese functionaries charged with the conduct of the negotiations should reflect upon the magnitude of the interests confided to them and their consequent grave responsibilities.

As our readers will have observed, we believe that the gradual abolition of extra-territoriality will be inaugurated under the revised treaties. In order that abolition should be subsequently rapidly carried into effect, a considerable improvement will be necessary both in the laws and the system of administering the affairs of this country. We therefore appeal to the public to shake off its lethargy and actively assist in the great national cause of the complete extrication of Japan, from the trammels of foreign interference.

Before discussing the alterations in our laws and system of administration, which it may be necessary to carry into effect, we will relate to our readers the experiences of the editor of this journal when travelling in Europe some years ago. It was a matter of no concern to him whether or not there were any mutual extra-territoriality privileges existing between the Government of Japan

and the Governments of Great Britain, France, Germany and Italy because, in those countries, such great reliance had been upon the territorial laws and the equitable and impartial manner in which they are administered, that he would have had not the slightest hesitation in confiding to them his property, his life and even his honour. If any difficulty had arisen our Editor was fully resolved to appeal to the tribunals of the country for protection, and therefore he was enabled to prosecute his travels through those particular nations without feeling the slightest uneasiness or apprehension. He then went to Greece, and thence to Austria where he embarked on a mail steamer, and sailing through the Sea of Marmora arrived at the world-renowned "Golden Horn" and landed in Constantinople, the capital of the Turkish Empire. Immediately upon his arrival he suddenly recollected that he was no longer in a land governed by the just and beneficent laws which obtain in Western Europe. "What course," thought he "shall I adopt? I do not feel any confidence in the peculiar laws and customs of Turkey nor in the administration of justice, and I do not think it prudent to trust myself to their protection." The result was, that he called upon one of the Foreign Ministers at Pera and producing his credentials stated the object of his visit. This was that as the country which the Minister in question represented possessed extra-territorial rights in Turkey, our editor desired to be taken under the protection of that Power during his stay in the place. This the Minister willingly complied with and the traveller was relieved from all further anxiety.

Now from our editor's point of view not alone Turkey but all the other European countries are foreign nations; and the laws of the Turkish Empire of and the state under whose protection he placed himself are alike different from those of Japan. How then was it that in some countries he felt quite at ease, never troubling his mind about treaties or compacts and yet when he came to Turkey he was under such apprehension that, as a matter of precaution, he felt it judicious to seek the protection of a foreign state? It was not that other European countries are more familiar with Japan than Turkey is. No, the solution is this; that in the four states named he had the most implicit confidence in the system of laws and the administration of justice, while in Turkey he could place confidence in neither.

Some there are, who, in discussing this burning question of extra-territoriality attribute its establishment and continuance to the circumstance of our religion and customs being different from those of the various countries of Europe and America, and they even go so far as to assert that, even if the laws of Japan and their administration were in every respect on a par with those of Europe and America, yet the Treaty Powers would not sanction the abolition of extra-territoriality. This opinion is altogether erroneous. There might perhaps have been some ground for it in the Middle Ages when the religious element entered so largely into the affairs of everyday life and the policy of nations; but in the present advanced state of the world we do not believe in the existence of any such ideas. A distinct line of demarcation is now drawn between politics and religion and the experiences of our editor had certainly nothing to do either with his religion or the different Christian and other religions adopted in the various countries he travelled through. To us it is as clear as the sun at noon-day, that if once the people of Europe and America reposed such confidence in the judicial system of Japan, that they would not hesitate to intrust their lives, liberties and property to its protection, then the remoteness of this country and its dissimilarities in religion and customs would be found to interpose no bar to the abolition of extra-territoriality.

At this stage it becomes necessary for us to inquire, how far the existing laws of Japan could be enforced against foreigners without causing them anxiety that the result would be prejudicial both to their lives, liberties and property; but before following up this branch of the subject, let us first consider to what extent these same laws are enforced against Japanese without exciting their apprehension; in short, whether our judicial system is such that the inhabitants of this Empire place implicit confidence in it.

We very much regret that for many cogent reasons we are unable to write as freely on the subject as we should have liked, however, as we have entered upon the discussion we cannot pass over this essential point in entire silence. It is impossible to disguise the fact that those Japanese who are

well acquainted with the different enactments in force in this country, and also with the general principles of law recognized among civilized nations are constrained to acknowledge that they cannot with implicit confidence entrust their lives, liberties and property, to the protection of the existing judicial system of this Empire. Submission to the law is unavoidable, and does not arise from any admission that it is either perfect, or even suited to the necessities of the country.

How sad it is to reflect that Japan has suffered under imperfect laws for so long a time. We have no desire to refer to the old days of the Shōgunate when the mere will of the ruler was omnipotent. Ever since the restoration, the Government has devoted great attention to the improvement of the judicial system, the arbitrary power of making new laws or abolishing existing ones has been done away with, and both the civil and criminal codes have been improved from time to time as the people progressed in civilization. These proceedings are well known to all men; it is admitted by everyone that our present judicial system is infinitely superior to the old method of arbitrary government. But at the same time when we come to compare our present laws with the excellent systems of foreign countries, then indeed a great discrepancy is noticeable and therefore it is that Japanese who are acquainted with the laws of other lands are dissatisfied with those of their own country.

It may be taken for granted that before we can expect foreigners to repose confidence in the judicial system of Japan, an example must first be shown by the Japanese themselves. When this has been done we can then consistently demand that the citizens of foreign countries shall also be subject to the territorial laws of this Empire. We believe that once it is established that we Japanese are, as a nation, perfectly satisfied with our own laws, and repose in them the same confidence which obtains in all civilized communities, then there will be no difficulty in procuring the abolition of extra-territoriality.

It may be asked;—In what respect do the laws of Japan fall short of the recognized standards? We reply, Look at marriage, the most important of human relations and the foundation of all civil communities, what enactment have we bearing upon this subject? Are our marriages arranged either in accordance with law or even religion? How are our individual liberties protected? What law is there providing for the guardianship of children or females? Then again, look at the absence of satisfactory legislation regulating the ownership of landed property, inheritance, contracts, debts, public companies and bankruptcy. Enactments have doubtless been passed referring to all these subjects, but if we are asked if they are sufficient to afford complete protection, our readers known quite as well as we do that we would be much embarrassed to return a direct answer. After careful consideration we have arrived at the conclusion that, when a Judge has to decide a case, if any express law exists bearing upon the question, the decision is given accordingly; if there is no express enactment then according to custom if the point has arisen before, but if there is neither law or custom to guide him, the Judge decides as he thinks best. It thus happens, that owing to the want of legislation, cases have frequently to be decided by customs which differ in many parts of the country and according to the ideas of Judges, who, in numerous instances, adopt antagonistic views upon precisely similar subjects. This state of things indubitably leads to much uncertainty in legal proceedings, and must be remedied by the enactment of a perfect and comprehensive civil code, if we wish to succeed in procuring provision for the gradual abolition of extra-territoriality in the revised treaties.

If anyone taking a cursory glance through our contentions was to ask if the establishment of a complete civil code would be sufficient to satisfy our requirements preparatory to doing away with extra-territoriality, we would point out that, although a civil code embraces those important subjects which relate to individual rights and property, it does not affect questions of far greater magnitude, viz:—criminal offences and the system of the administration of justice, which exercise paramount influence over the liberties of the community and therefore in the interests of our own countrymen further legislation on these subjects is also imperatively necessary.

It cannot be denied that the criminal procedure of Japan is much less satisfactory than the civil. The reason

for this has not to be far sought, because improvements in the civil laws have kept pace with the progress of the country, while the contrary has, to a very great extent, been the case with criminal jurisprudence. The "new" and the "revised" codes have apparently been looked upon as models for the present reign, and although notifications have been issued from time to time effecting slight alterations, still in the main the criminal law has not improved in unison with the onward strides of the Empire.

What rules are there referring to objections, (on good ground of course) to a particular judge presiding at a trial? Are there any fixed rules respecting the examination of witnesses, preliminary examinations, trials in subordinate courts, or trials upon indictment? Persons who are thoroughly acquainted with the practice of the law courts may, perhaps, be in a position to answer these interrogatories satisfactorily, and even to mention cases where the points involved have been decided, but at the same time it is utterly impossible for anyone to assert that there are properly established rules on these subjects.

The public is well aware that the "new" and the "revised" codes are in force throughout Japan, and we have no desire to discuss either their merits or demerits. If however we are asked;—In what respect does our criminal jurisprudence differ from that of civilized nations, is it more lenient or more rigorous, is it more primitive in procedure or more formal, is it more or less comprehensive? we should be obliged in the interests of truth to point out, that although the people willingly submit to the present criminal laws, still they are far from equal to those of other nations. There are matters relating to the authority of the police, the powers of punishment vested in judges, the examination of witnesses, the reception of documentary evidence, and the accurate definition of the jurisdiction of inferior and superior courts, &c., &c., some of which have already received attention in our existing codes, while others, although equally necessary, have so far been allowed to remain in abeyance. It must therefore be apparent we cannot contend that the present criminal jurisprudence of Japan is in an altogether satisfactory condition.

Is there any provision made for establishing the great principle, so essential to individual liberty, that "every man's house is his castle"? On the contrary, we all know that the police enter people's dwellings as matter of right. Is it part of our judicial system that "every man is to be considered innocent until his guilt is proven"? Is a warrant naming a particular person, necessary before the police can arrest that person? Do search warrants in any way specify to what investigations the officers executing them are to confine themselves? Have accused persons to be brought to trial within a limited period or else released? What provision is there for bailing out a prisoner? Must criminal trials take place in open court? Are prisoners allowed the privilege of counsel? Can a prisoner, who has been acquitted, be again placed in jeopardy for the same offence? Has trial by jury been established? We submit that until satisfactory replies can be given to each and every of these queries, it cannot truly be said that the criminal code of this Empire is on an equal footing with that of civilized communities.

Let us now give an example of what may befall a native of Japan under the existing laws. Suppose that a gentleman by his conduct, in some way arouses the suspicions of the police. They can enter, or if necessary break into, his house at death of night, without giving the slightest notice or having any warrant. Although they may be disguised and have nothing to evidence the fact of their being constables, they can arrest him, rummage through his private papers and effects as they please, and then thrust him into prison, where he may be kept for weeks or months undergoing preliminary examinations. The unfortunate accused may be charged with all kinds of offences, refused bail, denied all intercourse with his friends, in fact, deprived of every trace of freedom and, after all this if the preliminary investigations prove his innocence, he has no redress for the injuries sustained and is obliged to be thankful for his escape and accept some small monetary compensation for his inevitable losses. On the other hand, if the preliminary examinations result in the charge being sent to a higher tribunal for investigation, the accused must there answer all interrogatories put to him. Al-

though the court may be sitting with closed doors and the public excluded, no objection can be taken to it. The accused will not be allowed the assistance of counsel in his defence and altogether, unless he happen to be remarkably clever and well versed in law, it is almost hopeless to expect he will be able to extricate himself from the meshes of the net which surrounds him, although he may be perfectly innocent of the crime laid to his charge. Then again an accused person is placed in a very awkward position, as law books are not allowed in prisons and he is therefore precluded from referring to them when preparing his defence. Trial by jury is unknown, and consequently the question of guilt or innocence is in the uncontrolled discretion of the judge who presides and, in many cases, conducts the trial. No doubt there is a right of appeal in existence, but that is also to a single individual, and if he happens to adopt a similar view to the judge of the inferior court, the accused is without further redress. It is also a fact, that if a person is acquitted on a charge, he may be tried for the same offence again and again.

In the example we have adduced there may perhaps be one or two things not exactly technically accurate, but it is undeniable that the general public is fully convinced that such incidents are by no means uncommon. If the even possible existence of such things be compared with the assured protection to the liberty of even the meanest citizen, which obtains in every civilized country, it will be very easy to judge whether or not the people of Japan are enamoured with the present system of criminal jurisprudence. The practical lesson to be learned from what we have pointed out, and the proceedings in the cases of Messrs. Hayakawa Isami, Nakano and Fujita (which attracted so much attention and provoked such comment recently) is, that the criminal codes of Japan do not afford due protection to the lives, liberties and property of the inhabitants, and require very considerable reforms to be instituted before they meet with general approbation throughout the Empire.

Under these circumstances we naturally desire to see prompt measures taken by the authorities, to revise and place upon a proper footing, the entire civil and criminal jurisdiction and also the administration of justice, so that the people of Japan may at length repose implicit confidence in the laws which rule them. The adoption of such a course is the proper way to lead up to the abolition of extra-territoriality; the important question of a National Assembly does not affect the improvement of the laws nor the questions we are dealing with and therefore we will not discuss it.

We have now shown, we trust satisfactorily, that law reform is a necessary condition precedent to any arrangements being made for the abolition of extra-territoriality: we will complete our task with a few remarks in conclusion to which we heartily invite the earnest attention of our fellow-countrymen.

We have stated that the two great objects the public desires to see achieved are, the restitution of power to regulate the tariff, and the submission of foreign residents to the territorial laws. Now suppose both these objects accomplished, can Japan even then take rank, not nominally merely but actually, as an independent sovereign Empire on an equal footing with the nations of Europe and America? We think not, and will give our reasons for an assertion which is undoubtedly calculated at first sight to surprise our readers.

It is very generally supposed that it is only necessary for Japan to obtain the sole control of the tariff and the abolition of extra-territoriality in order to effectually recover her position. But this supposition is manifestly erroneous, forasmuch as the independent sovereign rights of a country do not consist solely in the power to impose a custom's tariff without interference and in foreign residents being under the necessity of conforming to the territorial laws. There are several countries both in Europe and America which possess these privileges to the full, and yet are not independent sovereign states on a footing of equality with some other nations.

According to the most reliable authorities "the independence of a nation depends upon the energy, intelligence, and industry of its inhabitants." How true indeed is this remark! The local judicial authority and control of the tariff are what no sovereign state should brook

interference with; but when these important matters are not considered in themselves to constitute the whole means necessary to maintain all the sovereign rights of an independent nation, then we must seek out what further is requisite.

It is in the accepted fitness of things that the Government and people of a country shall both perform their respective duties towards the general welfare. The judicial administration and control of the tariff pertain to the functions of the governing powers, and will be exercised by the authorities of this Empire if arrangements to that effect can be made in the revised treaties; but how does the general public stand as regards its obligations to the community? How comes it that the trade and commerce of this country are almost entirely in the hands of foreigners who exercise the most complete control over all mercantile matters? For this state of things we cannot hesitate to blame the public. For example, the continual excess of imports over exports is due in great measure to the growing love of luxury among the people, who are not content with the useful articles of life but require the superfluities also. The fault rests with them also that the export trade has not increased. On reviewing the mercantile affairs of Japan it is almost impossible to mention a solitary instance in which foreigners have not reaped the earlier and most important benefits. In many cases our countrymen have sustained losses which they should not, and been deprived of their legitimate profits, and it is evident that both in financial and commercial matters Japanese traders are entirely ruled by foreigners. This is beyond the power of Government to avoid; the tariff and judicial procedure have nothing to do with the subject, and even if the Government were in possession of every power and right which we wish to see vested in them, they would still be helpless. The remedy lies with the people themselves and until they follow a course which will relieve the country from the burden of foreign control, the trade and commerce of Japan will inevitably remain in the hands of foreigners.

Treaty revision can get rid of the evils of extra-territoriality and interference with the judicial rights of the Empire, this concerns the functionaries and more especially the Minister of Foreign Affairs. If foreign war vessels armed with the enormous guns produced by modern science attack our coasts, the military and naval authorities will have to undertake the defence of the country, but they cannot interfere if foreign merchants by the judicious employment of capital and importing goods with discrimination have brought the commerce of Japan into a flourishing condition and succeeded in monopolizing the mercantile interests of the Empire. This is a task for the people themselves to accomplish, and more especially those who are engaged in financial and commercial pursuits.

The seizure of the judicial rights by foreigners is no doubt a grave matter, but as compared with the monopoly of our commerce it is of small moment, as there is no anticipating where the latter will end: if not cut down now when a sapling, it will shortly grow into a tree requiring an axe to destroy it. Immediate action is the more imperative since this monopoly is rapidly developing into huge dimensions.

The annual imports to Japan largely exceed the exports, and it is now noticeable that imported articles which a few years ago were looked upon as luxuries are now regarded as positive necessities of life. This is so with respect to cotton yarn, shirtings and sugar. During so long as these were treated as luxuries it was easy to discourage their use on the score of economy, but now that these articles have become, as it were, part and parcel of the everyday existence of the people, the same course is no longer available. This is the great danger we apprehend from the constant excess of imports over exports, month after month and year after year; as this excess gives foreigners a continually increasing hold upon the commerce of the Empire.

If the native merchants supported by the public are unable to successfully compete with foreigners and break down the existing monopoly, ought they to adopt a course frequently mooted, and appeal to the Government for the imposition of a protective tariff? This handing over to the authorities of a duty which properly falls upon the people themselves is extremely distasteful to us. It is true that protectionists can adduce many apparently sound

arguments in favour of their views; but to us it seems that their object is to destroy the import trade by means of prohibitive duties and this we firmly believe would most inevitably entail the utter annihilation of the export trade also. This result would mean in effect, the total extinction of the commerce of Japan.

It is no doubt to be deplored that imported articles, once luxuries are now necessities, but such being the case, it is impossible to effect an alteration and the only remedy for the consequent evil results is to be found in an augmentation of exports. This can only be effected by increased production.

When we look abroad we find that a large and steadily improving demand exists for the products of Japan. We possess in our agriculture, mines, fisheries and manufactures the means of supplying all the possible requirements of our export trade. We have most, if not all, the sources of national wealth, and unrivalled facilities for transportation by water. Labour is plentiful and cheap, and yet with all these manifold advantages our exports are less than our imports. Who must bear the opprobrium incident upon this anomalous condition of our commerce?

Some critics of the views we have enunciated, may perhaps remark that it is through the Government not affording due assistance to the people that the latter are unable to prevent the continuance of the foreign commercial monopoly. Now, what is meant by government assistance? Is it that the authorities shall pass laws granting special privileges, make advances of money—or what? Anything of this kind we should think would be equivalent to the Government undertaking the duties which properly pertain to the people. Government assistance should be afforded merely for the purpose of clearing away occasional commercial and financial obstacles, so as to give greater freedom of individual action. The Government ought not to go any further, nor should the people either demand or expect it to do so.

Let us consider what might have been accomplished in opposition to foreign monopoly. No doubt the Mitsui Bishi Mail Steam-ship Company have succeeded in preventing the coast trade being absorbed by foreign shipping, although the Government assistance afforded is, in great measure, to be credited with their good fortune. But putting this company aside, can a Japanese merchant be named who has won the confidence of foreigners and extended his business to other countries and opened branches in them, as foreign merchants are in the constant habit of doing? Have any of our merchants been able to enter into successful competition with foreigners abroad? What Japanese merchant is there in our own open ports who occupies any prominent position in the import and export trade? Are there any Japanese banks having business relations with other countries, so that similar foreign institutions should not reap all the benefit of financial operations with this country? We are led to believe that there are no instances of the kind on record. It may be said that there are many merchants quite competent to enter into successful competition with foreigners, but who are unwilling to do so without help from Government. If this can only be substantiated, by all means let assistance be afforded them, but what a lamentable state of things is disclosed when we find our merchants without the requisite energy to embark in new enterprises except when induced to do so by Government aid.

Japan is in a position to produce a coinage which would circulate freely all over the world and yet its value, as compared with the currency of other countries, is controlled by the London market. We are not without wealthy mercantile institutions and yet the foreign exchanges are in the hands of alien banks. Japan possesses many vessels sailing under the national flag, but if we except the Mitsui Bishi Company, the commerce of the country is entirely carried on in foreign bottoms. If this miserable state of things continues for any great length of time, the monopoly of aliens will have attained such a deep-rooted hold upon the commercial life of this Empire, that it will be wholly impossible to free the nation from its trammels. The possession of complete judicial authority and unrestricted control of the tariff will be utterly impotent to prevent this disastrous termination. We therefore confidently submit we have fully proved our contention:—that it is fruitless to expect treaty revision alone to place this Empire in the same rank with the foremost countries of the

world, as an independent sovereign state, not in name only but in actual fact, with all its manifold accruing advantages. Spain, Portugal, Greece, Mexico, Peru, enjoy all the benefits which treaty revision can ever possibly give us, but it is patent to the world that these countries are still under the domination of aliens as regards their commercial and financial affairs. Let the example of other states act as a warning for our good. Let the people of Japan realize the magnitude of the disasters consequent upon a foreign monopoly of the commerce of the Empire and the utter impossibility of shaking it off by diplomatic action alone. Let every lover of his country devote all his energies to the great object in view; so that after a revision of the treaties we shall see accomplished the dearest hope of our lives:—the Empire of the "Rising Sun" a free, independent and prosperous sovereign state.

#### MR. MASUDA'S ADDRESS TO HIS FELLOW-MERCHANTS.

(Translated from the *Bukka Shimpō*.)

GENTLEMEN,—I, Masuda, the manager of the Mitsui Bussan Kuwaisha (company dealing in native productions) have the honour to bring under your notice the following particulars respecting those commercial interests in which we are all engaged.

It is altogether unnecessary for me to remark, as you must be aware of the fact, that it is absolutely necessary in order to secure success in commercial enterprises to be thoroughly conversant with all the details of the special line embarked in. You are all doubtless well acquainted with the different phases of business in our own country, but as regards foreign trade, the reverse is, almost without exception, the rule.

In consequence of the manners, customs and ideas of the people of alien states being so opposed to those of our own country, it is very difficult for us to become acquainted with the state of trade in foreign lands, unless we have some special knowledge on the subject, in fact we are like men searching for something in the dark.

What we do ascertain, is gleaned in many instances by running about from one foreign house to another, from one merchant (or their resident managers) to another, and trying to arrive at some conclusion as to the actual state of the markets, either from their statements or proceedings. It need hardly be said that this has proved an exceedingly disastrous course to pursue.

These disadvantages, under which the majority of Japanese traders labour, are perfectly well known. It is manifestly impossible to carry on business successfully without having some basis of calculation to work from, and thus it is that honest and cautious merchants and reckless speculators, alike sustain great losses.

This is not the case with foreign merchants; they devote unceasing attention to all the constantly recurring changes of commerce: they have special knowledge of the subject, the result of arduous training, and thus their operations are almost uniformly attended with success, and they accumulate wealth and increase in prosperity and power. Hence we can easily account for the foreign merchants exercising so great a control over the trade of this Empire.

Messrs. Mitsui & Co. directed their attention to the subject, and established the Mitsui Bussan Kuwaisha, appointing me commercial manager, principally because my views coincided with their own in this matter. As a natural consequence, ever since the company commenced operations I have had numerous consultations with the members of the firm and we decided to devote special attention to commerce with foreign countries. Accordingly branch houses of the company have been opened in London, Paris, New York, Shanghai and Hongkong, &c., and we have now had three years experience in conducting a direct trade with abroad, without the interference of the foreign merchants resident here in Japan.

However, as only a comparatively short time has elapsed since this company commenced operations, and we have had to devote attention both to the home and foreign trade, we have not, as yet, been able to make our system as complete as we desire. At the same time we wished other merchants to embark in the direct trade with abroad, but found it impossible to induce them to do so.

Now nothing will tend to advance the prosperity of the Empire more than to place our traders in full possession of the actual state of commercial matters abroad, and thus enable them to carry on an export business without incurring loss except through their own negligence. It therefore becomes a duty incumbent upon those engaged in foreign trade abroad to carefully ascertain the condition of business in the places where they reside, and transmit all the information they can gather there, to Japan, for the benefit of their fellow-traders.

As I have already mentioned, the company of which I am manager—the Mitsui Bussan Kuwaisha—has established branches in the most important commercial centres abroad, and although I do not pretend for a moment that we are in possession of every possible information respecting foreign trade, still I can truly affirm that, from the intelligence we continually receive from our correspondents in other lands, we are kept well acquainted with the conditions and requirements of both the import and export trade, the probable demand and supply, the condition of freights, the price of goods at the place of production, the probable margin of profit if sold here in Japan, and last but certainly not least important, the demand which exists from time to time in foreign countries for Japanese produce, such as silk, tea, rice, &c.

The principal object with which our company was established being the development of the direct trade of this country with abroad, such trade being carried on by Japanese merchants without the intervention of resident foreigners, all the information which we have procured is most heartily at the service of our fellow-traders. Every Japanese merchant desirous of information on any points connected with foreign trade is earnestly invited to call upon us, and all our knowledge is at his service. Anything I am personally unacquainted with, I will probably be able to ascertain from our correspondence, and as we employ a foreigner who is well skilled in commercial matters as an adviser, there can be little doubt that between us we shall be able to satisfy all reasonable requirements.

Some people may perhaps imagine that my present course in addressing you, is dictated by a regard for the interests of the company I represent; such, however, is not the case. I have already explained the principal object the founders of the firm had in view; and I ask you to harbour no unjust suspicions, but gain a benefit to yourselves through our instrumentality. If this be done our company will have accomplished the original design of the members, and perhaps also reaped some advantage at the same time.

With a view of hastening the work I have borrowed this space from the *Shimpo*, in order to explain in full to you the objects of our company.

#### THE LOOCHOO QUESTION IN LONDON.

AS the dispute between Japan and China on the subject of supremacy in the Loochoo Islands, has been the cause of considerable correspondence in the columns of the *Times*, we republish letters to the editor of that journal from the pens of Mr. E. J. Reed, M.P., Mr. John Russell Young, and Mr. Robert K. Douglas, as well as a *Times* editorial article on the same subject.

Sir,—References to the existing dispute between China and Japan are so frequent in the columns of the European Press, and so many persons find in it a probable cause of war, that it may interest your readers, both at home and abroad, to see the grounds of dispute set forth in your columns. I therefore submit for publication, if you consider them worthy of it, the following facts and observations:—

The cause of quarrel lies in the group of islands lying south of Japan, known to us as the Loochoo Islands, but called *Riu Kiu* in Japanese and *Liu Kiu* in Chinese. In 1872, after the Shogun's office had been abolished and the Empire of Japan remodelled, the present Emperor granted to Shotai, the King or Chief of Loochoo, the title of Prince-Suzerain of Loochoo, gave him a palace in Tokio, and sent officers from the seat of government to assist in the administration of the Islands. Subsequently—during the present year, in fact—a further change has been made. Just as the quasi-Royal Princes and Daimios of Japan had a few years since to surrender their more or less independent feudal governments, so the Loochooan chief has been required to surrender his feudal functions, and the government of Loochoo has been assimilated to that of the 35 Kens or prefectures of the country, and is now administered by responsible officials. It is against this incorporation of Loochoo in the common Empire of Japan that China protests, and she adds to her protest a demand for the repeal of the Imperial decree under which the incorporation has been effected.

The grounds upon which China puts forward her demands are as follows.—She states that the kings or chiefs of Loochoo have for ages past submitted to the ceremony of investiture by the Emperor of China: that Loochoo has occasionally paid tribute to China: has, nevertheless, always recognized the existence of Loochoo as a separate autonomous State; and that the recent acts of the Japanese Government in the matter are a breach of the agreement which binds both China and Japan to respect each other's territorial rights. Admitting—as facts to be referred to presently make it necessary to admit—that Japan has exercised great rights and powers in Loochoo, and has long both received tribute from it and afforded it protection, the Chinese Government contend that they have themselves, nevertheless, possessed limited suzerain rights in the island kingdom, and that Loochoo has been, in fact, under a sort of allegiance to both Japan and China at the same time. This dual suzerainty, so to call it, should have deterred Japan, say they, from ignoring the claims of China in the matter and from absorbing Loochoo into the Japanese Empire.

On the other side, the Government of Japan, while acknowledging the fact of the Chinese investiture of the Loochooan chiefs or kings, and of tribute having on some occasions been paid to China, declares that these acts indicated no more than a remote and shadowy relationship between the two countries, resembling that purely ceremonial and honorary relationship which has subsisted between China and some other unimportant territories in the China seas; whereas the relation of Loochoo to Japan has been substantial, intimate, responsible, and wholly inconsistent with the claim of suzerainty set up by China. By geographical position, by language, by manners and customs, by religion, and, above all, by political history, Loochoo has been connected with Japan—say the Japanese Government—from very early periods, while as regards homage and tribute, of these history is said to furnish abundant examples. Let us look a little into these representations.

As regards geographical position, it is needless to occupy your space, as a single glance at any trustworthy map will suffice to show that, alike by formation, and by proximity of intercourse, the Loochoo Islands are geographically Japanese. The province of Satsuma, in Japan, is, so to speak, their geographical suzerain, and any claim of China would be, in this respect, groundless.

As regards the language, I cannot do better than take the following passage from a paper on Loochoo written seven years ago by an English gentleman, Mr. Ernest Satow, of the British Embassy in Tokio (who is an admirable Japanese scholar), for the Royal Asiatic Society of Japan. Mr. Satow says:—

"The language spoken by the Loochooans, so far as I can judge at present from a vocabulary which Dr. Willis has kindly sent me from Kagoshima, appears to differ very little from Japanese. One or two of the heads of the (Loochooan) Embassy now in Yeddo, with whom I had an opportunity of conversing a few days ago, spoke Japanese with perfect correctness. It is also stated that the higher officials are acquainted with the Court dialect of China. It would not be a hazardous conjecture to suppose that the Satsuma dialect of the Japanese, which contains several words unknown in other parts of this country, is closely allied to the Loochooan tongue."

Mr. W. G. Aston, M. A., also of our Embassy in Tokio and an accomplished master of the subject, in his "Grammar of the Japanese Written Language," published two years ago, speaks still more confidently. He says:—

"The only dialect which contains any considerable proportion of words which are also Japanese is that spoken in the Loochoo islands. Loochooan differs sufficiently from Japanese to render necessary, or at any rate convenient, the service of interpreters, but it is only a dialect of Japanese, and resembles it almost as much as Lowland Scotch does English."

This testimony is decisive on the matter of language, which is now deservedly considered so important an element in the settlement of national and international claims.

It may be added that *Okinawa*, the native collective name for the Loochoos, is a purely Japanese word, as is likewise, *Amami* (*"the Heaven-descended"*), which is the name of him from whom the Loochooans claim descent.

The manners and customs of the Loochooans, like those of the Japanese themselves, appear to have been largely due in the early ages to Chinese influence. In cases where the present customs of China and Japan differ, however, Loochooan habits for the most part resemble those of Japan. Chinese visitors to the islands have themselves remarked this, pointing out that the islanders in question build their houses, sit upon the floor, take their meals off low stands, wear straw sandals and clogs, &c., all in Japanese fashion. It is even said that the etiquette observed in Loochoo on State occasions is that established by a celebrated Japanese Master of Ceremonies.

In the matter of religion, although the precepts of Confucius are observed in Loochoo, the religion of the country is said to be that of ancient Japan, which is Shintoism, a religion found nowhere except in Japan and Loochoo, and thought to be peculiar to people of Japanese extraction. The principal deities worshipped are those of the Shinto faith; and the only Buddhist sects known in the islands exist in, and were doubtless derived from, Japan.

Coming now to the much more important question of the political history of Loochoo, I may observe that it is usual for European scholars to carry their accounts of the island State no further back than the 12th century. Japanese histories, however, particularize events of very much earlier date. They tell us, for example, that as long ago as the first decade of the eighth century the Emperor, Mommu, of Japan conferred rank and presents upon some of the inhabitants of Loochoo, then known as *Minami-Shima*; and that shortly afterwards homage was done to a succeeding Emperor by people from several of the islands. Before the middle of the same century the local Government of *Kiu-shiu*, in Japan, sent an officer to Loochoo to arrange anchorages for vessels, fresh water supplies, &c. In the tenth century Loochoo was mentioned

as being under the government of Kiu-shiu, the Prince of which territory received from it tribute in the form of the red wood of the country.

In the 12th century two great military families rose to positions of enormous influence in Japan, and passed rapidly from friendship to rivalry, and from that to antagonism, and finally to fierce warfare. These were the Taira and Minamoto, the story of whose struggles I have recounted in my forthcoming work upon Japan. Suffice it here to say that during those struggles the Minamoto were once badly defeated, and one of them, an archer of immense personal strength and prowess, named Tametomo, was made prisoner and exiled, as it was called, to an island on the south coast of Japan, called Oshima, in Idzu. Thence he took to cruising in the seas and among the islands to the south of Japan, and after a time fixed his residence in the Loochoos, married the chief's daughter, and there by her had a son born to him. He himself ultimately returned to Oshima, but his son, named Shunten, or Son-ten, remained behind and became the chief or king of the islands. Mr. Satow says:—

"Shunten was succeeded by his son and grandson, after whom the throne was occupied by descendants of the ancient Sovereigns during five generations. The son of the last being a child only five years old, the people set him aside, and elected the Governor of Urasoe named Satto, to be their King. From him is descended in a direct line the present Sovereign, Shotai, who is the 34th since Shunten."

Mr. Satow, when writing this in 1872, was perhaps not aware of a very important fact viz., that the chief Shoyen, who recovered the ruling power in Loochoo about the middle of the 15th century, was a direct descendant of Shunten and of Tametomo, who, being Minamoto, were themselves descendants of the Imperial house, Seiwa-Tenno, who took the throne in 859, being their ancestor. Shotai, who has now been in a certain sense deposed to make way for the new system of government, is consequently himself a scion of the Imperial family of Japan. The descent of Shunten from an early Emperor of Japan is recognized by the Chinese.

We have already seen that in very early times Loochoo began to come somewhat under the control of Kiu-shiu, of which Satsuma is the leading principality. Since the middle of the 15th century the dependence of Loochoo upon the princely house of Shimadzu of Satsuma appears to have been most definite and certain. Under the Ashikaga Shoguns these islands were conferred as a reward for public services upon Shimadzu Tadakuni by the Shogun Yoshinari. In the 16th century, when the great Taiko of Japan was about to invade Korea, the taxes of Loochoo being in arrears, the chief was called upon to contribute provisions for the use of the Japanese army, and sent supplies accordingly. In the reign, so to speak, of the Taiko's successor (the first of those Tokugawa Shoguns who ruled from 1603 to 1868) the Prince of Satsuma, by order, sent an expedition to Loochoo to punish the chief for neglecting to perform his full duty in the above matter, and both the Chief Shonei and his governing Council were carried off to the Shogun's capital. Both this Shogun and his successor confirmed the authority of Satsuma over Loochoo, and the Prince of Satsuma reformed the government of the country, sent officers of his own to help in administering it, regulated the taxation of the islands, forbade the carrying of arms there, and so forth. The revenues of Loochoo became a recognized part of the income allowed by the Shoguns to Satsuma.

But more than this. I have mentioned the carrying off to Yeddo of Shonei and his council. From Yeddo they were taken to Kagoshima, the military capital of Satsuma, and detained there three years. Shonei then made oath to the effect that he would ever more remain faithful to Satsuma. In the formal oath, which has come down to us, he began by declaring that Loochoo had from ancient times been a dependency of Satsuma, and after reciting his shortcomings and the clemency of his "Lord," promised to obey the Prince in all lawful things, to keep the ordinances laid down for him, and to hand the oath down to his posterity in writing, that they might observe and keep it. The Council took an oath similar in substance, which also still exists. The very first of the ordinances prohibited the importation of merchandise from China without leave first obtained from the Prince of Satsuma. On the return home of the Loochooan authorities, among other ordinances which were issued was one binding them to maintain the institutions of the mainland of Japan, and no other. All this occurred nearly three centuries ago, and the Japanese Government maintain that Loochoo has ever since been thus completely subject to Satsuma, and, consequently, to Japan, and they ask if it is reasonable to suppose that this part of their Empire could be allowed longer to continue exempt from these new and improved administrative systems, derived from Europe, under which the rest of the Empire, including Satsuma itself has been lately brought.

I must for a moment advert to a circumstance which will be in the recollection of your readers. In 1873 a Loochoo junk was wrecked upon the eastern coast of Formosa: Japan, in the exercise of its functions as the protector of its Loochooan people, resolved to exact redress from the Formosans. To prevent a misunderstanding with China touching any rights which it might suppose itself to possess in Formosa, Japan, in the first place, appealed to China itself for redress. Its Ambassador obtained an audience in Peking, or as an American author (Mr. Griffis) characteristically says, "The Japanese Ambassador stood upright before the Dragon Face and the Dragon Throne, robed in the tight black dress-coat, pantaloons, and white neck linen of Western civilization, bearing the congratulations of the young Mikado of the Sunrise to the youthful Emperor of the Middle Kingdom." The Chinese Government disclaimed responsibility even for the Formosans, and thereupon Japan sent a costly expedition to that great island, and chastised its eastern chiefs in the interests of Loochoo. Then China roused itself, avowed its rights in Formosa, censured the act of Japan, and brought matters to the brink of war. Again

Japan sent one of its ablest Ministers to Peking—Mr. Okubo who was subsequently murdered in Tokio,—and not only was war averted, but after lengthened negotiations China paid to Japan a large indemnity for the expenses of the Formosan enterprise and undertook to protect for the future any Japanese subjects who might be shipwrecked upon Formosa.

It is in view of the long array of facts above detailed that China now sets up its claim to Loochoo and calls upon Japan to reverse an act which there is no sort of prospect of its ever reversing. I cannot for my part for a moment believe that China will carry its pretensions to the length of war in such a case as this. It is probable that the Ministers of China have hitherto been unacquainted with the nature of the connexion between Japan and Loochoo, and have hastily inferred that it was not materially different from its own. I am glad to say the Government of Japan are taking the utmost pains to bring the real state of the case to the knowledge of China, and thus to enable China to depart from its first position without any loss of honour. And besides communicating the facts, Japan is giving China the warmest assurances of its friendship and of its desire for peace; and while perfectly firm and unmistakable, as its Ministers are bound to be, as to the impossibility of conceding the claim of China, is urging China not to compromise the good relations between the two countries and bring about the many calamities of war between them without graver cause than the administration of a few outlying islands which can be of no great intrinsic importance to either Empire, but which have long been Japanese in almost every particular.

I am bound to say, however, that, remembering the raw susceptibilities of Governments, and knowing how swiftly, strange to say, the hand even of the civilized man and the Christian clutches at the sword-hilt, my best hope of the preservation of peace in this matter lies in the rumoured interposition of our able and distinguished Minister in China, Sir Thomas Wade. It was lately stated, in your columns I believe, that this experienced and zealous officer had offered his pacificatory services, and I earnestly trust they have been or will be accepted. It is pre-eminently a case for such assistance, and one in which the resort to war would be wholly inexcusable.

But for the fear of evil consequences I should like to offer a few remarks upon the capability of Japan to defend herself; in the interests of peace, however, I consider it best to avoid altogether the discussion of that question. Japan unquestionably desires "peace with honour," and I trust she may preserve both.

I have the honour to be, Sir, your obedient servant,

E. J. REED.

Broadway-chambers, Westminster.

Sir,—I have read with much interest Mr. Reed's letter on the Loochoo question between China and Japan. It is fair and kind, but presents only the Japanese side of the controversy. Mr. Reed adds that his best hope for the "preservation of peace lies in the rumoured interposition of our able and distinguished Minister in China, Sir Thomas Wade." Other events have occurred in the Loochoo question of which Mr. Reed is not perhaps aware, and a brief history of them, writing as I do from personal knowledge, may not be without interest.

General Grant, the ex-President of the United States, was in Peking last June and to a certain extent the guest of the Chinese Government, whose members treated him with a ceremonious courtesy hitherto unknown in their reception of foreigners. Prince Kung had a long conversation with General Grant on the Loochoo controversy. His Imperial Highness spoke with feeling about the action of Japan in the annexation of the Loochoo Islands. He complained that Japan refused even to discuss the question with the Chinese Ministers, regarding the annexation as a matter belonging to the Japanese Government and not meet for the consideration of a foreign power. Prince Kung requested General Grant, who was on his way to Japan, to acquaint himself with the Chinese case and to urge upon the Emperor of Japan a policy of conciliation and justice towards China, for unless there was such a policy the honour of China and the dignity of the Throne only left one alternative. General Grant said that his journey to Japan was that of a private citizen without office or authority, that he was not familiar with the question, and that the American Minister was the proper person to attend to diplomatic affairs. I remember Prince Kung replying by quoting a Chinese proverb "No business is often business," and saying he had found at times that most important results were often brought about at a dinner or in informal friendly meetings. He only spoke to General Grant in the interest of peace, and because he believed that the General's name and fame would give exceptional value to anything he would say to the Japanese in the interest of peace.

When General Grant returned to Tientsin from the capital he was waited upon by Li-Hung-Chang, the Viceroy of the province, and perhaps the foremost statesman in China in position and ability. Li-Hung-Chang came by the command of the Chinese Emperor to present the Chinese case in all its details. It was an elaborate case, presented with force and cleverness and only came to an end after two or three meetings. The Viceroy emphasized the declarations of Prince Kung as to the feelings of the Chinese Government, and while he wished for peace spoke always as a man with a clear and resolute purpose.

In the latter part of June, General Grant arrived in Japan. The occasion for which he had expressed a hope in his conversations with the Chinese rulers—the occasion when he could speak with the Japanese—came a few weeks later, while General Grant was spending some days in the interior of Japan at the beautiful mountain town of Nikko, famous for its temples and its shrines. The Emperor sent two members of the Cabinet, General Saigo, Secretary of War, and Governor Ito, Secretary for Home Affairs, as well as Mr. Yoshida, Japanese Minister to the United States, to Nikko,

to confer with General Grant and present the claim of Japan to the Loochoo Islands. This conference was held, taking nearly all of a long summer afternoon. The case of Japan, substantially as given in your columns by Mr. Reed, was presented by Governor Ito, but at greater length, accompanied by documentary evidence and diplomatic correspondence. Governor Ito, who speaks English with almost idiomatic fluency, did this with marked ability, and, while anxious to make any concession to bring about good feeling on the part of China, showed that it was impossible for Japan to abandon the position she had taken and fall back upon that urged upon her by China.

On the return of General Grant to Tokio to the palace of Enriokwan, where he was staying as the guest of the Emperor, there was a further conference with members of the Japanese Cabinet, at which Mr. Iwakura, the leading statesman in Japan, was present. There was also a long conversation with the Emperor, His Majesty coming to Enriokwan for that purpose. General Grant said he had studied both cases, the Chinese and Japanese, with great care. Much of the evidence on both sides was historical or traditional, and he could not follow it. As to the merits of either case he would rather not express an opinion. He saw the difficulties which surrounded Japan, that she could not retire altogether from her position. But he saw also that something was due to the wounded susceptibilities of China. He pointed out to the Emperor and his Ministers the gravity of war; that it was to be avoided at any sacrifice save the honour or life of a nation. He further shewed that no matter how well a war might be fought between Japan and China, the only parties who would benefit would be the outside Powers, and the end would undoubtedly be the spoliation of both countries by some European nation. He recognized the superior army and navy of Japan, which would compare well with European armies and navies. He knew that against this Power, armed and trained as it was, China could now make a feeble resistance. But China's real power would be felt in a second or third campaign, when her rulers and the people were driven by the stress of war to develop their limitless resources. He pointed out to the Emperor and his Ministers that China and Japan were now the only two great nations left in Asia who had reserved even a measure of independence and had not become drawers of water and hewers of wood for younger and more energetic civilizations. He felt the deepest interest in the preservation of this independence. He cited the example which England and America had shown in the Alabama case. Arbitration, of course, never satisfied either party at the time, but it satisfied the conscience of mankind, and the result of no war, no matter how triumphant, could do more. Before even seeking or accepting arbitration, however, the General said that nothing could do more towards a lasting peace and a perfect understanding between the two countries than for their rulers to settle it among themselves. If the intervention or even friendly advice of a foreign Power could be avoided, it would be better.

As a result of these conferences, General Grant addressed a letter to Prince Kung. In this letter, which has not yet been made public, the General gave the result of his good offices in Japan, and suggested a plan of compromise which would satisfy the honour of the two countries. He strongly urged its acceptance upon Prince Kung. This letter, which met the approval of the Japanese Emperor, was sent to Peking in the latter part of August. General Grant left Japan on the 3d of September. It is within my knowledge that since the arrival of the General in the United States he has been informed by a high official in the Japanese service that Prince Kung had written a very satisfactory reply to his letter—a reply "which indicated that the matter was not likely to give the two nations any further serious trouble."

I am, Sir, your obedient servant,

JOHN RUSSELL YOUNG.

46, Fleet-street, Dec. 12.

Sir,—Without in any way wishing to play the part of the Chinese State-jurist, who, as you say in your leading article of this morning, might doubtless adduce endless facts and statistics in opposing the Japanese claims to the Loochoo Islands, I venture to lay before you a few statements drawn from Kanghe's Imperial Encyclopædia on the Chinese side of the question.

Between nations which trace back their histories through countless ages it is scarcely worth while making a point of a century or two, but if Mr. Reed is right when he says that Japan first began to interfere in Loochooan affairs in the beginning of the eighth century, then China has a prior claim to the field by a hundred years. In the year 508 A.D. the Emperor Yang-te, of the Sui Dynasty, sent ambassadors to Loochoo, with orders to draw the islanders by gentle suasion within the Imperial sway. But, either through the maladroitness of the envoys or the obdurate independence of the islanders, the mission proved a failure. The Emperor, however, was bent on conquest, and finding gentle measures unavailing for his purpose, despatched an expedition against the offenders. Between such unequal foes the result of the contest could not be doubtful, and without meeting with any serious opposition, the Chinese general took the capital, beheaded the ruling King, burnt the city, and returned to China with a train of several thousand male and female captives.

As seems also to have been the case with the Japanese Emperor Mommu, according to Mr. Reed, this first assumption of sovereignty satisfied the ambition of Yang-te, and both he and his successors allowed the three Kings of Loochoo, for the islands were divided into three principalities, to remain in undisturbed possession of their freedom for several centuries. The next Imperial intermeddler from the west in Loochooan affairs was Khubilai Khan, who, while engaged in the Herculean task of consolidating his newly acquired empire, found both the time and inclination to seek to revive China's claim to supremacy in the islands. But it was not

until the accession of Hung-woo, the founder of the Ming Dynasty, in 1368, that Imperial sway over the three Kings was finally acknowledged and established. From that time until within the last few years the Kings have constantly presented tribute, sometimes in person and sometimes by ambassadors, at the Chinese Court, at intervals of from one to five years. On the death of each Sovereign the heir-apparent has, if not in every case, certainly with very few exceptions, sought and obtained investiture at the Imperial hand; and on the occasion of internal quarrels the Kings have, without demur, laid down their weapons at the command of the Chinese Emperor. So anxious also was Hung-woo to confer on the islanders the advantage of intellectual light, as well as of political privileges, that in the 25th year of his reign (1393) he founded a college at Nankin for the instruction of young Loochooan officials in the language and literature of China. This system has until quite lately been maintained, and at different times the sons and nephews of the Kings have presented themselves among the students, and have received, in common with their fellow learners, regular gifts of summer and winter official clothing from the Imperial tailors.

Such is a brief sketch of the Chinese case, which with the addition of further details, might readily be worked up into a formidable rejoinder to the Japanese claims. But, after all, the true matter, in dispute between the two countries is not affected by the question whether Yang-te's archers or Mommu's spearmen first invaded Loochoo. The real cause of contention arises from the eager haste with which the Japanese in the exercise of their great imitative faculties—which, properly guided, are admirable, but which under any circumstances are extraordinary—have set aside in favour of European knowledge everything in politics, religion, and literature which they learnt from the Chinese, and to which they owe entirely their rise from barbarism to what in the East passes for civilization. The rapid changes and reforms executed by these facile Asiatics are so many causes of anger, not unmixed with contempt, in the minds of the Chinese. Never was there a better illustration of the French proverb, "*Le mieux est l'ennemi du bien*," than in the present condition of the two empires; and until they approach a nearer level of thought and feeling, there will always be some question to stir up the restless spirit of the Japanese, and to ruffle the dignity of the Mandarins.

I am, Sir,

Your obedient servant.

ROBERT K. DOUGLAS.

December 12th, 1879.

The following are the comments of the leading London journal on Mr. Reed's letter.

Japan has secured a redoubtable champion in its controversy with China on the right to the Loochoo Islands. Mr. E. J. Reed, it is well known, builds its ironclads. But then he impartially does the same kind office for Peking. If Japan possesses a fleet which would compare not ill with European navies, China has been furnished by Mr. Reed's firm with a squadron of armed hornets able to sting many a respectable navy to death. So far the balance of the Member for Pembroke's favour to the two States has been hitherto about equal. Now the scale is inclined very much to the Japanese side by Mr. Reed's literary power, which is almost as formidable as his constructive ingenuity. He has constituted himself historian of Japan, and pronounces judgment for it with an edifying appearance of conviction that after he has spoken the dispute must end. We fear that the *litterati* of China will not be inclined to avail themselves of the gold bridge Mr. Reed offers them. He tells them that the quarrel has arisen from their want of acquaintance with the nature of the connexion between Japan and Loochoo. Their ignorance having been enlightened by Mr. Reed, they will, he believes, be able to abandon their original position without dishonour. Any who have studied the Chinese character will be very sure that even two of our columns would not contain a hundredth part of the facts and statistics a Chinese State jurist would be prepared to launch against the Japanese claim. In giving our readers the benefit of Mr. Reed's researches into the question, we must warn them that they are necessarily one-sided. At the same time, when the issue turns on contentions between Empires which apologize for adducing evidence so recent and merely contemporary as that of the twelfth century, it is something to obtain a clear view of what one side says. We are grateful for Sindbad the Sailor's autobiography, though conscious that the Old Man of the Sea might have been able to show it was prejudiced.

The Japanese, it may be remembered, have not now for the first time quarrelled with China over Loochoo. Six years back the Formosans pillaged a Loochoo ship which had been wrecked on their coast. China was known to have claimed imperial rights in the island. Consequently, Japan demanded at Peking redress for the wrong inflicted on its subjects, the Loochooans, by Formosans, the subjects of China. The Court of Peking did not at that time protest against the title of Japan to represent Loochoo interests. It pursued a rather illogical course. First it repudiated, on its own behalf, any responsibility for Formosan misconduct, and then it threatened Japan with war for having exacted vengeance for itself from Formosa. The Loochooans on their part have been well content to trade under the protection of the Japanese flag. They had a King of their own; but they recognised the suzerainty of the great Japanese feudatory of Satsuma, and thus indirectly of the Mikado, as the Prince of Satsuma's superior. When, seven years ago, the Japanese Central Government was consolidated, the Mikado assumed more direct authority over the islands. The King of Loochoo paid his homage immediately to the Japanese Emperor, though retaining apparently as much personal authority as he had enjoyed under the suzerainty of Satsuma. The Chinese Court would probably not question this practical dependence of the Loochoo chiefs upon

Japan, though they would deny the further inferences the Japanese desire to draw from it. On their side they insist upon a very remarkable fact, which also is not disputed by the advocates of Japan, including Mr. Reed. This, as we mentioned some months since, when we had occasion to refer to the strife, was the usage, dating from immemorial times, by which the Loochoo Princes accepted investiture of their dignity from the Chinese Emperors. Until the present year this tripartite arrangement endured in the Loochoo Islands. Loochoo had its own King, whether or not descended, as Mr. Reed has been informed by Japanese antiquaries, from the Imperial family of Japan. But this native Prince confessed a double relation to two much mightier potentates. He acknowledged Loochoo to be a dependency of the Japanese Crown, and obeyed its orders, though perhaps hardly with the uniform docility asserted by the friends of Japan. On the other hand, he commonly solicited as an honour as well as a duty the sanction of Peking for his enthronement. Sometimes even he is known to have paid tribute to the Chinese Emperor. Last spring the Japanese Government determined to fuse its Loochoo dependency with the body of the Japanese Empire. The great Japanese feudatories had already been deprived of their prerogatives. It is contended that what could be done without dispute to the fief of Satsuma, on which Loochoo previously had depended, can in the very nature of things be done to Loochoo. Mr. Reed and the Japanese Ambassador at the Court of Peking have drawn their inspiration from the same source and speak the same language. As will be seen from our Shanghai correspondence of to-day, the Japanese Minister to China has taken what we might have doubted was the best way of "allaying the irritation in high Chinese official circles at the so-called annexation of Loochoo." The Japanese emolument consists of a positive assertion that Loochoo has always been, in fact, an integral portion of the Japanese Empire, and a positive denial of the Chinese claim to a half share in the suzerainty. The Japanese manifesto assumes that the dethronement of the Prince and the reduction of the islands into a Japanese prefecture are simply Japanese administrative acts with which no other Power than Japan can have the least concern. While Japan retained its old feudal system Loochoo was as part of Japan, administered feudally. Japan having annulled the States it formerly established, and turned them into "departments," it became a thing of course that the fief of Loochoo, like the fief of Satsuma, which comprised it, should be included "in the general unification of the empire." Mr. Reed seems to go a step further than the Japanese Ambassador himself. He puts it as almost an injustice to the Loochooans that their islands "should be allowed longer to continue exempt from those new and improved administrative systems, derived from Europe, under which the rest of the empire, including Satsuma itself, has been lately brought."

Taking the facts as stated by Mr. Reed, used in the Japanese State paper, we are unable to see how the Japanese can be right in their contention technically. Loochoo has obviously on the given evidence been for centuries treated by Japan, even when in a position to exercise what power it pleased, as a dependency and a tributary rather than as a constituent part of Japan. When the Japanese Government took over the fief of Satsuma it must in theory be supposed to have taken it with the obligations attaching to it under the former tenure. The dependency of Loochoo henceforth would depend on the Mikado instead of the Prince of Satsuma. But in strict right the Mikado would not be entitled to incorporate in Japan a tributary kingdom because he had chosen to revolutionize the relations between the empire and a particular province of the empire to which that kingdom paid tribute. Here, it is true, we come upon controverted ground. Japan asserts that Loochoo was not an "autonomous" principality at all, and that the Loochooans have not for several centuries formed in any sense a nation. Yet the long exercise by China of the right, however shadowy, of investiture is sufficient proof that at one period, at all events, Loochoo was sufficiently a separate State from Japan to be able to acknowledge a kind of allegiance to another empire. It is for Japan to show, what it has not shown, when and how a condition of things which once existed terminated. If the Loochoo chiefs have been in any degree so far free agents as to have the capacity of maintaining the connexion of a formal dependence with the Chinese Emperor, Japan clearly commits an injury to China by destroying the system of Loochoo government by which alone that formal dependence is rendered possible. The incorporation of Loochoo in the Mikado's empire breaks the link between Loochoo and Peking. There is no longer any Prince of Loochoo to do homage and bring gifts. Loochoo loses its identity. It is henceforward swallowed up in Japan, from which no such signs of submission can be exacted. Nepal, it is notorious, acknowledges the same sort of indefinite allegiance to Peking as Loochoo. Had Nepal, as a consequence of the bygone war between it and Great Britain, been incorporated into British India, England would have acted entirely within its right; but not the less would the Chinese Court have suffered, in sentiment at any rate, a loss. Whether Japan, considering the intimate nature of its relations to Loochoo and the very unsubstantial character of those of China, be not justified morally in overriding the Chinese ghost of suzerainty, is a different matter. China can have no right to keep flags flying in isolated spots throughout Asia over which it is absolutely unable to exert any real authority. Rights divine without the smallest pretension to possession are as inconvenient and generally troublesome as the existence in old English law of a thicket of bare legal rights. It is, however, hardly more vexatious for Japan to find its way barred, or attempted to be barred, in Loochoo by a ragged board warning off trespassers in the name of Peking than it is mischievous for Peking to be tempted into wasting resources, andly wanted at home, on vain-glorious claims far away. Could it, as it is not at all likely that it could, occupy these islands, it would be unable to put them to any use. We cannot affect to sympathize with Mr. Reed's commendation of the policy of the Japanese

Government in dissolving a local administration which apparently suited the Loochooans very tolerably. At the same time, there can be no doubt on which side must be European sympathy when the question is whether Chinese or Japanese influence is to predominate. Chinese triumphs in Central Asia have indisposed Englishmen to look with any pleasure on the prospect of the Court of Peking transforming one more of its many obsolete titles of suzerainty into armed occupation.

## THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR  
OF THE "TIMES OF TAIKO."

### CHAPTER XXXVII.

#### SABURO'S REVENGE.

It is scarcely possible to appreciate, and it certainly were a hopeless attempt to set forth in words, Yoshitsune's feelings as he followed his guide towards the path that led from the summit of Mount Iso to the castle euciente. If the descent were practicable, the capture of the Taira stronghold might be regarded as almost certain; if otherwise, the failure of the assault, the annihilation of the three thousand chosen soldiers and the everlasting disgrace of the leader who had planned so rash an enterprise, were all inevitable consequences. Human nature may present many degrees of fortitude, but it will scarcely be found within the compass of any to contemplate such an alternative with composure.

Yoshitsune therefore refused to be accompanied by any of his knights when he proceeded to the examination of the defile. If disappointment were in store he may well have doubted his own ability to suffer its first shock patiently, and for the rest, his own resolve was independent of both circumstance and suggestion. Nevertheless, he would not willingly have foregone the support of his tried friends, Benkei and Saburo, but the two men had disappeared, how and when none could tell, and their absence suggested not a few disquieting conjectures. To one conversant with the story of Saburo's life it was not difficult to fancy that seeing himself at last within reach of his mortal foe, he had found the delay of even a few hours intolerable, and his demeanour of the preceding night made this supposition more than probable. But that Benkei should have permitted, much less participated in any design of which his chief was not cognizant, appeared altogether unlikely. Could it be that the two men, harassed by a disquiet no less than that of their leader, had attempted to explore the descent during the darkness, and in doing so met with the fate that had overtaken their five comrades on the causeway? If this were so—and for the moment no other idea suggested itself—the question of the castle's accessibility was immediately answered, and the death of his staunchest followers seemed to Yoshitsune a not unfitting prelude to the catastrophe their failure foreboded.

Washi-no-O had from the first persisted in his statement that to reach the valley safely would be no small feat of agility even for one on foot. At the same time he admitted that he had never himself made the attempt, but that he judged entirely from hearsay. There was always therefore a hope that report had magnified the difficulties, or that however impracticable the path had once been, time might have worn away something of its steepness and carried debris from the hill sides to fill up its hollows. Of such changes there had been many instances, the hunter said, among those southern mountains, and to this faith Yoshitsune resolutely adhered.

But when they reached the verge of the precipice—for it could be called nothing else—a single glance downwards showed that the place's worst reputation did not exceed the reality. The track was simply a groove worn in the hill-side by some ancient rill, so that the only reasonably secure foothold it afforded was at those points where the stream, winding to the right or left in search of softer channels, had cast down little hillocks of debris or formed banks to save itself from too headlong a progress.

Nevertheless the route would have been by no means impracticable for men or even horses, had it not merged into a veritable precipice some three fathoms high at a point about midway between the base and summit. Over this steep scarp impended an immense bank, whose supports each succeeding rainfall had helped the stream to under-

mine, until at length the mountain of mould hung in mid-air like a ruined arch, lacking one buttress and threatening every moment to break away from the other's frail support. At this place the perils of the descent culminated and ended at the same time, for looking through the arch one could discern a gentle declivity beyond, and see that the water course had its issue in a little dell hidden from the castle enceinte by a thick grove of pines and bamboos.

This last feature and the advantages it might have afforded did not escape Yoshitsune, though for the moment his attention was engrossed by something which at first sight almost startled him. From the point where he stood to the commencement of the final scarp, the bed of the watercourse had been hastily levelled, its most salient ridges having been cut away, while its deepest hollows had been filled in with material taken from the banks on either side, and the work was so recent that the frost which sparkled on every leaf and rock around had failed even to blanch the surface of the freshly displaced mould.

It was impossible to mistake the object of this work. Plainly it had been undertaken for the purpose of improving the condition of the path, but by whom and for whose passage? Moreover the real impracticability of the route consisted not in the ruggedness of its upper half but in the precipice to which it led below, and if the latter were in truth the insuperable barrier it seemed, any labour expended in correcting the former could be productive of no useful result whatsoever.

Scanning with disquiet eye every trace of this inexplicable performance, Yoshitsune's glance rested for a moment on the bank overhanging the precipice, and to add to his bewilderment he found himself suddenly possessed by an idea that this mass of earth trembled from time to time as if about to topple over, and that its motion was either preceded or accompanied by a dull sound like the stroke of a mattock.

A moment's examination proved to him that he was not mistaken. It was no longer possible to avoid associating what he saw with the presence of his own men in the Vale of Iso, though whether the aim of the work was to promote or prevent the design of his expedition, he could not immediately determine. Involuntarily, however, the thought of his two liegemen's disappearance connected itself with the things that were going forward, and as he made his way round to the brow of the hill above the precipice, his hopes began to gather fresh life.

Scarcely twenty paces farther on he found Benkei lying fast asleep among the bamboo grass. The giant was covered with mould and mud from head to foot, and it was easy to conjecture the utter weariness to which he had succumbed, for though his bare bosom was wet with the dew of the frost, he slept as soundly as though the bitter east-wind had been a comfortable fire's breath. In his hand he grasped an implement whose use would have been inexplicable under any other circumstances, but Yoshitsune knew it at once to be an extemporaneous spade formed by binding one of the huge man's iron chausses to the handle of a glaive.

The first words Benkei uttered when roused from his sleep explained the cause of his absence from the camp on the preceding night. "Is it down, then, Saburo? I never thought we could have finished the work by dawn, no more than I believed human sinews capable of such toil as yours have endured. And how does the path look now, think you?" Then suddenly recognizing Yoshitsune and the hunter, he sprang to his feet, surprise and contrition written on his frank face.

Yoshitsune could not refrain from smiling at the other's rueful mien. "I think I can answer for it Benkei," he said, "that whatever your hands have been seeking to overturn is not likely to stand firm much longer. But tell me; how come you to be separated from Saburo? I can understand what you have been about though I cannot sufficiently thank you for it, but I should not have looked to find you alone."

"And most heartily ashamed I am that it is so. The truth is these limbs of mine are capable of less endurance than those of a man half my size."

"Nay, nay. You malign yourself, Benkei. If any has outdone you, his strength comes from a source other than that which supports ordinary thews."

"By my faith you speak truth, in part at any rate. It's

my belief that not a province within the four seas could furnish a man capable of keeping his shoulders level with Saburo Yoshimori; at least if his performance of last night be an honest measure of his force."

"But what have you found to give you so much occupation, Benkei? Had you not done more wisely to husband your strength for the deeds you have to do to-day?"

"I fear me they had been deeds of small profit but for Saburo's forethought," said Benkei, shaking his head. "It were an evil plight to be imprisoned on the summit of a mountain while the Heike varlets held our comrades at bay below, yet surely no better chance was in store for us a few hours ago."

"Have you then accomplished something to forestall it?"

"Not I, by my faith; not I, but Saburo. Come and judge for yourself how he has fared." So saying Benkei led the way with not a little difficulty down the southern face of the mountain. Here a few stunted scrubs afforded points of support for the feet in a descent which would otherwise have been impracticable, and creeping along the edge of the precipice, the three men presently reached a projecting bluff recognized by Yoshitsune as the same he had observed in his original examination of the pathway. Looking down now, however, he could see that the scarp was half as high again as he had estimated it at first, though lower apparently at this place than anywhere else on the castle side, but for the rest he had not judged falsely, for the slope below was sufficiently gentle, and if only this one obstacle were past, no further difficulty suggested itself. For men in armour however, and much more so for their horses, a drop of thirty feet was an insuperable barrier, and as neither tuft nor ledge relieved the verticality of this marl wall, its base could only be reached by a sheer leap. Something of this obstacle Benkei and Saburo had gathered from their conversation with the hunter, and making their way to the place while their comrades slept, they had perceived and immediately proceeded to apply the only possible remedy.

Their plan was to cut away the support of the overhanging bank, in the hope that its debris would suffice to fill up the space between the top of the scarp and the incline beneath. An immense mass of earth would of course be needed for this purpose, but the volume of the bank seemed more than enough, and the configuration of the ground at the base of the wall was admirably adapted to retain the falling mould. The labour needed to effect this purpose was, however, so enormous that it seemed incredible two men could have seriously undertaken it with imperfect tools and a limit of time. Yet Benkei and Saburo had not only deemed the exploit possible, but had actually succeeded in forming across the neck of the impending hill a cutting so spacious and deep that Saburo, working in it, was completely concealed from view. "There he goes," cried Benkei with a burst of enthusiastic admiration. "For five hours he has never laid aside his mattock nor rested his sinews, and I swear that to every foot of excavation formed by my hands, his have added three at least. Pshaw! Shave my head and set me to chaunt litanies if I ever claim to be a strough man again."

Benkei's eulogy was not exaggerated. Whatever allowance might be made for his own labour, the extent of the achievement rendered it evident that Saburo must have toiled with a force and an endurance well nigh superhuman. Even now he showed no symptom of fatigue, but seemed rather to develop fresh energy in proportion as the growing sunlight found his work unfinished. Not much however remained to be done. Yoshitsune's eyes had not deceived him when he fancied he saw the arch of earth vibrate, for at each of Saburo's vigorous strokes it trembled perceptibly from base to summit, and when Benkei, leaping down into the chasm, brought his immense strength to bear upon the unstable mass, it toppled slowly over and fell with a heavy but noiseless thud on the shoulders of the hill below.

For a moment the thick cloud of dust that ascended to where the onlookers stood, prevented them from estimating the results attained, but as this subsided, they saw that the workmen's most sanguine hopes had been realized. The precipice no longer existed. In its place a newly formed hillock raised its head even above the level of the pathway it had once overhung, and the way to the valley lay freed from all peril or obstruction.

"Saburo," said Yoshitsune as his follower sprang nimbly

to his side, "it is not the overthrow of a mere mound of clay that you have achieved, but the fall of the castle of Fuku-hara."

"Not so, Sir," the other answered, "for of my own judgment I have done nothing. The spirit of one we both loved has gone before me since we turned our faces to this mountain, and is waiting now in yonder valley to guide us again. I have but prepared the path that we may follow."

Since Iné's death this was the first time Saburo had ever directly alluded to her, and it did not for a moment occur to his comrades to doubt the reality of what he said. Washi-no-O alone seemed uncertain whether he had not fallen in with some preternatural beings when he coupled these words of Saburo's and the fashion of their reception by his fellows with the inexhaustible strength the two men had displayed. He remembered the story of the twenty knights in white mail who had led the Heike army over the "Black Steep," and conjectured not unreasonably that a column of warriors riding to the assault by paths hitherto deemed impracticable and with spirits for their guides, were something more than common mortals.

Although Yoshitsune had taken all possible precautions to prevent his soldiers' confidence from being shaken by exaggerated rumours of the difficulties before them, he could not provide against inferences suggested by the perils they had already encountered and by the appearance of the surrounding mountains. Taught by the din of the combat now at its height before the castle, that they had been suffered to advance with impunity almost within bow-shot of the enemy's position, the knights, growing at once impatient of delay and mistrustful of its cause, had begun to tell each other that however careless the garrison of the fortress might be, its founder had been a soldier too astute to be satisfied with a mere hypothesis of his stronghold's invulnerability. If there were really any means of access by this route, it would never, they argued, have been left unprotected, and this doctrine having been once promulgated, distorted versions of their hunter guide's descriptions, or of the country folk's creed, were not wanting to confirm it. Their leaders return was therefore expected most anxiously, for it seemed to these strong men a grievous thing that they should be banished to a hill-top while their comrades battled against overwhelming odds in the plain, and when Yoshitsune rejoined them, their excitement had reached such a pitch that they might scarcely be withheld from leaving their bivouac and committing themselves to the guidance of the gods and of their own ardour.

Under these circumstances the order to advance was received with a fierce joy that presaged evil things for those whose fate opposed them to the first shock of the Genji onset. Yoshitsune rode in the forefront of the column. For all his quiet bearing there was not a man of the whole three thousand who had more pain to restrain himself from adding his voice to the well known refrain borne upward by the morning breezes from the castle enceinte. A tumult of delight stirred within him at the certain prospect of crossing swords with his father's foes, and the almost unendurable memory of his past suspense now first enabled him to appreciate the misfortune he had escaped. With very different feelings had he followed this same path an hour before, deeming death the only certain refuge from the troubles that were gathering around him.

A life of separation from sympathy had however taught him no common lesson of self-control, and moreover he was not insensible to the necessity of checking his followers' impetuosity. A little rashness might still undo everything for if the presence of the troops became known before the descent was accomplished, an occasion would be presented to the garrison of striking a fatal blow at a moment when effectual resistance was impossible. Better never to have come within sight of success than to fail now for lack of a moment's heedfulness, and Yoshitsune, keenly alive to this danger, spoke such stern words of caution that the knights reined in their horses, and instinctively resumed the same circumspect order of advance they had maintained during the darkness of the preceding night.

Even in its improved condition the track down the hill side would have presented a serious obstacle to deliberate cavaliers, but in the eyes of the Genji soldiers its difficulties were as nothing to the marvel of its preparation. Whether the gods had impelled their enemies to the mad-

ness of this work, or themselves procured its accomplishment in their sympathy for the Minamoto cause: these appeared the only reasonable surmises, for the few who had noted Benkei and Saburo's absence, never for moment thought of accrediting them with such an achievement. So it happened that when the whole column had reached the valley in safety and ranged themselves in battle order behind the grove of pines that hid them from the castle, there was not a man there who entertained the smallest doubt of speedy victory.

Yoshitsune read this confidence in his followers' bearing as he rode out to speak a last word of exhortation: "Comrades," he said, "it is not the first time we have fought side by side, yet is it the first time I am able to say, let mercy begin when strength fails. Every man that escapes you to-day must be met and struck down hereafter. Follow me then, and let none hold his hand so long as a Taira neck offers a mark for his sword."

The ringing shout that greeted this address was the first notice the Heike army had of the three thousand's advance. Up till that time the melody had surged backwards or forwards beyond the outmost barriers, for despite the desperate efforts made by the assailants not a single man had gained a footing within the enceinte, though many a stout soldier had sacrificed his life in the essay. But a small fraction of the garrison too had as yet shared in the defence, for so strong was the position by nature that a handful of men could have held an army at bay, nevertheless the followers of the red pennon had such scant faith in themselves and such large fear of their foes, that their whole available force was drawn up by way of reserve within the inner line of intrenchments, where standing with sheathed swords, they cheered on their comrades or derided each fresh failure of their opponents.

Into the midst of this unsuspecting crowd Yoshitsune and his following rode pell-mell. Utterly unsuspecting of an attack from the quarter they deemed of all others least accessible, the Heike men were at first too much astonished to resist. Hundreds were cut down or trampled under foot and the three thousand charging hither and thither, found nothing to obstruct their progress, but the corpses piled up in their path.

The disparity of strength between the assailants and the assailed was however too great to remain long unperceived. Before the panic spread to the defenders of the outworks, the immense force assembled within had begun to rally and close in upon their foes with a determination that must soon have turned the tide of victory. But Yoshitsune had foreseen all this. Just as his knights found themselves constrained to think of defence rather than assault, a thick column of smoke began to ascend from the castle roof and a cry was raised that the fortress was in flames.

Now the destruction of the castle would not have been in itself a sufficient cause to paralyze resistance under ordinary circumstances, but in the present case it signified very much more than the loss of a battle or a stronghold. In the southern wing of the building was lodged Kiyomori's grandson, the young Emperor, Antoku, and with him were those Imperial princes and court dignitaries who from choice or necessity had followed the Taira chief in his retreat from Kiyoto. An incalculable source of strength, in that it constituted their opponents rebels, this presence of royalty nevertheless added a heavy weight to the responsibilities of the Taira leaders, for though disaster was little likely to imperil the Emperor's personal safety, his capture by the Minamoto troops would have virtually put an end to the struggle between the two clans.

To provide against such a fatal contingency no less than to protect the castle's sea front, an immense fleet of war sloops and transports had been assembled in the bay, and so soon as the flames kindled by Benkei and Saburo attained the main building, the garrison abandoned all attempt to defend the approaches and made precipitately for the boats. It was perhaps the wisest though not the most valiant thing they could have done under the circumstances, seeing that from the moment they deserted their position, their chances of escape depended altogether on their promptitude. No attempt whatsoever was made to cover the retreat. With the exception of the Emperor's body guard, and a few stout soldiers who preferred death to the disgrace of defeat, none found anything dearer than safety, and the troops actually engaged in the defence of the outworks only held their

ground so long as they were ignorant that their supports had retired. Assured of this they fled with a celerity that almost bewildered their opponents, who for a time thought rather of dealing havoc among the fugitives than of turning their victory to the fullest account.

Yoshitsune himself, carried away by the pride of triumph and the fascination of the fight, was content to find wherever he turned fresh food for a sword of whose achievements veteran warriors spoke afterwards with almost fearful admiration. Followed by the flower of his knights he drove always into the thick of the mellay, and never held his hand till the piles of dead bodies were the only representatives of the Heike host.

Those however of all others most likely to be found at his side, and to whose exertions the victory was mainly due, had withdrawn from the combat even before the issue was perfectly assured, and little leisure as men found for comment or inquiry, the absence of the giant glaivesman and his sad-eyed comrade did not pass unnoticed. It was well known that to these two the duty of firing the castle had been entrusted, but since this had been accomplished early in the day, it did not seem a sufficient explanation of the mystery. At the same time it did not occur to any to suppose that evil had befallen either Benkei or Saburo. The prowess of both men was too justly appreciated to permit such a fancy, and the feeling of those that missed them in the mellay was less one of anxiety than of surprise that they should omit such an opportunity of achieving the vengeance they were known to have vowed against Kiyomori's kith and kin.

It was in one of the very latest incidents of the battle that the explanation of these things was discovered. The boats containing the Emperor, the ladies of the court and many of the chief nobles had already put off and the Genji knights were still hotly engaged with the remnant of their foes on the north side of the fortress, when a man emerged from the castle plaisance, carrying on his shoulders a pair of boxes with silk coverings on which were embroidered the arms of one well known in the Heike camp. This vassal—for such he seemed to be—had apparently escaped from the fire with no little difficulty, for the back of his doublet was charred, and his head, as well as the greater part of his face, were enveloped in a woman's girdle completely discolored by smoke and flame. Otherwise, however, there was nothing in his appearance to attract attention. Hundreds of retainers and servitors were similarly employed, and many of those that sought to gain the boats bore more grievous evidences of the day's misfortunes than a blistered limb or a singed garment. The man therefore made his way through the tumult unobserved, and reaching the water's edge, inquired hurriedly for his lordship Hiromori's barge.

It was a long time before he could gain the desired information. Some said the boat had already started; some that they knew nothing about it, and others refused to answer at all, but neither failure nor rebuff seemed to daunt the box-bearer's pertinacity. From boat to boat he passed, growing if anything more earnest in his search, until at last on the outer verge of the fleet in a spot removed from the centre of turmoil and within easy access of the castle moats he discovered the object of his search; a large barge, well appointed, fully manned and in all respects so completely prepared for a voyage that one could easily see its crew had not been over-burdened with the duties of the defence. Two or three of them left their oars and relieved the newcomer of his load, at the same time remarking carelessly that they hoped his portage fees would suffice to buy him a new doublet as his own had apparently been closer to the fire than was wholesome.

To this the man made merry answer that a scorched coat was a small matter so long as it covered a whole skin, and that for the rest he would be more than repaid by a passage in his lordship's barge, since it was his misfortune to have been left behind by his own master: a request which was granted without demur, and the vassal preparatory to taking his place in the boat, moved a little to one side and began to pull off his charred doublet.

At that very instant another but a smaller boat shot out of the castle moat. It was sculled by four men, and in its stern sat a knight in full armour, who, unlacing his helmet as he neared the waiting barge, disclosed the features of Hiromori, the captain of spies.

Had his skiff held on her natural course, he must have entered the barge on the port side and within a few feet of the spot where the sometime box-bearer sat, but for a reason not immediately apparent, he directed his oarsmen to steer for the opposite gunwale, and jumping out while his boat was still under way, gave the signal to cast off immediately.

Meanwhile the man who had asked for a passage, noting this unexpected manœuvre, had taken a hasty step forward, as though in the fear of being left behind he contemplated an attempt to enter the barge without permission, but if he had any such intention it was frustrated by the rapidity with which the crew obeyed their master's orders, casting off the hawser and plying their oars almost before Hiromori had reached his place in the bows.

For a moment then it seemed that this vassal, who had imperilled his life in the service of the Heike captain was about to be abandoned to the fury of the Genji soldiers, and whether he was appalled by the prospect, or whether his injuries, more serious than they appeared at first sight, were beginning to weaken him, those that chanced to turn their eyes shoreward saw that his features were suddenly and strangely contorted, and that a trembling like a fit of palsy fell upon him.

It so happened however that in the hurry of starting one of the oars slipped from the rollock, and the barge swinging round, glided for the briefest possible space of time with its side parallel to the shore. In that instant the supposed vassal, by an exercise of force that report has no doubt exaggerated but which must nevertheless have been well nigh marvellous, sprang at a single bound from the shore into the boat. He had cast off the covering from his head, shewing to the astonishment of all who watched his wonderful leap, that his hair was snow white, and as he passed through the air he yelled rather than shouted these two words, 'Saburo Yoshimori.'

The master of the barge cowered down under the gunwale as if the hand of death had already stricken him. He had never before met Saburo face to face, but for all that he had no difficulty in recognizing the blight his crime had cast upon the strong man's life, and seeing this avenger of blood leap upon him with the aspect of a spectre and the strength of a giant, he seemed to know that the message of the gods might not be gainsaid. He made no attempt to draw his sword and scarcely struggled in Saburo's iron grasp, so that before any could stretch out a hand to save him, his assailant had leaped with him into the water and dragged him far up upon the beach.

But Hiromori's followers were not disposed to abandon their master thus. In a moment the barge was thrust ashore and half a dozen men-at-arms sprang forward sword in hand, not to rescue but to avenge their lord, for Saburo's dirk was already buried in his throat. They had as they thought only one opponent to deal with and stalwart a soldier as he had shown himself to be, it was easy to see that he was utterly careless, nay almost unconscious of everything beyond the fate of the man whose head he was eagerly severing from the lifeless body.

They were however rudely undeceived. Before one of them could come within striking distance of Saburo, a man of gigantic proportions rushed along the beach, brandishing a glaive that beat down the Taira blades as though they had been rice stalks, and shred away limbs as if they had been of pith rather than flesh and bone. Benkei alone would probably have been more than a match for the whole boat's crew, but almost at the same moment the clatter of hoofs and armour warned Hiromori's men that the Genji knights were upon them and taking to their boat they pulled away for dear life, not however before a flight of arrows had laid more than half their number low.

(To be continued.)

## TRIPLE ACROSTIC.

(With Double Solution)

When from the shore we seaward gaze,  
With dimmed eye or aching heart;  
This wish is wafted through the haze,  
To the good friend we see depart.

1.  
A living composer, well practised with bow;  
His score much read; his fame but so-so.

Bulgarian atrocities filled Europe with ire,  
But these, impaled by Turks, are put on the fire.

2.  
A town in Erin's isle; the rapids' ford 'tis named.  
Where, fighting long ago, the English often gained.

In different ways old Italian poets tell us  
A tale of love—hot, furious and jealous.

3.  
A well known opera describes the fame  
Of cruel hero who in sorrow and shame,  
Did repent; but "goes to the dogs" all the same.

Romeo's friend, gentle, cheerful, happy;  
Not unlike our own Mark Tapley.

4.  
See, here it now lays before you.  
Catch it quickly; it may leave you.

A household god, not made of stone,  
'Tis found in every Russian home.

## METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, FEBRUARY 13TH, 1880.  
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

## REMARKS.

Heavy line represents barometer.  
Light continuous line—max. & min. thermometers.  
-----represents velocity of wind  
.....percentage of humidity  
Max. velocity of wind 24 miles per hour on Friday, 9 a.m.  
The barometer is reduced to the freezing point and to the level of the sea.  
The highest reading of the barometer was 30.383 inches on Thursday, at 7 a.m., and the lowest was 29.760 inches on Monday, at 7 a.m. Unusually high temperatures prevailed during the early part of the week; the maximum being 63°.5 on Monday. The total quantity of rain during the week was, 1.356 inches.

## SHIPPING INTELLIGENCE.

## INWARDS.

Feb. 15, American steamer *City of Tokio*, Maury, 5,050, from Hongkong, Mails and General, to P. M. Co.  
Feb. 16, Japanese barque *Sakurajima Maru*, Cheetham, 581, from Nagasaki, Coals, to M. B. Co.  
Feb. 16, German brig *Hermann*, Lembke, 210, from Takao, Sugar, to Jardine, Matheson & Co.  
Feb. 16, German 3-masted schooner *Caroline*, Michelsen, 274, from Takao, Sugar, to Walsh, Hall & Co.  
Feb. 16, Japanese steamer *Meiji Maru*, Peters, 1010, from Yokosuka, to Lighthouse Department.  
Feb. 16, Japanese steamer *Niigata Maru*, Walker, 1,603, from Hongkong via Kobe, Mails and General, to M. B. Co.  
Feb. 16, Japanese steamer *Shinagawa Maru*, Kilgour, 908, from Kobe, Mails and General, to M. B. Co.  
Feb. 17, American ship *Hagarstown*, Whitmore, 1,903, from New York, Oil and General, to C. & J. Trading Co.  
Feb. 17, American ship *Highland Light*, Reynolds, 1400, from New York, Oil and General, to Adamson, Bell & Co.  
Feb. 17, British barque *Glenhuntley*, Bidwell, 546, from Sunderland, General, to J. D. Carroll & Co.  
Feb. 18, British steamer *Malacca*, Reeves, 1,709, from Hongkong, Mails and General, to P. & O. Co.

Feb. 19, Japanese steamer *Takasago Maru*, Young, 1,230 from Shanghai and way-ports, Mails and General, M. B. Co.

## PASSENGERS.

Per American steamer *City of Tokio* from Hongkong:—For Yokohama, Miss Reeves, Mr. H. Bellamy, Mr. and Mrs. Bridges, Mr. D. Kay; for San Francisco, Mrs. McGilvary and 3 children, Mr. and Mrs. Pye, Mrs. Grey, Mr. and Mrs. Schenck and child, and Mr. and Mrs. Forbes.

Per Japanese steamer *Shinagawa Maru*, from Kobe:—25 Japanese. Per Japanese steamer *Niigata Maru*, from Hongkong via Kobe:—Messrs. Oishi, Onuma and Tanabe; 1 European, 2 Chinese and 65 Japanese in steerage.

Per British steamer *Malacca* from Hongkong:—Messrs. E. Johannsen and S. Johannsen; from Hongkong, Mr. S. Cope.

Per Japanese steamer *Takasago Maru*, from Shanghai and way-ports:—Mr. and Mrs. Ono and child, Mr. and Mrs. Hiroyama, Messrs. E. W. Drummond, J. Wolf, H. Braescher and servant, J. J. Quin, J. Bush, E. R. Holmes, A. E. Arolofsky, (H. I. R. Consul), Taneda, Tenda, Maruya, Sta, Fujiyeda, Ohinata and Kameyama, in cabin; 2 Europeans, 4 Chinese and 190 Japanese in steerage.

## OUTWARDS.

Feb. 15, Japanese steamer *Shario Maru*, Thompson, 800, for Kobe, General, despatched by M. B. Co.

Feb. 16, British steamer *Benarty*, Potter, 1,119, for Kobe, General, despatched by Smith, Baker & Co.

Feb. 16, Japanese steamer *Hiogo Maru*, Moore, 896, for Kobe, Mails and General, despatched by M. B. Co.

Feb. 16, Japanese steamer *Tsuruga Maru*, Steadman, 661, for Hakodate, Mails and General, despatched by M. B. Co.

Feb. 17, American steamer *City of Tokio*, Maury, 5,050, for San Francisco, Mails and General, despatched by P. M. Co.

Feb. 18, British steamer *Escambia*, Wildgoose, 1,404, for Kobe, General, despatched by Hudson & Co.

Feb. 18, Japanese steamer *Chitose Maru*, Pyne, 295, for Yokkaichi, Mails and General, despatched by M. B. Co.

Feb. 18, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and way-ports, Mails and General, despatched by M. B. Co.

Feb. 19, British barque *Lord of the Isles*, Watt, 317, for Takao, General, despatched by Chinese.

Feb. 21, Japanese steamer *Niigata Maru*, Walker, 1,603, for Hongkong via Kobe, Mails and General, despatched by M. B. Co.

## PASSENGERS.

Colomb, Madda, Nosed, Ito, Abe, Komuro, Nita, Dr. Soma, Messrs. Sanno, A. Patterson, Furukawa, Shibuya, Takahama, Satoyama, Nagoka, Hori, Fujita, Sakai, Kodama, Machida, Hanjee, Enouye, and Yamagata.

Per Japanese steamer *Niigata Maru* for Hongkong via Kobe:—Mrs. Honda, and Messrs. L. Davis, D. Fraser, E. C. Kirby, D. Reynolds, M. Raspe and Kuma.

## CARGOES.

Per Japanese steamer *Niigata Maru* from Hongkong via Kobe:—Treasure ... .. Yen 10,000.00

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure ... .. \$ 12,000.00

Per British steamer *Malacca*, from Hongkong:—General... .. 3,395 pkgs.

Sugar ... .. 1,381 bags.

Per Japanese steamer *Takasago Maru*, from Shanghai & ports:—Treasure ... .. Yen 12,000.00

Per Japanese steamer *Niigata Maru* for Hongkong via Kobe:—Treasure ... .. \$4,000.00

## REPORTS.

The Japanese steamer *Shinagawa Maru* reports: Experienced strong S. W. winds with rainy weather from Kobe to Rock Island, thence to port, light winds and fine weather.

The Japanese steamer *Niigata Maru* reports: Left Hongkong 7th Feb. at 6 a.m. Experienced light variable winds with foggy weather to Chapel Island; thence to Kobe strong N.E. winds with rainy weather. Arrived at Kobe at 11.30 a.m. 14th Feb. Left Kobe 15th instant at 4.20 a.m. strong S.S.E. winds to Rock Island; thence to port moderate N.E. winds and fine. Arrived at 3.45 p.m. 16th Feb.

The British barque *Glenhuntingley* reports: Left Sunderland October 17th, 1879; past Lizard 26th same month, and crossed the equator November 20th. Made Sandalwood Island 17th January, and arrived at Yokohama, February 17th, 115 days out.

The British steamer *Malacca* reports:—Left Hongkong at 6 a.m. 11th instant. Experienced strong monsoon with high sea to Ooshima; thence to port variable winds with fine weather. Arrived at 10 a.m. 18th instant.

The American ship *Hagarstown* reports Left New York on the 30th of August, 1879; had moderate southerly winds and fine

weather in the North Atlantic, and crossed the Equator in Long. 28 W. on the 10th of October. Had light S.E. trades and crossed the meridian of the Cape of Good Hope on the 9th of November; made the easting before strong westerly winds; and sighted Van Dieman's Land on the 13th of Dec. Came up east of Australia with light variable winds; and crossed the Equator in the Pacific, in long. 164 E., on the 23rd of January. Experienced strong N.E. trades; and fresh northerly winds and rough weather to the coast of Japan on the 7th of February; being detained 10 days by strong northerly gales and a swift current setting to the south-east. Arrived in port on the 17th of February. Passage, 170 days.

Blankets, green 6 to 8 lbs ... per lb. ...	0.35 to 0.41

**SUGAR.**—A good business has been done in Formosa Sugar during the past week, some 20,600 bags being settled at prices from \$4.30 to \$4.38 per picul. Stocks are estimated at 6,000 bags. The *Hermann* and the *Caroline* have arrived, both with cargoes from Takao. Advices are to hand of the following vessels that are now loading at Takao for Yokohama, viz:—*Anna Bertha*, *Johann Henrich*, and *Gustav*.

**KEROSENE.**—The market is very dull. Settlements for the week are reported at 2,720 boxes. The *Hagarstown* and *Highland Light*, with full cargoes, have arrived from New York during the week.

Sagdr:—Takao in bag ... per picul	\$4.30 to \$4.50

Japan Rice ... " "	\$2.60 to \$3.00
Kerosene Oil ... " "	\$1.60 to \$1.65
Newchwang Peas ... " "	\$2.20 to \$2.25

## EXPORTS.

**SILK.**—During the past week there has been a fair amount of activity in our Silk market, and about 550 native bales have been brought into buyers godowns; against this, however, rejections on inspection have been unusually heavy, and the actual sales resulting from all the transactions reported have therefore been very insignificant and do not reach 200 native bales.

There are, however, evident signs that buyers for the American market are still inclined to operate, and at any moment it appears probable that large purchases may be made.

Stock in Yokohama about 3,500 native bales. Total shipments to date 15,629 bales against 16,005 bales at the corresponding period last season.

Prices remained very firm; and desirable silks are becoming scarce.

	In London at 3/9 1/2 per lb.	In Lyons at fr. 4.85. per kilo.		In London at 3/9 1/2 per lb.	In Lyons at fr. 4.85. per kilo.

## THIRTEENTH SEMI-ANNUAL REPORT

OF THE

Court of Directors to the Proprietors,

For the Half-year ending 31st December, 1879.

THE HALF-YEARLY MEETING of the Proprietors was held at the Head Office, on 18th January, 1880, at which the Directors had the honour to submit the annexed General Statement and Balance Sheet of the affairs of the Bank, as at 31st December last.

The net profit of the Head Office and Branches amounts to Yen 198,793.668 (deducting remuneration of the officers, their travelling expenses, and all other payments, inclusive of interest). Adding to this sum the unappropriated balance of last Half-year, namely, Yen 36,772.855, and Yen 80,000 set aside as a special reserve for bad and doubtful debts, the total comes to Yen 315,566.523. From this sum Yen 36,371.575 will be taken to extinguish the bad debt of Onogumi; Yen 50,000 will be set aside as a special reserve for bad and doubtful debts; and Yen 24,200 will be given to the officers as a bonus; and the remainder is Yen 204,994.948, from which Yen 50,000 will be added to the Reserve Fund, Yen 120,000 will be divided amongst 15,000 shares, being Yen 8 per share, which is at the rate of 16 per cent, per annum, and the balance, Yen 34,994.948, will be carried forward to next half-year.

The debt incurred by Onogumi has been written off, and amounted to Yen 36,371.575, taken from the Special Reserve of Yen 80,000, which has been supplemented by the addition of the sum of Yen 50,000, an amount which, the Directors are of opinion, will amply suffice to meet any further contingencies that may arise.

SHIBUSAWA YEICHI,  
Chairman.

General Statement and Balance Sheet of the  
First National Bank of Japan, for the Half-year  
ended 31st Dec., 1879.

## MISCELLANEOUS.

## W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying  
on an extensive Foreign Trade, having held for  
many years in their Excise Bonded Stores, for the purpose  
of their Home Trade, a stock of not less than 12,000  
Casks of Wines and Spirits, which are equally  
available for Export. These stores are by far the largest  
private Duty Free Warehouses in the World, and are under  
the supervision of a staff of Excise Officers specially at-  
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them  
to give the best VALUE to the public, as a twentieth part of  
the Foreign Wines consumed in the United Kingdom is  
supplied from their stock. In the year 1876 W. & A.  
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,  
and the average quantity bottled and sent out by them  
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same  
whether the Wines or Spirits are obtained direct from their  
Head Establishments or from any of their Agents. The  
purity and genuineness of every article in this list are  
guaranteed in accordance with Act of Parliament, 38 and  
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of  
Bottle Measure recently recognised by the Government,  
namely—

6 bottles contain one gallon; 12 half-bottles contain  
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing  
W. & A. Gilbey's seal and label guaranteeing *quality* and  
*measure*, and the *strength* also in the case of Spirits.

## W. &amp; A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;  
(Warehouses, Duty Paid) Oval Road, Camden  
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;  
(Warehouses, Duty Paid) Upper Sackville St.,  
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;  
(Warehouses, Duty Paid) Haymarket, West  
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,  
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-  
Western Goods Station, and Bonny Street,  
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,  
London.

**J. J. GARGAN,**

**KEATING'S COUGH LOZENGES,**

COUGHS,  
ASTHMA,  
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

**MEDICAL TESTIMONY.**

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G——, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

**KEATING'S WORM TABLETS,**

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,  
Export Chemist and Druggist.

## THE GREATEST

**WONDER OF MODERN TIMES  
HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!  
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World  
May 17th, 1879. tfs

## The "Japan Mail,"

A Daily, Weekly, and Fortnightly Journal,

ESTABLISHED, 1865.

### TERMS OF SUBSCRIPTION.

WEEKLY EDITION. The "Japan Weekly Mail," a Weekly Review of Japanese Commerce, Politics, Literature and Art:—Per annum, \$24; Six months, \$13; Three months, \$7.

FORTNIGHTLY Edition, being a Summary of the foregoing, is published for transmission by the American Mail Steamers via San Francisco. Per annum, \$12; Six months, \$7; Three months, \$4.

THE JAPAN DAILY MAIL is published every morning (Sundays excepted) and contains the Arrivals and Departures of all Shipping, Passenger lists, Cargoes, Vessels on the Berth and in Harbour &c. &c. Also the latest Telegrams, Japanese news, Reports of Trials in the Courts of Law, Meetings of public bodies, and all matters of interest to the Community. Special attention is called to this Journal as a medium for circulating local advertisements. It has a large and constantly increasing circulation, its low price bringing it within the means of all classes of the community. It therefore affords exceptional advertising advantages, and secures to all announcements the utmost publicity, the object aimed at by advertisers.

SUBSCRIPTION PER MONTH—ONE DOLLAR.

## A BUILDING ACT FOR TOKIO.

### II.

**L**AST week we gave a few of our reasons for proposing a Building Act for Tokio, and referred to some of the points which such an enactment should include. There are other evils equally crying with those already enumerated which call for remedy and may be referred to here. It is beyond doubt that the rage of epidemics in certain seasons, as well as the yearly death rate from general sickness, would be much diminished by certain reforms in the sanitary condition of the dwellings.

An arrangement of sewers and complete underground drainage such as we have the advantage of possessing in large European cities would at present be quite impracticable in Japan. The agriculture of the country is greatly dependent on the use to which the sewage of all towns is put. Still any loss on this head could be avoided by causing the drainage to issue outside the towns into large cesspools forming stores of manure to be emptied when required. But the efficiency of such drainage would demand a perfect water supply connected with each house, and proper water-closet apparatus. In this as in other matters Japan must frame her own regulations in an initial and experimental manner with special reference to the needs and means of the poorer classes. Laws might certainly be drawn up with regard to the position of wells relatively to the street drains, house closets and other sources of impurity. It is quite customary to see a well within a few yards of a closet, portions of the sewage of which have for years been allowed to percolate through the surrounding soil. These receptacles moreover survive a whole generation of houses. One house burnt or ruined, its successor adopts the old well, closet, and other landmarks. The wells of all houses should be efficiently cemented or lined with material impervious to the draining of foul liquids

through the surrounding earth. In certain parts of the city, water is supplied by wooden aqueducts and brought for some distance, from the rivers. Medical men are agreed as to the necessity of examining, cleansing, and reinstating these. It would perhaps be also possible to introduce into their channels some complete means of filtration so that the water from them should be absolutely pure. It would be outside the province of an article dealing with the matter of arrangement and construction of buildings to consider the general sanitation of towns. It is here enough to indicate that the proposed act should contain rules relating to certain unhealthy appendages to the dwellings. The holes or cesspools forming the receptacles below the closets should be compulsorily lined with metal, earthenware, or brick and cement, so as to prevent the surrounding soil being saturated with the superfluities. Such pans should be subject to special inspection and emptying at regular intervals; they should also be provided with an overflow and pipe to some adjacent cesspool to avoid overflowing. Closets or conveniences of any kind should be placed at a fixed distance from the rooms of dwellings;—if necessary approached by a separate boarded passage, but on no account adjoining the inhabited rooms. Many know the frequent discomfort to the olfactory nerves from sleeping in a teahouse or sitting in a theatre in close proximity to certain quarters; and in the case of children and weak and infirm people the number of diseases and deaths due to unwholesome inhalations must be very great.

The low position of the street houses with regard to the road drains must be extremely unhealthy and productive of damp and noxious vapours. In many cases in the city of Tokio, the roads have been improved at the expense of the houses, and there are numerous instances in which the houses being lower than the roads the surface drainage must necessarily find its way immediately under the tenements, sending its damp through the thin low floors. The troughs or gutters which run along the streets are not, it is true, as in certain old continental towns, the recipients of the worst kind of filth and sewage, but the stagnant water, mud, vegetable and other decaying matter which their cleansing lays bare, bode no good to the inmates of adjacent houses. Such channels should be properly cemented or lined and laid to a proper fall so as to quickly carry off the contents, in addition to which periodical cleansing should take place. It is needless to say that such laying open and cleaning of gutters, drains and moats should not be made, as is often the case, in the hottest season of the year, when any stagnant impurities are likely to do most injury to health.

In addition to the construction of ordinary street dwellings which we have hitherto considered, and certain sanitary regulations affecting all buildings alike, part of the Building Act should have special reference to erections built in the so-called foreign style. Considering the extremely fragile and unsound construction of

many houses or bungalows inhabited by foreigners or the higher class of Japanese, it is a wonder that more frequent accidents do not occur than are actually recorded. Results from the recent earthquake show that, whereas the chimneys and other parts of such constructions have been split, broken, and sent flying, the more solidly built Government erections have sustained comparatively no injury. A hard material such as brick or stone, not pliant like wood, must necessarily have a tendency to crack during a very severe shock, but experiment shows that such slight injuries are rarer when the walls are low, strong, and bonded well with cement or good mortar joints, than in cases of light and flimsy constructions. Whereas a few insignificant cracks have been detected in some of the large buildings in Tokio, constructed with common pure lime mortar having the property of never properly setting, no cracks have been detected in one building bonded entirely with cement, although the bricks used are far softer than, and inferior to, the ordinary Tokio bricks. A limit must be imposed upon the height of buildings and walls, and a scale must be fixed for the thickness and diminution of walls according to their height. All heavy stone corners or projections near the top must be prevented as much as possible. The area of openings in walls with regard to the total surface, and the construction of arches and other supports for great superincumbent weight, are all matters to be taken carefully into consideration.

The common rules of building, with regard to the thickness of chimney-breasts, brickwork round flues, and the connection of wooden floors and roofs where abutting against such chimney stacks, are often grossly neglected. With regard to these matters it would be sufficient to copy the rules contained in the London Metropolitan Building Act, with certain modifications as to the length and construction of chimney stacks above the roof, on account of the danger of overthrow from earthquake. In addition to this, stoves inserted in wooden buildings have in more cases than one been the cause of conflagration; and the position and mode of fixing stove-pipes, stoves, and the floors and ceilings below and above stoves, as well as the distance of these from walls must be regulated.

Other important points might be alluded to; but it is not our intention to do more than sketch the general outline which might be followed in drawing up an enactment which should tend to diminish greatly the chances of public danger and loss from defective building.

#### DOMESTIC SLAVERY IN HONGKONG.

THE fact of the existence, in some form or other, of a system of actual bondage within the limits of a British ruled dependency, has been brought before the notice of the House of Commons, where the Colonial Secretary, in reply to interrogations on the subject, has expressed his conviction that the evil will be suppressed by the Governor of the colony. Such is the purport of a telegram recently transmitted from Europe to the East. That the result ought to be as predicted must be admitted. No kind of service that is not freely rendered can be allowed to be perpetuated in any part of the British dominions; and a Chinese island, though "a mere dot on the ocean," while controlled by a British Administrator, must be no exception to the rule. But, at the same time as all this has to be taken for granted, it is useless to attempt to disguise the fact that the task of the reformer is one of no mean magnitude. In this as in other respects it appears that Governor Hennessy has inherited a very troublesome legacy from his predecessors in office. Almost simultaneously with his arrival at the seat of his Government various

abuses, introduced under a system at once lax and arbitrary, had attained such dimensions that they could no longer be ignored. One by one they have obtruded themselves on the notice of the Chief Magistrate of the island, who, in the face of much opposition which was not always fair or scrupulous, has had to toil for their removal. He has the gratification of knowing that his efforts have not been unavailing. Nor, beyond the immediate limits of the interests and prejudices with which they came into friction, have they been unappreciated. Probably a labour, more arduous than any which he has heretofore undertaken is now before him; for the institution which he has to attempt to eradicate, is not only an integral part of Chinese family life, thus commanding the veneration of the Asiatic residents on the island: it is often actively sympathised with, and to a certain extent participated in, by the European settlers: its existence is apologized for, and its continuance all but asserted to be a necessity, by Christian scholars of vast experience in the lore, manners and customs of the Middle Kingdom; and finally, though admittedly and indubitably a species of slavery, is yet one of the most patriarchal and mildest forms of that system, and in no respect similar to the thralldom which prevailed from old times among warlike and vigorous western nations. Still less does it resemble the relationship long existing between negro chattels and their owners in the West Indies and America. In fact, it is generally "domestic" in the full sense of the term. The bondsman and bondswoman are almost invariably of the same race with their master. They live with him and form part of his family, and both by law and the still more vigorous prescription of custom are entitled to rights and privileges at his hands which he is powerless to deny or to withhold. None the less the ties which bind the two parties imply full proprietorship on the one side, and complete submission and loss of individual liberty on the other, constituting of course as thorough a system of slavery as that under which the African black and his descendants lived and toiled in the islands and states of the New World. This brief explanation will serve to show, both that a custom prevailing on English territory, it is an offence against English law, and that it must either cease to be or the law must be altered to suit local circumstances. On the other hand the difficulty involved in its extirpation must also be apparent. If, on the first cession of the island to the British, and its colonization by them, there had existed on the side of the dominant race more intimate knowledge of the life and habits of the people who were to be thenceforth their fellow-subjects, it is more than probable that the Chinese would have been made to understand that slavery, in whatever guise, would not be permitted under the shelter of the British flag. Celestial colonists would soon have grown accustomed to the rule; and the lapse of forty years, instead of confirming them in a custom which is itself a vice, which our law constitutes a crime, and which is one of the worst foes to civilization, would have taught them a higher, better and happier mode of life, and made the Asiatic community of the new dependency an example which could not have failed to have an effect upon people of the same origin living on the mainland. Here is one opportunity lost of sowing the germs of western thought and freedom in the Chinese mind. As it was, the black-haired visitors were told that they should enjoy the right to practise their "social customs" under the rule of their new masters. It would be absurd to suppose that "slavery" was included in the category. In fact the contrary has been more than once proclaimed; but still the custom in question was allowed to be imported: it has since been ignored

or connived it: it has become as much a part of Chinese existence on the isle as is the daily food of the inhabitants. Suddenly the official mind is awakened as to its prevalence and illegality; and the local and imperial Governments find themselves face to face with a constant and deeply-rooted practice which is a violation of the law, and must be abolished; but the work of abolition will involve no common care and circumspection. It cannot be dispersed by an order, or mere gesture of the hand of authority. Some equitable method of doing away with it must be thoughtfully devised, and righteously executed, all the more that Government itself has, as we have seen, no small share in the opprobrium which its existence implies.

It would not be uninteresting to glance briefly at the chief features of Chinese domestic slavery. The matter has of late been indirectly considered by Messrs. Moellendorff and Parker in their investigations into the family law which governs the race. It has, however, been directly and succinctly elucidated in an able report addressed by Dr. Eitel, Chinese Secretary in Hongkong, to the Colonial Government, on the occasion of the discussion which has arisen consequent upon the exposure of the prevalence of the institution in English territory. There is other and perhaps equally interesting literature in connection with the same subject before us; but the consideration of Dr. Eitel's communication will suffice for the present.

In no other country in the world, probably, has the idea of patriarchalism, as the organization of the state and the families which comprise it, ever attained such practical extension as in China. We subjoin the principal points of its constitution as described by Dr. Eitel:—

The male parent, as the patriarch of a definite family household, is the representative of the "family" which is the principal organized expression of the state. The supremacy of the male parent is enhanced by the necessity of continued sacrifices to the spirits of deceased ancestors. There lies therefore at the bottom of this system of patriarchalism the political necessity of a unitary household, as the substratum of the state, and the religious necessity of a positive central authority for sacred rites. The patriarch is thus invested with a power over every member of his family, consisting of one or more wives, children, grand-children, and so forth, also of hired servants and possibly slaves, every one of whom has a fixed relation to the "family," guaranteed by the whole social state, and all are subject to the same *patria potestas*. In a state thus based on patriarchalism the idea of personal liberty, of absolute rights possessed by every individual, as conceived by the civilization of the west, has no apparent room, although it is contained in it as the leaf is contained in the plant at every stage of its growth. Nor is there any room for that absolute slavery which for so many centuries disfigured western civilization. Every member of the family or household, the wife, the concubine, the child, the servant, the slave, merges his or her individual existence in the "family," which is legally the only "person" existing in China. The Chinese mind cannot comprehend any basis for individual relations apart from the relations of the family. Yet each individual has a definite place as a person, not as a property, reserved to him in this *imperium in imperio*, the empire of the *pater familias*, which place is guaranteed to him and guarded by the state. None is indeed *sui juris*, for all are under the *patria potestas* but the latter has its fixed limits. The mother, although but a purchased agnate, becomes the depositary of the *patria potestas* with the death of the father. The father of the family himself, although endowed with the *jus vitæ necisque*, is, for every exercise of his power affecting the life of any one, subject to his *patria potestas*, answerable to the state. Moreover, he has as many duties as he has rights. He is solidarily responsible for any crime committed by any member, servant, or slave of his family, whereby crime becomes a corporate act; and the extent of moral responsibility, thus laid upon the house-father, is a

serious burden. In a family thus constituted none can be free, but at the same time the bondage under which all are, in their several ways, is not a mark of tyranny, but of religious unity, a bond of equality and mutual regard.

It will be easily comprehended how vastly a condition of slavery prevailing under such a régime as is here outlined must differ from any form obtaining through right of conquest, or the demand of western commerce and industry for workers of a physically robust but intellectually inferior race. A kind of hereditary bondage exists to a small extent in China; but the Doctor affirms positively that no instance of it can be found in Hongkong; and he remarks even in regard to its provisions that it is a curious mixture of contract service, family dependence, and bondage, having no identity with that institution which the history of European society evolved, and to which our law books, acts of Parliament, and orders in Council refer. But he admits that domestic servitude does exist, and to a large extent, in the British colony. And no matter for what ulterior purpose children are bought and sold: no matter how well they may be treated in the families of which they, though enthralled, are still members: no matter what privileges of marriage, provision and ultimate freedom they may have to look forward to, they are still, and only, slaves.

There is, no doubt, some consideration required before offering an answer to the query:—"Who would glibly decide that this modern intellectual individualism of the West, with all the development it has wrought in science and mechanics, is an undoubted advance upon the filial piety and intuitive faith of Chinese patriarchalism?" Deliberation is also required as to the best means to be followed in carrying into effect a determination to expunge a blot on the British escutcheon, which laxity on the part of the rulers of an annexed dominion, aided by the inert imperiousness of ancient Chinese custom, has rendered both broad and deep. It has to be erased, however; and while every present and foregoing circumstance should be duly taken into account, the inevitable fact that slavery cannot, must not, dare not, be tolerated under British rule, has to be, as no doubt it will be, borne steadfastly in mind as the one point at which every effort shall meet.

#### THE ROWING CLUB AND THE HATOBA.

THE importance, at least to our minds, of the continuance of the Amateur Rowing Club in the prosperity it had attained last year, must be our excuse for again referring to the want of a site for the boat-house. In our issue of the 17th January we advocated the grant of a part of the French Hatoba to the Club, and we then expressed a hope that the decision, said to have been come to by the local authorities, would be reviewed. We have still the same hope,—accompanied perhaps by a measure of that heart-sickening which arises from fruition delayed,—but still a hope.

For if it be true, as we are informed is the case, that the local authorities are in favour of the scheme that has been laid before them: that, in fact, the property owners who would be most interested in the maintenance of the French Hatoba in a proper state, are in favour of the scheme; and if we consider the improvement that would be effected by almost any change in the present condition of the landing place, we are more than ever surprised that all other opposition should not have been withdrawn. From inquiries that have been made of us, it seems that some misapprehension exists as to the scheme which the Rowing Club has put forward, and which is sketched out in a plan that has been submitted to the Consular Board.

Many people, and some who might easily have been better informed, remembering the structure which was on the former site, think that the same building is to be placed on the Hatoba. Now, the style of the old building was necessitated by the form of the site—a narrow frontage;—but on the proposed site can be placed a low, flat-roofed house, far from unsightly, and at the same time convenient for the wants of the Club. Such is the building that is proposed to be erected. At the right hand or eastern end of the Hatoba is ample space for all the requirements of the members while the opposite end will be retained as an accommodation landing place, as in its present state. No inconvenience can, in our opinion, be inflicted upon the public if this scheme is carried out; and no interference with the rights of free sight and fresh-air to the residents in immediate proximity to the Hatoba. Were it otherwise, were there a probability that the rights of property would be injuriously affected, we should abstain from advocating the scheme; but, considering that buildings are already erected on this land, and these buildings more than are reasonably required for the purposes of the passenger traffic and the checking of smuggling, for which alone the Hatoba is now used; no rights or amenities would be interfered with; a large improvement would be made in the appearance of the Bund; and last, not least, a great benefit would be conferred upon a popular Club, among whose adherents are to be found members of every nationality represented in these islands. By the improvements and repairs now being made to the facing of the Hatoba, the local authorities have shown that they are not supine to the wishes of the community; let them now finish what they have well begun, and allow the Rowing Club to do its best to render this Hatoba a less unsightly, and at same time a more useful, strand than it is at present, or has been for a long time past.

ONE of the pictures in the last number of the *Maru Maru Shimben* depicts a large inflated frog with a saddle on its back, and the word *tori* inscribed upon its breast, evidently referring to the *tori-hiki*, or exchange business. A Japanese dressed in European style is falling from the saddle. In one of his hands he holds a turnip—*kabu*—meaning also a share. Another man, wearing foreign clothes, and holding a field-glass, is watching the misadventure. The interpretation of this cartoon is that some official, having been unfortunate in exchange speculations, is about to be reported by a comrade to his superiors. It is known that government servants are prohibited from indulging in such operations as have brought the rider of the frog to grief. Another sketch has reference to the Tokio municipal loan of Yen 170,000 to be expended in such improvements as will lessen the chance of fire. It represents a marriage ceremony in which the Governor of the capital and the loan are groom and bride respectively. A middleman is supposed to be one of the negotiators of the loan, and to him the husband addresses his thanks for his instrumentality in bringing about the arrangement, remarking that the affairs of the household are in good order, and that special precautions have been taken against the dangers of conflagration. Another issue of the same paper has a sketch of a *kuro-dako*, or black cuttle fish, arriving at Hakodate. This is a play upon the name of General Kuroda, who as chief of the Colonization Department has lately visited the northern island for the purpose of relieving the poor who were rendered homeless by the late fire. Of the two pictures contained in the last *Kibi Dango*, one depicts a vast pine tree, *Matsu*, at which several people are gazing with admiration. Here the Governor of Tokio again figures; the allegory meaning the order in which he keeps the members of the local assembly at their

meetings. The drawing in these prints is of no high order, but the conception is frequently ingenious and subtle.

MR. John Milne, of the Imperial College of Engineering, has propounded a series of questions relative to the recent earthquake, which he desires answered in order to aid him in compiling certain statistics which may prove useful. As Mr. Milne is anxious to obtain the fullest publicity for these queries, we gladly comply with his request to publish them in our columns. The questions are:—

- 1.—Do you know with accuracy at what time the shaking commenced? This can perhaps be answered by persons who were on board ships and had chronometers at their service.
- 2.—From the first swing of a lamp, the roll of a billiard ball, the direction of fall or projection of a body, the oscillation of a liquid in a vessel, or by any other means, can you tell pretty accurately the direction of the shock?
- 3.—What was the nature of the damage done to your house?
- 4.—In what direction did the chimneys fall. If they were rectangular in shape, did they fall broadside or endways?
- 5.—Did you observe that any objects had a clear fall, say, for instance, like a tile from the edge of a roof, or like a vase from a mantelpiece? If so what was the vertical height through which the body fell; and the horizontal distance measured on the ground to which the body was projected: also, what was the direction of throw?
- 6.—Were any objects like columns overturned? If this is the case, in what direction?
- 7.—Were any objects like chimneys twisted? If so, what was the direction of turn? For instance, was it from E. towards S. and on to W.?
- 8.—Were any serious cracks found in the walls of your house? If there were such cracks found, what was their direction and in what walls were they formed? In the case of stone or brick buildings, what is the width of the crack? If any of the above questions are answered relating to houses, please give the situation of your house with regard to the points of the compass, and also say whether it stands on the edge of a bluff or cliff, and on which side of the house this bluff or cliff may be?
- 9.—At the time of the shock was there any one who did not feel it? If so where were they? It is believed that many severe shocks may be passed by unnoticed by persons when out walking.
- 10.—Did the motion produce any effects of sickness, headache, &c.?
- 11.—Was any rumbling sound heard before or after the shock?
- 12.—Were any peculiar phenomena observed which have not been referred to above?

A paragraph in a Hongkong paper announces that the machinations which have been directed against the fame and life of the ex-Chinese Imperial Envoy to Russia, Chung How, have so far attained their object that the luckless nobleman has taken refuge from his anxieties and troubles in the last resource of suicide. It had previously been stated by the Shanghai journals that His Excellency was definitely degraded, and was ordered to be put to the question as a preliminary to further punishment. Chung How was one of the ablest and most enlightened men of modern China, and the persecution to which he has been subjected since his return to the capital is a disgrace to the rulers of the country. The crime actually alleged against him was that he left his post without permission from his superiors; but it is more than likely that the latter were dissatisfied with the arrangement which he concluded with the Russian Government on the Ili question. This and the jealousy of his peers, supported by disgraceful intrigues in the palace, have cost him his life. It would not be matter to excite grave surprise if the whole bargain agreed upon at Livadia were repudiated by the Court of Peking acting through the Tsung Li Yamen.

A LARGE rice-growing area will probably soon be developed in Queensland, Australia, where successful experiments in the culture have already been made. In October, corresponding with April in Japan, a crop was sown, which was reaped in the following January. Immediately thereafter the fresh seed was sown, and a second crop was reaped in April. Thus the land produced two crops in six months, the quantity of grain aggregating sixty-eight bushels per acre. As the bushel contained lb. 50, this represented a total production of lb. 3,400 per acre. Extensive tracts of land exist in the Colony suitable in all respects for this cereal, and from the known energy of the colonists we may conclude that a large trade will speedily spring up. The soil is good and thoroughly suitable, and the moisture is obtained from occasional showers and heavy dews. Hence the cost of cultivation is materially decreased.

THE fate of Li Yang Choi, the Kwangsi insurgent, who for many months last year set the imperial forces of China at defiance, and invaded the tributary kingdom of Annam, has been finally decided upon. In reply to a memorial addressed by the Governor of Kwangsi to the emperor, the Grand Council has ordered that the prisoner should be executed, immediately, in the provincial capital, and his head be sent to Annam for exposure there. Although the petition of the Viceroy suggests that death alone "would be an insufficient penalty" for the crimes with which the insurgent leader was charged, yet it does not appear from the imperial rescript that the extreme penalty of the law was to be accompanied by torture and ignominy.

IN view of probable complications arising out of their conflicting interests in Central Asia, both England and Russia appear to be cultivating the friendship of Persia. We learn that Great Britain contemplates releasing the Shah from the treaty obligations entered into in 1857, which probably accounts for the announcement in the *Broad Arrow* that it has "the authority of a high Persian official for stating that a most perfect understanding exists between the Governments of Her Majesty and the Shah with regard to the movements of Russia in Central Asia. Should that Power seize upon Merv the Persian monarch will oppose any further acquisition of Persian territory by the great Northern Power."

SPEAKING of a rendezvous held last autumn at Chefoo by the flag ships of the various naval squadrons in the waters of China and Japan, the Shanghai correspondent of the *Times* remarks that the alphabetical gunboats of the Chinese Marine were also anchored there. He says of them that, harmless looking craft as they seemed alongside such marine monsters as the *Iron Duke* and the *Armide*, they would be capable of infinite mischief, if at any future time we should be involved in hostilities with China, and also, he is happy to add, if the Chinese system of drill and discipline were to succeed in training officers and men capable of working the great guns of these small boats effectively. The writer adds:—"I visited two of them recently, and for dirt and disorder they were all that I could have expected. So long as their system remains what it is, it is idle to measure China's power of offence or defence by the size of the armaments which she has purchased in England. Under certain conditions of discipline these boats become dangerous toys, and these conditions are fulfilled in every ship that flies the Dragon flag."

FREQUENT disclosures are made of the existence of extensive slave-trade in the archipelagoes of the South Pacific. A correspondent of the *Straits Times*, writing from

Borneo, reveals the following state of affairs:—

"The quantity of Sooloos sold in Booloong as slaves, was estimated by my informants, about two months ago, at four thousand. Some of these people were the *bona fide* slaves of various headmen in Sooloo, but the greater part of them were simply kidnapped for sale. The hardships undergone by these wretched people on board the slave-boats are very great. Their flesh all falls away from want of food, till they are simply bones, and sores break out all over them. If they get beyond a certain stage of starvation, the strain on their constitution is too great, and they generally die, even though it be months after. On the voyage they rarely have rice above once in two or three days, and have to live on shell-fish, if they can find any when the boat stops. It was three boats of this kind that were captured by the Netherlands gunboat *Salak*. A man illustrating the state of affairs in Sugh said that, if two men saw one man, they would kidnap him, and if four men saw two they would kidnap them. Happening to mention the name of a man who had gone to Sooloo, I was informed that he was coasting round Sugh, and going ashore for the purpose of cooking or other reason, he and his companions were murdered and the boat taken. Questioning a man of the name of Inchi Seedick to-day as to the present state of affairs in Sooloo, he says that kidnapping continues as usual; the people cannot venture out of the town of Meimboing on foot, but are obliged to go, if on a journey of a few miles, on horseback, and armed with guns and spears. He adds that this used not to be, till within this year."

WE observe, in a report upon the health of Shanghai for the past year, that the death rate was only twenty-seven per thousand, considerably less than the average for the preceding ten years, which was nearly thirty-one and a half per cent. During the twelve months only three deaths, and all of those among residents, occurred from cholera. Among the river population, where the terrible disease generally makes its head quarters, not one choleraic seizure was heard of. The *Courier* observes that no new light has been thrown upon the origin of the malady. "Its former prevalence amongst seafaring men had been ascribed to their drinking impure water; but in many cases it was shown that the water used on the ships attacked was not obtained at Shanghai, having been brought from other places; and had been used during long voyages without perceptible injury. Amongst the large number of sailors, it would be almost impossible that impure water,—or at least water in its usual condition,—was not drunk last summer; yet no serious results followed. The absence of cholera amongst the sailors is of interest, as seeming to indicate that in cases of this nature it is not the water that is at fault. It would, however, with the present knowledge, or rather ignorance, on the matter, be the height of foolishness not to pay attention to the purity of the water consumed."

THE Shanghai medical practitioners, in their reference to the cases of heat apoplexy which came under their notice last year, remark that alcohol appeared to be a predisposing cause. "There is no question that excessive drinking, followed by subsequent exposure to the sun, is attended with serious danger. The lesson taught is plain enough; and it can only be hoped that as the risk is more clearly recognised it will be avoided." People who suffer from, or are threatened with disease of the liver, will no doubt be interested to learn that the treatment of the complaint has made great progress, and that there is now, in certain forms of it at least, much prospect of recovery than there was previously.

#### REVENUES AND EXPENDITURES.\*

##### PART VII.—REVENUE FROM GOVERNMENT PROPERTY.

(From the *Tokio Times*.)

The revenues which we are about to consider are derived from the sale of lands, trees, bamboos, dwellings, warehouses, etc., belonging to the government, and sundry articles not required; and also from rents of lands and buildings, etc.

\* Continued from *Japan Weekly Mail*, of February 21st.

The total receipts from these sources amounted to Yen 6,886,220.253, and the amounts collected in each year are as follows:

	Yen.
First term.....	50,193.712
Second term.....	49,831.704
Third term.....	72,303.633
Fourth term.....	210,116.114
Fifth term.....	297,879.425
Sixth term.....	2,223,017.203
Seventh term.....	1,107,500.774
Eighth term.....	2,375,377.688

Total..... 6,886,220.253

The above table shows a gradual increase since the 4th term; and a large and sudden increase in the 6th term. This increase was due to the fact that after the abolition of the board for advancement of agriculture, the fund which had been derived from sales of government land, and kept by the board to be used for encouragement of industries, was paid into the national treasury to the amount of Yen 1,510,000 in round numbers. And the increase of receipts for the eighth term was mainly owing to the facts that the war department had been for several years selling what became useless to it, and in this term it sent into the national treasury the accumulation of its sales during those years to the amount of Yen 468,000 in round numbers, and more than Yen 247,000 was realized by the sale of material which belonged to the Banchi Jimu Kioku (bureau of the Formosan expedition), but had become unnecessary. Furthermore, sales of government land had increased in this over previous terms; and a large number of persons commuted their hereditary pensions for government bonds and cash.

#### PART VIII.—ORDINARY MISCELLANEOUS RECEIPTS.

The receipts which we are going to consider consisted of what is called Keishitsu Mai (rice received above legal measure and weight), profit on bullion, fines, war tax levied by a provisional measure, and the like. These receipts cannot be incorporated with any of the above. The total receipts of the revenue in question for seven and half years, namely, from the 1st year of Meiji to the 7th month of the 8th year of Meiji, amounted to Yen 8,781,945.247, the amount of receipts for each term being as follows:—

	Yen.
First term.....	332,755.192
Second term.....	127,687.198
Third term.....	489,280.512
Fourth term.....	1,792,925.941
Fifth term.....	1,538,698.075
Sixth term.....	641,627.848
Seventh term.....	2,431,838.703
Eighth term.....	1,382,181.723

Total..... 8,781,945.247

As shown in the figures above given, the amount of the receipts for the 1st term is more than that for the 2d term. This increase was due to the collection of money which the late Siogun's government had levied for building a palace for the empress dowager, and the confiscation of money and rice found in the residences of rebellious daimios in Tokio, Saikio and Osaka. These sums amounted to more than Yen 170,000. A small increase is observable in the 8d term, and is thus accounted for. A contribution to the war-fund had been levied in each Han in proportion to its production of rice since the first term, but the lands which were held in sub-infundation had been exempted, until by notification issued in the 4th month of the 2d year of Meiji they were made to pay to the fund in the same way as the lands actually possessed by the daimios. The large increase in the 4th term was due to the fact that, while the war fund hitherto levied was abolished by notification issued in the 9th month of the 3d year of Meiji, a navy fund was created instead, the new levy being heavier than the old. Further, arrears of payments to the war fund due in the preceding term were received in this term. In the 5th term the income was also large. This increase was obtained by reforms in the financial system, whereby the profits on the recoinage which belonged to terms previous to the 4th were received in this one, and to payment of arrears of the war fund. The receipts are, in proportion to the total amount, as follows:—

Profits on the coinage.....	41 per cent.
Arrears of the war fund.....	45 " "
Other receipts.....	14 " "

In the 6th term a large decrease occurred. This was ascribable to the circumstance that the arrears of the war fund paid were small, and the profit on the coinage, though large, could not all be collected in this term. So the profit actually entered in the accounts of this term was insignificant. The 7th term shows a large increase. This was due to the fact that profit on the coinage belonging to previous terms was actually now received, together with the sum due for the current term. Again, a fixed proportion between the new and old coins was established by notification issued in the 9th month of the 7th year of Meiji, whereby a large nominal profit on the old coin and bullion sent in previously in accordance with the provisions of the old standard, was realized, amounting to more than Yen 1,589,000. This nominal profit amounted to 65.4 per cent of the receipts which we are now considering, and other items under the same head reached 34.6 per cent. In the eighth term which, we must bear in mind, consisted of only six months, the receipts in question, though smaller than those of the preceding period, yet were nearly equal to those of the fourth or fifth term. This was caused by the fact that all the miscellaneous receipts which had been delayed in earlier years were received during this term.

The revenues treated in the foregoing parts, and detailed in the first seven sections of Table No. 1, constitute the ordinary receipts for the eight fiscal terms. They amount to Yen 282,870,871.985.

#### IX.—ISSUE OF PAPER MONEY.

This paper money was issued in order to meet the expenditures for the suppression of the rebellion or other extraordinary expenditures.

The total of the issue from the 1st to the 5th year of Meiji inclusive, amounted to Yen 73,825,444.100, and the amounts issued in each fiscal year are as follows:

	Yen.
First term.....	24,037,889.818
Second term.....	23,062,610.187
Third term.....	5,854,512.500
Fourth term.....	2,145,487.500
Fifth term.....	17,825,444.100

Total..... 73,825,444.100

With respect to this issue, detailed explanation and exact accounts will be rendered after each section of the revenues and expenditures has been dealt with, but it is necessary here to give a short epitome of the same. The issue of so-called Daijo Kuwan satsu in the 1st and 2d fiscal years was to meet the expenses of the war of the rebellion which was waged during that period; for the development of internal industries in general; and, moreover, for extraordinary disbursements which could not be met in the same manner as ordinary expenditures.

The Minbusho paper money was issued in the 3d and 4th terms in order to withdraw a part of the Daijo Kuwan satsu of large denominations, which were found inconvenient for daily transactions. This issue was, therefore, of small denominations. About Yen 4,000,000 of the Daijo Kuwan satsu thus withdrawn were again put into circulation during the 4th term to meet certain extraordinary disbursements incurred through the abolition of the former division of the Han and the constitution of Ken in their stead. In the fifth term convertible paper money, amounting to Yen 9,300,000, Yen 2,500,000 of which was issued by the Kai Taku Shi, was put into circulation. This was done with the purpose of reducing the inconveniences caused by false tokens or by the insufficiency of the new coins in circulation. In the same year there was another issue of more than Yen 8,525,000 of new paper money. This was uttered to meet the large expenditures which were continually demanded until the local administrations had been fairly settled, in this term, by abolitions, creations, separations and amalgamations of Ken. The local expenditures for this period increased by 786 per cent compared with those of the preceding term. The governmental departments (Sho) greatly developed their operations, and the military and naval forces were augmented. These changes enlarged the expenditures for both these items by more than 233 per cent compared with the previous term; and furthermore, every

item of outlay, with the exception of the Seito Hi (expenses for the war of the rebellion) had more or less developed. On the other hand none of the items of revenues for the same period had increased to any extent, except the land tax, which advanced by 70 $\frac{2}{3}$  per cent: receipts from government properties by 41 $\frac{2}{3}$  per cent; and repayments of ordinary and extraordinary loans by 27 $\frac{1}{2}$  per cent. (Income derived from the former Han increased greatly, but disbursements were of corresponding increment.) Under such circumstances the issue of a new paper currency was necessary to assist in surmounting the financial difficulties of that epoch. The total amount of paper currency in circulation on the 30th day of the 6th month of the 8th year of Meiji was more than Yen 94,808,819 (see estimates for the 9th fiscal year), showing an increase of upward of Yen 21,478,875 over the amount of the notes issued during the preceding five terms. The causes of this addition will be enumerated in Part II. of Chapter III. of this Book.

## PART X.—LOANS.

These are loans contracted by the government with individuals and companies, national or foreign, and the foreign loan raised in London. The total of them amounted to Yen 21,250,982.568; and the separate amounts for each term are as follows:

	Yen.
First term .....	4,782,462.878
Second term .....	911,500.190
	Yen.
Third term .....	4,782,400.000
Sixth term .....	10,888,600.000
Total .....	21,250,982.568

The loans contracted in the 1st and 2d terms were raised partly to meet extraordinary expenses at the time of the restoration, and partly to refund foreign debts contracted by the Siogunate. Of the loans raised in these two terms 82 $\frac{2}{3}$  per cent were received from national and 17 $\frac{1}{3}$  per cent from foreign capitalists. The loan contracted in the 3d term was raised in London at an interest of 9 per cent, as a railway fund. This is called the old foreign loan. The loan contracted in the 6th term was also raised in England at an interest of 7 per cent, to help those who had given up their Chitsu Roku (hereditary pensions). This is called the new foreign loan. Details in regard to the above-mentioned loans, raised for temporary requirements and refunded before the 5th term, and the old and new foreign loans raised for railway purposes and grants for the surrender of pensions will be given in the parts treating of national loans, government industries and hereditary pensions in Chapter III.

## PART XI.—REPAYMENT OF EXTRAORDINARY LOANS DUE TO THE GOVERNMENT.

This deals with the repayment of loans made in proportion to Kokudaka (amount of rice production in different localities), and also of those made for the development of industries, which may be called "extraordinary." The total of these loans in the seven and a half years from the 1st year of Meiji to the 6th month of the 8th year of Meiji, amounted to Yen 16,583,689.968. The receipts for each of those periods are as follows:—

	Yen.
First term .....	10,686.788
Second term .....	4,498,872.556
Third term .....	174,140.894
Fourth term .....	4,817,219.908
Fifth term .....	5,859,268.876
Sixth term .....	818,585.021
Seventh term .....	819,594.031
Eighth term .....	505,872.854
Total .....	16,583,689.968

The amount for the 1st term was very small, and consisted only of the interest on the loans made for the development of industries. No repayment of principal occurred. That for the 2d term was large. This was due to the fact that a sum of more than Yen 4,267,000 out of Yen 4,591,000 in round numbers, advanced in the preceding term to the Sho Ho Shi as a fund for the development of industries, was repaid. This refund took place on account of the abolition of the said Sho Ho Shi and the establishment of

the Tsu Sho Shi. By this change the Kuwangio (encouragement of industries) business was put in better order, for the remaining liabilities of the Sho Ho Shi were assumed by the Tsu Sho Shi. The receipts for the 3d term were composed of repayments on account of capital and interest of loans made (1) to the Kokudaka, and (2) to others for the development of industries. The proportions contributed to this total of receipts were (1) 22.8 per cent; (2) 29.6 per cent; and, for interest on both items, 47.6 per cent. The large receipts of the 4th term were due to the fact that the abolition of Tsu Sho Shi took place in the 7th month of the 4th year of Meiji, and the repayment of the sums previously advanced to it was effected in this term. This refund amounted to 84.8 per cent. of the whole receipts: other repayments and interest being 15.7 per cent. In the 5th term receipts were larger than in the preceding term. This result was attained by the repayment of loans advanced by the government to the Han in proportion to the production of rice therein. The reimbursement had been delayed for several years. It was made in this term and amounted to more than Yen 8,592,000. This was more than 67 per cent of the whole amount of the receipts. The repayment of other loans amounted to 29.6 per cent, and interest on them to 3.4 per cent. From the 6th term the receipts in question did not fluctuate so greatly as in former terms. This was due to the circumstance that the political affairs of the country had begun to be stable; and after the sixth year there was no great political change having influence on the condition of the loans.

## PART XII.—FUNDS BELONGING TO THE BAKUFU AND HAN, AND OTHER RECEIPTS.

The receipts which will be mentioned in this part are, as we have seen in the first table, the fund left by the Bakufu and Han, the reserves of Han, the fund for redemption of the paper money issued by the several Han, repayments of loans due to Han, and other sums which had belonged to the Han. These sums for the seven and a half years, namely from the 1st year of Meiji (1868) to the 7th month of the 8th year of Meiji (June, 1875), amounted to Yen 9,071,565.514. Following are the amounts of such receipts for each of these fiscal terms:—

	Yen
First term .....	362,542.088
Second term .....	14,710.093
Third term .....	161,918.252
Fourth term .....	60,235.994
Fifth term .....	2,529,718.169
Sixth term .....	8,060,450.424
Seventh term .....	1,410,165.274
Eighth term .....	1,471,835.270
Total .....	9,071,565.514

In the first and second terms, money and rice kept in the Bakufu's treasury and storerooms were received into the national guardianship. In the third and fourth terms, the fund kept by the iron foundry at Nagasaki, the reserve retained by the Kuwaisho (town hall) at the same place, and repayments of loans due to the Bakufu were received into the central exchequer. In the fifth term we see a great increase, arising thus: After the abolition of the Han the reserves retained for the redemption of the paper money issued by them, and other reserves in their hands, were received into the national treasury in this period. Such funds amounted to 89.1 per cent of the sum derived from all the sources of the revenues in question. The remaining 10.9 per cent was received from what is called the Ku Han Guwai Koku Sai Tsui Cho,\* and the repayment of loans made by the government.

The receipts for the sixth term were larger than those of the fifth. This is due to the fact that residues of Han moneys and the remainder of the fund for redemption of paper money issued by the Han were collected in this term. The former sums amounted to 39.7 per cent, and the latter to 37.1 per cent, of all the receipts under consideration, and the remaining 23.2 per cent came from some other resources

\* A great many Han had contracted debts to foreigners, which, when the old divisions were abolished, were assumed by the imperial government. Those portions of these debts which had been incurred by the Han authorities for general improvements were left undisturbed; but the public domains and other property which had been granted or improved with the funds thus obtained, were taken over by the government and denominated Ku Han Guwai Koku Sai Tsui Cho.

falling under this heading. In the seventh and eighth terms, the receipts in question show a diminution. This would necessarily be so; but the decrease was not so great as it might have been. This is attributable to the circumstance that, although the receipts from the moneys left by the Han, and the fund for redemption of paper money issued by them were diminished, yet the repayment of their loans increased. In the seventh term receipts from the fund for the redemption of Han paper money was 41 per cent; from funds left by Han, and other reserves, 26 per cent; and repayment of loans, 83 per cent. In the eighth term the first item was only 2 per cent; the second was 47 per cent; and the third 51 per cent.

#### PART XIII.—IRREGULAR REVENUES.

Under this head we collect such sums as voluntary presents from individuals, fines imposed on Han and the indemnity received from the Chinese government. These sums amounted in the seven and a half fiscal terms, namely, from the 1st year of Meiji to the 7th month of the eighth year of Meiji, to Yen 8,289,299.884. The following are the receipts from the sources in question for each term:—

	Yen
First term .....	281,482.111
Second term .....	884,655.658
Third term .....	442,904.084
Fourth term .....	280,782.094
Fifth term .....	808,004.916
Sixth term .....	202,921.645
Seventh term .....	125,808.589
Eighth term .....	1,268,294.487

Total ..... 8,289,299.884

From the first to the sixth terms, daimios and other patriotic persons presented considerable sums to help to provide for the extraordinary expenses which the national treasury incurred; and several daimios who were rebellious to the imperial cause were fined; and what was called Hikioi Kin Tsui Cho<sup>1</sup> also contributed some funds. The total from these sources amounted in the five terms to Yen 1,697,000 in round numbers; 55 per cent being composed of presents; 29.7 per cent of fines; and 15.3 per cent of Hikioi Kin Tsui Cho.

In the sixth and seventh terms receipts of this class consisted mainly of sums forwarded by the daimios in repayment of debts due from them to the government. The total for the two terms was about Yen 828,000, whereof 98.5 per cent was contributed from the source just mentioned. The increase in the class of receipts under consideration, in the eighth term, was created by the indemnity obtained from the Chinese government, and receipts by the steam-ship department for the Formosan expedition.

The last five parts deal with extraordinary revenues; and the total of the sums which they embrace during the eight fiscal terms which we have to consider is Yen 128,479,981,584.

#### CHAPTER II.

##### STATISTICS OF THE ACTUAL EXPENDITURES FOR THE EIGHT FISCAL TERMS.

#### PART I.

The grand total of the actual expenditures for the seven years and a half, extending from the 1st year of Meiji to the 8th of the 6th month of the 8th year of Meiji, amounted to Yen 359,446,682.548. Of this sum, Yen 242,801,605.418 are ordinary expenditures, and the remainder, being Yen 116,645,077.125, is extraordinary expenditures. The following table shows the amount of every item in each section of the expenditures for the eight fiscal periods.

TABLE No. II.

STATISTICAL TABLE OF THE ACTUAL ACCOUNTS OF THE EXPENDITURES FOR THE EIGHT FISCAL TERMS, BEGINNING WITH THE FIRST YEAR OF MEIJI AND ENDING WITH THE SIXTH MONTH OF THE EIGHTH YEAR OF MEIJI.

#### Section I.

Daijo Kuwan: Tai	Yen.
Sho In, Shin Gi In,	
Sa In & Gen Ro In	2,077,281.241

<sup>1</sup> When government agents proved dishonest, and applied public money which they had received for government purchases or other purposes to their own use, the sums thus misappropriated had to be refunded by the guilty parties, and were received into the national treasury under the name of Hikioi Kin Tsui Cho.

Dept. of foreign affairs: Guwai Koku, Jimu Kioku and Guwai Koku Kuwan .....	925,791.936
Home dept.: Nai Koku, Jimu Kioku, Minbu Sho and Minbu Kuwan....	1,050,116.078
Finance dept.: Kuwai Koi Jimu Kioku, Kuwai Kei Kuwan, and land tax reform office .....	8,640,055.035
Educational dept.: Schools and hospitals .....	4,505,031.388
Dept. of religion: Shingi Jimu Kioku, Shingi Kuwan and Shingi Sho..	845,800.856
Dept. of public works	1,834,062.826
Judicial dept.: Keiho Jimu Kioku, Keiho Kuwan, Kioku Sho and Dan Jio Dai..	2,580,719.625
Imperial household Dept. ....	4,512,412.519
Kuwan Roku, official salaries* and allowances .....	5,308,166.149
Traveling expenses, official houses and public banquets..	873,800.948
Postal expenses....	1,087,631.304
	Yen.
	28,639,872.800

#### Section II.

Army and navy expenses: Gunbo Jimu Kioku, Gunmu Kuwan, Hiobu Sho and Riku Gun Sho .....	34,697,334.410
Arms purchased for the army .....	8,443,965.854
Construction of barracks .....	630,699.559
Drafting expenses ..	827,646.308
Kanagawa barracks..	301,606.748
Navy expenses (Kai Gun Sho) .....	5,675,183.864
Purchase of ships of war .....	1,770,106.641
Purchase of arms for the navy .....	1,074,379.833
	47,690,674.717

#### Section III.

Kai Taku Shi (colonial dept.) .....	5,639,655.912
Department of Police	1,685,344.481
Three Fu .....	5,971,674.890
Ken with open ports	8,843,009.416
Ken in general ....	31,481,385.463
Police expenses in general .....	1,759,567.787
Expenses for assembly of local governors .....	37,549.264
Construction of imperial tombs and expenses for shrines and temples .....	894,687.804
Festival expenses..	452,314.578
	38,755,089.545

#### Section IV.

Expenses for legations and consulates in foreign countries .....	1,183,401.830
Entertainment of foreign princes and other guests .....	109,560.362
	1,292,962.192

#### Section V.

Reduction of domestic debts .....	692,227.000
Interest on domestic debts .....	2,215,817.430
Reduction of foreign debts .....	1,690,317.978
Interest and commission on foreign debts .....	4,123,574.423
	8,721,936.831

#### Section VI.

Hereditary pensions .....	Yen.
	87,292,471.990

\* Kuwan Roku and official salaries are synonymous. Till the 5th year of Meiji the item was called Kuwan Roku: afterward it was known as official salaries.

Pensions for meritorious services ....	6,460,720.123	
Shrines and temples .....	939,824.425	
Miscellaneous relief .....	558,788.370	
		95,250,804.808
<b>Section VII.</b>		
Construction and repairs of Kuwau and Shō .....	3,975,506.942	
Constructions and repairs in Fu and Ken .....	513,963.971	
Constructions and repairs of dykes, roads and bridges ..	7,623,154.674	
		13,113,624.587
<b>Section VIII.</b>		
Onshio (rewards for meritorious services), Yōron (relief for the aged) and Shinjitsu (relief for the poor) .....	1,151,439.314	
Loan to the people for relief .....	8,979,471.753	
		5,030,901.046
<b>Section IX.</b>		
Construction of a palace for the Empress-dowager and other expenses (Imperial progress to the south, construction of Kio-melkin* and coronation expenses ..	201,816.125	
Expenses for the transport of rice ..	8,041,593.753	
Expenses for transport of different kinds of goods .....	201,015.323	
Rice lost by shipwreck and loss in short measurement of rice received .....	287,697.908	
Refining gold and silver .....	263,230.293	
Ruled paper for legal documents and licenses .....	76,168.443	
Interest on temporary loans ....	496,855.767	
Losses from Kokuwan Sa <sup>10</sup> .....	289,820.496

<b>Section XI.</b>		
Reduction of foreign debts contracted by the late Siogunato and Han .....	Yen.	
	4,043,856.837	
Reduction of other debts contracted by late Han .....	2,015,599.308	
Foreign indemnities due from the late Siogunato and Han ..	1,728,788.537	
Subsidies toward the expense of the late Han governments ..	2,353,886.324	

\* See Book II, Part III, Chapter I.

<sup>10</sup> See Book II, Chapter I, Part VIII, paragraph

Special grants to Han .....	829,812.515	
Allowance for changing feudal domains .....	1,150,971.257	
Compensations to Daimios, who received less productive territories than their old ones ....	1,137,630.339	
Subsidy to those samurai who became peasants .....	1,223,687.746	
Expense of coal mine .....	465,663.526	
		Yen.
		14,949,986.299
<b>Section XII.</b>		
Construction of railway .....	8,811,315.949	
Expenses for railway and its working ..	1,230,903.273	
Mining expenses ....	3,846,592.379	
Telegraph expenses ..	1,850,566.738	
Lighthouse expenses ..	2,347,584.512	
Iron factory, dockyard and other manufactories ....	4,788,068.905	
Mint expenses .....	3,075,350.043	
Expense of manufacturing paper money and bonds ..	2,440,263.032	
		28,280,664.131
<b>Section XIII.</b>		
Imperial progress to the east (at the time of changing the site of the capital) .....	834,636.517	
Expenses of Ambassadors and others sent to foreign lands .....	1,076,068.696	
Expenses of students sent to foreign lands .....	697,637.985	
Salaries, etc., to foreigners in government service ....	627,967.836	
Expenses for exhibitions .....	831,230.962	
Grants for encouragement of industries .....	682,588.287	
Expenses for Kuwangio (encouragement of industries) .....	950,041.872	
Purchase and repairs of ships (expenses for steam navigation) .....	348,269.615	
Actual running expenses of steamers .....	744,056.997	
Improvements of two rivers (Tonegawa and Shinanogawa) ..	460,363.196	
Expenses of Hokkaido Tonden (a kind of military colony) ..	400,000.000	
Expenses of redeeming old coins and paper money ....	199,855.672	
		7,852,597.607
<b>Section XIV.</b>		
Loans in proportion to the Kokudaka ..	12,733,261.500	
Loans for the development of national industries .....	15,388,510.700	
Loans to the Kai Taku Shii (colonial dept.) .....	2,500,000.000	
Loans for the construction of brick houses in the Tokio Fu .....	Yen.	
	747,089.215	Yen.
		31,369,861.415
<b>Section XV.</b>		
Repayment of temporary, domestic and foreign loans ..	5,643,982.568	
Interest on temporary, domestic and foreign loans ..	680,414.736	
Grants for surrender of hereditary pensions .....	11,699,511.604	
		18,023,908.908
<b>Section XVI.</b>		
Expenses of coast defense .....	225,495.009	
Expenses of the settlement of Kawase Guwaisha affairs ..	764,875.684	

Loss incurred by the failure of Onogumi	752,881.385	
Loss incurred by the failure of Shimadagumi.....	213,758.975	
Indemnity given because of dissolving contracts <sup>11</sup> .....	98,890.000	
Expenses of raising the foreign loan..	772,027.217	
Steamer furnished to the Liu Kiu Han, etc.....	95,255.278	
Miscellaneous expenditures .....	205,597.887	
	<u>3,127,311.435</u>	Yen.
Total of extraordinary expenditures.....	116,645,077.125	
Grand total of expenditures.....	<u>359,446,582.543</u>	
Excess of revenues over expenditures.....	46,904,170.973	

Before proceeding to examine the different sections of the expenditures above mentioned, it is desirable to give some explanations in regard to certain items of some sections.

Kuwan Roku, official salaries and other allowances, mentioned in the 10th item of Section I., are for payments which belong to terms before the fifth. Kuwan Roku and official incomes, etc., for the officers of each Kuwan and Shō. (Pay to civil and military officials of the army and navy departments is also included in this item.) But after the fifth term, official salaries, etc., came to be paid out of the appropriations to each Kuwan and Shō, therefore after that term we have not specially provided an item for such salaries, etc. Expenses for traveling, official houses, and public banquets, mentioned in the 11th item of the same section, are treated in the same manner as official salaries, etc.

Army and navy expenses mentioned in the 1st item of Section II. are disbursements belonging to Hiobu Shō before the army and navy departments had been separated; and also include those of the army after the separation. The navy expenses mentioned in the 6th item of the same section were those incurred after the establishment of the navy department in the 2d month of the 5th year of Meiji (January, 1872).

Reduction of foreign debts mentioned in the 8d item of Section V. was made by payment of £848,000 sterling, at the current rate and not at the rate of Yen 4.88 per pound, which was the rate of exchange at the time when the loan was raised.

Interest on temporary loans mentioned in the 7th item of Section IX. was that charged on loans from banks and other sources to meet temporary requirements. The amounts of the principal of the said loans received or repaid, are made to cancel each other as far as this can be done, and only the difference is taken into account, just as was done in the case of the interest on temporary loans mentioned in the 5th item of Section VII. of the statement of revenues. Salaries to foreigners in government service mentioned in the 4th item of Section XIII. were for sums belonging to periods before the 5th term. After the 5th term these salaries were paid out of the appropriation of every department, and so are no longer included in this item. Subsidies for encouragement of industries, mentioned in the 6th item of the same section, were grants to local governments for developing the national resources. Kuwanro expenses, mentioned in the 7th item of the same section, were for industries which the central government had directly created and worked.

#### PART II.—EXPENSES OF KUWAN AND SHO.

These were the aggregated sums of all expenses pertaining to the Daijo Kuwan and all other departments (that of the army and navy excepted) amounting to Yen 28,639,872.800 for the seven years and a half, namely from the 1st year of Meiji to the 6th month of the 8th year of Meiji. They are subdivided as follows:—

	Yen.
First term .....	1,675,877.408
Second term .....	2,424,808.802
Third term .....	2,847,445.807
Fourth term .....	2,789,685.455
Fifth term .....	4,518,599.770
Sixth term .....	5,417,728.055

<sup>11</sup> See the last paragraph but one in Book II, Part III, Chapter I.

Seventh term .....	5,915,628.900
Eighth term .....	3,050,543.937

Total ..... 28,639,872.800

According to the above figures there was an increase of the expenses in question by Yen 749,000 in round numbers, or 44 $\frac{1}{2}$  per cent in the second over those of the 1st term. This was due to the facts that the site of the Daijo Kuwan was transferred to Tokio in the second month of the 2d year of Meiji. Many boards and bureaux were established in various Shō; the business of different Shō developed considerably; and, consequently, the Kuwan Roku, traveling expenses and other allowances, etc., also increased upon those of the preceding term. Under such circumstances, enormous outlay was required in the second term, although it was only a short one, consisting of nine months (from the 1st to the 9th month of the 2d year of Meiji).

In the third term there was an increase of the expenses by nearly Yen 422,000 or 17 $\frac{1}{2}$  per cent over those of the preceding period. This was due to the comparatively large amount of the Kuwan Roku and official salaries paid out, which was not caused by an increase of officials, but by the inequality in the number of months between this and the previous term. The financial year in question consisted of twelve months, extending from the 10th month of the 2d year of Meiji to the 9th month inclusive of the 8d year of Meiji; while the last term consisted of only nine months. There was a decrease of a little over Yen 57,000 in the 4th term in comparison with that preceding it. This was brought about by a decrease of the Kuwan Roku and official salary payments, on account of some of the offices having been abolished and others united in the 7th month of the 4th term, though the Kobu Shō was newly established in the 10th month (the second 10th month—intercalary) of the 8d term. Consequently a new item of expense was added to the budget. In the 5th term there was an increase of a little more than Yen 728,000 or 62 per cent above the preceding term. This was due to the following fact. Since the abolition of the Han in the 4th year of Meiji (1871) the scope of the administration of the central government was largely extended; and, in consequence, every department was invested with additional duties, which caused an increase of expenditure. Moreover, in this term the division of the fiscal year, which had hitherto ended with the 9th month, was changed, and the calendar and fiscal years were made to correspond. The change caused this term to be a long one, consisting of fourteen months. In the 6th term there was an increase of a little more than Yen 899,000, or a little less than 20 per cent from the preceding year. There were various reasons for this increment; but the principal were that in the fiscal period in question, educational affairs and local judicial administrations attained considerable development. Accordingly, the expenses of both these departments were augmented. In the 7th term there was an increase of a little over Yen 497,000 or 8 $\frac{1}{2}$  per cent from the previous term. Several causes contributed to this effect; but the principal one was the establishment of the Home Department. In the 8th term there was a decrease of something more than Yen 2,865,000, or over 484 per cent compared with the previous term. That the expenses of this fiscal period were nearly half the amount of those of the previous term, was due to the fact that the term extended over half a year only, namely from the 1st to the 6th month of the 8th year of Meiji.

#### PART III.—ARMY AND NAVY EXPENSES.

These were the collective amounts of expenses for both the army and navy departments, and for the purchase of arms and men-of-war, construction of ports, barracks and ships, etc. They amounted in all to Yen 47,820,074.717 for the seven years and a half, namely from the 1st month of the 1st year of Meiji to the 6th month of the 8th year of Meiji.

The following are the expenses for each fiscal term:—

	Yen.
First term .....	1,059,797.848
Second term .....	1,547,905.947
Third term .....	1,500,174.273
Fourth term .....	3,252,966.072
Fifth term .....	9,568,891.005
Sixth term .....	9,088,007.180

Seventh term .....	10,418,413.883
Eighth term .....	10,784,898.459
Total .....	47,820,674.717

According to the above figures the outlay for the interval between the 1st and 8d terms was very meager, fluctuating from about Yen 1,000,000 to about Yen 1,500,000. The reason why the expenses of the 8d were less than those of the previous term was because purchases of men-of-war were comparatively few, though there was a certain increase of expense in the Hiobu Sho in the period in question.

In the 4th term there was an increase in expenses by Yen 1,752,000 compared with those of the preceding term. This is explained thus:—Several regiments were called from the Kagosima, Yamaguchi and Kochi Han in the 2d month of the 4th year of Meiji to form an imperial guard; and four military stations were established, in Tokio, Osaka, Kamamoto and Sendai respectively. In the 5th term there was a considerable increase. The expenses were in excess a little more than Yen 6,815,000, or above 294 per cent of those of the previous term. In the 2d month of the 5th year of Meiji, Hiobu Sho was abolished, and in its place two distinct departments, for army and navy, were constituted. The affairs of both departments were considerably increased. Arms and men-of-war were purchased, barracks were established, and the numbers of the army were added to. Again, the new regulations that the Kuwan Roku, official salaries and traveling expenses etc., should be paid from the appropriations of the respective departments, were put into operation in this term. In the 6th period there was an increase of expenses by about Yen 119,000 compared with those of the previous term. This was because there was further increase in the expenditures for the army. Those of the navy diminished to a small extent. The 7th term witnessed an increase in expenses by about Yen 780,000 from those of the previous term. This was because there was an addition to extraordinary expenses in connection with the Saga insurrection in the early part of the 7th year of Meiji. Following on that event, the Formosa expedition took place, involving extra outlay on the part of both army and navy departments. The ordinary appropriations of the fiscal year in question for the two departments were not sufficient to meet the extraordinary demands. Though the 8th term consisted of six months only, yet the expenses incurred were greater than those of any previous terms. This was caused by the fact that, at that time negotiations with the Chinese government on the subject of the Formosan expedition being still pending, extensive preparations for land and sea forces were made, and purchases of arms and men-of-war were rendered necessary. The sums thus required amounted to Yen 5,932,552. (Though the greater part of this total had been paid in the previous term, yet the accounts were actually included in those of this period.) If the above extraordinary expenses be deducted from the total expenditures of the fiscal term in question, and the remainder be compared with half the amount of the expenses of the previous period, those of this term will show a decrease of more than Yen 351,000.

#### PART IV.—EXPENSES OF LOCAL GOVERNMENTS.

These were the collective amounts of expenses for the Kai Taku Shi, Fu, Ken, police, shrines and temples, and festivals, etc., amounting to Yen 88,755,089.545 in the seven and a half years extending from the 1st year of Meiji to the 6th month of the 8th year, being subdivided as follows:—

	Yen.
First term.....	938,223.728
Second term.....	1,570,886.020
Third term .....	1,269,854.429
Fourth term .....	979,431.075
Fifth term.....	7,697,588.118
Sixth term.....	8,966,839.496
Seventh term .....	10,527,884.030
Eighth term .....	6,805,832.054
Total .....	88,755,089.545

The expenses in question for the 1st term were composed of those of Fu, Ken, shrines and temples, festivals, etc. They amounted to only a little over Yen 938,000, as we have seen above. In the 2d term there was an increase of more

than Yen 682,000. This was due to the fact that the Kai Taku Shi (colonial department) was established and a large amount of money granted for its maintenance. In the 3d term there was a decrease of a little more than Yen 801,000 compared with the previous term, owing to the fact that the expenses of the Kai Taku Shi and festivals were comparatively small, though there was a certain increase of the expenditures in Fu and Ken. In the 4th term there was also a decrease of a little over Yen 289,000 from the previous period. This is accounted for in the following manner. Previously the expenses of Fu and Ken were deducted from the taxes collected in the respective territories, and only the remainder was sent into the national treasury; but in this term it was enacted that the total of taxation should be paid into the central exchequer, and special appropriations should be made for Fu and Ken according to their respective needs. Still for some time the working of the newly introduced system was not thoroughly perfected; and there were some local governments which continued to use the taxes gathered in their jurisdictions as before. Therefore the amounts paid by the national treasury to meet the current expenses of Fu and Ken were but small in this term. Under these circumstances it was inevitable that, after the 6th term—(until the 5th term the old custom was adhered to to a considerable extent)—there should be a great number of entries of what is called Yenko, and many cases of what is known as Tsuiiku.<sup>11</sup> The expenses in question increased by more than Yen 6,718,000 in this, as compared with those of the preceding term, the addition being due to the following causes. After the abolition of the Han, Ken were created, and the amalgamation of several jurisdictions took place. Thus, at first, the payments of the local administrations necessarily increased. Beside, in the beginning of this term (the 10th month of the 4th year of Meiji) police bureaux began to be established in the principal districts of the empire, to wit, Tokio, Osaka, Niigata, Aichi, etc. Furthermore, it was decided that a grant of Yen 10,000,000 should be made to the Kai Taku Shi for a period of ten years, beginning with the 5th year of Meiji. Accordingly the outlay for this latter term was also large. In the 6th there was an increase of a little over Yen 1,268,000 in comparison with the previous term. This was due to the fact that in the fiscal year in question further creations, abolitions, separations and amalgamations of Ken took place; while the police forces were increased, and the local business of Fu and Ken attained greater development from year to year. In the 7th term there was an increase of a little over Yen 1,561,000 compared with the previous term. It arose in the foundation of the Keishicho in the 1st month of the 7th year of Meiji, and in the adjustment of some Ken accounts pertaining to the 4th and 5th term, the actual receipts and payments occurring in this period.

In the 8th term there was a decrease of about Yen 8,722,000, in comparison with the preceding term, owing to the fiscal period being a short one, consisting of six months only. However, the expenses were great, considering the duration of the term. This was due to the fact that some of the accounts which had belonged to foregoing terms were adjusted in this one, as happened in the previous term; but the principal cause of the large outlay was that a sum of more than Yen 2,000,000 was given to the Kai Taku Shi, including former taxes on marine produce and other revenues, as well as the arrears due to the department.

#### PART V.—EXPENDITURES OF LEGATIONS AND CONSULATES IN FOREIGN COUNTRIES; AND FOR THE ENTERTAINMENT OF FOREIGN GUESTS.

The expenditures incurred under the above heading amounted in all to Yen 1,378,962.192 for six years and a half, namely from the 2d year of Meiji to the 6th month of the 8th year of Meiji, being divided as follows:

	Yen.
Second term.....	40,897.558
Third term .....	8,821.787
Fourth term .....	55,959.076
Fifth term.....	148,939.100
Sixth term .....	508,294.848
Seventh term .....	545,149.414
Eighth term.....	76,899.859

Total..... 1,378,962.192

<sup>11</sup> See the eleventh paragraph of the introductory remarks.

Of the above figures, the expenses for the 2d term were those for the entertainment of a British prince who visited Japan, and for the 3d term the final settlement of the liabilities of the preceding year. The expenses in the 4th term were for the establishment of legations in France and America. Those for the 5th term were for a similar embassy in England, consulates at Shanghai and in Corea, and furthermore for the entertainment of a Russian imperial prince. The increase of the expenses for the 6th term was due to the foundation of legations in Russia, Austria and Italy, and a consulate in New York, and the final settlement of the accounts for the entertainment of the Russian prince, and further for hospitality extended to an Italian prince. Again, there was an increase in the 7th term, due to the establishment of consulates at Marseille and Amoy. The expenses of the 8th term (which included six months only) were much smaller than the half of those of the preceding period. This was due to the fact that it was then, as it is now, customary to give the legations and consulates the funds necessary to their maintenance six months in advance. Such payments for the fiscal year in question were, therefore, not included in this item. Those which are accounted for in this place belong, of right, to the outlay of the ninth fiscal year.

#### PART VI.—REDUCTION OF DEBTS, DOMESTIC & FOREIGN; AND PAYMENT OF INTEREST THEREON.

In this part is considered the reduction of the domestic and foreign debts, and the interest paid thereon, amounting together to Yen 8,721,936.831 for four years and a half, namely from the 4th year of Meiji to the 6th month of the 8th year of Meiji. The amounts of each term are as follows:—

	Yen.
Fourth term .....	430,336.957
Fifth term .....	430,336.957
Sixth term .....	2,996,088.904
Seventh term .....	3,254,140.331
Eighth term .....	1,593,083.592
<b>Total .....</b>	<b>8,721,936.831</b>

Of the above statistics, those for the 4th and 5th terms were only for interest and commission on the old foreign debts. The large increase in the 6th term was due to the reduction of the domestic debt, payment of interest thereon, repayment of the old foreign debt and payment of the interest on the new foreign debt. There was also an increase in the 7th term, owing to the issue of the Chitsu Roku bonds,<sup>12</sup> and the payment of interest thereon. In the 8th term there was a decrease. This was due to the fact that the repayments in the fiscal period in question were only those of the new and old foreign debts. Domestic debts were not repaid, but only interest on Kinsaten Hikikaye (bonds in redemption of the paper money issued by the Daijio Kuwan), and Chitsu Roku bonds,—the latter having been issued in the later part of the previous term.

#### PART VII.—PENSIONS AND RELIEF.

Here we find the amounts of pensions paid for hereditary claims and meritorious services, pensions to shrines and temples, temporary grants for the imperial princes, the former Kuwan-nin (court officers) and vassals of the late Siogun, the amount and mode of payment of whose annuities were not yet adjusted. The disbursements amounted in all to Yen 95,250,804.808 for the seven years and a half, namely from the 1st year of Meiji to the 6th month of the 8th year of Meiji. The amounts for every term are as follows:

	Yen
First term .....	839,076.018
Second term .....	1,710,512.215
Third term .....	2,340,501.537
Fourth term .....	3,148,607.887
Fifth term .....	16,072,616.811
Sixth term .....	18,045,598.697
Seventh term .....	26,497,642.506
Eighth term .....	27,095,648.542
<b>Total .....</b>	<b>95,250,804.808</b>

<sup>12</sup> These bonds were issued to those who surrendered pensions of small amount, under 100 koku, and must not be confounded with Kin Roku bonds, which are general in their character.

The above total being more than Yen 95,250,000, exceeds that of any other section of the expenditures. Comparing it with the aggregate of the land tax, the principal source of the revenues for seven and a half years, it will be found that it absorbs as much as about 41 per cent of that resource. The sum of the hereditary pensions which were surrendered in the course of the 7th year of Meiji, amounted to somewhat over Yen 2,979,000. If it were not for this, the expenses in question would have been somewhat larger. The Chitsu Roku pensions used not to be paid all at once; but some in the beginning, and others at the end of the year, and occasionally some in the following year, the practice differing in different localities. Furthermore, the periods of the payment were changed, and the division of the fiscal year was altered. Consequently, the actual total of these seven years and a half was not free from the confusion arising from the different length of the fiscal years. According to the figures above given, the amount of the expense in question for the 1st term was small, yet more than half the amounts of the 2nd, with part of the amounts of the 1st, term constitute a sum corresponding to the Chitsu Roku pensions of the first term. In the 8d term there was an increase of Yen 629,000 as compared with the previous term. This was because pensions for meritorious services due in the 2d year were first paid in the fiscal year in question. Miscellaneous relief was also augmented. In the 4th term there was an increase of a little over Yen 808,000 compared with the previous term. This was due to the fact that, in the later fiscal period, many pensions for meritorious services, due in the previous term, were paid off. The reason why, in the 5th term, there was a great increase over the previous term, amounting in fact to a little over 510 $\frac{1}{2}$  per cent, is this:— Since the abolition of the Han, in the 4th year of Meiji, the hereditary pensions of former daimios and of their vassals were disbursed to them direct from the national treasury. In the 6th term there was also an increase of a little more than Yen 1,972,000 compared with the previous term. In the fiscal term in question the average price of rice was high, and the payments of pensions to shrines and temples increased. Again, in the 7th term, there was an increase of above Yen 8,452,000 in comparison with the previous period. This was due to the fact that in this the average price of rice was still higher than in the previous term. In the 8th term there was an addition of about Yen 598,000 to the expenditures of the term immediately preceding. In the later period the average price of rice was lower than before; and during the seventh year of Meiji there were many surrenders of pensions. Accordingly, one might naturally expect some diminution; but, on the contrary, we find an increase. This apparent anomaly is explained by the following circumstances. A large arrear of Chitsu Roku pensions, which belonged to the 7th term, was paid in this period. Indeed, under these conditions, the increase of payments under this section in the 7th over those of the 6th term, would have been, but for the reduction noted, much more than the eight million yen, or thereabout, above accounted for. The increase of this term was also augmented by the advance in the average price of rice, which in the 6th term was Yen 3.861, while in the 7th it was Yen 5.917, per koku.

#### PART VIII.—EXPENDITURES FOR CONSTRUCTION AND REPAIRS OF GOVERNMENT OFFICES AND DYKES.

The expenditures for the construction and repair of all the offices of government, Fu and Ken, and the repair and construction of dykes, roads and bridges in all the provinces are included in this part. The total sum of the expenses incurred during the seven and a half years extending from the 1st year of Meiji to the 6th month of the 8th year of Meiji amounted to Yen 12,112,624.587, those for each term being as follows:—

	Yen.
First term .....	786,949.627
Second term .....	1,447,819.056
Third term .....	881,948.837
Fourth term .....	904,480.627
Fifth term .....	2,242,022.574
Sixth term .....	2,095,222.102
Seventh term .....	2,091,114.861
Eighth term .....	1,668,117.008
<b>Total .....</b>	<b>12,112,624.587</b>

In the 1st term the expenditure was only Yen 787,000 in round numbers, but in the 2d year it advanced to Yen 1,447,819. The cause of this increase was that an extra outlay was required for the deepening of the river Yodo, and the maintenance of its banks; and that the expenditure for construction and repairs of Kuwan and Sho was augmented on account of the change of the imperial capital from Suikio to Tokio. In the 3d and 4th terms there was no such extra expense: consequently the disbursements were less considerable. In the 5th term there was a large increase, one cause of which was that, after the old division of the Han was abolished, all the business of government was extended, and so a great increment in the outlay for the construction and repair of its offices was required. Beside, as all the provinces were brought under the direct control of the central government, more funds for repairing and building the provincial offices and dykes were needed.

In the 6th the expenses decreased in comparison with the previous term. This was due to the fact that although the expenditure for construction and repair of dykes was large, yet similar work in the government offices was not carried out on so large scale as in the former period.

In the 7th term the expenses were nearly the same as before. The only difference was that, in this term, the expenses for the constructions and repairs of the governmental offices diminished and the expense for those of dykes increased compared with the preceding term.

In the 8th term the expenses were only for a period of six months, yet they amounted to such a sum as that shown in the above table. A large expenditure was necessary in erecting and mending dykes; and similar outlay on government offices, which had been previously diminishing, was extensively called for.

The total of this kind of expenditures amounted to upward of Yen 12,112,000. This sum is divided into two heads: one for the constructions and repairs of the Kuwan, Sho, Fu and Ken offices, and the other for the repairs and constructions of dykes. The proportion of the latter was 68 per cent, and those for the former 37 per cent of the whole.

## The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEBRUARY 28TH, 1880.

JAPANESE ERA 2346, MEIJI 13TH YEAR, 2ND MONTH, 28TH DAY, DO-YO-NI.

### NOTES OF THE WEEK.

The M. M. steamer *Folya*, with the English and Continental mails, arrived on the evening of the 26th instant. Home despatches have gone forward by the M. M. steamer *Tibre* on Monday morning last, and by the P. & O. steamer *Malacca*, at noon, to-day.

Singapore has set an example which may be followed with advantage in other eastern settlements. We learn that a laundry establishment, with machinery, which will be worked by steam, is being erected in the Tanglin district, and laundresses have been engaged in England to superintend the making up of the clothes. The sufferers by the present system adopted by Asiatic washermen, will be able to realize the advantages enjoyed by the residents of Singapore when the new enterprise commences operations.

A recent Italian paper thus tabulates the attempted regicides of 1878 and 1879:—There have been two attacks on the Emperor William, one against King Humbert, one against King Alfonso, and two against the Czar. Sovereigns, it remarks, will soon reckon their years of rule by these outrages, the Czar having experienced four, and the Emperor William five. Napoleon

III. had seven. Since this compilation was made there have been at least two further attempts on the life of the Russian potentate: namely, the endeavor to blow up the train in which he was travelling; and that to kill him in the explosion at the Winter Palace. The much hunted sovereign has thus been subjected to six recognized assaults upon his existence.

A correspondent in Rome of a London paper draws attention to Italian postal curiosities which are, apparently not few in number. He says, for instance, that in the year 1878, 334,702,496 objects passed through the post, of which less than half were delivered at their address, and of these 122,874 were returned as wrongly delivered. The distribution of letters is one of the weakest points in the Italian postal system. Except in large towns, the Post Office does not profess to make any house-to-house distribution at all, except on payment of a small fee, generally a sou for each packet delivered to the postman; and in the large towns the delivery is done in a very careless manner. The postman rarely takes the trouble to climb the stairs to the different apartments, except just before Christmas, but contents himself with leaving all the letters for a house with the porter, who delivers them whenever he happens to be going upstairs: if the porter is not in the way the letters go back into the bag till the next round is made, or are even sometimes left at a shop near. No wonder then that letters frequently miscarry without such wilful intention as the postman showed who was discovered one Christmas stuffing all his letters into a sewer grating that he might get the sooner to his dinner. The excuse for non-delivery is that with houses of five or six stories the work is too hard for the postman. Again, for the year in question, the money-order department showed a net loss of 56,459f., resulting from thefts, frauds, and errors in payment. It is remarkable that money-orders should be so much made use of, considering the expense of them, and the great difficulty the Post Office makes about paying them, and also that two large banks—the Banco di Napoli and the Banco di Sicilia—issue orders on their branches without any charge whatever. On the other hand, the collection from the boxes placed about the town has one feature which might well be adopted not only in England, as is suggested, but elsewhere. "The boxes attached to the wall cannot be opened by the postman, who slides in a bag underneath, which by pressing a spring, lets the letters fall into it; at the same time two little brass plates with the hour of the next clearance slide forward. In this way there is a check on the postman, and you can tell without fear of a difference in clocks whether you have caught the clearance that you require."

It is announced that M. Henri Say, nephew of M. Léon Say, has left New York with his wife and child, on a yachting trip, which is to last two years, and to comprise New Orleans, the West Indies, South America, San Francisco, Japan, China, India, the Suez Canal, and Cherbourg. The yacht, now called the *Heriela*, but originally the *Skaunghraun*, was constructed last year for Mr. Bonicault, and is regarded as the finest steam yacht ever built in the United States. It is accompanied by a tender, with coal, manned by ten men, the yacht itself having thirty-five souls on board. The crew are all Frenchmen.

Shanghai proposes to subscribe to the proposed international memorial to the late Sir Rowland Hill, who conferred upon the world the benefits of cheap postage. The matter is in the hands of the Chairmen of the two local Municipal Councils, Mr. R. W. Little, and Mr. E. G. Vouillemont, Manager of the Comptoir d'Escompte, a post which a few years ago he also occupied in Yokohama.

Connecting Mr. Mori's appointment, to the post of Minister from Japan to the Court of St. James, with negotiations for the revision of the treaties, the *London and China Express* holds that the fact is "evidence that his Government have carefully considered the importance of the negotiations now pending, and are desirous of using every means afforded by diplomatic ability to maintain the friendly relations which exist, and at the same time to gain their own ends. It is therefore clear that some difficulty still remains to be overcome. But we cannot doubt that with his experience and tact Mori will see a way out of any complications. We cordially welcome him to England, feeling assured that he will maintain the Legation with the same dignity as his predecessor, and that he will continue to

exercise that same cordial social intercourse with English society which characterised the Japanese Legation under Wooyeno."

An indication of returning commercial prosperity, not only to one individual corporation, which we are happy to congratulate upon the evident success of its late operations, but to all those engaged in trade in the Far East, is referred to in the address of the Chairman of the Hongkong and Shanghai Banking Corporation to an assembly of shareholders in Hongkong. The speaker said:—"We have passed, gentlemen, through some years of almost unequalled commercial depression and yet the Bank has steadily earned fair profits, and now that business is improving and showing signs of general revival, I think we may all look forward with a fair amount of confidence to a period of prosperity."

The many friends of Mr. Edward Gilbert, who left Japan after organizing the imperial telegraph service, will be pleased to learn that he has been appointed to a responsible and lucrative position at home. The *Dundee Advertiser* alluding to the subject says:—"In view of the transference of the Dundee and Arbroath Railway to the joint-ownership of the Caledonian and North British Railway Companies, Mr. Gilbert has been appointed to the important position of Manager on behalf of the two Companies. Mr. Gilbert is well known in this district. He held the office of Superintendent of Telegraphs on the Scottish North Eastern line for a number of years, and after that line was merged in the Caledonian he obtained the appointment of Superintendent of Telegraphs on the North British system."

Last Sunday morning witnessed an earthquake unparalleled both as regards intensity and destructiveness since this portion of Japan has been open to foreign residence. At eight minutes to one o'clock the inhabitants of Yokohama were aroused by the violent agitation of their dwellings, accompanied, in many instances, with the crash of falling chimneys, tiles, mirrors and articles of furniture. The shock was of great force during the eighteen or twenty seconds of its duration, and vividly recalled similar experiences in South America, the great country of earthquakes. The Bluff has evidently suffered most from the dire visitation. Scarcely a single house was unaffected; chimneys thrown down or twisted out of shape, roofs stripped of the tiles, heaps of plaster, walls cracked and tottering, were to be met with in all directions. It would be impossible to specify within reasonable limit every building which has been damaged, as the list would include nearly every edifice on the Bluff and very many in the Settlement. Prominent among those which show signs of great injury is the Convent, the roof being apparently irremediably shaken. In the Settlement, the Grand Hotel was the greatest sufferer, five of the chimneys having either fallen or been so damaged as to require rebuilding. Notwithstanding the many narrow escapes which must necessarily have occurred, we are glad to be able to state that no person has, we believe, sustained injury, although some ladies have not yet quite recovered the shock to their nerves. We have heard that the earth tremour reached Tokio one minute and a half before it was felt in Yokohama. On the ships in harbour, the shock was in many cases distinctly felt, and it is noticeable that although during and immediately before the earthquake the wind was almost imperceptible, yet, as soon as the tremour ceased, a strong breeze sprang up; no other atmospheric change was observed. The damage sustained cannot be even approximately estimated, but if we include the destruction of valuable curios, ornaments, glass, china, &c., &c., which occurred, it will reach a total of many thousands of dollars.

A correspondent in Tokio writes to us:—

"I have just seen Dr. Martin, who, as you are aware, immediately travelled to Asama-yama as soon as the papers announced an eruption in that mountain, and he has been kind enough to grant me permission to publish the following facts:—

"He mentions that, although he inquired frequently along the road, he found no one who had heard of any such occurrence. On the 20th,—the night of the great earthquake—he stopped at Iwabana, a short distance from the Usui Toge and less than half a day's journey from the summit of the mountain, but he perceived no shock; nor did he hear any mention of it. The mountain itself he found

in its ordinary state; but the well-known Usui pass was covered with snow. It seems quite clear, therefore, that the recent severe earthquake did not come from the direction of Asama-yama."

A friend in the capital writes to us as follows:—"I have very little information to give you about the great shake, more than that it completely satisfied those of us who are supposed to be seismologically inane. We want no more of the same kind—not even in the interest of science. As far as I can learn, however, very little damage was done in Tokio, apart from the general scare. A couple of chimneys were thrown down at the Dai Gaku; and I have heard of one house, near the Nihon Bashi, which was badly cracked. Some injury was sustained by apparatus in the meteorological department. I think the shock could not have been so violent in Tokio as in Yokohama. Of course you stand more in need of a good shake up than we do; and we are well satisfied that you got the best of it. We don't envy you in the least."

According to the *Ceylon Times*, it is probable that the Directors of the Hongkong and Shanghai Bank intend very shortly to open a branch of their institution in Colombo, not only for exchange operations, but for general banking business.

The *Shanghai Courier* says, "for some days past rumours have been current in the Settlement of the discovery of defalcations on the part of Mr. E. Caussade, Acting Secretary of the French Municipal Council. These rumours have unfortunately proved well founded, for we learn that Mr. Caussade has been placed under arrest on a charge of misappropriating money over which he had official control. His defalcations are supposed to amount to about £8,000, and among the sums misappropriated is believed to be the subscriptions to the late ball given by the residents of the French Concession. Principally his defalcations appear to have been made in the funds of the Council and money belonging to the estate of the late Mr. A. Logras. As the French Consul-General has not power to try an official in the position of Mr. Caussade, we understand he will be sent to Saigon for trial. Notice has been given by the President of the French Municipal Council that all matters relating to the French Municipal Offices should be directed to Mr. N. Bettembourg, who has kindly consented, at the request of his colleagues, to take charge of the offices."

The American papers state that "Judge Eldridge, of Memphis, recently fined himself 10 dols. for being late at court. Two lawyers made able arguments for the remission of the penalty, but his honour remained firm." If the example of Mr. Eldridge was followed to any great extent here in Japan, we are apt to think that some of our local judicial functionaries would experience a very considerable diminution in the amount of their incomes: but then perhaps they would not be able to resist the "able arguments" which might be adduced, begging for a reconsideration of the decision of the court.

The following is the recipe for the whitewash used on the White House at Washington, and the best known: Take a half bushel of unslaked lime and slake it with boiling hot water covering it during the process. Strain it, and add a peck of salt, dissolved in warm water, and three pounds of ground rice boiled to a thin paste; put in, boiling hot, half a pound of Spanish whiting and a pound of clear glue, dissolved in warm water. Mix, and let it stand for several days; then keep it in a kettle on a portable furnace, and put on as hot as possible with a paint or whitewash brush.

The date of departure of the O. & O. steamer *Belgie* from this port for San Francisco, has been changed from the 6th to 9th March next.

A remarkable meteor passed over the north-western part of Kioto this morning (Wednesday, 18th) at about 6.45. The sky was overcast and cloudy at the time. From an intelligent eyewitness, and assisted by a celestial globe, I make out that it made its appearance near the pole, and therefore at an altitude of about 35 degrees above the horizon; pursuing a course slightly inclined downward, it disappeared in the south-west at an altitude of about 10 degrees; its time of flight was probably between five and ten seconds. The meteor was projected from a small dark cloud with luminous edges; there was a

sudden flash of light and a heavy rumbling noise, as of thunder, followed by two or three slighter rumblings. My informant says the appearance was that of a thunderstorm approaching. The meteor in its course appeared merely as a luminous streak; possibly at an earlier hour, with less light, it would have presented the appearance of a fire-ball. It left behind it a long, narrow, smoky-looking cloud, which remained visible for nearly half an hour. I was lying in my bed, about half awake, when I was thoroughly aroused by the violent shaking of the glass *shoji* of my room, two or three slighter shakings followed. I thought for some time it was an earthquake, but was at a loss to account for the absence of the usual tremors. I learn from a friend that the noise awoke him from his sleep, and from Japanese sources that articles were thrown down in houses.

It would appear from the violent concussion of the air that an explosion took place at no great distance, and probably an aerolite has fallen in this vicinity. The Kiyoto Fu, I learn, will seek to get further information on the subject.

The local papers say that a large haul of thieves—a gang of eleven—was made at Fu-shimi-Inari lately. They are said to be the party who committed the murders at Awaji shima some time ago. On their persons were found 60 hairpins (*kanzashi*), 4 watches, and 17 pocket books.

The Exhibition will open on the first of next month and continue for the usual one hundred days. I learn that there will be nothing to distinguish it from its immediate predecessors. A gas apparatus of about thirty lights has been erected on the grounds, and exhibitions of the light will be made occasionally. The application for a loan to erect a museum building has not yet been answered by the Fu.

The report of the discovery of an ore of quicksilver in Inariyama, Fushimi, which appeared lately in a Tokio native paper, is not true. A valuable ore of the above was discovered in Sakai Ken, about three years ago, and a sample was analysed in the Semikiyoku of this city, yielding, if I mistake not, about 85 or 40 per cent of pure metal.—*Corr. Hiogo News.*

The following figures, taken from the address read by Mr. Kawase Hidetsugu, a secretary of the 1st class of Finance, and Superintendent of Commercial Affairs, at the opening ceremonies of the *Kiyoshin-Kien*, at Osaka, may prove interesting to some of our readers:

For the four years from 1874 to 1877 the whole exports from Japan amounted to 92,000,000 yen, 62 per cent, of this being tea and silk. The imports during the same period amounted to 106,000,000 yen, of which cotton and sugar contributed 48 per cent. The average quantity of these products used during the same period was: sugar, 90,000,000 lbs., and cotton, 70,000,000 lbs. The average quantity of cotton produced in Japan was under 26,500,000 lbs., and of sugar just over 27,000,000 lbs.

The Exhibition just opened at Osaka is for the purpose of promoting the cultivation of sugar and cotton, and the figures given above show that a healthy stimulus in this direction will not be out of place.—*Hiogo News.*

The men-of-war in harbour were dressed in honour of the anniversary of the birth of George Washington, first President of the United States of America, "first in war, first in peace, and first in the hearts of his fellow-countrymen."

#### REUTER'S TELEGRAMS.

LONDON, 27th February, 1880.

The *Standard* hints that the Government will dissolve Parliament, if the opposition persist in pursuing a course of obstruction.

SUPPLIED TO THE "DAILY PRESS."

LONDON, February 21st, 1880.

Baroness Burdett Coutts has subscribed £5,000 to the Irish Relief Fund.

GERMANY.—Parliament has been opened by the Emperor, who, in his speech, said that prospects were pacific.

RUSSIA.—Nihilists have exploded a mine under the Winter Palace. The imperial family, not having assembled, escaped. Thirty-five guards were killed and wounded.

LONDON, 13th February, 1880.

In the House of Commons, in reply to a question, the Secretary of State for the Colonies said that he was satisfied Governor Hennessy would repress domestic servitude, and declined to interfere.

#### PARIS LETTER. (On Scientific Subjects.)

DECEMBER 20TH, 1879.

The test of a severe winter is not so much the intense low temperature marked at a special moment, as the persistence of cold. Now the present season appears to combine both, and may safely be classed among the most rigorous winters of the century. The thermometer at the Observatory of Mt. Souris has descended to 24 degrees C. below zero. In the open plain, 25 degrees were registered on the night of the 9th instant, and it is a singular coincidence at least, that the lowest temperatures on record, in 1842 and 1871, occurred on the same date. The cold is not at all simultaneous; while the temperature is abnormal at Paris and in the centre and east of France, Belgium, Switzerland and Austria, it is above zero on the northern coast of France and the British Islands. Nearly all rivers in the centre of Europe are frozen; this is not to be accepted as a proof of exceptional inclemency, as a current of water flowing slowly will sooner be congealed than where a river flows rapidly. Dams, impeding the current, will induce congelation. Thus the Seine is frozen, from the obstructions of the Pont des Invalides, upwards, while it is free downwards to Havre. The thickness of the ice is an excellent measure for the intensity of frost. In calm water, ice two inches thick will bear a man; four inches, a horse; six inches, vehicles; and eight, field artillery. An army or a crowd is perfectly safe on ice twelve inches thick. In 1794, the French cavalry was able to cross the Texel and capture the frozen-in Dutch fleet, after a few charges. Ordinarily, when a winter sets in rigorously, its departure is element. This is not always certain. Thus in 1788 the cold commenced on the 25th of December, and excepting one day's thaw, as we have just experienced, lasted till the 13th of January. The snow accumulated in blocks as massive as granite; the basins at Versailles had ice twenty-two inches thick; the deepest wells were frozen, and in wine cellars bottles burst; the docks at Marseilles were frozen; the sea-coast for some leagues was coated with ice; travellers and sentries were frozen to death, and trees were split from top to bottom. It is thus, that winters with the longest number of days of frost are the most disastrous in their consequences, and notably on some winter crops.

Though our knowledge of meteorology is far from being exact, in the sense of other sciences, we know this fact to be certain, that there is no revolution taking place, as is popularly supposed, in the seasons. From 396 B.C. there have been winters periodically hot as well as cold, and succeeding with a certain regularity also. Do the return of these antithetical winters obey any fixed law? Can their coming be predicted? Here science is mute. M. Renon has calculated, from a multitude of observations extending as far back as to the year 1,400, that intense winters arrive every 41 years. In general, cold winters form groups of 4 and 6, around a specially central one. He was right in respect to 1870-71; he predicted 1878-79 to be rigorous, which it was not; he passes over the present severity, and bids us prepare for intense cold in 1882, and great heat in 1883. The same gentleman traces extreme cold to cosmical causes; to the tendency of our planet to cool down to the temperature of space—some 50 degrees C. below zero. But this will not explain why at Paris, the cold is 24 degrees, and at Havre but 5, below zero, while at the same moment it is 9 degrees above zero, in England. Cold appears to be the production of atmospheric currents as these come from northern regions, and warm if of southern origin, similarly as rain—or drought, follow winds charged with humidity or dryness. Now these currents are displaced from a variety of causes, more or less a subject of speculation, and where the moon is presumed to play an important rôle. One fact appears to be admitted, that severe winters are associated with rainy years.

Those born deaf are naturally dumb, because never having heard the sounds of language they can neither repeat nor comprehend them. Persons "hard of hearing" can be materially assisted according to Messrs. Paul Bert and Arsonveel, who have prepared an instrument in the form of a cone, which the afflicted apply to their ear. However, this apparatus augmented all the noise from the action of the lungs, the beatings of the heart, and the contractions of the muscles of the jaw; and these sounds became so intense, that the deaf individual was as if situated in a railway train, he himself making all the noise. The gentlemen in question made an improved microphone, and by means of a receptacle, three or four feet in diameter, placed before an orator in the tribune, a distant and deaf deputy could hear with advantage even if the speech was only in conversation pitch. It is intended to fit up special boxes in all of the theatres by means of which the deaf can enjoy the play.

By the united efforts of Spain and France the meridian of Paris has been accurately measured, and prolonged as far as the Sahara. The difficulty lay in the perception of signals above the Mediterranean, and the end was, to observe these from two elevated points in Spain and Algeria, so as to form the four angles of an immense quadrilateral, of which the sides would be equal to 70 leagues. Glimpses of the tops of the mountains of Murcia could be dimly perceived on a fine day, but insufficient for measuring purposes; the solar telegraph proved too weak, and ultimately it was decided to employ the electric light. But to produce this, roads had to be made to the summit of the mountain, in order to erect a steam engine to work the Gramme machine, and place the electro-magnetic apparatus in position; also to lodge men and horses. By the 9th of September all was ready, and the measurements were satisfactorily completed on the 18th of October. Biot and Arago divined the possibility effecting these measurements of immense triangles.

M. Topinard desires to precisely define the word *race*, as it is understood differently by naturalists, agriculturists, and historians. Since the time of Buffon, the idea of race has been either opposed to, or combined with, species. When God created the male and female of each kind of animal; species, according to one school of naturalists, means the descent of each kind from the parent stock, without any relationship with other species born from a distinct origin. This is termed absolute species; man is one, as descending from Adam and Eve, as the horse, dog, etc., are in their case; only with time difference in descent has arisen, by which some men are black, or tawny, and others white, and dogs have become spaniels, bull, etc. These differences are *racas*, and so understood by Buffon, Cuvier and their followers. Then came Lamarck, who took up the idea that animal forms have no fixity, and are modified *ad infinitum* under the influence of time and circumstances. G. St. Hilaire was Lamarck's pupil, but was ridiculed by Cuvier, who in turn has had to give way to Darwin. Race, not species, is the word retained by French anthropologists, implying a special, not a common original, stock.
